LETTER OF TRANSMITTAL

THE LIBRARY OF CONGRESS,
CONGRESSIONAL RESEARCH SERVICE,
Washington, D.C., June 25, 1976.

Hon. EDMUND S. MUSKIE,
Chairman, Subcommittee on Environmental Pollution, U.S. Senate,
Washington, D.C.

DEAR MR. CHAIRMAN: In response to your request, we have prepared a legislative history of the Energy Supply and Environmental Coordination Act of 1974, Public Law 93-319.

This two volume document contains the major bills, reports, hearing testimony, and debates that marked the first efforts to amend the Clean Air Act Amendments of 1972 because of a critical energy supply situation. A section-by-section index is included which references discussions of provisions of ESECA.

The history should be of considerable aid to legislators, public officials, industries, and the general public who are involved with implementing and amending the Clean Air Act and who wish to understand Congressional intent in the passage of Public Law 93-319.

The author of this report was Connie A. Musgrove, Analyst, of the Environment and Natural Resources Policy Division.

We hope this document will serve your Committee's needs for a continuing updated history of the Clean Air Act.

Sincerely,

NORMAN BECKMAN,
Acting Director.

LETTER OF TRANSMITTAL

U.S. SENATE,
COMMITTEE ON PUBLIC WORKS,
Washington, D.C., June 25, 1976.

Hon. JENNINGS RANDOLPH,
Chairman, Committee on Public Works, U.S. Senate,
Washington, D.C.

DEAR JENNINGS: The enactment of the Energy Supply and Environmental Coordination Act of 1974 was a significant step forward in governmental policies designed to meet energy needs while maintaining our objective of improved air quality for the Nation. As Chairman of the Senate Committee on Public Works, you know the long and difficult deliberations that eventually produced this law. The Subcommittee on Environmental Pollution examined legislative proposals to amend the Clean Air Act that were contained in the emergency energy legislation of 1973 and early 1974. The coal conversion and allocation section and Title II, Coordination with Environmental Protection Requirements, were subsequently separated from the energy legislation in April 1974 after a Presidential veto of the latter and reintroduced as a separate bill H.R. 14368 and as the similar Senate substitute amendment No. 1303.

Many of the original documents detailing the complicated history of this legislation are now out of print. The publication of this report will make all of the necessary materials available in one comprehensive document. When these volumes are used with the earlier Senate Public Works Committee Print, A Legislative History of The Clean Air Act Amendments of 1970, we facilitate further public understanding of the Clean Air Act. To ensure that this document will be available to all who may have need to use it, I request that it be published as a Committee Print by the Committee on Public Works.

Sincerely,

EDMUND S. MUSKIE,
Chairman, Subcommittee on Environmental Pollution.

NOTES

This legislative history provides a compilation of the significant documents and debates leading up to the Energy Supply and Environmental Coordination Act of 1974, Public Law 93–319. These first substantive changes in the Clean Air Act Amendments of 1970 found their roots in the proposed Energy Emergency Act precipitated by the 1973 Arab oil embargo. After two conference reports and a Presidential veto, the Clean Air Act revisions were split from energy emergency legislation and passed in a separate bill.

The boldface section references inserted in the text refer to the section numbers of the bill under discussion except those provisions amending the Clean Air Act designated by CAA. If the provisions do not amend the Clean Air Act but are contained in Public Law 93–319, they are designated by ESECA.

CONNIE A. MUSGROVE,
Environment and Natural Resources Policy Division,
Congressional Research Service,
Library of Congress.

CONTENTS

Note: An identical contents appears in Volume 2. This volume (Volume 1) contains Chapters 1–8 only.

CHAPTER 1

The Clean Air Act, as Amended, Public Law 93–319, and the President's Approval

THE CLEAN AIR ACT

AS AMENDED, JUNE 1974

Revisions indicated by marginal brackets

TITLE I—AIR POLLUTION PREVENTION AND CONTROL [1]

FINDINGS AND PURPOSES

"SEC. 101. (a) The Congress finds—

"(1) that the predominant part of the Nation's population is located in its rapidly expanding metropolitan and other urban areas, which generally cross the boundary lines of local jurisdictions and often extend into two or more States;

"(2) that the growth in the amount and complexity of air pollution brought about by urbanization, industrial development, and the increasing use of motor vehicles, has resulted in mounting dangers to the public health and welfare, including injury to agricultural crops and livestock, damage to and the deterioration of property and hazards to air and ground transportation;

"(3) that the prevention and control of air pollution at its source is the primary responsibility of States and local governments; and

"(4) that Federal financial assistance and leadership is essential for the development of cooperative Federal, State, regional and local programs to prevent and control air pollution.

"(b) The purposes of this title are—

"(1) to protect and enhance the quality of the Nation's air resources so as to promote the public health and welfare and the productive capacity of its population;

"(2) to initiate and accelerate a national research and development program to achieve the prevention and control of air pollution;

"(3) to provide technical and financial assistance to State and local governments in connection with the development and execution of their air pollution prevention and control programs; and

"(4) to encourage and assist the development and operation of regional air pollution control programs.

COOPERATIVE ACTIVITIES AND UNIFORM LAWS

"SEC. 102. (a) The Administrator shall encourage cooperative activities by the States and local governments for the prevention

[1] Clean Air Act (42 U.S.C. 1857 et seq.) includes the Clean Air Act of 1963 (P.L. 88-206), and amendments made by the Motor Vehicle Air Pollution Control Act —P.L. 89-272 (October 20, 1965), the Clean Air Act Amendments of 1966—P.L. 89-675 (October 15, 1966), the Air Quality Act of 1967—P.L. 90-148 (November 21, 1967), the Clean Air Amendments of 1970—P.L. 91-604—(December 31, 1970), the Comprehensive Health Manpower Training Act of 1971—P.L. 92-157—(November 18, 1971), and the Energy Supply and Environmental Coordination Act of 1974—P.L. 93-319—(June 22, 1974).

Marginal brackets indicate revisions.

and control of air pollution; encourage the enactment of improved and, so far as practicable in the light of varying conditions and needs, uniform State and local laws relating to the prevention and control of air pollution; and encourage the making of agreements and compacts between States for the prevention and control of air pollution.

"(b) The Administrator shall cooperate with and encourage cooperative activities by all Federal departments and agencies having functions relating to the prevention and control of air pollution, so as to assure the utilization in the Federal air pollution control program of all appropriate and available facilities and resources within the Federal Government.

"(c) The consent of the Congress is hereby given to two or more States to negotiate and enter into agreements or compacts, not in conflict with any law or treaty of the United States, for (1) cooperative effort and mutual assistance for the prevention and control of air pollution and the enforcement of their respective laws relating thereto, and (2) the establishment of such agencies, joint or otherwise, as they may deem desirable for making effective such agreements or compacts. No such agreement or compact shall be binding or obligatory upon any State a party thereto unless and until it has been approved by Congress. It is the intent of Congress that no agreement or compact entered into between States after the date of enactment of the Air Quality Act of 1967, which relates to the control and abatement of air pollution in an air quality control region, shall provide for participation by a State which is not included (in whole or in part) in such air quality control region.

RESEARCH, INVESTIGATION, TRAINING, AND OTHER ACTIVITIES

"SEC. 103. (a) The Administrator shall establish a national research and development program for the prevention and control of air pollution and as part of such program shall—

"(1) conduct, and promote the coordination and acceleration of, research, investigations, experiments, training, demonstrations, surveys, and studies relating to the causes, effects, extent, prevention, and control of air pollution;

"(2) encourage, cooperate with, and render technical services and provide financial assistance to air pollution control agencies and other appropriate public or private agencies, institutions, and organizations, and individuals in the conduct of such activities;

"(3) conduct investigations and research and make surveys concerning any specific problem of air pollution in cooperation with any air pollution control agency with a view to recommending a solution of such problem, if he is requested to do so by such agency or if, in his judgment, such problem may affect any community or communities in a State other than that in which the source of the matter causing or contributing to the pollution is located;

"(4) establish technical advisory committees composed of

recognized experts in various aspects of air pollution to assist in the examination and evaluation of research progress and proposals and to avoid duplication of research.

"(b) In carrying out the provisions of the preceding subsection the Administrator is authorized to—

"(1) collect and make available, through publications and other appropriate means, the results of and other information, including appropriate recommendations by him in connection therewith, pertaining to such research and other activities;

"(2) cooperate with other Federal departments and agencies, with air pollution control agencies, with other public and private agencies, institutions, and organizations, and with any industries involved, in the preparation and conduct of such research and other activities;

"(3) make grants to air pollution control agencies, to other public or nonprofit private agencies, institutions, and organizations, and to individuals, for purposes stated in subsection (a) (1) of this section;

"(4) contract with public or private agencies, institutions, and organizations, and with individuals, without regard to sections 3648 and 3709 of the Revised Statutes (31 U.S.C. 529; 41 U.S.C. 5);

"(5) provide training for, and make training grants to, personnel of air pollution control agencies and other persons with suitable qualifications;

"(6) establish and maintain research fellowships, in the Environmental Protection Agency and at public or nonprofit private educational institutions or research organizations;

"(7) collect and disseminate, in cooperation with other Federal departments and agencies, and with other public or private agencies, institutions, and organizations having related responsibilities, basic data on chemical, physical, and biological effects of varying air quality and other information pertaining to air pollution and the prevention and control thereof; and

"(8) develop effective and practical processes, methods, and prototype devices for the prevention or control of air pollution.

"(c) In carrying out the provisions of subsection (a) of this section the Administrator shall conduct research on, and survey the results of other scientific studies on the harmful effects on the health or welfare of persons by the various known air pollutants.

"(d) The Administrator is authorized to construct such facilities and staff and equip them as he determines to be necessary to carry out his functions under this Act.

"(e) If, in the judgment of the Administrator, an air pollution problem of substantial significance may result from discharge or discharges into the atmosphere, he may call a conference concerning this potential air pollution problem to be held in or near one or more of the places where such discharge or discharges are

occurring or will occur. All interested persons shall be given an opportunity to be heard at such conference, either orally or in writing, and shall be permitted to appear in person or by representative in accordance with procedures prescribed by the Administrator. If . . . the Administrator finds, on the basis of evidence presented at such conference, that the discharge or discharges if permitted to take place or continue are likely to cause or contribute to air pollution subject to abatement under section 115, he shall send such findings, together with recommendations concerning the measures which he finds reasonable and suitable to prevent such pollution, to the person or persons whose actions will result in the discharge or discharges involved; to air pollution agencies of the State or States and of the municipality or municipalities where such discharge or discharges will originate; and to the interstate air pollution control agency, if any, in the jurisdictional area of which any such municipality is located. Such findings and recommendations shall be advisory only, but shall be admitted together with the record of the conference, as part of the proceedings under subsections (b), (c), (d), (e), and (f) of section 115.

"(f) (1) In carrying out research pursuant to this Act, the Administrator shall give special emphasis to research on the short- and long-term effects of air pollutants on public health and welfare. In the furtherance of such research, he shall conduct an accelerated research program—

"(A) to improve knowledge of the contribution of air pollutants to the occurrence of adverse effects on health, including, but not limited to, behavioral, physiological, toxicological, and biochemical effects; and

"(B) to improve knowledge of the short- and long-term effects of air pollutants on welfare.

"(2) In carrying out the provisions of this subsection the Administrator may—

"(A) conduct epidemiological studies of the effects of air pollutants on mortality and morbidity;

"(B) conduct clinical and laboratory studies on the immunologic, biochemical, physiological, and the toxicological effects including carcinogenic, teratogenic, and mutagenic effects of air pollutants;

"(C) utilize, on a reimbursable basis, the facilities of existing Federal scientific laboratories and research centers;

"(D) utilize the authority contained in paragraphs (1) through (4) of subsection (b); and

"(E) consult with other appropriate Federal agencies to assure that research or studies conducted pursuant to this subsection will be coordinated with research and studies of such other Federal agencies.

"(3) In entering into contracts under this subsection, the Administrator is authorized to contract for a term not to exceed 10 years in duration. For the purposes of this paragraph, there are authorized to be appropriated $15,000,000. Such amounts as

are appropriated shall remain available until expended and shall be in addition to any other appropriations under this Act."

RESEARCH RELATING TO FUELS AND VEHICLES

"SEC. 104. (a) The Administrator shall give special emphasis to research and development into new and improved methods, having industry-wide application, for the prevention and control of air pollution resulting from the combustion of fuels. In furtherance of such research and development he shall—

"(1) conduct and accelerate research programs directed toward development of improved, low-cost techniques for—

"(A) control of combustion byproducts of fuels,

"(B) removal of potential air pollutants from fuels prior to combustion,

"(D) control of emissions from the evaporation of fuels,

"(D) improving the efficiency of fuels combustion so as to decrease atmospheric emissions, and

"(E) producing synthetic or new fuels which, when used, result in decreased atmospheric emissions."

"(2) provide for Federal grants to public or nonprofit agencies, institutions, and organizations and to individuals, and contracts with public or private agencies, institutions, or persons, for payment of (A) part of the cost of acquiring, constructing, or otherwise securing for research and development purposes, new or improved devices or methods having industry-wide application of preventing or controlling discharges into the air of various types of pollutants; (B) part of the cost of programs to develop low emission alternatives to the present internal combustion engine; (C) the cost to purchase vehicles and vehicle engines, or portions thereof, for research, development, and testing purposes; and (D) carrying out the other provisions of this section, without regard to sections 3648 and 3709 of the Revised Statutes (31 U.S.C. 529; 41 U.S.C. 5): *Provided*, That research or demonstration contracts awarded pursuant to this subsection or demonstration contracts awarded pursuant to this subsection (including contracts for construction) may be made in accordance with, and subject to the limitations provided with respect to research contracts of the military departments in, section 2353 of title 10, United States Code, except that the determination, approval, and certification required thereby shall be made by the Administrator: *Provided further*, That no grant may be made under this paragraph in excess of $1,500,000;

"(3) determine, by laboratory and pilot plant testing, the results of air pollution research and studies in order to develop new or improved processes and plant designs to the

point where they can be demonstrated on a large and practical scale;

"(4) construct, operate, and maintain, or assist in meeting the cost of the construction, operation, and maintenance of new or improved demonstration plants or processes which have promise of accomplishing the purposes of this Act;

"(5) study new or improved methods for the recovery and marketing of commercially valuable byproducts resulting from the removal of pollutants.

"(b) In carrying out the provisions of this section, the Administrator may—

"(1) conduct and accelerate research and development of low-cost instrumentation techniques to facilitate determination of quantity and quality of air pollutant emissions, including, but not limited to, automotive emissions;

"(2) utilize, on a reimbursable basis, the facilities of existing Federal scientific laboratories;

"(3) establish and operate necessary facilities and test sites at which to carry on the research, testing, development, and programming necessary to effectuate the purposes of this section;

"(4) acquire secret processes, technical data, inventions, patent applications, patents, licenses, and an interest in lands, plants, and facilities, and other property or rights by purchase, license, lease, or donation; and

"(5) cause on-site inspections to be made of promising domestic and foreign projects, and cooperate and participate in their development in instances in which the purposes of the Act will be served thereby.

"(c) For the purposes of this section there are authorized to be appropriated $75,000,000 for the fiscal year ending June 30, 1971, $125,000,000 for fiscal year ending June 30, 1972, $150,000,000 for fiscal year ending June 30, 1973, $150,000,000 for fiscal year ending June 30, 1974, and $150,000,000 for fiscal year ending June 30, 1975. Amounts appropriated pursuant to this subsection shall remain available until expended.

GRANTS FOR SUPPORT OF AIR POLLUTION PLANNING AND CONTROL PROGRAMS

"SEC. 105. (a) (1) (A) The Administrator may make grants to air pollution control agencies in an amount up to two-thirds of the cost of planning, developing, establishing, or improving, and up to one-half of the cost of maintaining programs for the prevention and control of air pollution or implementation of national primary and secondary ambient air quality standards.

"(B) Subject to subparagraph (C), the Administrator may make grants to air pollution control agencies within the meaning of paragraph (1), (2), or (4) of section 302(b) in an amount up to three-fourths of the cost of planning, developing, establishing, or improving, and up to three-fifths of the cost of maintaining any program for the prevention and control of air pollution or implementation of national primary and secondary ambient

air quality standards in an area that includes two or more municipalities, whether in the same or different States.

"(C) With respect to any air quality control region or portion thereof for which there is an applicable implementation plan under section 110, grants under subparagraph (B) may be made only to air pollution control agencies which have substantial responsibilities for carrying out such applicable implementation plan.

"(2) Before approving any grant under this subsection to any air pollution control agency within the meaning of sections 302 (b) (2) and 302(b) (4) the Administrator shall receive assurances that such agency provides for adequate representation of appropriate State, interstate, local, and (when appropriate) international, interests in the air quality control region.

"(3) Before approving any planning grant under this subsection to any air pollution control agency within the meaning of sections 302(b) (2) and 302(b) (4), the Administrator shall receive assurances that such agency has the capability of developing a comprehensive air quality plan for the air quality control region, which plan shall include (when appropriate) a recommended system of alerts to avert and reduce the risk of situations in which there may be imminent and serious danger to the public health or welfare from air pollutants and the various aspects relevant to the establishment of air quality standards for such air quality control region, including the concentration of industries, other commercial establishments, population and naturally occurring factors which shall affect such standards.

"(b) from the sums available for the purposes of subsection (a) of this section for any fiscal year, the Administrator shall from time to time make grants to air pollution control agencies upon such terms and conditions as the Administrator may find necessary to carry out the purpose of this section. In establishing regulations for the granting of such funds the Administrator shall, so far as practicable, give due consideration to (1) the population, (2) the extent of the actual or potential air pollution problem, and (3) the financial need of the respective agencies. No agency shall receive any grant under this section during any fiscal year when its expenditures of non-Federal funds for other than nonrecurrent expenditures for air pollution control programs will be less than its expenditures were for such programs during the preceding fiscal year; and no agency shall receive any grant under this section with respect to the maintenance of a program for the prevention and control of air pollution unless the Administrator is satisfied that such grant will be so used as to supplement and, to the extent practicable, increase the level of State, local, or other non-Federal funds that would in the absence of such grant be made available for the maintenance of such program, and will in no event supplant such State, local, or other non-Federal funds. No grant shall be made under this section until the Administrator has consulted with the appropriate official as designated by the Governor or Governors of the State or States affected.

"(c) Not more than 10 per centum of the total of funds appropriated or allocated for the purposes of subsection (a) of this section shall be granted for air pollution control programs in any one State. In the case of a grant for a program in an area crossing State boundaries, the Administrator shall determine the portion of such grant that is chargeable to the percentage limitation under this subsection for each State into which such area extends.

"(d) The Administrator, with the concurrence of any recipient of a grant under this section, may reduce the payments to such recipient by the amount of the pay, allowances, traveling expenses, and any other costs in connection with the detail of any officer or employee to the recipient under section 301 of this Act, when such detail is for the convenience of, and at the request of such recipient and for the purpose of carrying out the provisions of this Act. The amount by which such payments have been reduced shall be available for payment of such costs by the Administrator, but shall, for the purpose of determining the amount of any grant to a recipient under subsection (a) of this section, be deemed to have been paid to such agency.

INTERSTATE AIR QUALITY AGENCIES OR COMMISSIONS

"SEC. 106. For the purpose of developing implementation plans for any interstate air quality control region designated pursuant to section 107, the Administrator is authorized to pay, for two years, up to 100 per centum of the air quality planning program costs of any agency designated by the Governors of the affected States, which agency shall be capable of recommending to the Governors, plans for implementation of national primary and secondary ambient air quality standards and shall include representation from the States and appropriate political subdivisions within the air quality control region. After the initial two-year period, the Administrator is authorized to make grants to such agency in an amount up to three-fourths of the air quality planning program costs of such agency.

AIR QUALITY CONTROL REGIONS

"SEC. 107. (a) Each State shall have the primary responsibility for assuring air quality within the entire geographic area comprising such State by submitting an implementation plan for such State which will specify the manner in which national primary and secondary ambient air quality standards will be achieved and maintained within each air quality control region in such State.

"(b) For purposes of developing and carrying out implementation plans under section 110—

"(1) an air quality control region designated under this section before the date of enactment of the Clean Air Amendments of 1970, or a region designated after such date under subsection (c), shall be an air quality control region; and

"(2) the portion of such State which is not part of any such designated region shall be an air quality control region, but

such portion may be subdivided by the State into two or more air quality control regions with the approval of the Administrator.

"(c) The Administrator shall, within 90 days after the date of enactment of the Clean Air Amendments of 1970, after consultation with appropriate State and local authorities, designate as an air quality control region any interstate area or major intrastate area which he deems necessary or appropriate for the attainment and maintenance of ambient air quality standards. The Administrator shall immediately notify the Governors of the affected States of any designation made under this subsection.

AIR QUALITY CRITERIA AND CONTROL TECHNIQUES

"SEC. 108. (a)(1) For the purpose of establishing national primary and secondary ambient air quality standards, the Administrator shall within 30 days after the date of enactment of the Clean Air Amendments of 1970 publish, and shall from time to time thereafter revise, a list which includes each air pollutant—

"(A) which in his judgment has an adverse effect on public health and welfare;

"(B) the presence of which in the ambient air results from numerous or diverse mobile or stationary sources; and

"(C) for which air quality criteria had not been issued before the date of enactment of the Clean Air Amendments of 1970, but for which he plans to issue air quality criteria under this section.

"(2) The Administrator shall issue air quality criteria for an air pollutant within 12 months after he has included such pollutant in a list under paragraph (1). Air quality criteria for an air pollutant shall accurately reflect the latest scientific knowledge useful in indicating the kind and extent of all identifiable effects on public health or welfare which may be expected from the presence of such pollutant in the ambient air, in varying quantities. The criteria for an air pollutant, to the extent practicable, shall include information on—

"(A) those variable factors (including atmospheric conditions) which of themselves or in combination with other factors may alter the effects on public health or welfare of such air pollutant;

"(B) the types of air pollutants which, when present in the atmosphere, may interact with such pollutant to produce an adverse effect on public health or welfare; and

"(C) any known or anticipated adverse effects on welfare.

"(b)(1) Simultaneously with the issuance of criteria under subsection (a), the Administrator shall, after consultation with appropriate advisory committees and Federal departments and agencies, issue to the States and appropriate air pollution control agencies, information on air pollution control techniques, which information shall include data relating to the technology and costs of emission control. Such information shall include such data as are available on available technology and alternative methods of

prevention and control of air pollution. Such information shall also include data on alternative fuels, processes, and operating methods which will result in elimination of significant reduction of emissions.

"(2) In order to assist in the development of information on pollution control techniques, the Administrator may establish a standing consulting committee for each air pollutant included in a list published pursuant to subsection (a) (1), which shall be comprised of technically qualified individuals representative of State and local governments, industry, and the academic community. Each such committee shall submit as appropriate, to the Administrator, information related to that required in paragraph (1).

"(c) The Administrator shall from time to time review, and, as appropriate, modify, and reissue any criteria or information on control techniques issued pursuant to this section.

"(d) The issuance of air quality criteria and information on air pollution control techniques shall be announced in the Federal Register and copies shall be made available to the general public.

NATIONAL AMBIENT AIR QUALITY STANDARDS

"SEC. 109. (a) (1) The Administrator

"(A) within 30 days after the date of enactment of the Clean Air Amendments of 1970, shall publish proposed regulations prescribing a national primary ambient air quality standard and a national secondary ambient air quality standard for each air pollutant for which air quality criteria have been issued prior to such date of enactment; and

"(B) after a reasonable time for interested persons to submit written comments thereon (but no later than 90 days after the initial publication of such proposed standards) shall by regulation promulgate such proposed national primary and secondary ambient air quality standards with such modifications as he deems appropriate.

"(2) With respect to any air pollutant for which air quality criteria are issued after the date of enactment of the Clean Air Amendments of 1970, the Administrator shall publish, simultaneously with the issuance of such criteria and information, proposed national primary and secondary ambient air quality standards for any such pollutant. The procedure provided for in paragraph (1) (B) of this subsection shall apply to the promulgation of such standards.

"(b) (1) National primary ambient air quality standards, prescribed under subsection (a) shall be ambient air quality standards the attainment and maintenance of which in the judgment of the Administrator, based on such criteria and allowing an adequate margin of safety, are requisite to protect the public health. Such primary standards may be revised in the same manner as promulgated.

"(2) Any national secondary ambient air quality standard prescribed, under subsection (a) shall specify a level of air quality the attainment and maintenance of which in the judgment of the

Administrator, based on such criteria, is requisite to protect the public welfare from any known or anticipated adverse effects associated with the presence of such air pollutant in the ambient air. Such secondary standards may be revised in the same manner as promulgated.

IMPLEMENTATION PLANS

"SEC. 110. (a) (1) Each State shall, after reasonable notice and public hearings, adopt and submit to the Administrator, within nine months after the promulgation of a national primary ambient air quality standard (or any revision thereof) under section 109 for any air pollutant, a plan which provides for implementation, maintenance and enforcement of such primary standard in each air quality control region (or portion thereof) within such State. In addition, such State shall adopt and submit to the Administrator (either as a part of a plan submitted under the preceding sentence or separately) within nine months after the promulgation of a national ambient air quality secondary standard (or revision thereof), a plan which provides for implementation, maintenance and enforcement of such secondary standard in each air quality control region (or portion thereof) within such State. Unless a separate public hearing is provided, each State shall consider its plan implementing such secondary standard at the hearing required by the first sentence of this paragraph.

"(2) The Administrator shall, within four months after the date required for submission of a plan under paragraph (1), approve or disapprove such plan for each portion thereof. The Administrator shall approve such plan, or any portion thereof, if he determines that it was adopted after reasonable notice and hearing and that—

"(A) (i) in the case of a plan implementing a national primary ambient air quality standard, it provides for the attainment of such primary standard as expeditiously as practicable but (subject to subsection (e)) in no case later than three years from the date of approval of such plan (or any revision thereof to take account of a revised primary standard); and, (ii) in the case of a plan implementing a national secondary ambient air quality standard, it specifies a reasonable time at which such secondary standard will be attained;

"(B) it includes emission limitations, schedules, and timetables for compliance with such limitations, and such other measures as may be necessary to insure attainment and maintenance of such primary or secondary standard, including, but not limited to, land-use and transportation controls;

"(C) it includes provision for establishment and operation of appropriate devices, methods, systems, and procedures necessary to (i) monitor, compile, and analyze data on ambient air quality and, (ii) upon request, make such data available to the Administrator;

"(D) it includes a procedure, meeting the requirements of paragraph (4), for review (prior to construction or modifica-

tion) of the location of new sources to which a standard of performance will apply;

"(E) it contains adequate provisions for intergovernmental cooperation, including measures necessary to insure that emissions of air pollutants from sources located in any air quality control region will not interfere with the attainment or maintenance of such primary or secondary standard in any portion of such region outside of such State or in any other air quality control region;

"(F) it provides (i) necessary assurances that the State will have adequate personnel, funding, and authority to carry out such implementation plan; (ii) requirements for installation of equipment by owners or operators of stationary sources to monitor emissions from such sources; (iii) for periodic reports on the nature and amounts of such emissions; (iv) that such reports shall be correlated by the State agency with any emission limitations or standards established pursuant to this Act, which reports shall be available at reasonable times for public inspection; and (v) for authority comparable to that in section 303, and adequate contingency plans to implement such authority;

"(G) it provides, to the extent necessary and practicable, for periodic inspection and testing of motor vehicles to enforce compliance with applicable emission standards; and

"(H) it provides for revision, after public hearings, of such plan (i) from time to time as may be necessary to take account of revisions of such national primary or secondary ambient air quality standard or the availability of improved or more expeditious methods of achieving such primary or secondary standard; or (ii) whenever the Administrator finds on the basis of information available to him that the plan is substantially inadequate to achieve the national ambient air quality primary or secondary standard which it implements.

"(3)(A) The Administrator shall approve any revision of an implementation plan applicable to an air quality control region if he determines that it meets the requirements of paragraph (2) and has been adopted by the State after reasonable notice and public hearings.

"(B) As soon as practicable, the Administrator shall, consistent with the purposes of this Act and the Energy Supply and Environmental Coordination Act of 1974, review each State's applicable implementation plans and report to the State on whether such plans can be revised in relation to fuel burning stationary sources (or persons supplying fuel to such sources) without interfering with the attainment and maintenance of any national ambient air quality standard within the period permitted in this section. If the Administrator determines that any such plan can be revised, he shall notify the State that a plan revision may be submitted by the State. Any plan revision which is submitted by the State shall, after public notice and opportunity for public hearing, be approved by the Administrator if the revision relates

only to fuel burning stationary sources (or persons supplying fuel to such sources), and the plan as revised complies with paragraph (2) of this subsection. The Administrator shall approve or disapprove any revision no later than three months after its submission.

"(4) The procedure referred to in paragraph (2) (D) for review, prior to construction or modification, of the location of new sources shall (A) provide for adequate authority to prevent the construction or modification of any new source to which a standard of performance under Section 111 will apply at any location which the State determines will prevent the attainment or maintenance within any air quality control region (or portion thereof) within such State of a national ambient air quality primary or secondary standard, and (B) require that prior to commencing construction or modification of any such source, the owner or operator thereof shall submit to such State such information as may be necessary to permit the State to make a determination under clause (A).

"(b) The Administrator may, wherever he determines necessary, extend the period for submission of any plan or portion thereof which implements a national secondary ambient air quality standard for a period not to exceed eighteen months from the date otherwise required for submission of such plan.

"(c) (1) The Administrator shall, after consideration of any State hearing record, promptly prepare and publish proposed regulations setting forth an implementation plan, or portion thereof, for a State if—

"(A) The State fails to submit an implementation plan for any national ambient air quality primary or secondary standard within the time prescribed,

"(B) the plan, or any portion thereof, submitted for such State is determined by the Administrator not to be in accordance with the requirements of this section, or

"(C) the State fails, within 60 days after notification by the Administrator or such longer period as he may prescribe, to revise an implementation plan as required pursuant to a provision of its plan referred to in subsection (a) (2) (H).

If such State held no public hearing associated with respect to such plan (or revision thereof), the Administrator shall provide opportunity for such hearing within such State on any proposed regulation. The Administrator shall, within six months after the date required for submission of such plan (or revision thereof), promulgate any such regulations unless, prior to such promulgation, such State has adopted and submitted a plan (or revision) which the Administrator determines to be in accordance with the requirements of this section.

"(2) (A) The Administrator shall conduct a study and shall submit a report to the Committee on Interstate and Foreign Commerce of the United States House of Representatives and the Committee on Public Works of the United States Senate not later than three months after date of enactment of this paragraph on the necessity of parking surcharge, management of parking

supply, and preferential bus/carpool lane regulations as part of the applicable implementation plans required under this section to achieve and maintain national primary ambient air quality standards. The study shall include an assessment of the economic impact of such regulations, consideration of alternative means of reducing total vehicle miles traveled, and an assessment of the impact of such regulations on other Federal and State programs dealing with energy or transportation. In the course of such study, the Administrator shall consult with other Federal officials including, but not limited to, the Secretary of Transportation, the Federal Energy Administrator, and the Chairman of the Council on Environmental Quality.

"(B) No parking surcharge regulation may be required by the Administrator under paragraph (1) of this subsection as a part of an applicable implementation plan. All parking surcharge regulations previously required by the Administrator shall be void upon the date of enactment of this subparagraph. This subparagraph shall not prevent the Administrator from approving parking surcharges if they are adopted and submitted by a State as part of an applicable implementation plan. The Administrator may not condition approval of any implementation plan submitted by a State on such plan's including a parking surcharge regulation.

"(C) The Administrator is authorized to suspend until January 1, 1975, the effective date or applicability of any regulations for the management of parking supply or any requirement that such regulations be a part of an applicable implementation plan approved or promulgated under this section. The exercise of the authority under this subparagraph shall not prevent the Administrator from approving such regulations if they are adopted and submitted by a State as part of an applicable implementation plan. If the Administrator exercises the authority under this subparagraph, regulations requiring a review or analysis of the impact of proposed parking facilities before construction which take effect on or after January 1, 1975, shall not apply to parking facilities on which construction has been initiated before January 1, 1975.

"(D) For purposes of this paragraph—

"(i) The term 'parking surcharge regulation' means a regulation imposing or requiring the imposition of any tax, surcharge, fee, or other charge on parking spaces, or any other area used for the temporary storage of motor vehicles.

"(ii) The term 'management of parking supply' shall include any requirement providing that any new facility containing a given number of parking spaces shall receive a permit or other prior approval, issuance of which is to be conditioned on air quality considerations.

"(iii) The term 'preferential bus/carpool lane' shall include any requirement for the setting aside of one or more lanes of a street or highway on a permanent or temporary basis for the exclusive use of buses or carpools, or both.

"(E) No standard, plan, or requirement, relating to manage-

ment of parking supply or preferential bus/carpool lanes shall be promulgated after the date of enactment of this paragraph by the Administrator pursuant to this section, unless such promulgation has been subjected to at least one public hearing which has been held in the area affected and for which reasonable notice has been given in such area. If substantial changes are made following public hearings, one or more additional hearings shall be held in such area after such notice.

"(d) For purposes of this Act, an applicable implementation plan is the implementation plan, or most recent revision thereof, which has been approved under subsection (a) or promulgated under subsection (c) and which implements a national primary or secondary ambient air quality standard in a State.

"(e) (1) Upon application of a Governor of a State at the time of submission of any plan implementing a national ambient air quality primary standard, the Administrator may (subject to paragraph (2)) extend the three-year period referred to in subsection (a) (2) (A) (i) for not more than two years for an air quality control region if after review of such plan the Administrator determines that—

"(A) one or more emission sources (or classes of moving sources) are unable to comply with the requirements of such plan which implement such primary standard because the necessary technology or other alternatives are not available or will not be available soon enough to permit compliance within such three-year period, and

"(B) the State has considered and applied as a part of its plan reasonably available alternative means of attaining such primary standard and has justifiably concluded that attainment of such primary standard within the three years cannot be achieved.

"(2) The Administrator may grant an extension under paragraph (1) only if he determines that the State plan provides for—

"(A) application of the requirements of the plan which implement such primary standard to all emission sources in such region other than the sources (or classes) described in paragraph (1) (A) within the three-year period, and

"(B) such interim measures of control of the sources (or classes) described in paragraph (1) (A) as the Administrator determines to be reasonable under the circumstances.

"(f) (1) Prior to the date on which any stationary source or class of moving sources is required to comply with any requirement of an applicable implementation plan the Governor of the State to which such plan applies may apply to the Administrator to postpone the applicability of such requirement to such source (or class) for not more than one year. If the Administrator determines that—

"(A) good faith efforts have been made to comply with such requirement before such date,

"(B) such source (or class) is unable to comply with such requirement because the necessary technology or other alternative methods of control are not available or have not been

available for a sufficient period of time,

"(C) any available alternative operating procedures and interim control measures have reduced or will reduce the impact of such source on public health, and

"(D) the continued operation of such source is essential to national security or to the public health or welfare,

then the Administrator shall grant a postponement of such requirement.

"(2) (A) Any determination under paragraph (1) shall (i) be made on the record after notice to interested persons and opportunity for hearing, (ii) be based upon a fair evaluation of the entire record at such hearing, and (iii) include a statement setting forth in detail the findings and conclusions upon which the determination is based.

"(B) Any determination made pursuant to this paragraph shall be subject to judicial review by the United States Court of Appeals for the circuit which includes such State upon the filing in such court within 30 days from the date of such decision of a petition by any interested person praying that the decision be modified or set aside in whole or in part. A copy of the petition shall forthwith be sent by registered or certified mail to the Administrator and thereupon the Administrator shall certify and file in such court the record upon which the final decision complained of was issued, as provided in section 2112 of title 28, United States Code. Upon the filing of such petition the court shall have jurisdiction to affirm or set aside the determination complained of in whole or in part. The findings of the Administrator with respect to questions of fact (including each determination made under subparagraphs (A), (B), (C), and (D) of paragraph (1)) shall be sustained if based upon a fair evaluation of the entire record at such hearing.

"(C) Proceedings before the court under this paragraph shall take precedence over all the other causes of action on the docket and shall be assigned for hearing and decision at the earliest practicable date and expedited in every way.

"(D) Section 307 (a) (relating to subpenas) shall be applicable to any proceeding under this subsection.

STANDARDS OF PERFORMANCE FOR NEW STATIONARY SOURCES

"SEC. 111. (a) For purposes of this section:

"(1) The term 'standard of performance' means a standard for emissions of air pollutants which reflects the degree of emission limitation achievable through the application of the best system of emission reduction which (taking into account the cost of achieving such reduction) the Administrator determines has been adequately demonstrated.

"(2) The term 'new source' means any stationary source, the construction or modification of which is commenced after the publication of regulations (or, if earlier, proposed regulations) prescribing a standard of performance under this section which will be applicable to such source.

"(3) The term 'stationary source' means any building, structure, facility, or installation which emits or may emit any air pollutant.

"(4) The term 'modification' means any physical change in, or change in the method of operation of, a stationary source which increases the amount of any air pollutant emitted by such source or which results in the emission of any air pollutant not previously emitted.

"(5) The term 'owner or operator' means any person who owns, leases, operates, controls, or supervises a stationary source.

"(6) The term 'existing source' means any stationary source other than a new source.

"(b) (1) (A) The Administrator shall, within 90 days after the date of enactment of the Clean Air Amendments of 1970, publish (and from time to time thereafter shall revise) a list of categories of stationary sources. He shall include a category of sources in such list if he determines it may contribute significantly to air pollution which causes or contributes to the endangerment of public health or welfare.

"(B) Within 120 days after the inclusion of a category of stationary sources in a list under subparagraph (A), the Administrator shall publish proposed regulations, establishing Federal standards of performance for new sources within such category. The Administrator shall afford interested persons an opportunity for written comment on such proposed regulations. After considering such comments, he shall promulgate, within 90 days after such publication, such standards with such modifications as he deems appropriate. The Administrator may, from time to time, revise such standards following the procedure required by this subsection for promulgation of such standards. Standards of performance or revisions thereof shall become effective upon promulgation.

"(2) The Administrator may distinguish among classes, types, and sizes within categories of new sources for the purpose of establishing such standards.

"(3) The Administrator shall, from time to time, issue information on pollution control techniques for categories of new sources and air pollutants subject to the provisions of this section.

"(4) The provisions of this section shall apply to any new source owned or operated by the United States.

"(c) (1) Each State may develop and submit to the Administrator a procedure for implementing and enforcing standards of performance for new sources located in such State. If the Administrator finds the State procedure is adequate, he shall delegate to such State any authority he has under this Act to implement and enforce such standards (except with respect to new sources owned or operated by the United States).

"(2) Nothing in this subsection shall prohibit the Administrator from enforcing any applicable standard of performance under this section.

"(d) (1) The Administrator shall prescribe regulations which

shall establish a procedure similar to that provided by section 110 under which each State shall submit to the Administrator a plan which (A) establishes emission standards for any existing source for any air pollutant (i) for which air quality criteria have not been issued or which is not included on a list published under section 108(a) or 112(b) (1) (A) but (ii) to which a standard of performance under subsection (b) would apply if such existing source were a new source, and (B) provides for the implementation and enforcement of such emission standards.

"(2) The Administrator shall have the same authority—

"(A) to prescribe a plan for a State in cases where the State fails to submit a satisfactory plan as he would have under section 110(c) in the case of failure to submit an implementation plan, and

"(B) to enforce the provisions of such plan in cases where the State fails to enforce them as he would have under sections 113 and 114 with respect to an implementation plan.

"(e) After the effective date of standards of performance promulgated under this section, it shall be unlawful for any owner or operator of any new source to operate such source in violation of any standard of performance applicable to such source.

NATIONAL EMISSION STANDARDS FOR HAZARDOUS AIR POLLUTANTS

"SEC. 112. (a) For purposes of this section—

"(1) The term 'hazardous air pollutant' means an air pollutant to which no ambient air quality standard is applicable and which in the judgment of the Administrator may cause, or contribute to, an increase in mortality or an increase in serious irreversible, or incapacitating reversible, illness.

"(2) The term 'new source' means a stationary source the construction or modification of which is commenced after the Administrator proposes regulations under this section establishing an emission standard which will be applicable to such source.

"(3) The terms 'stationary source,' 'modification,' 'owner or operator' and 'existing source' shall have the same meaning as such terms have under section 111(a).

"(b) (1) (A) The Administrator shall, within 90 days after the date of enactment of the Clean Air Amendments of 1970, publish (and shall from time to time thereafter revise) a list which includes each hazardous air pollutant for which he intends to establish an emission standard under this section.

"(B) Within 180 days after the inclusion of any air pollutant in such list, the Administrator shall publish proposed regulations establishing emission standards for such pollutant together with a notice of a public hearing within thirty days. Not later than 180 days after such publication, the Administrator shall prescribe an emission standard for such pollutant, unless he finds, on the basis of information presented at such hearings, that such pollutant clearly is not a hazardous air pollutant. The Administrator shall

establish any such standard at the level which in his judgment provides an ample margin of safety to protect the public health from such hazardous air pollutants.

"(C) Any emission standard established pursuant to this section shall become effective upon promulgation.

"(2) The Administrator shall, from time to time, issue information on pollution control techniques for air pollutants subject to the provisions of this section.

"(c) (1) After the effective date of any emission standard under this section—

"(A) no person may construct any new source or modify any existing source which, in the Administrator's judgment, will emit an air pollutant to which such standard applies unless the Administrator finds that such source if properly operated will not cause emissions in violation of such standard, and

"(B) no air pollutant to which such standard applies may be emitted from any stationary source in violation of such standard, except that in the case of an existing source—

"(i) such standard shall not apply until 90 days after its effective date, and

"(ii) the Administrator may grant a waiver permitting such source a period of up to two years after the effective date of a standard to comply with the standard, if he finds that such period is necessary for the installation of controls and that steps will be taken during the period of the waiver to assure that the health of persons will be protected from imminent endangerment.

"(2) The President may exempt any stationary source from compliance with paragraph (1) for a period of not more than two years if he finds that the technology to implement such standards is not available and the operation of such source is required for reasons of national security. An exemption under this paragraph may be extended for one or more additional periods, each period not to exceed two years. The President shall make a report to Congress with respect to each exemption (or extension thereof) made under this paragraph.

"(d) (1) Each State may develop and submit to the Administrator a procedure for implementing and enforcing *emission standards for hazardous air pollutants* for stationary sources located in such State. If the Administrator finds the State procedure is adequate, he shall delegate to such State any authority he has under this Act to implement and enforce such standards (except with respect to stationary sources owned or operated by the United States).

"(2) Nothing in this subsection shall prohibit the Administrator from enforcing any applicable *emission* standard under this section.

FEDERAL ENFORCEMENT

"SEC. 113. (a) (1) Whenever, on the basis of any information available to him, the Administrator finds that any person is in violation of any requirement of an applicable implementation plan, the Administrator shall notify the person in violation of the plan and the State in which the plan applies of such finding. If such violation extends beyond the 30th day after the date of the Administrator's notification, the Administrator may issue an order requiring such person to comply with the requirements of such plan or he may bring a civil action in accordance with subsection (b).

"(2) Whenever, on the basis of information available to him, the Administrator finds that violations of an applicable implementation plan are so widespread that such violations appear to result from a failure of the State in which the plan applies to enforce the plan effectively, he shall so notify the State. If the Administrator finds such failure extends beyond the thirtieth day after such notice, he shall give public notice of such finding. During the period beginning with such public notice and ending when such State satisfies the Administrator that it will enforce such plan (hereafter referred to in this section as 'period of Federally assumed enforcement') the Administrator may enforce any requirement of such plan with respect to any person—

"(A) by issuing an order to comply with such requirement, or

"(B) by bringing a civil action under subsection (b).

"(3) Whenever, on the basis of any information available to him, the Administrator finds that any person is in violation of section 111 (e) (relating to new source performance standards), 112(c) (relating to standards for hazardous emissions), or 119(g) (relating to energy-related authorities), or is in violation of any requirement of section 114 (relating to inspections, etc.), he may issue an order requiring such person to comply with such section or requirement, or he may bring a civil action in accordance with subsection (b).

"(4) An order issued under this subsection (other than an order relating to a violation of section 112) shall not take effect until the person to whom it is issued has had an opportunity to confer with the Administrator concerning the alleged violation. A copy of any order issued under this subsection shall be sent to the State air pollution control agency of any State in which the violation occurs. Any order issued under this subsection shall state with reasonable specificity the nature of the violation, specify a time for compliance which the Administrator determines is reasonable, taking into account the seriousness of the violation and any good faith efforts to comply with applicable requirements. In any case in which an order under this subsection (or notice to a violator under paragraph (1)) is issued to a corporation, a copy of such order (or notice) shall be issued to appropriate corporate officers.

"(b) The Administrator may commence a civil action for appropriate relief, including a permanent or temporary injunction, whenever any person—

"(1) violates or fails or refuses to comply with any order issued under subsection (a) ; or

"(2) violates any requirement of an applicable implementation plan (A) during any period of Federally assumed enforcement, or (B) more than 30 days after having been notified by the Administrator under subsection (a)(1) of a finding that such person is violating such requirement; or

"(3) violates section 111(e), 112(c), or 119(g) ; or

"(4) fails or refuses to comply with any requirement of section 114.

Any action under this subsection may be brought in the district court of the United States for the district in which the defendant is located or resides or is doing business, and such court shall have jurisdiction to restrain such violation and to require compliance. Notice of the commencement of such action shall be given to the appropriate State air pollution control agency.

"(c) (1) Any person who knowingly—

"(A) violates any requirement of an applicable implementation plan (i) during any period of Federally assumed enforcement, or (ii) more than 30 days after having been notified by the Administrator under subsection (a)(1) that such person is violating such requirement, or

"(B) violates or fails or refuses to comply with any order issued by the Administrator under subsection (a), or

"(C) violates section 111(e), section 112(c), or section 119(g) shall be punished by a fine of not more than $25,000 per day of violation, or by imprisonment for not more than one year, or by both. If the conviction is for a violation committed after the first conviction of such person under this paragraph, punishment shall be by a fine of not more than $50,000 per day of violation, or by imprisonment for not more than two years, or by both.

"(2) Any person who knowingly makes any false statement, representation, or certification in any application, record, report, plan, or other document filed or required to be maintained under this Act or who falsifies, tampers with, or knowingly renders inaccurate any monitoring device or method required to be maintained under this Act, shall upon conviction, be punished by a fine of not more than $10,000, or by imprisonment for not more than six months, or by both.

INSPECTIONS, MONITORING, AND ENTRY

"SEC. 114. (a) For the purpose (i) of developing or assisting in the development of any implementation plan under section 110 or 111(d), any standard of performance under section 111, or any emission standard under section 112,(ii) of determining whether any person is in violation of any such standard or any requirement of such a plan, or (iii) carrying out section 119 or 303—

"(1) the Administrator may require the owner or operator of any emission source to (A) establish and maintain such records, (B) make such reports, (C) install, use, and maintain such monitoring equipment or methods, (D) sample such emissions (in accordance with such methods, at such locations, at such intervals, and in such manner as the Administrator shall prescribe), and (E) provide such other information, as he may reasonably require; and

"(2) the Administrator or his authorized representative, upon presentation of his credentials—

"(A) shall have a right of entry to, upon, or through any premises in which an emission source is located or in which any records required to be maintained under paragraph (1) of this section are located, and

"(B) may at reasonable times have access to and copy any records, inspect any monitoring equipment or method required under paragraph (1), and sample any emissions which the owner or operator of such source is required to sample under paragraph (1).

"(b) (1) Each State may develop and submit to the Administrator a procedure for carrying out this section in such State. If the Administrator finds the State procedure is adequate, he may delegate to such State any authority he has to carry out this section (except with respect to new sources owned or operated by the United States).

"(2) Nothing in this subsection shall prohibit the Administrator from carrying out this section in a State.

"(c) Any records, reports or information obtained under subsection (a) shall be available to the public, except that upon a showing satisfactory to the Administrator by any person that records, reports, or information, or particular part thereof, (other than emission data) to which the Administrator has access under this section if made public, would divulge methods or processes entitled to protection as trade secrets of such person, the Administrator shall consider such record, report, or information or particular portion thereof confidential in accordance with the purposes of section 1905 of title 18 of the United States Code, except that such record, report, or information may be disclosed to other officers, employees, or authorized representatives of the United States concerned with carrying out this Act or when relevant in any proceeding under this Act.

ABATEMENT BY MEANS OF CONFERENCE PROCEDURE IN CERTAIN CASES

"SEC. 115. (a) The pollution of the air in any State or States which endangers the health or welfare of any persons and which is covered by subsection (b) or (c) shall be subject to abatement as provided in this section.

"(b) (1) Whenever requested by the Governor of any State, a State air pollution control agency, or (with the concurrence of the

Governor and the State air pollution control agency for the State in which the municipality is situated) the governing body of any municipality, the Administrator shall, if such request refers to air pollution which is alleged to endanger the health or welfare of persons in a State other than that in which the discharge or discharges (causing or contributing to such pollution) originate, give formal notification thereof to the air pollution control agency of the municipality where such discharge or discharges originate, to the air pollution control agency of the State in which such municipality is located, and to the interstate air pollution control agency, if any, in whose jurisdictional area such municipality is located, and shall call promptly a conference of such agency or agencies and of the air pollution control agencies of the municipalities which may be adversely affected by such pollution, and the air pollution control agency, if any, of each State, or for each area, in which any such municipality is located.

"(2) Whenever requested by the Governor of any State, a State air pollution control agency, or (with the concurrence of the Governor and the State air pollution control agency for the State in which the municipality is situated) the governing body of any municipality, the Administrator shall, if such request refers to alleged air pollution which is endangering the health or welfare of persons only in the State in which the discharge or discharges (causing or contributing to such pollution) originate and if a municipality affected by such air pollution, or the municipality in which such pollution originates, has either made or concurred in such request, give formal notification thereof to the State air pollution control agency, to the air pollution control agencies of the municipality where such discharge or discharges originate, and of the municipality or municipalities alleged to be adversely affected thereby, and to any interstate air pollution control agency, whose jurisdictional area includes any such municipality and shall promptly call a conference of such agency or agencies, unless in the judgment of the Administrator, the effect of such pollution is not of such significance as to warrant exercise of Federal jurisdiction under this section.

"(3) The Administrator may, after consultation with State officials of all affected States, also call such a conference whenever, on the basis of reports, surveys, or studies, he has reason to believe that any pollution referred to in subsection (a) is occurring and is endangering the health and welfare of persons in a State other than that in which the discharge or discharges originate. The Administrator shall invite the cooperation of any municipal, State, or interstate air pollution control agencies having jurisdiction in the affected area on any surveys or studies forming the basis of conference action.

"(4) A conference may not be called under this subsection with respect to an air pollutant for which (at the time the conference is called) a national primary or secondary ambient air quality standard is in effect under section 109.

"(c) Whenever the Administrator, upon receipt of reports, surveys, or studies from any duly constituted international agency,

has reason to believe that any pollution referred to in subsection (a) which endangers the health or welfare of persons in a foreign country is occurring, or whenever the Secretary of State requests him to do so with respect to such pollution which the Secretary of State alleges is of such a nature, the Administrator shall give formal notification thereof to the air pollution control agency of the municipality where such discharge or discharges originate, to the air pollution control agency of the State in which such municipality is located, and to the interstate air pollution control agency, if any, in the jurisdictional area of which such municipality is located, and shall call promptly a conference of such agency or agencies. The Administrator shall invite the foreign country which may be adversely affected by the pollution to attend and participate in the conference, and the representative of such country shall, for the purpose of the conference and any further proceeding resulting from such conference, have all the rights of a State air pollution control agency. This subsection shall apply only to a foreign country which the Administrator determines has given the United States essentially the same rights with respect to the prevention or control of air pollution occurring in that country as is given that country by this subsection.

"(d) (1) The agencies called to attend any conference under this section may bring such persons as they desire to the conference. The Administrator shall deliver to such agencies and make available to other interested parties, at least thirty days prior to any such conference, a Federal report with respect to the matters before the conference, including data and conclusions or findings (if any) ; and shall give at least thirty days' prior notice of the conference date to any such agency, and to the public by publication on at least three different days in a newspaper or newspapers of general circulation in the area. The chairman of the conference shall give interested parties an opportunity to present their views to the conference with respect to such Federal report, conclusions or findings (if any), and other pertinent information. The Administrator shall provide that a transcript be maintained of the proceedings of the conference and that a copy of such transcript be made available on request of any participant in the conference at the expense of such participant.

"(2) Following this conference, the Administrator shall prepare and forward to all air pollution control agencies attending the conference a summary of conference discussions including (A) occurrence of air pollution subject to abatement under this Act; (B) adequacy of measures taken toward abatement of the pollution; and (C) nature of delays, if any, being encountered in abating the pollution.

"(e) If the Administrator believes, upon the conclusion of the conference or thereafter, that effective progress toward abatement of such pollution is not being made and that the health or welfare of any persons is being endangered, he shall recommend to the appropriate State, interstate, or municipal air pollution control agency (or to all such agencies) that the necessary remedial action be taken. The Administrator shall allow at least six months

from the date he makes such recommendations for the taking of such recommended action.

"(f) (1) If, at the conclusion of the period so allowed, such remedial action or other action which in the judgment of the Administrator is reasonably calculated to secure abatement of such pollution has not been taken, the Administrator shall call a public hearing, to be held in or near one or more of the places where the discharge or discharges causing or contributing to such pollution originated, before a hearing board of five or more persons appointed by the Administrator. Each State in which any discharge causing or contributing to such pollution originates and each State claiming to be adversely affected by such pollution shall be given an opportunity to select one member of such hearing board and each Federal department, agency, or instrumentality having a substantial interest in the subject matter as determined by the Administrator shall be given an opportunity to select one member of such hearing board, and one member shall be a representative of the appropriate interstate air pollution agency if one exists, and not less than a majority of such hearing board shall be persons other than officers or employees of the Environmental Protection Agency. At least three weeks' prior notice of such hearing shall be given to the State, interstate, and municipal air pollution control agencies called to attend such hearing and to the alleged polluter or polluters. All interested parties shall be given a reasonable opportunity to present evidence to such hearing board.

"(2) On the basis of evidence presented at such hearing, the hearing board shall make findings as to whether pollution referred to in subsection (a) is occurring and whether effective progress toward abatement thereof is being made. If the hearing board finds such pollution is occurring and effective progress toward abatement thereof is not being made it shall make recommendations to the Administrator concerning the measures, if any, which it finds to be reasonable and suitable to secure abatement of such pollution.

"(3) The Administrator shall send such findings and recommendations to the person or persons discharging any matter causing or contributing to such pollution; to air pollution control agencies of the State or States and of the municipality or municipalities where such discharge or discharges originate; and to any interstate air pollution control agency whose jurisdictional area includes any such municipality, together with a notice specifying a reasonable time (not less than six months) to secure abatement of such pollution.

"(g) If action reasonably calculated to secure abatement of the pollution within the time specified in the notice following the public hearing is not taken the Administrator—

> "(1) in the case of pollution of air which is endangering the health or welfare of persons (A) in a State other than that in which the discharge or discharges (causing or contributing to such pollution) originate, or (B) in a foreign country which has participated in a conference called under subsection (c) of this section and in all proceedings under this

section resulting from such conference, may request the Attorney General to bring a suit on behalf of the United States in the appropriate United States district court to secure abatement of the pollution;

"(2) in the case of pollution of air which is endangering the health or welfare of persons only in the State in which the discharge or discharges (causing or contributing to such pollution) originate, at the request of the Governor of such State, shall provide such technical and other assistance as in his judgment is necessary to assist the State in judicial proceedings to secure abatement of the pollution under State or local law or, at the request of the Governor of such State, shall request the Attorney General to bring suit on behalf of the United States in the appropriate United States district court to secure abatement of the pollution.

"(h) The court shall receive in evidence in any suit brought in a United States court under subsection (g) of this section a transcript of the proceedings before the board and a copy of the board's recommendations and shall receive such further evidence as the court in its discretion deems proper. The court, giving due consideration to the practicability of complying with such standards as may be applicable and to the physical and economic feasibility of securing abatement of any pollution proved, shall have jurisdiction to enter such judgment, and orders enforcing such judgment, as the public interest and the equities of the case may require.

"(i) Members of any hearing board appointed pursuant to subsection (f) who are not regular full-time officers or employees of the United States shall, while participating in the hearing conducted by such board or otherwise engaged on the work of such board, be entitled to receive compensation at a rate fixed by the Administration, but not exceeding $100 per diem, including traveltime, and while away from their homes or regular places of business they may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by law (5 U.S.C. 73b–2) for persons in the Government service employed intermittently.

"(j) (1) In connection with any conference called under this section, the Administrator is authorized to require any person whose activities result in the emission of air pollutants causing or contributing to air pollution to file with him, in such form as he may prescribe, a report, based on existing data, furnishing to the Administrator such information as may reasonably be required as to the character, kind, and quantity of pollutants discharged and the use of devices or other means to prevent or reduce the emission of pollutants by the person filing such a report. After a conference has been held with respect to any such pollution the Administrator shall require such reports from the person whose activities result in such pollution only to the extent recommended by such conference. Such report shall be made under oath or otherwise, as the Administrator may prescribe, and shall be filed with the Administrator within such reasonable period as the Administrator may prescribe, unless additional time be granted by

the Administrator. No person shall be required in such report to divulge trade secrets or secret processes and all information reported shall be considered confidential for the purposes of section 1905 of title 18 of the United States Code.

"(2) If any person required to file any report under this subsection shall fail to do so within the time fixed by the Administrator for filing the same, and such failure shall continue for thirty days after notice of such default, such person shall forfeit to the United States the sum of $100 for each and every day of the continuance of such failure, which forfeiture shall be payable into the Treasury of the United States, and shall be recoverable in a civil suit in the name of the United States brought in the district where such person has his principal office or in any district in which he does business: *Provided,* that the Administrator may upon application therefore remit or mitigate any forfeiture provided for under this subsection and he shall have authority to determine the facts upon all such applications.

"(3) It shall be the duty of the various United States attorneys, under the direction of the Attorney General of the United States, to prosecute for the recovery of such forfeitures.

"(k) No order or judgment under this section, or settlement, compromise, or agreement respecting any action under this section (whether or not entered or made before the date of enactment of the Clean Air Amendments of 1970) shall relieve any person of any obligation to comply with any requirement of an applicable implementation plan, or with any standard prescribed under section 111 or 112.

RETENTION OF STATE AUTHORITY

"SEC. 116. Except as otherwise provided in sections 119(c), (e), and (f), 209, 211(c)(4), and 233 (preempting certain State regulation of moving sources) nothing in this Act shall preclude or deny the right of any State or political subdivision thereof to adopt or enforce (1) any standard or limitation respecting emissions of air pollutants or (2) any requirement respecting control or abatement of air pollution; except that if an emission standard or limitation is in effect under an applicable implementation plan or under section 111 or 112, such State or political subdivision may not adopt or enforce any emission standard or limitation which is less stringent than the standard or limitation under such plan or section.

PRESIDENT'S AIR QUALITY ADVISORY BOARD AND ADVISORY COMMITTEES

"SEC. 117. (a)(1) There is hereby established in the Environmental Protection Agency an Air Quality Advisory Board, composed of the Administrator or his designee, who shall be Chairman, and fifteen members appointed by the President, none of whom shall be Federal officers or employees. The appointed

members, having due regard for the purposes of this Act, shall be selected from among representatives of various State, interstate, and local governmental agencies, of public or private interests contributing to, affected by, or concerned with air pollution, and of other public and private agencies, organizations, or groups demonstrating an active interest in the field of air pollution prevention and control, as well as other individuals who are expert in this field.

"(2) Each member appointed by the President shall hold office for a term of three years, except that (A) any member appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was appointed shall be appointed for the remainder of such term, and (B) the terms of office of the members first taking office pursuant to this subsection shall expire as follows: five at the end of one year after the date of appointment, five at the end of two years after such date, and five at the end of three years after such date, as designated by the President at the time of appointment, and (C) the term of any member under the preceding provisions shall be extended until the date on which his successor's appointment is effective. None of the members shall be eligible for reappointment within one year after the end of his preceding term, unless such term was for less than three years.

"(b) The Board shall advise and consult with the Administrator on matters of policy relating to the activities and functions of the Administrator under this Act and make such recommendations as it deems necessary to the President.

"(c) Such clerical and technical assistance as may be necessary to discharge the duties of the Board and such other advisory committees as hereinafter authorized shall be provided from the personnel of the Environmental Protection Agency.

"(d) In order to obtain assistance in the development and implementation of the purposes of this Act, including air quality criteria, recommended control techniques, standards, research and development, and to encourage the continued efforts on the part of industry to improve air quality and to develop economically feasible methods for the control and abatement of air pollution, the Administrator shall from time to time establish advisory committees. Committee members shall include, but not be limited to, persons who are knowledgeable concerning air quality from the standpoint of health, welfare, economics, or technology.

"(e) The members of the Board and other advisory committees appointed pursuant to this Act who are not officers or employees of the United States while attending conferences or meetings of the Board or while otherwise serving at the request of the Administrator, shall be entitled to receive compensation at a rate to be fixed by the Administrator, but not exceeding $100 per diem, including traveltime, and while away from their homes or regular places of business they may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by section 5703 of

title 5 of the United States Code for persons in the Government service employed intermittently.

"(f) Prior to—

"(1) issuing criteria for an air pollutant under section 108(a)(2),

"(2) publishing any list under section 111(b)(1)(A) or 112(b)(1)(A),

"(3) publishing any standard under section 111(b)(1)(B) or section 112(b)(1)(B), or

"(4) publishing any regulation under section 202(a),

the Administrator shall, to the maximum extent practicable within the time provided, consult with appropriate advisory committees, independent experts, and Federal departments and agencies.

CONTROL OF POLLUTION FROM FEDERAL FACILITIES

"SEC. 118. Each department, agency, and instrumentality of the executive, legislative, and judicial branches of the Federal Government (1) having jurisdiction over any property or facility, or (2) engaged in any activity resulting, or which may result, in the discharge of air pollutants, shall comply with Federal, State, interstate, and local requirements respecting control and abatement of air pollution to the same extent that any person is subject to such requirements. The President may exempt any emission source of any department, agency, or instrumentality in the executive branch from compliance with such a requirement if he determines it to be in the paramount interest of the United States to do so, except that no exemption may be granted from section 111, and an exemption from section 112 may be granted only in accordance with section 112(c). No such exemption shall be granted due to lack of appropriation unless the President shall have specifically requested such appropriation as a part of the budgetary process and the Congress shall have failed to make available such requested appropriation. Any exemption shall be for a period not in excess of one year, but additional exemptions may be granted for periods not to exceed one year upon the President's making a new determination. The President shall report each January to the Congress all exemptions from the requirements of this section granted during the preceding calendar year, together with his reason for granting each such exemption.

ENERGY-RELATED AUTHORITY

"Sec. 119(a) For purposes of this section:

"(1) The term 'stationary source fuel or emission limitation' means any emission limitation, schedule or timetable of compliance, or other requirement, which is prescribed under this Act (other than this section, or section 111(b), 112, or 303) or contained in an applicable implementation plan (other than a requirement imposed under authority described in section 110(a)(2)(F)(v)), and which limits, or

is designed to limit, stationary source emissions resulting from combustion of fuels, including a prohibition on, or specification of, the use of any fuel of any type, grade, or pollution characteristic.

"(2) The term 'air pollution requirement' means any emission limitation, schedule or timetable for compliance, or other requirement, which is prescribed under any Federal, State, or local law or regulation, including this Act (except for any requirement prescribed under subsection (c) or (d) of this section, section 110(a)(2)(F)(v), or section 303), and which limits stationary source emissions resulting from combustion of fuels (including a prohibition on, or specification of, the use of any fuel of any type, grade, or pollution characteristic).

"(3) The terms 'stationary source' and 'source' have the same meaning as the term 'stationary source' has under section 111(a)(3); except that such terms include any owner or operator (as defined in section 111(a)(5)) of such source.

"(4) The term 'coal' includes coal derivatives.

"(5) The term 'primary standard condition' means a limitation, requirement, or other measure, prescribed by the Administrator under subsection (d)(2)(A) of this section.

"(6) The term 'regional limitation' means the requirement of subsection (c)(2)(D) of this section.

"(b)(1)(A) The Administrator may, for any period beginning on or after the date of enactment of this section and ending on or before June 30, 1975, temporarily suspend an stationary source fuel or emission limitation as it applies to any person—

"(i) if the Administrator finds that such person will be unable to comply with any such limitation during such period solely because of unavailability of types or amounts of fuels (unless such unavailability results from an order under section 2(a) of the Energy Supply and Environmental Coordination Act of 1974), or

"(ii) if such person is a source which is described in subsection (c)(1)(A) or (B) of this section and which has converted to coal, and the Administrator finds that the source will be able to comply during the period of the suspension with all primary standard conditions which will be applicable to such source.

Any suspension under this paragraph, the imposition of any interim requirement on which suspension is conditioned under paragraph (3) of this subsection, and the imposition of any primary standard condition which relates to such suspension, shall be exempted from any procedural requirements set forth in this Act or in any other provision of Federal, State, or local law; except as provided in subparagraph (B) of this paragraph.

"(B) The Administrator shall give notice to the public and afford interested persons an opportunity for written and oral presentations of data, views, and arguments prior to issuing a suspension under subparagraph (A), or denying an application for

such a suspension, unless otherwise provided by the Administrator for good cause found and published in the Federal Register. In any case, before issuing such a suspension, he shall give actual notice to the Governor of the State in which the affected source or sources are located, and to appropriate local governmental officials (as determined by the Administrator). The issuing or denial of such a suspension, the imposition of an interim requirement, and the imposition of any primary standard condition shall be subject to judicial review only on the grounds specified in paragraph (2)(B), (2)(C), or (2)(D), of section 706 of title 5, United States Code, and shall not be subject to any proceeding under section 304(a)(2) or 307(b) and (c) of this Act.

"(2) In issuing any suspension under paragraph (1), the Administrator is authorized to act on his own motion or upon application by any person (including a public officer or public agency).

"(3) Any suspension under paragraph (1) shall be conditioned upon compliance with such interim requirements as the Administrator determines are reasonable and practicable. Such interim requirements shall include, but need not be limited to, (A) a requirement that the persons receiving the suspension comply with such reporting requirements as the Administrator determines may be necessary, (B) such measures as the Administrator determines are necessary to avoid an imminent and substantial endangerment to health of persons, and (C) in the case of a suspension under paragraph (1)(A)(i), requirements that the suspension shall be inapplicable during any period during which fuels which would enable compliance with the suspended stationary source fuel or emission limitations are in fact reasonably available (as determined by the Administrator) to such person.

"(c)(1) Except as provided in paragraph (2) of this subsection, the Administrator shall issue a compliance date extension to any fuel-burning stationary source—

"(A) which is prohibited from using petroleum products or natural gas by reason of an order which is in effect under section 2(a) and (b) of the Energy Supply and Environmental Coordination Act of 1974, or

"(B) which the Administrator determines began conversion to the use of coal as its primary energy source during the period beginning on September 15, 1973, and ending on March 15, 1974,

and which, on or after September 15, 1973, converts to the use of coal as its primary energy source. If a compliance date extension is issued to a source, such source shall not, until January 1, 1979, be prohibited, by reason of the application of any air pollution requirement, from burning coal which is available to such source, except as provided in subsection (d)(3). For purposes of this paragraph, the term 'began conversion' means action by the source during the period beginning on September 15, 1973, and ending on March 15, 1974 (such as entering into a contract binding on such source for obtaining coal, or equipment or facilities to burn coal; or applying for an air pollution variance

to enable such source to burn coal) which the Administrator finds evidences a decision (made prior to March 15, 1974) to convert to burning coal as a result of the unavailability of an adequate supply of fuels required for compliance with the applicable implementation plan, and a good faith effort to expeditiously carry out such decision.

"(2)(A) A compliance date extension under paragraph (1) of this subsection may be issued to a source only if—

(i) the Administrator finds that such source will not be able to burn coal which is available to such source in compliance with all applicable air pollution requirements without a compliance date extension,

(ii) the Administrator finds that the source will be able during the period of the compliance date extension to comply with all the primary standard conditions which are required under subsection (d)(2) to be applicable to such source, and with the regional limitation if applicable to such source, and

(iii) the source has submitted to the Administrator a plan for compliance for such source which the Administrator has approved.

A plan submitted under clause (iii) of the preceding sentence shall be approved only if it meets the requirements of regulations prescribed under subparagraph (B). The Administrator shall approve or disapprove any such plan within 60 days after such plan is submitted.

"(B) Not later than 90 days after the date of enactment of this section, the Administrator shall prescribe regulations requiring that any source to which a compliance date extension applies submit and obtain approval of its means for and schedule of compliance with the requirements of subparagraph (C) of this paragraph. Such regulations shall include requirements that such schedules shall include dates by which any such source must—

"(i) enter into contracts (or other obligations enforceable against such source) which the Administrator has approved as being adequate to provide for obtaining a long-term supply of coal which enables such source to achieve the emission reduction required by subparagraph (C), or

(ii) if coal which enables such source to achieve such emission reduction is not available to such source, enter into contracts (or other obligations enforceable against such source) which the Administrator has approved as being adequate to provide for obtaining (I) a long-term supply of other coal, and (II) continuous emission reduction systems necessary to permit such source to burn such coal and to achieve the degree of emission reduction required by subparagraph (C).

Regulations under this subparagraph shall provide that contracts or other obligations required to be approved under this subparagraph must be approved before they are entered into (except that a contract or obligation which was entered into before

the date of enactment of this section may be approved after such date).

"(C) Regulations under subparagraph (B) shall require that the source achieve the most stringent degree of emission reduction that such source would have been required to achieve under the applicable implementation plan which was in effect on the date of submittal (under subparagraph (B) of this paragraph) of the means for and schedule of compliance (or if no applicable implementation plan was in effect on such date, under the first applicable implementation plan which takes effect after such date). Such degree of emission reduction shall be achieved as soon as practicable, but not later than December 31, 1978; except that, in the case of a source for which a continuous emission reduction system is required for sulfur-related emissions, reduction of such emissions shall be achieved on a date designated by the Administrator (but not later than January 1, 1979). Such regulations shall also include such interim requirements as the Administrator determines are reasonable and practicable, including requirements described in subparagraphs (A) and (B) of subsection (b)(3) and requirements to file progress reports.

"(D) A source which is issued a compliance date extension under this subsection, and which is located in an air quality control region in which a national primary ambient air quality standard for an air pollutant is not being met, may not emit such pollutant in amounts which exceed any emission limitation (and may not violate any other requirement) which applies to such source, under the applicable implementation plan for such pollutant. For purposes of this subparagraph, applicability of any such limitation or requirement to a source shall be determined without regard to this subsection or subsection (b).

"(3) A source to which this subsection applies may, upon the expiration of a compliance date extension, receive a one-year postponement of the application of any requirement of an applicable implementation plan under the conditions and in the manner provided in section 110(f).

"(4) The Administrator shall give notice to the public and afford an opportunity for oral and written presentations of data, views, and arguments before issuing any compliance date extension, prescribing any regulation under paragraph (2) of this subsection, making any finding under paragraph (2)(A) of this subsection, imposing any requirement on a source pursuant to paragraph (2) or any regulation thereunder, prescribing a primary standard condition under subsection (d)(2) which applies to a source to which an extension is issued under this subsection, or acting on any petition under subsection (d)(2)(C).

"(d)(1)(A) Whenever the Federal Energy Administrator issues an order under section 2(a) of the Energy Supply and Environmental Coordination Act of 1974 which will not apply after June 30, 1975, the Administrator of the Environmental Protection Agency shall certify to him—

"(i) in the case of a source to which no suspension will be issued under subsection (b), the earliest date on which

such source will be able to burn coal and to comply with all applicable air pollution requirements, or

"(ii) in the case of a source to which a suspension will be issued under subsection (b) of this section, the date determined under paragraph (2)(B) of this subsection.

"(B) Whenever the Federal Energy Administrator issues an order under section 2(a) of such Act which will apply after June 30, 1975, the Administrator of the Environmental Protection Agency shall notify him if such source will be able, on and after July 1, 1975, to burn coal and to comply with all applicable air pollution requirements without a compliance date extension under subsection (c). If such notification is not given—

"(i) in the case of a source which is eligible for a compliance date extension under subsection (c), the Administrator of the Environmental Protection Agency shall certify to the Federal Energy Administrator the date determined under paragraph (2)(B) of this subsection, and

"(ii) in the case of a source which is not eligible for such an extension, the Administrator of the Environmental Protection Agency shall certify to the Federal Energy Administrator the earliest date on which the source will be able to burn coal and to comply with all applicable air pollution requirements.

"(2)(A) The Administrator of the Environmental Protection Agency, after consultation with appropriate States, shall prescribe (and may from time to time, after such consultation, modify) emission limitations, requirements respecting pollution characteristics of coal, or other enforceable measures for control of emissions, for each source to which a suspension under subsection (b)(1)(A)(ii) will apply, and for each source to which a compliance date extension under subsection (c)(1) will apply. Such limitations, requirements, and measures shall be those which he determines must be complied with by the source in order to assure (throughout the period that the suspension or extension will be in effect) that the burning of coal by such source will not result in emissions which cause or contribute to concentrations of any air pollutant in excess of any national primary ambient air quality standard for such pollutant.

"(B) Whenever the Administrator prescribes a limitation, requirement, or measure under subparagraph (A) of this paragraph with respect to a source, he shall determine the earliest date on which such source will be able to comply with such limitation, requirement, or measure, and with any regional limitation applicable to such source.

"(C) An air pollution control agency may petition the Administrator (A) to modify any limitation, requirement, or other measure under this paragraph so as to assure compliance with the requirements of this paragraph, or (B) to issue to the Federal Energy Administration the certification described in paragraph (3)(B) on the grounds described in clause (iii) thereof. The Administrator shall take the action requested in the petition, or

deny the petition, within 90 days after the date of receipt of the petition.

"(3)(A) If the Administrator determines that a source to which a suspension under subsection (b)(1)(A)(ii) or to which a compliance date extension under subsection (c)(1) applies is not in compliance with any primary standard condition, or that a source to which a compliance date extension applies is not in compliance with a regional limitation applicable to it, he shall (except as provided in subparagraph (B)) either—

"(i) enforce compliance with such condition or limitation under section 113, or

"(ii) (after notice to the public and affording an opportunity for interested persons to present data, views, and arguments, including oral presentations, to the extent practicable) revoke such suspension or compliance date extension.

"(B) If the Administrator finds that for any period—

"(i) a source, to which an order under section 2(a) of the Energy Supply and Environmental Coordination Act of 1974 applies, will be unable to comply with a primary standard condition or regional limitation,

"(ii) such a source will not be in compliance with such a condition or limitation, but such condition or limitation cannot be enforced because of a court order restraining its enforcement, or

"(iii) the burning of coal by such a source will result in an increase in emissions of any air pollutant for which national ambient air quality standards have not been promulgated (or an air pollutant which is transformed in the atmosphere into an air pollutant for which such a standard has not been promulgated), and that such increase may cause (or materially contribute to) a significant risk to public health,

he shall notify the Federal Energy Administrator of his finding and certify the period for which such order under such section 2(a) shall not be in effect with respect to such source. Subject to the conditions of the preceding sentence, such certification may be modified from time to time. For purposes of this subsection, subsection (c), and section 2(a) or (b) of the Energy Supply and Environmental Coordination Act of 1974, a source shall be considered unable to comply with an air pollution requirement (including a primary standard condition or regional limitation) only if necessary technology or other alternative methods of control are not available or have not been available for a sufficient period of time.

"(4) Nothing in this Act shall prohibit a State, political subdivision of a State, or agency or instrumentality of either, from enforcing any primary standard condition or regional limitation.

"(5) A conversion to coal (A) to which a suspension under subsection (b) or a compliance date extension under subsection (c) applies or (B) by reason of an order under section 2(a) of

the Energy Supply and Environmental Coordination Act of 1974 shall not be deemed to be a modification for purposes of section 111(a)(2) and (4) of this Act.

"(e) The Administrator may, by rule, establish priorities under which manufacturers of continuous emission reduction systems necessary to carry out subsection (c) shall provide such systems to users thereof, if he finds that priorities must be imposed in order to assure that such systems are first provided to sources in air quality control regions in which national primary ambient air quality standards have not been achieved. No rule under this subsection may impair the obligation of any contract entered into before the date of enactment of this section. To the extent necessary to carry out this section, the Administrator may prohibit any State or political subdivision of a State, or an agency or instrumentality of either, from requiring any person to use a continuous emission reduction system for which priorities have been established under this subsection, except in accordance with such priorities.

"(f) No State, political subdivision of a State, or agency or instrumentality of either, may require any person to whom a suspension has been issued under subsection (b)(1) to use any fuel the unavailability of which is the basis of such person's suspension (except that this subsection shall not apply to requirements under subsection (b)(3) or subsection (d)(2)).

"(g)(1) It shall be unlawful for any person to whom a suspension has been issued under subsection (b)(1) to violate any requirement on which the suspension is conditioned pursuant to subsection (b)(3) or any primary standard condition applicable to him.

"(2) It shall be unlawful for any person to fail to comply with any requirement under subsection (c), or any regulation, plan, or schedule thereunder (including a primary standard condition or regional limitation), which is applicable to such person.

"(3) It shall be unlawful for any person to violate any rule under subsection (e).

"(4) It shall be unlawful for any person to fail to comply with an interim requirement under subsection (i)(3).

"(h) Nothing in this section shall affect the power of the Administrator to deal with air pollution presenting an imminent and substantial endangerment to the health of persons under section 303 of this Act.

"(i)(1) In order to reduce the likelihood of early phaseout of existing electric generating powerplants, any electric generating powerplant (A) which, because of the age and condition of the plant, is to be taken out of service permanently no later than January 1, 1980, according to the power supply plan (in existence on January 1, 1974) of the owner or operator of such plant, (B) for which a certification to that effect has been filed by the owner or operator of the plant with the Environmental Protection Agency and the Federal Power Commission, and (C) for which such Commission has determined that the certifi-

cation has been made in good faith and that the plan to cease operations no later than January 1, 1980, will be carried out as planned in light of existing and prospective power supply requirements, shall be eligible for a single one-year postponement as provided in paragraph (2).

"(2) Prior to the date on which any powerplant eligible under paragraph (1) is required to comply with any requirement of an applicable implementation plan, such plant may apply (with the concurrence of the Governor of the State in which the plant is located) to the Administrator to postpone the applicability of such requirement to such plant for not more than one year. If the Administrator determines, after considering the risk to public health and welfare which may be associated with a postponement. that compliance with any such requirement is not reasonable in light of the projected useful life of the plant, the availability of rate base increases to pay for the costs of such compliance, and other appropriate factors, then the Administrator shall grant a postponement of any such requirement.

"(3) The Administrator shall, as a condition of any postponement under paragraph (2), prescribe such interim requirements as are practicable and reasonable in light of the criteria in paragraph (2).

"(j)(1) The Administrator may, after public notice and opportunity for presentation of data, views, and arguments in accordance with section 553 of title 5, United States Code, and after consultation with the Federal Energy Administrator, designate persons with respect to whom fuel exchange requirements should be imposed under paragraph (2) of this subsection. The purpose of such designation shall be to avoid or minimize the adverse impact on public health and welfare of any suspension under subsection (b) of this section or conversion to coal to which subsection (c) applies or of any allocation under section 2(d) of the Energy Supply and Environmental Coordination Act of 1974 or under the Emergency Petroleum Allocation Act of 1973.

"(2) The Federal Energy Administrator shall exercise his authority under section 2(d) of the Energy Supply and Environmental Coordination Act of 1974 and under the Emergency Petroleum Allocation Act of 1973 with respect to persons designated by the Administrator of the Environmental Protection Agency under paragraph (1) in order to require the exchange of any fuel subject to allocation under such Acts effective no later than forty-five days after the date of such designation, unless the Federal Energy Administrator determines, after consultation with the Administrator of the Environmental Protection Agency, that the costs or consumption of fuel, resulting from requiring such exchange, will be excessive.

"(k)(1) The Administrator shall study, and report to Congress not later than six months after the date of enactment of this section, with respect to—

"(A) the present and projected impact of fuel shortages

and fuel allocation programs on the program under this Act;

"(B) availability of continuous emission reduction technology (including projections respecting the time, cost, and number of units available) and the effects that continuous emission reduction systems would have on the total environment and on supplies of fuel and electricity;

"(C) the number of sources and locations which must use such technology based on projected fuel availability data;

"(D) a priority schedule for installation of continuous emission reduction technology, based on public health or air quality;

"(E) evaluation of availability of technology to burn municipal solid waste in electric powerplants or other major fuel burning installations, including time schedules, priorities, analysis of pollutants which may be emitted (including those for which national ambient air quality standards have not been promulgated), and a comparison of health benefits and detriments from burning solid waste and of economic costs;

"(F) evaluation of alternative control strategies for the attainment and maintenance of national ambient air quality standards for sulfur oxides within the time for attainment prescribed in this Act, including associated considerations of cost, time for attainment, feasibility, and effectiveness of such alternative control strategies as compared to stationary source fuel and emission regulations;

"(G) proposed priorities, for continuous emission reduction systems which do not produce solid waste, for sources which are least able to handle solid waste byproducts of such systems;

"(H) plans for monitoring or requiring sources to which this section applies to monitor the impact of actions under this section on concentrations of sulfur dioxide in the ambient air; and

"(I) steps taken pursuant to authority of section 110 (a)(3)(B) of this Act.

"(2) Beginning January 1, 1975, the Administrator shall publish in the Federal Register, at no less than one-hundred-and-eighty-day intervals, the following:

"(A) A concise summary of progress reports which are required to be filed by any person or source owner or operator to which subsection (c) applies. Such progress reports shall report on the status of compliance with all requirements which have been imposed by the Administrator under such subsection.

"(B) Up-to-date findings on the impact of this section upon—

"(i) applicable implementation plans, and

"(ii) ambient air quality.

TITLE II—EMISSION STANDARDS FOR MOVING SOURCES

SHORT TITLE

"SEC. 201. This title may be cited as the 'National Emission Standards Act.'

PART A—MOTOR VEHICLE EMISSION AND FUEL STANDARDS

ESTABLISHMENT OF STANDARDS

"SEC. 202. (a) Except as otherwise provided in subsection (b)—

"(1) The Administrator shall by regulation prescribe (and from time to time revise) in accordance with the provisions of this section, standards applicable to the emission of any air pollutant from any class or classes of new motor vehicles or new motor vehicle engines, which in his judgment causes or contributes to, or is likely to cause or to contribute to, air pollution which endangers the public health or welfare. Such standards shall be applicable to such vehicles and engines for their useful life (as determined under subsection (d)), whether such vehicles and engines are designed as complete systems or incorporate devices to prevent or control such pollution.

"(2) Any regulation prescribed under this subsection (and any revision thereof) shall take effect after such period as the Administrator finds necessary to permit the development and application of the requisite technology, giving appropriate consideration to the cost of compliance within such period.

"(b) (1) (A) The regulations under subsection (a) applicable to emissions of carbon monoxide and hydrocarbons from light-duty vehicles and engines manufactured during model years 1975 and 1976 shall contain standards which are identical to the interim standards which were prescribed (as of December 1, 1973) under paragraph (5) (A) of this subsection for light-duty vehicles and engines manufactured during model year 1975. The regulations under subsection (a) applicable to emissions of carbon monoxide and hydrocarbons from light duty vehicles and engines manufactured during or after model year 1977 shall contain standards which require a reduction of at least 90 per centum from emissions of carbon monoxide and hydrocarbons allowable under the standards under this section applicable to light duty vehicles and engines manufactured in model year 1970.

"(B) The regulations under subsection (a) applicable to emissions of oxides of nitrogen from light-duty vehicles and engines manufactured during model years 1975 and 1976 shall contain standards which are identical to the standards which were prescribed (as of December 1, 1973) under subsection (a) for light-duty vehicles and engines manufactured during model year

1975. The regulations under subsection (a) applicable to emissions of oxides of nitrogen from light-duty vehicles and engines manufactured during model year 1977 shall contain standards which provide that such emissions from such vehicles and engines may not exceed 2.0 grams per vehicle mile. The regulations under subsection (a) applicable to emissions of oxides of nitrogen from light duty vehicles and engines manufactured during or after model year 1978 shall contain standards which require a reduction of at least 90 per centum from the average of emissions of oxides of nitrogen actually measured from light duty vehicles manufactured during model year 1971 which are not subject to any Federal or State emission standard for oxides of nitrogen. Such average of emissions shall be determined by the Administrator on the basis of measurements made by him.

"(2) Emission standards under paragraph (1), and measurement techniques on which such standards are based (if not promulgated prior to the date of enactment of the Clean Air Act Amendments of 1970), shall be prescribed by regulation within 180 days after such date.

"(3) For purposes of this part—

"(A) (i) The term 'model year' with reference to any specific calendar year means the manufacturer's annual production period (as determined by the Administrator) which includes January 1 of such calendar year. If the manufacturer has no annual production period, the term 'model year' shall mean the calendar year.

"(ii) For the purpose of assuring that vehicles and engines manufactured before the beginning of a model year were not manufactured for purposes of circumventing the effective date of a standard required to be prescribed by subsection (b), the Administrator may prescribe regulations defining 'model year' otherwise than as provided in clause (i).

"(B) The term 'light duty vehicles and engines' means new light duty motor vehicles and new light duty motor vehicle engines, as determined under regulations of the Administrator.

"(4) On July 1 of 1971, and of each year thereafter, the Administrator shall report to the Congress with respect to the development of systems necessary to implement the emission standards established pursuant to this section. Such reports shall include information regarding the continuing effects of such air pollutants subject to standards under this section on the public health and welfare, the extent and progress of efforts being made to develop the necessary systems, the costs associated with development and application of such systems, and following such hearings as he may deem advisable, any recommendations for additional congressional action necessary to achieve the purposes of this Act. In gathering information for the purposes of this paragraph and in connection with any hearing, the provisions of section 307(a) (relating to subpenas) shall apply.

"(5) (A) At any time after January 1, 1975, any manufacturer may file with the Administrator an application requesting

the suspension for one year only of the effective date of any emission standard required by paragraph (1)(A) with respect to such manufacturer for light-duty vehicles and engines manufactured in model year 1977. The Administrator shall make his determination with respect to any such application within sixty days. If he determines, in accordance with the provisions of this subsection, that such suspension should be granted, he shall simultaneously with such determination prescribe by regulation interim emission standards which shall apply (in lieu of the standards required to be prescribed by paragraph (1)(A) of this subsection) to emissions of carbon monoxide or hydrocarbons (or both) from such vehicles and engines manufactured during model year 1977.

"(B) Any interim standards prescribed under this paragraph shall reflect the greatest degree of emission control which is achievable by application of technology which the Administrator determines is available, giving appropriate consideration to the cost of applying such technology within the period of time available to manufacturers.

"(C) Within 60 days after receipt of the application for any such suspension, and after public hearing, the Administrator shall issue a decision granting or refusing such suspension. The Administrator shall grant such suspension only if he determines that (i) such suspension is essential to the public interest or the public health and welfare of the United States; (ii) all good faith efforts have been made to meet the standards established by this subsection; (iii) the applicant has established that effective control technology, processes, operating methods, or other alternatives are not available or have not been available for a sufficient period of time to achieve compliance prior to the effective date of such standards, and (iv) the study and investigation of the National Academy of Sciences conducted pursuant to subsection (c) and other information available to him has not indicated that technology, processes, or other alternatives are available to meet such standards.

"(D) Nothing in this paragraph shall extend the effective date of any emission standard required to be prescribed under this subsection for more than one year.

"(c)(1) The Administrator shall undertake to enter into appropriate arrangements with the National Academy of Sciences to conduct a comprehensive study and investigation of the technological feasibility of meeting the emissions standards required to be prescribed by the Administrator by subsection (b) of this section.

"(2) Of the funds authorized to be appropriated to the Administrator by this Act, such amounts as are required shall be available to carry out the study and investigation authorized by paragraph (1) of this subsection.

"(3) In entering into any arrangement with the National Academy of Sciences for conducting the study and investigation authorized by paragraph (1) of this subsection, the Administrator shall request the National Academy of Sciences to submit semiannual reports on the progress of its study and investigation to

the Administrator and the Congress, beginning not later than July 1, 1971, and continuing until such study and investigation is completed.

"(4) The Administrator shall furnish to such Academy at its request any information which the Academy deems necessary for the purpose of conducting the investigation and study authorized by paragraph (1) of this subsection. For the purpose of furnishing such information, the Administrator may use any authority he has under this Act (A) to obtain information from any person, and (B) to require such person to conduct such tests, keep such records, and make such reports respecting research or other activities conducted by such person as may be reasonably necessary to carry out this subsection:

"(d) The Administrator shall prescribe regulations under which the useful life of vehicles and engines shall be determined for purposes of subsection (a) (1) of this section and section 207. Such regulations shall provide that useful life shall—

"(1) in the case of light duty vehicles and light duty vehicle engines, be a period of use of five years or of fifty thousand miles (or the equivalent), whichever first occurs; and

"(2) in the case of any other motor vehicle or motor vehicle engine, be a period of use set forth in paragraph (1) unless the Administrator determines that a period of use of greater duration or mileage is appropriate.

"(e) In the event a new power source or propulsion system for new motor vehicles or new motor vehicle engines is submitted for certification pursuant to section 206(a), the Administrator may postpone certification until he has prescribed standards for any air pollutants emitted by such vehicle or engine which cause or contribute to, or are likely to cause or contribute to, air pollution which endangers the public health or welfare but for which standards have not been prescribed under subsection (a).

PROHIBITED ACTS

"SEC. 203. (a) The following acts and the causing thereof are prohibited—

"(1) in the case of a manufacturer of new motor vehicles or new motor vehicle engines for distribution in commerce, the sale, or the offering for sale, or the introduction, or delivery for introduction, into commerce, or (in the case of any person, except as provided by regulation of the Administrator) the importation into the United States of any new motor vehicle or new motor vehicle engine, manufactured after the effective date of regulations under this part which are applicable to such vehicle or engine unless such vehicle or engine is covered by a certificate of conformity issued (and in effect) under regulations prescribed under this part (except as provided in subsection (b));

"(2) for any person to fail or refuse to permit access to or

copying of records or to fail to make reports or provide information, required under section 208;

"(3) for any person to remove or render inoperative any device or element of design installed on or in a motor vehicle or motor vehicle engine in compliance with regulations under this title prior to its sale and delivery to the ultimate purchaser, or for any manufacturer or dealer knowingly to remove or render inoperative any such device or element of design after such sale and delivery to the ultimate purchaser; or

"(4) for any manufacturer of a new motor vehicle or new motor vehicle engine subject to standards prescribed under section 202—

"(A) to sell or lease any such vehicle or engine unless such manufacturer has complied with the requirements of section 207(a) and (b) with respect to such vehicle or engine, and unless a label or tag is affixed to such vehicle or engine in accordance with section 207(c)(3), or

"(B) to fail or refuse to comply with the requirements of section 207(c) or (e).

"(b)(1) The Administrator may exempt any new motor vehicle or new motor vehicle engine from subsection (a), upon such terms and conditions as he may find necessary for the purpose of research, investigations, studies, demonstrations, or training, or for reasons of national security.

"(2) A new motor vehicle or new motor vehicle engine offered for importation or imported by any person in violation of subsection (a) shall be refused admission into the United States, but the Secretary of the Treasury and the Administrator may, by joint regulation, provide for deferring final determination as to admission and authorizing the delivery of such a motor vehicle or engine offered for import to the owner or consignee thereof upon such terms and conditions (including the furnishing of a bond) as may appear to them appropriate to insure that any such motor vehicle or engine will be brought into conformity with the standards, requirements, and limitations applicable to it under this part. The Secretary of the Treasury shall, if a motor vehicle or engine is finally refused admission under this paragraph, cause disposition thereof in accordance with the customs laws unless it is exported, under regulations prescribed by such Secretary, within ninety days of the date of notice of such refusal or such additional time as may be permitted pursuant to such regulations, except that disposition in accordance with the customs laws may not be made in such manner as may result, directly or indirectly, in the sale, to the ultimate consumer, of a new motor vehicle or new motor vehicle engine that fails to comply with applicable standards of the Administrator under this part.

"(3) A new motor vehicle or new motor vehicle engine intended solely for export, and so labeled or tagged on the outside of the container and on the vehicle or engine itself, shall be subject to the provisions of subsection (a), except that if the country of export has emission standards which differ from the standards

prescribed under subsection (a), then such vehicle or engine shall comply with the standards of such country of export.

"(c) Upon application therefor, the Administrator may exempt from section 203(a)(3) any vehicles (or class thereof) manufactured before the 1974 model year from section 203(a)(3) for the purpose of permitting modifications to the emission control device or system of such vehicle in order to use fuels other than those specified in certification testing under section 206(a)(1), if the Administrator, on the basis of information submitted by the applicant, finds that such modification will not result in such vehicle or engine not complying with standards under section 202 applicable to such vehicle or engine. Any such exemption shall identify (1) the vehicle or vehicles so exempted, (2) the specific nature of the modification, and (3) the person or class of persons to whom the exemption shall apply.

INJUNCTION PROCEEDINGS

"SEC. 204. (a) The district courts of the United States shall have jurisdiction to restrain violations of paragraph (1), (2), (3), or (4) of section 203(a).

"(b) Actions to restrain such violations shall be brought by and in the name of the United States. In any such action, subpenas for witnesses who are required to attend a district court in any district may run into any other district.

PENALTIES

"SEC. 205. Any person who violates paragraph (1), (2), (3), or (4) of section 203(a) shall be subject to a civil penalty of not more than $10,000. Any such violation with respect to paragraph (1), (2), or (4) of section 203(a) shall constitute a separate offense with respect to each motor vehicle or motor vehicle engine.

MOTOR VEHICLE AND MOTOR VEHICLE ENGINE COMPLIANCE TESTING AND CERTIFICATION

"SEC. 206. (a)(1) The Administrator shall test, or require to be tested in such manner as he deems appropriate, any new motor vehicle or new motor vehicle engine submitted by a manufacturer to determine whether such vehicle or engine conforms with the regulations prescribed under section 202 of this Act. If such vehicle or engine conforms to such regulations, the Administrator shall issue a certificate of conformity upon such terms, and for such period (not in excess of one year), as he may prescribe.

"(2) The Administrator shall test any emission control system incorporated in a motor vehicle or motor vehicle engine submitted to him by any person, in order to determine whether such system enables such vehicle or engine to conform to the standards required to be prescribed under section 202(b) of this Act. If the Administrator finds on the basis of such tests that such vehicle or

engine conforms to such standards, the Administrator shall issue a verification of compliance with emission standards for such system when incorporated in vehicles of a class of which the tested vehicle is representative. He shall inform manufacturers and the National Academy of Sciences, and make available to the public, the results of such tests. Tests under this paragraph shall be conducted under such terms and conditions (including requirements for preliminary testing by qualified independent laboratories) as the Administrator may prescribe by regulations.

"(b) (1) In order to determine whether new motor vehicles or new motor vehicle engines being manufactured by a manufacturer do in fact conform with the regulations with respect to which the certificate of conformity was issued, the Administrator is authorized to test such vehicles or engines. Such tests may be conducted by the Administrator directly or, in accordance with conditions specified by the Administrator, by the manufacturer.

"(2) (A) (i) If, based on tests conducted under paragraph (1) on a sample of new vehicles or engines covered by a certificate of conformity, the Administrator determines that all or part of the vehicles or engines so covered do not conform with the regulations with respect to which the certificate of conformity was issued, he may suspend or revoke such certificate in whole or in part, and shall so notify the manufacturer. Such suspension or revocation shall apply in the case of any new motor vehicles or new motor vehicle engines manufactured after the date of such notification (or manufactured before such date if still in the hands of the manufacturer), and shall apply until such time as the Administrator finds that vehicles and engines manufactured by the manufacturer do conform to such regulations. If, during any period of suspension or revocation, the Administrator finds that a vehicle or engine actually conforms to such regulations, he shall issue a certificate of conformity applicable to such vehicle or engine.

"(ii) If, based on tests conducted under paragraph (1) on any new vehicle or engine, the Administrator determines that such vehicle or engine does not conform with such regulations, he may suspend or revoke such certificate insofar as it applies to such vehicle or engine until such time as he finds such vehicle or engine actually so conforms with such regulations, and he shall so notify the manufacturer.

"(B) (i) At the request of any manufacturer the Administrator shall grant such manufacturer a hearing as to whether the tests have been properly conducted or any sampling methods have been properly applied, and make a determination on the record with respect to any suspension or revocation under subparagraph (A); but suspension or revocation under subparagraph (A) shall not be stayed by reason of such hearing.

"(ii) In any case of actual controversy as to the validity of any determination under clause (i), the manufacturer may at any time prior to the 60th day after such determination is made, file a petition with the United States court of appeals for the circuit wherein such manufacturer resides or has his principal place of business for a judicial review of such determination. A copy of

the petition shall be forthwith transmitted by the clerk of the court to the Administrator or other officer designated by him for that purpose. The Administrator thereupon shall file in the court, the record of the proceedings on which the Administrator based his determination, as provided in section 2112 of title 28 of the United States Code.

"(iii) If the petitioner applies to the court for leave to adduce additional evidence, and shows to the satisfaction of the court that such additional evidence is material and that there were reasonable grounds for the failure to adduce such evidence in the proceeding before the Administrator, the court may order such additional evidence (and evidence in rebuttal thereof) to be taken before the Administrator, in such manner and upon such terms and conditions as the court may deem proper. The Administrator may modify his findings as to the facts, or make new findings, by reason of the additional evidence so taken and he shall file such modified or new findings, and his recommendation, if any, for the modification or setting aside of his original determination, with the return of such additional evidence.

"(iv) Upon the filing of the petition referred to in clause (ii), the court shall have jurisdiction to review the order in accordance with chapter 7 of title 5, United States Code, and to grant appropriate relief as provided in such chapter.

"(c) For purposes of enforcement of this section, officers or employees duly designated by the Administrator, upon presenting appropriate credentials to the manufacturer or person in charge, are authorized (1) to enter, at reasonable times, any plant or other establishment of such manufacturers, for the purpose of conducting tests of vehicles or engines in the hands of the manufacturer, or (2) to inspect at reasonable times, records, files, papers, processes, controls, and facilities used by such manufacturer in conducting tests under regulations of the Administrator. Each such inspection shall be commenced and completed with reasonable promptness.

"(d) The Administrator shall by regulation establish methods and procedures for making tests under this section.

"(e) The Administrator shall announce in the Federal Register and make available to the public the results of his tests of any motor vehicle or motor vehicle engine submitted by a manufacturer under subsection (a) as promptly as possible after the enactment of the Clean Air Amendments of 1970 and at the beginning of each model year which begins thereafter. Such results shall be described in such nontechnical manner as will reasonably disclose to prospective ultimate purchasers of new motor vehicles and new motor vehicle engines the comparative performance of the vehicles and engines tested in meeting the standards prescribed under section 202 of this Act.

COMPLIANCE BY VEHICLES AND ENGINES IN ACTUAL USE

"SEC. 207. (a) Effective with respect to vehicles and engines manufactured in model years beginning more than 60 days after

the date of the enactment of the Clean Air Act Amendments of 1970, the manufacturer of each new motor vehicle and new motor vehicle engine shall warrant to the ultimate purchaser and each subsequent purchaser that such vehicle or engine is (1) designed, built, and equipped so as to conform at the time of sale with applicable regulations under section 202, and (2) free from defects in materials and workmanship which cause such vehicle or engine to fail to conform with applicable regulations for its useful life (as determined under sec. 202(d)) .

"(b) If the Administrator determines that (i) there are available testing methods and procedures to ascertain whether, when in actual use throughout its useful life (as determined under section 202(d)), each vehicle and engine to which regulations under section 202 apply complies with the emission standards of such regulations, (ii) such methods and procedures are in accordance with good engineering practices, and (iii) such methods and procedures are reasonably capable of being correlated with tests conducted under section 206(a)(1), then—

"(1) he shall establish such methods and procedures by regulation, and

"(2) at such time as he determines that inspection facilities or equipment are available for purposes of carrying out testing methods and procedures established under paragraph (1), he shall prescribe regulations which shall require manufacturers to warrant the emission control device or system of each new motor vehicle or new motor vehicle engine to which a regulation under section 202 applies and which is manufactured in a model year beginning after the Administrator first prescribes warranty regulations under this paragraph (2). The warranty under such regulations shall run to the ultimate purchaser and each subsequent purchaser and shall provide that if—

"(A) the vehicle or engine is maintained and operated in accordance with instructions under subsection (c)(3),

"(B) it fails to conform at any time during its useful life (as determined under section 202(d)) to the regulations prescribed under section 202, and

"(C) such nonconformity results in the ultimate purchaser (or any subsequent purchaser) of such vehicle or engine having to bear any penalty or other sanction (including the denial of the right to use such vehicle or engine) under State or Federal law,

then such manufacturer shall remedy such nonconformity under such warranty with the cost thereof to be borne by the manufacturer.

"(c) Effective with respect to vehicles and engines manufactured during model years beginning more than 60 days after the date of enactment of the Clean Air Amendments of 1970—

"(1) If the Administrator determines that a substantial number of any class or category of vehicles or engines, although properly maintained and used, do not conform to the regulations prescribed under section 202, when in actual

use throughout their useful life (as determined under section 202(d)), he shall immediately notify the manufacturer thereof of such nonconformity, and he shall require the manufacturer to submit a plan for remedying the nonconformity of the vehicles or engines with respect to which such notification is given. The plan shall provide that the nonconformity of any such vehicles or engines which are properly used and maintained will be remedied at the expense of the manufacturer. If the manufacturer disagrees with such determination of nonconformity and so advises the Administrator, the Administrator shall afford the manufacturer and other interested persons an opportunity to present their views and evidence in support thereof at a public hearing. Unless, as a result of such hearing the Administrator withdraws such determination of nonconformity, he shall ,within 60 days after the completion of such hearing, order the manufacturer to provide prompt notification of such nonconformity in accordance with paragraph (2).

"(2) Any notification required by paragraph (1) with respect to any class or category of vehicles or engines shall be given to dealers, ultimate purchasers, and subsequent purchasers (if known) in such manner and containing such information as the Administrator may by regulations require.

"(3) The manufacturer shall furnish with each new motor vehicle or motor vehicle engine such written instructions for the maintenance and use of the vehicle or engine by the ultimate purchaser as may be reasonable and necessary to assure the proper functioning of emission control devices and systems. In addition, the manufacturer shall indicate by means of a label or tag permanently affixed to such vehicle or engine that such vehicle or engine is covered by a certificate of conformity issued for the purpose of assuring achievement of emissions standards prescribed under section 202. Such label or tag shall contain such other information relating to control of motor vehicle emissions as the Administrator shall prescribe by regulation.

"(d) Any cost obligation of any dealer incurred as a result of any requirement imposed by subsection (a), (b), or (c) shall be borne by the manufacturer. The transfer of any such cost obligation from a manufacturer to any dealer through franchise or other agreement is prohibited.

"(e) If a manufacturer includes in any advertisement a statement respecting the cost or value of emission control devices or systems, such manufacturer shall set forth in such statement the cost or value attributed to such devices or systems by the Secretary of Labor (through the Bureau of Labor Statistics). The Secretary of Labor, and his representatives, shall have the same access for this purpose to the books, documents, papers, and records of a manufacturer as the Comptroller General has to those of a recipient of assistance for purposes of section 311.

"(f) Any inspection of a motor vehicle or a motor vehicle engine for purposes of subsection (c) (1), after its sale to the ulti-

mate purchaser, shall be made only if the owner of such vehicle or engine voluntarily permits such inspection to be made, except as may be provided by any State or local inspection program.

RECORDS AND REPORTS

"SEC. 208. (a) Every manufacturer shall establish and maintain such records, make such reports, and provide such information as the Administrator may reasonably require to enable him to determine whether such manufacturer has acted or is acting in compliance with this part and regulations thereunder and shall, upon request of an officer or employee duly designated by the Administrator, permit such officer or employee at reasonable times to have access to and copy such records.

"(b) Any records, reports or information obtained under subsection (a) shall be available to the public, except that upon a showing satisfactory to the Administrator by any person that records, reports, or information, or particular part thereof (other than emission data), to which the Administrator has access under this section if made public, would divulge methods or processes entitled to protection as trade secrets of such person, the Administrator shall consider such record, report, or information or particular portion thereof confidential in accordance with the purposes of section 1905 of title 18 of the United States Code, except that such record, report, or information may be disclosed to other officers, employees, or authorized representatives of the United States concerned with carrying out this Act or when relevant in any proceeding under this Act. Nothing in this section shall authorize the withholding of information by the Administrator or any officer or employee under his control, from the duly authorized committees of the Congress.

STATE STANDARDS

"SEC. 209. (a) No State or any political subdivision thereof shall adopt or attempt to enforce any standard relating to the control of emissions from new motor vehicles or new motor vehicle engines subject to this part. No State shall require certification, inspection, or any other approval relating to the control of emissions from any new motor vehicle or new motor vehicle engine as condition precedent to the initial retail sale, titling (if any), or registration of such motor vehicle, motor vehicle engine, or equipment.

"(b) The Administrator shall, after notice and opportunity for public hearing, waive application of this section to any State which has adopted standards (other than crankcase emission standards) for the control of emissions from new motor vehicles or new motor vehicle engines prior to March 30, 1966, unless he finds that such State does not require standards more stringent

than applicable Federal standards to meet compelling and extraordinary conditions or that such State standards and accompanying enforcement procedures are not consistent with section 202(a) of this part.

"(c) Nothing in this part shall preclude or deny to any State or political subdivision thereof the right otherwise to control, regulate, or restrict the use, operation, or movement of registered or licensed motor vehicles.

STATE GRANTS

"SEC. 210. The Administrator is authorized to make grants to appropriate State agencies in an amount up to two-thirds of the cost of developing and maintaining effective vehicle emission devices and systems inspection and emission testing and control programs, except that—

"(1) no such grant shall be made for any part of any State vehicle inspection program which does not directly relate to the cost of the air pollution control aspects of such a program;

"(2) no such grant shall be made unless the Secretary of Transportation has certified to the Administrator that such program is consistent with any highway safety program developed pursuant to section 402 of title 23 of the United States Code; and

"(3) no such grant shall be made unless the program includes provisions designed to insure that emission control devices and systems on vehicles in actual use have not been discontinued or rendered inoperative.

REGULATION OF FUELS

"SEC. 211. (a) The Administrator may by regulation designate any fuel or fuel additive and, after such date or dates as may be prescribed by him, no manufacturer or processor of any such fuel or additive may sell, offer for sale, or introduce into commerce such fuel or additive unless the Administrator has registered such fuel or additive in accordance with subsection (b) of this section.

"(b)(1) For the purpose of registration of fuels and fuel additives, the Administrator shall require—

"(A) the manufacturer of any fuel to notify him as to the commercial identifying name and manufacturer of any additive contained in such fuel; the range of concentration of any additive in the fuel; and the purpose-in-use of any such additive; and

"(B) the manufacturer of any additive to notify him as to the chemical composition of such additive.

"(2) For the purpose of registration of fuels and fuel additives, the Administrator may also require the manufacturer of any fuel or fuel additive—

"(A) to conduct tests to determine potential public health

effects of such fuel or additive (including, but not limited to, carcinogenic, teratogenic, or mutagenic effects), and

"(B) to furnish the description of any analytical technique that can be used to detect and measure any additive in such fuel, the recommended range of concentration of such additive, and the recommended purpose-in-use of such additive, and such other information as is reasonable and necessary to determine the emissions resulting from the use of the fuel or additive contained in such fuel, the effect of such fuel or additive on the emission control performance of any vehicle or vehicle engine, or the extent to which such emissions affect the public health or welfare.

Tests under subparagraph (A) shall be conducted in conformity with test procedures and protocols established by the Administrator. The result of such tests shall not be considered confidential.

"(3) Upon compliance with the provision of this subsection, including assurances that the Administrator will receive changes in the information required, the Administrator shall register such fuel or fuel additive.

"(c) (1) The Administrator may, from time to time on the basis of information obtained under subsection (b) of this section or other information available to him, by regulation, control or prohibit the manufacture, introduction into commerce, offering for sale, or sale of any fuel or fuel additive for use in a motor vehicle or motor vehicle engine (A) if any emission products of such fuel or fuel additive will endanger the public health or welfare, or (B) if emission products of such fuel or fuel additive will impair to a significant degree the performance of any emission control device or system which is in general use, or which the Administrator finds has been developed to a point where in a reasonable time it would be in general use were such regulation to be promulgated.

"(2) (A) No fuel, class of fuels, or fuel additive may be controlled or prohibited by the Administrator pursuant to clause (A) of paragraph (1) except after consideration of all relevant medical and scientific evidence available to him, including consideration of other technologically or economically feasible means of achieving emission standards under section 202.

"(B) No fuel or fuel additive may be controlled or prohibited by the Administrator pursuant to clause (B) of paragraph (1) except after consideration of available scientific and economic data, including a cost benefit analysis comparing emission control devices or systems which are or will be in general use and require the proposed control or prohibition with emission control devices or systems which are or will be in general use and do not require the proposed control or prohibition. On request of a manufacturer of motor vehicles, motor vehicle engines, fuels, or fuel additives submitted within 10 days of notice of proposed rulemaking, the Administrator shall hold a public hearing and publish findings with respect to any matter he is required to consider under this subparagraph. Such findings shall be published at the time of promulgation of final regulations.

"(C) No fuel or fuel additive may be prohibited by the Administrator under paragraph (1) unless he finds, and publishes such

finding, that in his judgment such prohibition will not cause the use of any other fuel or fuel additive which will produce emissions which will endanger the public health or welfare to the same or greater degree than the use of the fuel or fuel additive proposed to be prohibited.

"(3)(A) For the purpose of obtaining evidence and data to carry out paragraph (2), the Administrator may require the manufacturer of any motor vehicle or motor vehicle engine to furnish any information which has been developed concerning the emissions from motor vehicles resulting from the use of any fuel or fuel additive, or the effect of such use on the performance of any emission control device or system.

"(B) In obtaining information under subparagraph (A), section 307(a) (relating to subpenas) shall be applicable.

"(4)(A) Except as otherwise provided in subparagraph (B) or (C), no State (or political subdivision thereof) may prescribe or attempt to enforce, for purposes of motor vehicle emission control, any control or prohibition respecting use of a fuel or fuel additive in a motor vehicle or motor vehicle engine—

"(i) if the Administrator has found that no control or prohibition under paragraph (1) is necessary and has published his finding in the Federal Register, or

"(ii) if the Administrator has prescribed under paragraph (1) a control or prohibition applicable to such fuel or fuel additive, unless State prohibition or control is identical to the prohibition or control prescribed by the Administrator.

"(B) Any State for which application of section 209(a) has at any time been waived under section 209(b) may at any time prescribe and enforce, for the purpose of motor vehicle emission control, a control or prohibition respecting any fuel or fuel additive.

"(C) A State may prescribe and enforce, for purposes of motor vehicle emission control, a control or prohibition respecting the use of a fuel or fuel additive in a motor vehicle or motor vehicle engine if an applicable implementation plan for such State under section 110 so provides. The Administrator may approve such provision in an implementation plan, or promulgate an implementation plan containing such a provision, only if he finds that the State control or prohibition is necessary to achieve the national primary or secondary ambient air quality standard which the plan implements.

"(d) Any person who violates subsection (a) or the regulations prescribed under subsection (c) or who fails to furnish any information required by the Administrator under subsection (b) shall forfeit and pay to the United States a civil penalty of $10,000 for each and every day of the continuance of such violation, which shall accrue to the United States and be recovered in a civil suit in the name of the United States, brought in the district where such person has his principal office or in any district in which he does business. The Administrator may, upon application therefor, remit or mitigate any forfeiture provided for in this subsection and he shall have authority to determine the facts upon all such applications.

DEVELOPMENT OF LOW-EMISSION VEHICLES

"SEC. 212. (a) For the purpose of this section—

"(1) The term 'Board' means the Low-Emission Vehicle Certification Board.

"(2) The term 'Federal Government' includes the legislative, executive, and judicial branches of the Government of the United States, and the government of the District of Columbia.

"(3) The term 'motor vehicle' means any self-propelled vehicle designed for use in the United States on the highways, other than a vehicle designed or used for military field training, combat, or tactical purposes.

"(4) The term 'low-emission vehicle' means any motor vehicle which—

"(A) emits any air pollutant in amounts significantly below new motor vehicle standards applicable under section 202 at the time of procurement to that type of vehicle; and

"(B) with respect to all other air pollutants meets the new motor vehicle standards applicable under section 202 at the time of procurement of that type of vehicle.

"(5) The term 'retail price' means (A) the maximum statutory price applicable to any class or model of motor vehicle; or (B) in any case where there is no applicable maximum statutory price, the most recent procurement price paid for any class or model of motor vehicle.

"(b) (1) There is established a Low-Emission Vehicle Certification Board to be composed of the Administrator or his designee, the Secretary of Transportation or his designee, the Chairman of the Council on Environmental Quality or his designee, the Director of the National Highway Safety Bureau in the Department of Transportation, the Administrator of General Services, and two members appointed by the President. The President shall designate one member of the Board as Chairman.

"(2) Any member of the Board not employed by the United States may receive compensation at the rate of $125 for each day such member is engaged upon work of the Board. Each member of the Board shall be reimbursed for travel expenses, including per diem in lieu of subsistence as authorized by section 5703 of title 5, United States Code, for persons in the Government service employed intermittently.

"(3) (A) The Chairman, with the concurrence of the members of the Board, may employ and fix the compensation of such additional personnel as may be necessary to carry out the functions of the Board, but no individual so appointed shall receive compensation in excess of the rate authorized for GS–18 by section 5332 of title 5, United States Code.

"(B) The Chairman may fix the time and place of such meetings as may be required, but a meeting of the Board shall be called whenever a majority of its members so request.

"(C) The Board is granted all other powers necessary for meeting its responsibilities under this section.

"(c) The Administrator shall determine which models or classes of motor vehicles qualify as low-emission vehicles in accordance with the provisions of this section.

"(d) (1) The Board shall certify any class or model of motor vehicles—

"(A) for which a certification application has been filed in accordance with paragraph (3) of this subsection;

"(B) which is a low-emission vehicle as determined by the Administrator; and

"(C) which it determines is suitable for use as a substitute for a class or model of vehicles at that time in use by agencies of the Federal Government.

The Board shall specify with particularity the class or model of vehicles for which the class or model of vehicles described in the application is a suitable substitute. In making the determination under this subsection the Board shall consider the following criteria:

"(i) the safety of the vehicle;

"(ii) its performance characteristics;

"(iii) its reliability potential;

"(iv) its serviceability;

"(v) its fuel availability;

"(vi) its noise level; and

"(vii) its maintenance costs as compared with the class or model of motor vehicle for which it may be a suitable substitute.

"(2) Certification under this section shall be effective for a period of one year from the date of issuance.

"(3) (A) Any party seeking to have a class or model of vehicle certified under this section shall file a certification application in accordance with regulations prescribed by the Board.

"(B) The Board shall publish a notice of each application received in the Federal Register.

"(C) The Administrator and the Board shall make determinations for the purpose of this section in accordance with procedures prescribed by regulation by the Administrator and the Board, respectively.

"(D) The Administrator and the Board shall conduct whatever investigation is necessary, including actual inspection of the vehicle at a place designated in regulations prescribed under subparagraph (A).

"(E) The Board shall receive and evaluate written comments and documents from interested parties in support of, or in opposition to, certification of the class or model of vehicle under consideration.

"(F) Within ninety days after the receipt of a properly filed certification application, the Administrator shall determine whether such class or model of vehicle is a low-emission vehicle, and within 180 days of such determination, the Board shall reach a decision by majority vote as to whether such class or model of vehicle, having been determined to be a low-emission vehicle, is a suitable substitute for any class or classes of vehicles presently being purchased by the Federal Government for use by its agencies.

"(G) Immediately upon making any determination or decision

63-518 O - 76 - 5 (Vol. 1)

under subparagraph (F), the Administrator and the Board shall each publish in the Federal Register notice of such determination or decision, including reasons therefor and in the case of the Board, any dissenting views.

"(e) (1) Certified low-emission vehicles shall be acquired by purchase or lease by the Federal Government for use by the Federal Government in lieu of other vehicles if the Administrator of General Services determines that such certified vehicles have procurement costs which are no more than 150 per centum of the retail price of the least expensive class or model of motor vehicle for which they are certified substitutes.

"(2) In order to encourage development of inherently low-polluting propulsion technology, the Board may, at its discretion, raise the premium set forth in paragraph (1) of this subsection to 200 per centum of the retail price of any class or model of motor vehicle for which a certified low-emission vehicle is a certified substitute, if the Board determines that the certified low-emission vehicle is powered by an inherently low-polluting propulsion system.

"(3) Data relied upon by the Board and the Administrator in determining that a vehicle is a certified low-emission vehicle shall be incorporated in any contract for the procurement of such vehicle.

"(f) The procuring agency shall be required to purchase available certified low-emission vehicles which are eligible for purchase to the extent they are available before purchasing any other vehicles for which any low-emission vehicle is a certified substitute. In making purchasing selections between competing eligible, certified low-emission vehicles, the procuring agency shall give priority to (1) any class or model which does not require extensive periodic maintenance to retain its low-polluting qualities or which does not require the use of fuels which are more expensive than those of the classes or models of vehicles for which it is a certified substitute; and (2) passenger vehicles other than buses.

"(g) For the purpose of procuring certified low-emission vehicles any statutory price limitations shall be waived.

"(h) The Administrator shall, from time to time as the Board deems appropriate, test the emissions from certified low-emission vehicles purchased by the Federal Government. If at any time he finds that the emission rates exceed the rates on which certification under this section was based, the Administrator shall notify the Board. Thereupon the Board shall give the supplier of such vehicles written notice of this finding, issue public notice of it, and give the supplier an opportunity to make necessary repairs, adjustments, or replacements. If no such repairs, adjustments, or replacements are made within a period to be set by the Board, the Board may order the supplier to show cause why the vehicle involved should be eligible for recertification.

"(i) There are authorized to be appropriated for paying additional amounts for motor vehicles pursuant to, and for carrying out the provisions of, this section, $5,000,000 for the fiscal year ending June 30, 1971, and $25,000,000 for each of the four succeeding fiscal years.

"(j) The Board shall promulgate the procedures required to implement this section within one hundred and eighty days after the date of enactment of the Clean Air Act Amendments of 1970.

FUEL ECONOMY IMPROVEMENT FROM NEW MOTOR VEHICLES

"Sec. 213(a)(1) The Administrator and the Secretary of Transportation shall conduct a joint study, and shall report to the Committee on Interstate and Foreign Commerce of the United States House of Representatives and the Committees on Public Works and Commerce of the United States Senate within one hundred and twenty days following the date of enactment of this section, concerning the practicability of establishing a fuel economy improvement standard of 20 per centum for new motor vehicles manufactured during and after model year 1980. Such study and report shall include, but not be limited to, the technological problems of meeting any such standard, including the leadtime involved; the test procedures required to determine compliance; the economic costs associated with such standard, including any beneficial economic impact; the various means of enforcing such standard; the effect on consumption of natural resources, including energy consumed; and the impact of applicable safety and emission standards. In the course of performing such study, the Administrator and the Secretary of Transportation shall utilize the research previously performed in the Department of Transportation, and the Administrator and the Secretary shall consult with the Federal Energy Administrator, the Chairman of the Council on Environmental Quality, and the Secretary of the Treasury. The Office of Management and Budget may review such report before its submission to such committees of the Congress, but such Office may not revise the report or delay its submission beyond the date prescribed for its submission, and may submit to Congress its comments respecting such report. In connection with such study, the Administrator may utilize the authority provided in section 307(a) of this Act to obtain necessary information.

"(2) For the purpose of this section, the term 'fuel economy improvement standard' means a requirement of a percentage increase in the number of miles of transportation provided by a manufacturer's entire annual production of new motor vehicles per unit of fuel consumed, as determined for each manufacturer in accordance with test procedures established by the Administrator pursuant to this Act. Such term shall not include any requirement for any design standard or any other requirement specifying or otherwise limiting the manufacturer's discretion in deciding how to comply with the fuel economy improvement standard by any lawful means.

DEFINITIONS FOR PART A

"Sec. 214. As used in this part—

"(1) The term 'manufacturer' as used in sections 202, 203, 206, 207, and 208 means any person engaged in the manu-

facturing or assembling of new motor vehicles or new motor vehicle engines, or importing such vehicles or engines for resale, or who acts for and is under the control of any such person in connection with the distribution of new motor vehicles or new motor vehicle engines, but shall not include any dealer with respect to new motor vehicles or new motor vehicle engines received by him in commerce.

"(2) The term 'motor vehicle' means any self-propelled vehicle designed for transporting persons or property on a street or highway.

"(3) Except with respect to vehicles or engines imported or offered for importation, the term 'new motor vehicle' means a motor vehicle the equitable or legal title to which has never been transferred to an ultimate purchaser; and the term 'new motor vehicle engine' means an engine in a new motor vehicle or a motor vehicle engine the equitable or legal title to which has never been transferred to the ultimate purchaser; and with respect to imported vehicles or engines, such terms mean a motor vehicle and engine, respectively, manufactured after the effective date of a regulation issued under section 202 which is applicable to such vehicle or engine (or which would be applicable to such vehicle or engine had it been manufactured for importation into the United States).

"(4) The term 'dealer' means any person who is engaged in the sale or the distribution of new motor vehicles or new motor vehicle engines to the ultimate purchaser.

"(5) The term 'ultimate purchaser' means, with respect to any new motor vehicle or new motor vehicle engine, the first person who in good faith purchases such new motor vehicle or new engine for purposes other than resale.

"(6) The term 'commerce' means (A) commerce between any place in any State and any place outside thereof; and (B) commerce wholly within the District of Columbia.

PART B—AIRCRAFT EMISSION STANDARDS

ESTABLISHMENT OF STANDARDS

"SEC. 231 (a) (1) Within 90 days after the date of enactment of the Clean Air Amendments of 1970, the Administrator shall commence a study and investigation of emissions of air pollutants from aircraft in order to determine—

"(A) the extent to which such emissions affect air quality in air quality control regions throughout the United States, and

"(B) the technological feasibility of controlling such emissions.

"(2) Within 180 days after commencing such study and investigation, the Administrator shall publish a report of such study and investigation and shall issue proposed emission standards applicable to emissions of any air pollutant from any class or classes of aircraft or aircraft engines which in his judgment cause or contribute to or are likely to cause or contribute to air pollution which endangers the public health or welfare.

"(3) The Administrator shall hold public hearings with respect to such proposed standards. Such hearings shall, to the extent practicable, be held in air quality control regions which are most seriously affected by aircraft emissions. Within 90 days after the issuance of such proposed regulations, he shall issue such regulations with such modifications as he deems appropriate. Such regulations may be revised from time to time.

"(b) Any regulation prescribed under this section (and any revision thereof) shall take effect after such period as the Administrator finds necessary (after consultation with the Secretary of Transportation) to permit the development and application of the requisite technology, giving appropriate consideration to the cost of compliance within such period.

"(c) Any regulations under this section, or amendments thereto, with respect to aircraft, shall be prescribed only after consultation with the Secretary of Transportation in order to assure appropriate consideration for aircraft safety.

ENFORCEMENT OF STANDARDS

"SEC. 232 (a) The Secretary of Transportation, after consultation with the Administrator, shall prescribe regulations to insure compliance with all standards prescribed under section 231 by the Administrator. The regulations of the Secretary of Transportation shall include provisions making such standards applicable in the issuance, amendment, modification, suspension, or revocation of any certificate authorized by the Federal Aviation Act or the Department of Transportation Act. Such Secretary shall insure that all necessary inspections are accomplished, and, may execute any power or duty vested in him by any other provision of law in the execution of all powers and duties vested in him under this section.

"(b) In any action to amend, modify, suspend, or revoke a certificate in which violation of an emission standard prescribed under section 231 or of a regulation prescribed under subsection (a) is at issue, the certificate holder shall have the same notice and appeal rights as are prescribed for such holders in the Federal Aviation Act of 1958 or the Department of Transportation Act, except that in any appeal to the National Transportation Safety Board, the Board may amend, modify, or revoke the order of the Secretary of Transportation only if it finds no violation of such standard or regulation and that such amendment, modification, or revocation is consistent with safety in air transportation.

STATE STANDARDS AND CONTROLS

"SEC. 233. No State or political subdivision thereof may adopt or attempt to enforce any standard respecting emissions of any air pollutant from any aircraft or engine thereof unless such standard is identical to a standard applicable to such aircraft under this part.

DEFINITIONS

"SEC. 234. Terms used in this part (other than Administrator) shall have the same meaning as such terms have under section 101 of the Federal Aviation Act of 1958.

TITLE III—GENERAL

ADMINISTRATION

"SEC. 301. (a) The Administrator is authorized to prescribe such regulations as are necessary to carry out his functions under this Act. The Administrator may delegate to any officer or employee of the Environmental Protection Agency such of his powers and duties under this Act, except the making of regulations, as he may deem necessary or expedient.

"(b) Upon the request of an air pollution control agency, personnel of the Environmental Protection Agency may be detailed to such agency for the purpose of carrying out the provisions of this Act.

"(c) Payments under grants made under this Act may be made in installments, and in advance or by way of reimbursement, as may be determined by the Administrator.

DEFINITIONS

"SEC. 302. When used in this Act—

"(a) The term 'Administrator' means the Administrator of the Environmental Protection Agency.

"(b) The term 'air pollution control agency' means any of the following:

"(1) A single State agency designated by the Governor of that State as the official State air pollution control agency for purposes of this Act;

"(2) An agency established by two or more States and having substantial powers or duties pertaining to the prevention and control of air pollution;

"(3) A city, county, or other local government health authority, or, in the case of any city, county, or other local government in which there is an agency other than the health authority charged with responsibility for enforcing ordinances or laws relating to the prevention and control of air pollution, such other agency; or

"(4) An agency of two or more municipalities located in the same State or in different States and having substantial powers or duties pertaining to the prevention and control of air pollution.

"(c) The term 'interstate air pollution control agency' means—

"(1) an air pollution control agency established by two or more States, or

"(2) an air pollution control agency of two or more municipalities located in different States.

"(d) The term 'State' means a State, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, and American Samoa.

"(e) The term 'person' includes an individual, corporation, partnership, association, State, municipality, and political subdivision of a State.

"(f) The term 'municipality' means a city, town, borough,

county, parish, district, or other public body created by or pursuant to State law.

"(g) The term 'air pollutant' means an air pollution agent or combination of such agents.

"(h) All language referring to effects on welfare includes, but is not limited to, effects on soils, water, crops, vegetation, manmade materials, animals, wildlife, weather, visibility, and climate, damage to and deterioration of property, and hazards to transportation, as well as effects on economic values and on personal comfort and well-being.

EMERGENCY POWERS

"SEC. 303. Notwithstanding any other provisions of this Act, the Administrator upon receipt of evidence that a pollution source or combination of sources (including moving sources) is presenting an imminent and substantial endangerment to the health of persons, and that appropriate State or local authorities have not acted to abate such sources, may bring suit on behalf of the United States in the appropriate United States district court to immediately restrain any person causing or contributing to the alleged pollution to stop the emission of air pollutants causing or contributing to such pollution or to take such other action as may be necessary.

CITIZEN SUITS

"SEC. 304. (a) Except as provided in subsection (b), any person may commence a civil action on his own behalf—

"(1) against any person (including (i) the United States, and (ii) any other governmental instrumentality or agency to the extent permitted by the Eleventh Amendment to the Constitution) who is alleged to be in violation of (A) an emission standard or limitation under this Act or (B) an order issued by the Administrator or a State with respect to such a standard or limitation, or

"(2) against the Administrator where there is alleged a failure of the Administrator to perform any act or duty under this Act which is not discretionary with the Administrator.

The district courts shall have jurisdiction, without regard to the amount in controversy or the citizenship of the parties, to enforce such an emission standard or limitation, or such an order, or to order the Administrator to perform such act or duty, as the case may be.

"(b) No action may be commenced—

"(1) under subsection (a) (1)—

"(A) prior to 60 days after the plaintiff has given notice of the violation (i) to the Administrator, (ii) to the State in which the violation occurs, and (iii) to any alleged violator of the standard, limitation, or order, or

"(B) if the Administrator or State has commenced and is diligently prosecuting a civil action in a court of

the United States or a State to require compliance with the standard, limitation, or order, but in any such action in a court of the United States any person may intervene as a matter of right.

"(2) under subsection (a)(2) prior to 60 days after the plaintiff has given notice of such action to the Administrator, except that such action may be brought immediately after such notification in the case of an action under this section respecting a violation of section 112(c)(1)(B) or an order issued by the Administrator pursuant to section 113(a). Notice under this subsection shall be given in such manner as the Administrator shall prescribe by regulation.

"(c)(1) Any action respecting a violation by a stationary source of an emission standard or limitation or an order respecting such standard or limitation may be brought only in the judicial district in which such source is located.

"(2) In such action under this section, the Administrator, if not a party, may intervene as a matter of right.

"(d) The court, in issuing any final order in any action brought pursuant to subsection (a) of this section, may award costs of litigation (including reasonable attorney and expert witness fees) to any party, whenever the court determines such award is appropriate. The court may, if a temporary restraining order or preliminary injunction is sought, require the filing of a bond or equivalent security in accordance with the Federal Rules of Civil Procedure.

"(e) Nothing in this section shall restrict any right which any person (or class of persons) may have under any statute or common law to seek enforcement of any emission standard or limitation or to seek any other relief (including relief against the Administrator or a State agency).

"(f) For purposes of this section, the term 'emission standard or limitation under this Act' means—

"(1) a schedule or timetable of compliance, emission limitation, standard of performance or emission standard, or

"(2) a control or prohibition respecting a motor vehicle fuel or fuel additive,

which is in effect under this Act (including a requirement applicable by reason of section 118) or under an applicable implementation plan.

APPEARANCE

"SEC. 305. The Administrator shall request the Attorney General to appear and represent him in any civil action instituted under this Act to which the Administrator is a party. Unless the Attorney General notifies the Administrator that he will appear in such action, within a reasonable time, attorneys appointed by the Administrator shall appear and represent him.

FEDERAL PROCUREMENT

"SEC. 306. (a) No Federal agency may enter into any contract with any person who is convicted of any offense under section

113(c)(1) for the procurement of goods, materials, and services to perform such contract at any facility at which the violation which gave rise to such conviction occurred if such facility is owned, leased, or supervised by such person. The prohibition in the preceding sentence shall continue until the Administrator certifies that the condition giving rise to such a conviction has been corrected.

"(b) The Administrator shall establish procedures to provide all Federal agencies with the notification necessary for the purposes of subsection (a).

"(c) In order to implement the purposes and policy of this Act to protect and enhance the quality of the Nation's air, the President shall, not more than 180 days after enactment of the Clean Air Act Amendments of 1970 cause to be issued an order (1) requiring each Federal agency authorized to enter into contracts and each Federal agency which is empowered to extend Federal assistance by way of grant, loan, or contract to effectuate the purpose and policy of this Act in such contracting or assistance activities, and (2) setting forth procedures, sanctions, penalties, and such other provisions, as the President determines necessary to carry out such requirement.

"(d) The President may exempt any contract, loan, or grant from all or part of the provisions of this section where he determines such exemption is necessary in the paramount interest of the United States and he shall notify the Congress of such exemption.

"(e) The President shall annually report to the Congress on measures taken toward implementing the purpose and intent of this section, including but not limited to the progress and problems associated with implementation of this section.

GENERAL PROVISION RELATING TO ADMINISTRATIVE PROCEEDINGS AND JUDICIAL REVIEW

"SEC. 307 (a)(1) In connection with any determination under section 110(f) or section 202(b)(5), or for purposes of obtaining information under section 202(b)(4) or 211(c)(3), the Administrator may issue subpenas for the attendance and testimony of witnesses and the production of relevant papers, books, and documents, and he may administer oaths. Except for emission data, upon a showing satisfactory to the Administrator by such owner or operator that such papers, books, documents, or information or particular part thereof, if made public, would divulge trade secrets or secret processes of such owner or operator, the Administrator shall consider such record, report, or information or particular portion thereof confidential in accordance with the purposes of section 1905 of title 18 of the United States Code, except that such paper, book, document, or information may be disclosed to other officers, employees, or authorized representatives of the United States concerned with carrying out this Act, to persons carrying out the National Academy of Sciences' study and investigation provided for in section 202(c), or when relevant in any proceeding under this Act. Witnesses summoned shall be paid the same fees and mileage that are paid witnesses in the courts of the

United States. In cases of contumacy or refusal to obey a subpena served upon any person under this subparagraph, the district court of the United States for any district in which such person is found or resides or transacts business, upon application by the United States and after notice to such person, shall have jurisdiction to issue an order requiring such person to appear and give testimony before the Administrator to appear and produce papers, books, and documents before the Administrator, or both, and any failure to obey such order of the court may be punished by such court as a contempt thereof.

"(b)(1) A petition for review of action of the Administrator in promulgating any national primary or secondary ambient air quality standard, any emission standard under section 112, any standard of performance under section 111 any standard under section 202 (other than a standard required to be prescribed under section 202(b)(1)), any determination under section 202(b)(5), any control or prohibition under section 211, or any standard under section 231 may be filed only in the United States Court of Appeals for the District of Columbia. A petition for review of the Administrator's action in approving or promulgating any implementation plan under section 110 or section 111(d), or his action under section 119(c)(2)(A), (B), or (C) or under regulations thereunder, may be filed only in the United States Court of Appeals for the appropriate circuit. Any such petition shall be filed within 30 days from the date of such promulgation, approval, or action, or after such date if such petition is based solely on grounds arising after such 30th day.

"(2) Action of the Administrator with respect to which review could have been obtained under paragraph (1) shall not be subject to judicial review in civil or criminal proceedings for enforcement.

"(c) In any judicial proceeding in which review is sought of a determination under this Act required to be made on the record after notice and opportunity for hearing, if any party applies to the court for leave to adduce additional evidence, and shows to the satisfaction of the court that such additional evidence is material and that there were reasonable grounds for the failure to adduce such evidence in the proceeding before the Administrator, the court may order such additional evidence (and evidence in rebuttal thereof) to be taken before the Administrator, in such manner and upon such terms and conditions as to the court may deem proper. The Administrator may modify his findings as to the facts, or make new findings, by reason of the additional evidence so taken and he shall file such modified or new findings, and his recommendation, if any, for the modification or setting aside of his original determination, with the return of such additional evidence.

MANDATORY LICENSING

"SEC. 308. Whenever the Attorney General determines, upon application of the Administrator—

' (1) that—

"(A) in the implementation of the requirements of section 111, 112, or 202 of this Act, a right under any

United States letters patent, which is being used or intended for public or commercial use and not otherwise reasonably available, is necessary to enable any person required to comply with such limitation to so comply, and

"(B) there are no reasonable alternative methods to accomplish such purpose, and

"(2) that the unavailability of such right may result in a substantial lessening of competition or tendency to create a monopoly in any line of commerce in any section of the country,

the Attorney General may so certify to a district court of the United States, which may issue an order requiring the person who owns such patent to license it on such reasonable terms and conditions as the court, after hearing, may determine. Such certification may be made to the district court for the district in which the person owning the patent resides, does business, or is found.

POLICY REVIEW

"SEC. 309. (a) The Administrator shall review and comment in writing on the environmental impact of any matter relating to duties and responsibilities granted pursuant to this Act or other provisions of the authority of the Administrator, contained in any (1) legislation proposed by any Federal department or agency, (2) newly authorized Federal projects for construction and any major Federal agency action other than a project for construction to which section 102(2)(C) of Public Law 91–190 applies, and (3) proposed regulations published by any department or agency of the Federal Government. Such written comment shall be made public at the conclusion of any such review.

"(b) In the event the Administrator determines that any such legislation, action, or regulation is unsatisfactory from the standpoint of public health or welfare or environmental quality, he shall publish his determination and the matter shall be referred to the Council on Environmental Quality.

OTHER AUTHORITY NOT AFFECTED

"SEC. 310. (a) Except as provided in subsection (b) of this section, this Act shall not be construed as superseding or limiting the authorities and responsibilities, under any other provision of law, of the Administrator or any other Federal officer, department, or agency.

"(b) No appropriation shall be authorized or made under section 301, 311, or 314 of the Public Health Service Act for any fiscal year after the fiscal year ending June 30, 1964, for any purpose for which appropriations may be made under authority of this Act.

RECORDS AND AUDIT

"SEC. 311. (a) Each recipient of assistance under this Act shall keep such records as the Administrator shall prescribe, including records which fully disclose the amount and disposition by such

recipient of the proceeds of such assistance, the total cost of the project or undertaking in connection with which such assistance is given or used, and the amount of that portion of the cost of the project or undertaking supplied by other sources, and such other records as will facilitate an effective audit.

"(b) The Administrator and the Comptroller General of the United States, or any of their duly authorized representatives, shall have access for the purpose of audit and examinations to any books, documents, papers, and records of the recipients that are pertinent to the grants received under this Act.

COMPREHENSIVE ECONOMIC COST STUDIES

"SEC. 312. (a) In order to provide the basis for evaluating programs authorized by this Act and the development of new programs and to furnish the Congress with the information necessary for authorization of appropriations by fiscal years beginning after June 30, 1969, the Administrator, in cooperation with State, interstate, and local air pollution control agencies, shall make a detailed estimate of the cost of carrying out the provisions of this Act; a comprehensive study of the cost of program implementation by affected units of government; and a comprehensive study of the economic impact of air quality standards on the Nation's industries, communities, and other contributing sources of pollution, including an analysis of the national requirements for and the cost of controlling emissions to attain such standards of air quality as may be established pursuant to this Act or applicable State law. The Administrator shall submit such detailed estimate and the results of such comprehensive study of cost for the five-year period beginning July 1, 1969, and the results of such other studies, to the Congress not later than January 10, 1969, and shall submit a reevaluation of such estimate and studies annually thereafter.

"(b) The Administrator shall also make a complete investigation and study to determine (1) the need for additional trained State and local personnel to carry out programs assisted pursuant to this Act and other programs for the same purpose as this Act; (2) means of using existing Federal training programs to train such personnel; and (3) the need for additional trained personnel to develop, operate and maintain those pollution control facilities designed and installed to implement air quality standards. He shall report the results of such investigation and study to the President and the Congress not later than July 1, 1969.

ADDITIONAL REPORTS TO CONGRESS

"SEC. 313. Not later than six months after the effective date of this section and not later than January 10 of each calendar year beginning after such date, the Administrator shall report to the Congress on measures taken toward implementing the purpose and intent of this Act including, but not limited to, (1) the progress and problems associated with control of automotive exhaust emissions and the research efforts related thereto; (2) the development of air quality criteria and recommended emission con-

trol requirements; (3) the status of enforcement actions taken pursuant to this Act; (4) the status of State ambient air standards setting, including such plans for implementation and enforcement as have been developed; (5) the extent of development and expansion of air pollution monitoring systems; (6) progress and problems related to development of new and improved control techniques; (7) the development of quantitative and qualitative instrumentation to monitor emissions and air quality; (8) standards set or under consideration pursuant to title II of this Act; (9) the status of State, interstate, and local pollution control programs established pursuant to and assisted by this Act; and (10) the reports and recommendations made by the President's Air Quality Advisory Board.

LABOR STANDARDS

"SEC. 314. The Administrator shall take such action as may be necessary to insure that all laborers and mechanics employed by contractors or subcontractors on projects assisted under this Act shall be paid wages at rates not less than those prevailing for the same type of work on similar construction in the locality as determined by the Secretary of Labor, in accordance with the Act of March 3, 1931, as amended, known as the Davis-Bacon Act (46 Stat. 1494; 40 U.S.C. 276a—276a–5). The Secretary of Labor shall have, with respect to the labor standards specified in this subsection, the authority and functions set forth in Reorganization Plan Numbered 14 of 1950 (15 F.R. 3176; 64 Stat. 1267) and section 2 of the Act of June 13, 1934, as amended (48 Stat. 948; 40 U.S.C. 276c).

SEPARABILITY

"SEC. 315. If any provision of this Act, or the application of any provision of this Act to any person or circumstance, is held invalid, the application of such provision to other persons or circumstances, and the remainder of this Act, shall not be affected thereby.

APPROPRIATIONS

"SEC. 316. There are authorized to be appropriated to carry out this Act, other than sections 103(f)(3) and (d), 104, 212, and 403, $125,000,000 for the fiscal year ending June 30, 1971, $225,000,000 for the fiscal year ending June 30, 1972, $300,000,000 for the fiscal year ending June 30, 1973, $300,000,000 for the fiscal year ending June 30, 1974, and $300,000,000 for the fiscal year ending June 30, 1975.

SAVINGS PROVISIONS [1]

"SEC. 16. (a)(1) Any implementation plan adopted by any State and submitted to the Secretary of Health, Education, and Welfare, or to the Administrator pursuant to the Clean Air Act prior to enactment of this Act may be approved under section 110 of the

[1] Provisions included in Clean Air Act Amendments of 1970. In these provisions, the phrases "prior to enactment of this Act" and "as amended by this Act" refer to enactment of the Clean Air Act Amendments of 1970.

Clean Air Act (as amended by this Act) and shall remain in effect, unless the Administrator determines that such implementation plan, or any portion thereof, is not consistent with the applicable requirements of the Clean Air Act (as amended by this Act) and will not provide for the attainment of national primary ambient air quality standards in the time required by such Act. If the Administrator so determines, he shall, within ninety days after promulgation of any national ambient air quality standards pursuant to section 109(a) of the Clean Air Act, notify the State and specify in what respects changes are needed to meet the additional requirements of such Act, including requirements to implement national secondary ambient air quality standards. If such changes are not adopted by the State after public hearings and within six months after such notification, the Administrator shall promulgate such changes pursuant to section 110(c) of such Act.

"(2) The amendments made by section 4(b) shall not be construed as repealing or modifying the powers of the Administrator with respect to any conference convened under section 108(d) of the Clean Air Act before the date of enactment of this Act.[2]

"(b) Regulations or standards issued under title II of the Clean Air Act prior to the enactment of this Act shall continue in effect until revised by the Administrator consistent with the purposes of such Act.

"(1) Section 601 of the Federal Aviation Act of 1958 (49 U.S.C. 1421) is amended by adding at the end thereof the following new subsection:

AVIATION FUEL STANDARDS [1]

"(d) The Administrator shall prescribe, and from time to time revise, regulations (1) establishing standards governing the composition or the chemical or physical properties of any aircraft fuel or fuel additive for the purpose of controlling or eliminating aircraft emissions which the Administrator of the Environmental Protection Agency (pursuant to section 231 of the Clean Air Act) determines endanger the public health or welfare, and (2) providing for the implementation and enforcement of such standards.

"(2) Section 610(a) of such Act (49 U.S.C. 1430(a)) is amended by striking out "and" at the end of paragraph (7); by striking out the period at the end of paragraph (8) and inserting in lieu thereof "; and" and by adding after paragraph (8) the following new paragraph:

"(9) For any person to manufacture, deliver, sell, or offer for sale, any aviation fuel or fuel additive in violation of any regulation prescribed under section 601(d)."

"(3) That portion of the table of contents contained in the first section of the Federal Aviation Act of 1958 which appears under the side heading

"SEC. 601 General Safety Powers and Duties."

is amended by adding at the end thereof the following:

"(d) Aviation fuel standards."

---

[2] The amendments referred to in this paragraph were contained in section 4(b) of the Clean Air Amendments of 1970. They are reflected in the provisions of what is now section 115 of the Clean Air Act.

[1] These amendments to the Federal Aviation Act were made by the Clean Air Amendments of 1970 and are included herein because of their relationship to the Clean Air Act.

Public Law 93-319
93rd Congress, H. R. 14368
June 22, 1974

An Act

88 STAT. 246

To provide for means of dealing with energy shortages by requiring reports with respect to energy resources, by providing for temporary suspension of certain air pollution requirements, by providing for coal conversion, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

Energy Supply and Environmental Coordination Act of 1974. 15 USC 791 note.

SECTION 1. SHORT TITLE; PURPOSE.

(a) This Act, including the following table of contents, may be cited as the "Energy Supply and Environmental Coordination Act of 1974".

TABLE OF CONTENTS

(b) The purposes of this Act are (1) to provide for a means to assist in meeting the essential needs of the United States for fuels, in a manner which is consistent, to the fullest extent practicable, with existing national commitments to protect and improve the environment, and (2) to provide requirements for reports respecting energy resources. 15 USC 791.

SEC. 2. COAL CONVERSION AND ALLOCATION. 15 USC 792.

(a) The Federal Energy Administrator—

(1) shall, by order, prohibit any powerplant, and

(2) may, by order, prohibit any major fuel burning installation, other than a powerplant,

Powerplant and fuel burning installations.

from burning natural gas or petroleum products as its primary energy source, if the Federal Energy Administrator determines such powerplant or installation on the date of enactment of this Act has the capability and necessary plant equipment to burn coal, and if the requirements of subsection (b) are met.

(b) The requirements referred to in subsection (a) are as follows:

(1) An order under subsection (a) may not be issued with respect to a powerplant or installation unless the Federal Energy Administrator finds (A) that the burning of coal by such plant or installation, in lieu of petroleum products or natural gas, is practicable and consistent with the purposes of this Act, (B) that coal and coal transportation facilities will be available during the period the order is in effect, and (C) in the case of a powerplant, that the prohibition under subsection (a) will not impair the reliability of service in the area served by such plant. Such an order shall be rescinded or modified to the extent the Federal Energy Administrator determines that any requirement described in subparagraph (A), (B), or (C) of this paragraph is no longer met; and such an order may at any time be modified if the Federal Energy Administrator determines that such order, as modified, complies with the requirements of this section.

Public notice.

(2)(A) Before issuing an order under subsection (a) which is applicable to a powerplant or installation for a period ending on or before June 30, 1975, the Federal Energy Administrator (i) shall give notice to the public and afford interested persons an opportunity for written presentations of data, views, and arguments, (ii) shall consult with the Administrator of the Environmental Protection Agency, and (iii) shall take into account the likelihood that the powerplant or installation will be permitted to burn coal after June 30, 1975.

(B) An order described in subparagraph (A) of this paragraph shall not become effective until the date which the Administrator of the Environmental Protection Agency certifies pursuant to section 119(d)(1)(A) of such Act is the earliest date that such plant or installation will be able to comply with the air pollution requirements which will be applicable to it. Such order shall not be effective for any period certified by the Administrator of the Environmental Protection Agency pursuant to section 119(d)(3)(B) of such Act.

(3)(A) Before issuing an order under subsection (a) which is applicable to a powerplant or installation after June 30, 1975 (or modifying an order to which paragraph (2) applies, so as to apply such order to a powerplant or installation after such date), the Federal Energy Administrator shall give notice to the public and afford interested persons an opportunity for oral and written presentations of data, views, and arguments.

(B) An order (or modification thereof) described in subparagraph (A) of this paragraph shall not become effective until (i) the Administrator of the Environmental Protection Agency notifies the Federal Energy Administrator under section 119(d)(1)(B) of the Clean Air Act that such plant or installation will be able on and after July 1, 1975, to burn coal and to comply with all applicable air pollution requirements without a compliance date extension under section 119(c) of such Act, or (ii) if such notification is not given, the date which the Administrator of the Environmental Protection Agency certifies pursuant to section 119(d)(1)(B) of such Act is the earliest date that such plant or installation will be able to comply with all applicable requirements of such section 119. Such order (or modification) shall not be effective during any period certified by the Administrator of the Environmental Protection Agency under section 119(d)(3)(B) of such Act.

Post, p. 248.

Powerplant, construction design.

(c) The Federal Energy Administrator may require that any powerplant in the early planning process (other than a combustion gas turbine or combined cycle unit) be designed and constructed so as to be capable of using coal as its primary energy source. No powerplant may be required under this subsection to be so designed and constructed, if the Administrator determines that (1) to do so is likely to result in an impairment of reliability or adequacy of service, or (2) an adequate and reliable supply of coal is not expected to be available. In considering whether to impose a design and construction requirement under this subsection, the Federal Energy Administrator shall consider the existence and effects of any contractual commitment for the construction of such facilities and the capability of the owner to recover any

capital investment made as a result of any requirement imposed under this subsection.

(d) The Federal Energy Administrator may, by rule or order, allocate coal (1) to any powerplant or major fuel-burning installation to which an order under subsection (a) has been issued, or (2) to any other person to the extent necessary to carry out the purposes of this Act.

(e) For purposes of this section:

(1) The term "powerplant" means a fossil-fuel fired electric generating unit which produces electric power for purposes of sale or exchange. "Powerplant."

(2) The term "coal" includes coal derivatives. "Coal."

(f)(1) Authority to issue orders or rules under subsections (a) through (d) of this section shall expire at midnight, June 30, 1975. Such a rule or order may take effect at any time before January 1, 1979. Expiration and effective dates.

(2) Authority to amend, repeal, rescind, modify, or enforce such rules or orders shall expire at midnight, December 31, 1978; but the expiration of such authority shall not affect any administrative or judicial proceeding which relates to any act or omission which occurred prior to January 1, 1979.

SEC. 3. SUSPENSION AUTHORITY.

Title I of the Clean Air Act is amended by adding at the end thereof the following new section: 81 Stat. 485. 42 USC 1857.

"ENERGY-RELATED AUTHORITY

"SEC. 119. (a) For purposes of this section: Definitions. 42 USC 1857c-10.

"(1) The term 'stationary source fuel or emission limitation' means any emission limitation, schedule or timetable of compliance, or other requirement, which is prescribed under this Act (other than this section, or section 111(b), 112, or 303) or contained in an applicable implementation plan (other than a requirement imposed under authority described in section 110(a)(2)(F)(v)), and which limits, or is designed to limit, stationary source emissions resulting from combustion of fuels, including a prohibition on, or specification of, the use of any fuel of any type, grade, or pollution characteristic.

"(2) The term 'air pollution requirement' means any emission limitation, schedule or timetable for compliance, or other requirement, which is prescribed under any Federal, State, or local law or regulation, including this Act (except for any requirement prescribed under subsection (c) or (d) of this section, section 110(a)(2)(F)(v), or section 303), and which limits stationary source emissions resulting from combustion of fuels (including a prohibition on, or specfication of, the use of any fuel of any type, grade, or pollution characteristic).

"(3) The terms 'stationary source' and 'source' have the same meaning as the term 'stationary source' has under section 111(a)(3); except that such terms include any owner or operator (as defined in section 111(a)(5)) of such source.

"(4) The term 'coal' includes coal derivatives.

"(5) The term 'primary standard condition' means a limitation, requirement, or other measure, prescribed by the Administrator under subsection (d)(2)(A) of this section.

"(6) The term 'regional limitation' means the requirement of subsection (c)(2)(D) of this section.

Temporary suspension.

"(b)(1)(A) The Administrator may, for any period beginning on or after the date of enactment of this section and ending on or before June 30, 1975, temporarily suspend any stationary source fuel or emission limitation as it applies to any person—

"(i) if the Administrator finds that such person will be unable to comply with any such limitation during such period solely because of unavailability of types or amounts of fuels (unless such unavailability results from an order under section 2(a) of the Energy Supply and Environmental Coordination Act of 1974), or

"(ii) if such person is a source which is described in subsection (c)(1)(A) or (B) of this section and which has converted to coal, and the Administrator finds that the source will be able to comply during the period of the suspension with all primary standard conditions which will be applicable to such source.

Any suspension under this paragraph, the imposition of any interim requirement on which such suspension is conditioned under paragraph (3) of this subsection, and the imposition of any primary standard condition which relates to such suspension, shall be exempted from any procedural requirements set forth in this Act or in any other provision of Federal, State, or local law; except as provided in subparagraph (B) of this paragraph.

Public notice.

"(B) The Administrator shall give notice to the public and afford interested persons an opportunity for written and oral presentations of data, views, and arguments prior to issuing a suspension under subparagraph (A), or denying an application for such a suspension, unless otherwise provided by the Administrator for good cause found and published in the Federal Register. In any case, before issuing such a suspension, he shall give actual notice to the Governor of the State in which the affected source or sources are located, and to appropriate local governmental officials (as determined by the Administrator). The issuing or denial of such a suspension, the imposition of an interim requirement, and the imposition of any primary standard condition shall be subject to judicial review only on the grounds specified in paragraph (2)(B), (2)(C), or (2)(D), of section 706 of title 5, United States Code, and shall not be subject to any proceeding under section 304(a)(2) or 307(b) and (c) of this Act.

Publication in Federal Register.
Notice to State Governor and local officials.
Judicial review.
80 Stat. 393.
84 Stat. 1705.
42 USC 1857h-2, 1857h-5.

"(2) In issuing any suspension under paragraph (1), the Administrator is authorized to act on his own motion or upon application by any person (including a public officer or public agency).

Interim requirements, compliance.

"(3) Any suspension under paragraph (1) shall be conditioned upon compliance with such interim requirements as the Administrator determines are reasonable and practicable. Such interim requirements shall include, but need not be limited to, (A) a requirement that the persons receiving the suspension comply with such reporting requirements as the Administrator determines may be necessary, (B) such measures as the Administrator determines are necessary to avoid an imminent and substantial endangerment to health of persons, and

(C) in the case of a suspension under paragraph (1)(A)(i), requirements that the suspension shall be inapplicable during any period during which fuels which would enable compliance with the suspended stationary source fuel or emission limitations are in fact reasonably available (as determined by the Administrator) to such person.

"(c)(1) Except as provided in paragraph (2) of this subsection, the Administrator shall issue a compliance date extension to any fuel-burning stationary source— Compliance date, extension.

"(A) which is prohibited from using petroleum products or natural gas by reason of an order which is in effect under section 2 (a) and (b) of the Energy Supply and Environmental Coordination Act of 1974, or

"(B) which the Administrator determines began conversion to the use of coal as its primary energy source during the period beginning on September 15, 1973, and ending on March 15, 1974, and which, on or after September 15, 1973, converts to the use of coal as its primary energy source. If a compliance date extension is issued to a source, such source shall not, until January 1, 1979, be prohibited, by reason of the application of any air pollution requirement, from burning coal which is available to such source, except as provided in subsection (d)(3). For purposes of this paragraph, the term 'began conversion' means action by the source during the period beginning on September 15, 1973, and ending on March 15, 1974 (such as entering into a contract binding on such source for obtaining coal, or equipment or facilities to burn coal; expanding substantial sums to permit such source to burn coal; or applying for an air pollution variance to enable such source to burn coal) which the Administrator finds evidences a decision (made prior to March 15, 1974) to convert to burning coal as a result of the unavailability of an adequate supply of fuels required for compliance with the applicable implementation plan, and a good faith effort to expeditiously carry out such decision. "Began conversion."

"(2) (A) A compliance date extension under paragraph (1) of this subsection may be issued to a source only if— Conditions.

(i) the Administrator finds that such source will not be able to burn coal which is available to such source in compliance with all applicable air pollution requirements without a compliance date extension,

(ii) the Administrator finds that the source will be able during the period of the compliance date extension to comply with all the primary standard conditions which are required under subsection (d)(2) to be applicable to such source, and with the regional limitation if applicable to such source, and

(iii) the source has submitted to the Administrator a plan for compliance for such source which the Administrator has approved.

A plan submitted under clause (iii) of the preceding sentence shall be approved only if it meets the requirements of regulations prescribed under subparagraph (B). The Administrator shall approve or disapprove any such plan within 60 days after such plan is submitted.

"(B) Not later than 90 days after the date of enactment of this section, the Administrator shall prescribe regulations requiring that any source to which a compliance date extension applies submit and obtain approval of its means for and schedule of compliance with the require- Regulations. Compliance schedule.

ments of subparagraph (C) of this paragraph. Such regulations shall include requirements that such schedules shall include dates by which any such source must—

Contracts, approval.

"(i) enter into contracts (or other obligations enforceable against such source) which the Administrator has approved as being adequate to provide for obtaining a long-term supply of coal which enables such source to achieve the emission reduction required by subparagraph (C), or

"(ii) if coal which enables such source to achieve such emission reduction is not available to such source, enter into contracts (or other obligations enforceable against such source) which the Administrator has approved as being adequate to provide for obtaining (I) a long-term supply of other coal, and (II) continuous emission reduction systems necessary to permit such source to burn such coal, and to achieve the degree of emission reduction required by subparagraph (C).

Regulations under this subparagraph shall provide that contracts or other obligations required to be approved under this subparagraph must be approved before they are entered into (except that a contract or obligation which was entered into before the date of enactment of this section may be approved after such date).

Emmission reduction, requirements.

"(C) Regulations under subparagraph (B) shall require that the source achieve the most stringent degree of emission reduction that such source would have been required to achieve under the applicable implementation plan which was in effect on the date of submittal (under subparagraph (B) of this paragraph) of the means for and schedule of compliance (or if no applicable implementation plan was in effect on such date, under the first applicable implementation plan which takes effect after such date). Such degree of emission reduction shall be achieved as soon as practicable, but not later than December 31, 1978; except that, in the case of a source for which a continuous emission reduction system is required for sulfur-related emissions, reduction of such emissions shall be achieved on a date designated by the Administrator (but not later than January 1, 1979). Such regulations shall also include such interim requirements as the Administrator determines are reasonable and practicable, including requirements described in subparagraphs (A) and (B) of subsection (b)(3) and requirements to file progress reports.

Progress reports.

"(D) A source which is issued a compliance date extension under this subsection, and which is located in an air quality control region in which a national primary ambient air quality standard for an air pollutant is not being met, may not emit such pollutant in amounts which exceed any emission limitation (and may not violate any other requirement) which applies to such source, under the applicable implementation plan for such pollutant. For purposes of this subparagraph, applicability of any such limitation or requirement to a source shall be determined without regard to this subsection or subsection (b).

"(3) A source to which this subsection applies may, upon the expiration of a compliance date extension, receive a one-year postponement of the application of any requirement of an applicable implementation plan under the conditions and in the manner provided in section 110(f).

"(4) The Administrator shall give notice to the public and afford an opportunity for oral and written presentations of data, views, and arguments before issuing any compliance date extension, prescribing any regulation under paragraph (2) of this subsection, making any finding under paragraph (2)(A) of this subsection, imposing any requirement on a source pursuant to paragraph (2) or any regulation thereunder, prescribing a primary standard condition under subsection (d)(2) which applies to a source to which an extension is issued under this subsection, or acting on any petition under subsection (d)(2)(C). Public notice.

"(d)(1)(A) Whenever the Federal Energy Administrator issues an order under section 2(a) of the Energy Supply and Environmental Coordination Act of 1974 which will not apply after June 30, 1975, the Administrator of the Environmental Protection Agency shall certify to him—

"(i) in the case of a source to which no suspension will be issued under subsection (b), the earliest date on which such source will be able to burn coal and to comply with all applicable air pollution requirements, or

"(ii) in the case of a source to which a suspension will be issued under subsection (b) of this section, the date determined under paragraph (2)(B) of this subsection.

"(B) Whenever the Federal Energy Administrator issues an order under section 2(a) of such Act which will apply after June 30, 1975, the Administrator of the Environmental Protection Agency shall notify him if such source will be able, on and after July 1, 1975, to burn coal and to comply with all applicable air pollution requirements without a compliance date extension under subsection (c). If such notification is not given—

"(i) in the case of a source which is eligible for a compliance date extension under subsection (c), the Administrator of the Environmental Protection Agency shall certify to the Federal Energy Administrator the date determined under paragraph (2)(B) of this subsection, and

"(ii) in the case of a source which is not eligible for such an extension, the Administrator of the Environmental Protection Agency shall certify to the Federal Energy Administrator the earliest date on which the source will be able to burn coal and to comply with all applicable air pollution requirements.

"(2)(A) The Administrator of the Environmental Protection Agency, after consultation with appropriate States, shall prescribe (and may from time to time, after such consultation, modify) emission limitations, requirements respecting pollution characteristics of coal, or other enforceable measures for control of emissions, for each source to which a suspension under subsection (b)(1)(A)(ii) will apply, and for each source to which a compliance date extension under subsection (c)(1) will apply. Such limitations, requirements, and measures shall be those which he determines must be complied with by the source in order to assure (throughout the period that the suspension or extension will be in effect) that the burning of coal by such source will not result in emissions which cause or contribute to concentrations of any air pollutant in excess of any national primary ambient air quality standard for such pollutant. Emission limitations.

"(B) Whenever the Administrator prescribes a limitation, requirement, or measure under subparagraph (A) of this paragraph with respect to a source, he shall determine the earliest date on which such source will be able to comply with such limitation, requirement, or measure, and with any regional limitation applicable to such source.

Emission limitations, petition for modification.

"(C) An air pollution control agency may petition the Administrator (A) to modify any limitation, requirement, or other measure under this paragraph so as to assure compliance with the requirements of this paragraph, or (B) to issue to the Federal Energy Administration the certification described in paragraph (3)(B) on the grounds described in clause (iii) thereof. The Administrator shall take the action requested in the petition, or deny the petition, within 90 days after the date of receipt of the petition.

Compliance.

"(3)(A) If the Administrator determines that a source to which a suspension under subsection (b)(1)(A)(ii) or to which a compliance date extension under subsection (c)(1) applies is not in compliance with any primary standard condition, or that a source to which a compliance date extension applies is not in compliance with a regional limitation applicable to it, he shall (except as provided in subparagraph (B)) either—

"(i) enforce compliance with such condition or limitation under section 113, or

Public notice.

"(ii) (after notice to the public and affording an opportunity for interested persons to present data, views, and arguments, including oral presentations, to the extent practicable) revoke such suspension or compliance date extension.

"(B) If the Administrator finds that for any period—

"(i) a source, to which an order under section 2(a) of the Energy Supply and Environmental Coordination Act of 1974 applies, will be unable to comply with a primary standard condition or regional limitation,

"(ii) such a source will not be in compliance with such a condition or limitation, but such condition or limitation cannot be enforced because of a court order restraining its enforcement, or

"(iii) the burning of coal by such a source will result in an increase in emissions of any air pollutant for which national ambient air quality standards have not been promulgated (or an air pollutant which is transformed in the atmosphere into an air pollutant for which such a standard has not been promulgated), and that such increase may cause (or materially contribute to) a significant risk to public health,

he shall notify the Federal Energy Administrator of his finding and certify the period for which such order under such section 2(a) shall not be in effect with respect to such source. Subject to the conditions of the preceding sentence, such certification may be modified from time to time. For purposes of this subsection, subsection (c), and section 2 (a) or (b) of the Energy Supply and Environmental Coordination Act of 1974, a source shall be considered unable to comply with an air pollution requirement (including a primary standard condition or regional limitation) only if necessary technology or other alternative methods of control are not available or have not been available for a sufficient period of time.

"(4) Nothing in this Act shall prohibit a State, political subdivision of a State, or agency or instrumentality of either, from enforcing any primary standard condition or regional limitation.

"(5) A conversion to coal (A) to which a suspension under subsection (b) or a compliance date extension under subsection (c) applies or (B) by reason of an order under section 2(a) of the Energy Supply and Environmental Coordination Act of 1974 shall not be deemed to be a modification for purposes of section 111(a) (2) and (4) of this Act.

Continuous emission reduction systems, manufacturing priorities, rules.

"(e) The Administrator may, by rule, establish priorities under which manufacturers of continuous emission reduction systems necessary to carry out subsection (c) shall provide such systems to users thereof, if he finds that priorities must be imposed in order to assure that such systems are first provided to sources in air quality control regions in which national primary ambient air quality standards have not been achieved. No rule under this subsection may impair the obligation of any contract entered into before the date of enactment of this section. To the extent necessary to carry out this section, the Administrator may prohibit any State or political subdivision of a State, or an agency or instrumentality of either, from requiring any person to use a continuous emission reduction system for which priorities have been established under this subsection, except in accordance with such priorities.

"(f) No State, political subdivision of a State, or agency or instrumentality of either, may require any person to whom a suspension has been issued under subsection (b) (1) to use any fuel the unavailability of which is the basis of such person's suspension (except that this subsection shall not apply to requirements identical to Federal requirements under subsection (b) (3) or subsection (d) (2)).

Unlawful acts.

"(g) (1) It shall be unlawful for any person to whom a suspension has been issued under subsection (b) (1) to violate any requirement on which the suspension is conditioned pursuant to subsection (b) (3) or any primary standard condition applicable to him.

"(2) It shall be unlawful for any person to fail to comply with any requirement under subsection (c), or any regulation, plan, or schedule thereunder (including a primary standard condition or regional limitation), which is applicable to such person.

"(3) It shall be unlawful for any person to violate any rule under subsection (e).

"(4) It shall be unlawful for any person to fail to comply with an interim requirement under subsection (i) (3).

"(h) Nothing in this section shall affect the power of the Administrator to deal with air pollution presenting an imminent and substantial endangerment to the health of persons under section 303 of this Act. 84 Stat. 1705. 42 USC 1857h-1.

Electric generating powerplants, cessation of operation, postponement.

"(i) (1) In order to reduce the likelihood of early phaseout of existing electric generating powerplants, any electric generating powerplant (A) which, because of the age and condition of the plant, is to be taken out of service permanently no later than January 1, 1980, according to the power supply plan (in existence on January 1, 1974) of the owner or operator of such plant, (B) for which a certification to that effect has been filed by the owner or operator of the plant with the Environmental Protection Agency and the Federal Power Commission, and (C) for which such Commission has determined that

the certification has been made in good faith and that the plan to cease operations no later than January 1, 1980, will be carried out as planned in light of existing and prospective power supply requirements, shall be eligible for a single one-year postponement as provided in paragraph (2).

"(2) Prior to the date on which any powerplant eligible under paragraph (1) is required to comply with any requirement of an applicable implementation plan, such plant may apply (with the concurrence of the Governor of the State in which such plant is located) to the Administrator to postpone the applicability of such requirement to such plant for not more than one year. If the Administrator determines, after considering the risk to public health and welfare which may be associated with a postponement, that compliance with any such requirement is not reasonable in light of the projected useful life of the plant, the availability of rate base increases to pay for the costs of such compliance, and other appropriate factors, then the Administrator shall grant a postponement of any such requirement.

"(3) The Administrator shall, as a condition of any postponement under paragraph (2), prescribe such interim requirements as are practicable and reasonable in light of the criteria in paragraph (2).

Public notice.

"(j) (1) The Administrator may, after public notice and opportunity for presentation of data, views, and arguments in accordance with section 553 of title 5, United States Code, and after consultation with the Federal Energy Administrator, designate persons with respect to whom fuel exchange requirements should be imposed under paragraph (2) of this subsection. The purpose of such designation shall be to avoid or minimize the adverse impact on public health and welfare of any suspension under subsection (b) of this section or conversion to coal to which subsection (c) applies or of any allocation under section 2(d) of the Energy Supply and Environmental Coordination Act of 1974 or under the Emergency Petroleum Allocation Act of 1973.

80 Stat. 383.

87 Stat. 627.

15 USC 751 note.

"(2) The Federal Energy Administrator shall exercise his authority under section 2(d) of the Energy Supply and Environmental Coordination Act of 1974 and under the Emergency Petroleum Allocation Act of 1973 with respect to persons designated by the Administrator of the Environmental Protection Agency under paragraph (1) in order to require the exchange of any fuel subject to allocation under such Acts effective no later than forty-five days after the date of such designation, unless the Federal Energy Administrator determines, after consultation with the Administrator of the Environmental Protection Agency, that the costs or consumption of fuel, resulting from requiring such exchange, will be excessive.

Study; report to Congress.

"(k) (1) The Administrator shall study, and report to Congress not later than six months after the date of enactment of this section, with respect to—

"(A) the present and projected impact of fuel shortages and fuel allocation programs on the program under this Act;

"(B) availability of continuous emission reduction technology (including projections respecting the time, cost, and number of units available) and the effects that continuous emission reduc-

tion systems would have on the total environment and on supplies of fuel and electricity;

"(C) the number of sources and locations which must use such technology based on projected fuel availability data;

"(D) a priority schedule for installation of continuous emission reduction technology, based on public health or air quality;

"(E) evaluation of availability of technology to burn municipal solid waste in electric powerplants or other major fuel burning installations, including time schedules, priorities, analysis of pollutants which may be emitted (including those for which national ambient air quality standards have not been promulgated), and a comparison of health benefits and detriments from burning solid waste and of economic costs;

"(F) evaluation of alternative control strategies for the attainment and maintenance of national ambient air quality standards for sulfur oxides within the time for attainment prescribed in this Act, including associated considerations of cost, time for attainment, feasibility, and effectiveness of such alternative control strategies as compared to stationary source fuel and emission regulations;

"(G) proposed priorities, for continuous emission reduction systems which do not produce solid waste, for sources which are least able to handle solid waste byproducts of such systems;

"(H) plans for monitoring or requiring sources to which this section applies to monitor the impact of actions under this section on concentrations of sulfur dioxide in the ambient air; and

"(I) steps taken pursuant to authority of section 110(a)(3)(B) of this Act.

"(2) Beginning January 1, 1975, the Administrator shall publish in the Federal Register, at no less than one-hundred-and-eighty-day intervals, the following: Publication in Federal Register.

"(A) A concise summary of progress reports which are required to be filed by any person or source owner or operator to which subsection (c) applies. Such progress reports shall report on the status of compliance with all requirements which have been imposed by the Administrator under such subsection.

"(B) Up-to-date findings on the impact of this section upon—

"(i) applicable implementation plans, and

"(ii) ambient air quality."

SEC. 4. IMPLEMENTATION PLAN REVISIONS.

(a) Section 110(a) of the Clean Air Act is amended in paragraph (3) by inserting "(A)" after "(3)" and by adding at the end thereof the following new subparagraph: 84 Stat. 1680. 42 USC 1857c-5.

"(B) As soon as practicable, the Administrator shall, consistent with the purposes of this Act and the Energy Supply and Environmental Coordination Act of 1974, review each State's applicable implementation plans and report to the State on whether such plans can be revised in relation to fuel burning stationary sources (or persons supplying fuel to such sources) without interfering with the attainment and maintenance of any national ambient air quality standard within the period permitted in this section. If the Administrator determines that any such plan can be revised, he shall notify the State that a plan revision may be submitted by the State. Any plan revision Review. Report to State. Revised plans, submittal.

Public notice and hearing opportunity.

which is submitted by the State shall, after public notice and opportunity for public hearing, be approved by the Administrator if the revision relates only to fuel burning stationary sources (or persons supplying fuel to such sources), and the plan as revised complies with paragraph (2) of this subsection. The Administrator shall approve or disapprove any revision no later than three months after its submission."

84 Stat. 1680. 42 USC 1857c-5.

(b) Subsection (c) of section 110 of the Clean Air Act is amended by inserting "(1)" after "(c)"; by redesignating paragraphs (1), (2), and (3) as subparagraphs (A), (B), and (C), respectively, and by adding at the end thereof the following new paragraph:

Transportation regulations study. Report, submittal to congressional committees.

"(2)(A) The Administrator shall conduct a study and shall submit a report to the Committee on Interstate and Foreign Commerce of the United States House of Representatives and the Committee on Public Works of the United States Senate not later than three months after date of enactment of this paragraph on the necessity of parking surcharge, management of parking supply, and preferential bus/carpool lane regulations as part of the applicable implementation plans required under this section to achieve and maintain national primary ambient air quality standards. The study shall include an assessment of the economic impact of such regulations, consideration of alternative means of reducing total vehicle miles traveled, and an assessment of the impact of such regulations on other Federal and State programs dealing with energy or transportation. In the course of such study, the Administrator shall consult with other Federal officials including, but not limited to, the Secretary of Transportation, the Federal Energy Administrator, and the Chairman of the Council on Environmental Quality.

Parking surcharge.

"(B) No parking surcharge regulation may be required by the Administrator under paragraph (1) of this subsection as a part of an applicable implementation plan. All parking surcharge regulations previously required by the Administrator shall be void upon the date of enactment of this subparagraph. This subparagraph shall not prevent the Administrator from approving parking surcharges if they are adopted and submitted by a State as part of an applicable implementation plan. The Administrator may not condition approval of any implementation plan submitted by a State on such plan's including a parking surcharge regulation.

Regulations, suspension authority.

"(C) The Administrator is authorized to suspend until January 1, 1975, the effective date or applicability of any regulations for the management of parking supply or any requirement that such regulations be a part of an applicable implementation plan approved or promulgated under this section. The exercise of the authority under this subparagraph shall not prevent the Administrator from approving such regulations if they are adopted and submitted by a State as part of an applicable implementation plan. If the Administrator exercises the authority under this subparagraph, regulations requiring a review or analysis of the impact of proposed parking facilities before construction which take effect on or after January 1, 1975, shall not apply to parking facilities on which construction has been initiated before January 1, 1975.

"(D) For purposes of this paragraph— Definitions.

"(i) The term 'parking surcharge regulation' means a regulation imposing or requiring the imposition of any tax, surcharge, fee, or other charge on parking spaces, or any other area used for the temporary storage of motor vehicles.

"(ii) The term 'management of parking supply' shall include any requirement providing that any new facility containing a given number of parking spaces shall receive a permit or other prior approval, issuance of which is to be conditioned on air quality considerations.

"(iii) The term 'preferential bus/carpool lane' shall include any requirement for the setting aside of one or more lanes of a street or highway on a permanent or temporary basis for the exclusive use of buses or carpools, or both.

"(E) No standard, plan, or requirement, relating to management of parking supply or preferential bus/carpool lanes shall be promulgated after the date of enactment of this paragraph by the Administrator pursuant to this section, unless such promulgation has been subjected to at least one public hearing which has been held in the area affected and for which reasonable notice has been given in such area. If substantial changes are made following public hearings, one or more additional hearings shall be held in such area after such notice." Promulgation. Public hearing; notice.

SEC. 5. MOTOR VEHICLE EMISSIONS.

(a) Section 202(b)(1)(A) of the Clean Air Act is amended by striking out "1975" and inserting in lieu thereof "1977"; and by inserting after "(A)" the following: "The regulations under subsection (a) applicable to emissions of carbon monoxide and hydrocarbons from light-duty vehicles and engines manufactured during model years 1975 and 1976 shall contain standards which are identical to the interim standards which were prescribed (as of December 1, 1973) under paragraph (5)(A) of this subsection for light-duty vehicles and engines manufactured during model year 1975." 84 Stat. 1680. 42 USC 1857f-1. Model years 1975 and 1976, standards.

(b) Section 202(b)(1)(B) of such Act is amended by striking out "1976" and inserting in lieu thereof "1978"; and by inserting after "(B)" the following: "The regulations under subsection (a) applicable to emissions of oxides of nitrogen from light-duty vehicles and engines manufactured during model years 1975 and 1976 shall contain standards which are identical to the standards which were prescribed (as of December 1, 1973) under subsection (a) for light-duty vehicles and engines manufactured during model year 1975. The regulations under subsection (a) applicable to emissions of oxides of nitrogen from light-duty vehicles and engines manufactured during model year 1977 shall contain standards which provide that such emissions from such vehicles and engines may not exceed 2.0 grams per vehicle mile."

(c) Section 202(b)(5)(A) of such Act is amended to read as follows:

"(5)(A) At any time after January 1, 1975, any manufacturer may file with the Administrator an application requesting the suspension for one year only of the effective date of any emission standard required by paragraph (1)(A) with respect to such manufacturer for light-duty vehicles and engines manufactured in model year 1977. The Administrator shall make his determination with respect to any such application within sixty days. If he determines, in accordance Model year 1977, suspension request.

with the provisions of this subsection, that such suspension should be granted, he shall simultaneously with such determination prescribe by regulation interim emission standards which shall apply (in lieu of the standards required to be prescribed by paragraph (1)(A) of this subsection) to emissions of carbon monoxide or hydrocarbons (or both) from such vehicles and engines manufactured during model year 1977."

Repeal.
84 Stat. 1691.
42 USC 1857f.

(d) Section 202(b)(5)(B) of the Clean Air Act is repealed and the following subparagraphs redesignated accordingly.

SEC. 6. CONFORMING AMENDMENTS.

84 Stat. 1686; 85 Stat. 464.
42 USC 1857c-8.

(a)(1) Section 113(a)(3) of the Clean Air Act is amended by striking out "or" before "112(c)", by inserting a comma in lieu thereof, and by inserting after "hazardous emissions)" the following: ", or 119(g) (relating to energy-related authorities)".

(2) Section 113(b)(3) of such Act is amended by striking out "or 112(c)" and inserting in lieu thereof ", 112(c), or 119(g)".

(3) Section 113(c)(1)(C) of such Act is amended by striking out "or section 112(c)" and inserting in lieu thereof ", section 112(c), or section 119(g)".

42 USC 1857c-9.

(4) Section 114(a) of such Act is amended by inserting "119 or" before "303".

42 USC 1857d-1.

(b) Section 116 of the Clean Air Act is amended by inserting "119 (c), (e), and (f)," before "209".

42 USC 1857h-5.

(c)(1) The second sentence of subsection (b) of section 307 of such Act is amended by inserting ", or his action under section 119(c)(2)(A), (B), or (C) or under regulations thereunder," after "111(d)".

(2) The third sentence of such subsection is amended by striking out "or approval" and inserting in lieu thereof ", approval, or action".

15 USC 793.

SEC. 7. PROTECTION OF PUBLIC HEALTH AND ENVIRONMENT.

87 Stat. 627.
15 USC 751 note.

(a) Any allocation program provided for in section 2 of this Act or in the Emergency Petroleum Allocation Act of 1973, shall, to the maximum extent practicable, include measures to assure that available low sulfur fuel will be distributed on a priority basis to those areas of the United States designated by the Administrator of the Environmental Protection Agency as requiring low sulfur fuel to avoid or minimize adverse impact on public health.

Study.

Ante, p. 248.

Appropriation.

(b) In order to determine the health effects of emissions of sulfur oxides to the air resulting from any conversions to burning coal to which section 119 of the Clean Air Act applies, the Department of Health, Education, and Welfare shall, through the National Institute of Environmental Health Sciences and in cooperation with the Environmental Protection Agency, conduct a study of chronic effects among exposed populations. The sum of $3,500,000 is authorized to be appropriated for such a study. In order to assure that long-term studies can be conducted without interruption, such sums as are appropriated shall be available until expended.

81 Stat. 485.
42 USC 1857.

(c)(1) No action taken under the Clean Air Act shall be deemed a major Federal action significantly affecting the quality of the human environment within the meaning of the National Environmental Policy Act of 1969 (83 Stat. 856).

42 USC 4321 note.

(2) No action under section 2 of this Act for a period of one year after initiation of such action shall be deemed a major Federal action significantly affecting the quality of the human environment within

the meaning of the National Environmental Policy Act of 1969. However, before any action under section 2 of this Act that has a significant impact on the environment is taken, if practicable, or in any event within sixty days after such action is taken, an environmental evaluation with analysis equivalent to that required under section 102(2)(C) of the National Environmental Policy Act, to the greatest extent practicable within this time constraint, shall be prepared and circulated to appropriate Federal, State, and local government agencies and to the public for a thirty-day comment period after which a public hearing shall be held upon request to review outstanding environmental issues. Such an evaluation shall not be required where the action in question has been preceded by compliance with the National Environmental Policy Act by the appropriate Federal agency. Any action taken under section 2 of this Act which will be in effect for more than a one-year period or any action to extend an action taken under section 2 of this Act to a total period of more than one year shall be subject to the full provisions of the National Environmental Policy Act, notwithstanding any other provision of this Act.

83 Stat. 852.

Environment evaluation, availability. 83 Stat. 853. 42 USC 4332.

Hearing.

(d) In order to expedite the prompt construction of facilities for the importation of hydroelectric energy thereby helping to reduce the shortage of petroleum products in the United States, the Federal Power Commission is hereby authorized and directed to issue a Presidential permit pursuant to Executive Order 10485 of September 3, 1953, for the construction, operation, maintenance, and connection of facilities for the transmission of electric energy at the borders of the United States without preparing an environmental impact statement pursuant to section 102 of the National Environmental Policy Act of 1969 (83 Stat. 856) for facilities for the transmission of electric energy between Canada and the United States in the vicinity of Fort Covington, New York.

Hydroelectric energy facilities, construction.

16 USC 824a note.

42 USC 4332.

SEC. 8. ENERGY CONSERVATION STUDY.

15 USC 794.

(a) The Federal Energy Administrator shall conduct a study on potential methods of energy conservation and, not later than six months after the date of enactment of this Act, shall submit to Congress a report on the results of such study. The study shall include, but not be limited to, the following:

Report to Congress.

(1) the energy conservation potential of restricting exports of fuels or energy-intensive products or goods, including an analysis of balance-of-payments and foreign relations implications of any such restrictions;

(2) alternative requirements, incentives, or disincentives for increasing industrial recycling and resource recovery in order to reduce energy demand, including the economic costs and fuel consumption tradeoff which may be associated with such recycling and resource recovery in lieu of transportation and use of virgin materials; and

(3) means for incentives or disincentives to increase efficiency of industrial use of energy.

(b) Within ninety days of the date of enactment of this Act, the Secretary of Transportation, after consultation with the Federal Energy Administrator, shall submit to the Congress for appropriate action an "Emergency Mass Transportation Assistance Plan" for the purpose of conserving energy by expanding and improving public

Emergency Mass Transportation Assistance Plan, submittal to Congress.

mass transportation systems and encouraging increased ridership as alternatives to automobile travel.

(c) Such plan shall include, but shall not be limited to—

Grants.

(1) recommendations for emergency temporary grants to assist States and local public bodies and agencies thereof in the payment of operating expenses incurred in connection with the provision of expanded mass transportation service in urban areas;

(2) recommendations for additional emergency assistance for the purchase of buses and rolling stock for fixed rail, including the feasibility of accelerating the timetable for such assistance under section 142(a)(2) of title 23, United States Code (the "Federal Aid Highway Act of 1973"), for the purpose of providing additional capacity for and encouraging increased use of public mass transportation systems;

87 Stat. 259.

Fares.

(3) recommendations for a program of demonstration projects to determine the feasibility of fare-free and low-fare urban mass transportation systems, including reduced rates for elderly and handicapped persons during nonpeak hours of transportation;

Fringe parking.

(4) recommendations for additional emergency assistance for the construction of fringe and transportation corridor parking facilities to serve bus and other mass transportation passengers;

Tax incentives.

(5) recommendations on the feasibility of providing tax incentives for persons who use public mass transportation systems.

15 USC 795.

SEC. 9. REPORT.

Report to Congress.

The Administrator of the Environmental Protection Agency shall report to Congress not later than January 31, 1975, on the implementation of sections 3 through 7 of this Act.

SEC. 10. FUEL ECONOMY STUDY.

81 Stat. 499; 84 Stat. 1694. 42 USC 1857f-1.

Title II of the Clean Air Act is amended by redesignating section 213 as section 214 and by adding the following new section:

"FUEL ECONOMY IMPROVEMENT FROM NEW MOTOR VEHICLES

42 USC 1857f-6f.

Report to congressional committees.

"SEC. 213. (a)(1) The Administrator and the Secretary of Transportation shall conduct a joint study, and shall report to the Committee on Interstate and Foreign Commerce of the United States House of Representatives and the Committees on Public Works and Commerce of the United States Senate within one hundred and twenty days following the date of enactment of this section, concerning the practicability of establishing a fuel economy improvement standard of 20 per centum for new motor vehicles manufactured during and after model year 1980. Such study and report shall include, but not be limited to, the technological problems of meeting any such standard, including the leadtime involved; the test procedures required to determine compliance; the economic costs associated with such standard, including any beneficial economic impact; the various means of enforcing such standard; the effect on consumption of natural resources, including energy consumed; and the impact of applicable safety and emission standards. In the course of performing such study, the Administrator and the Secretary of Transportation shall utilize the research previously performed in the Department of Transportation, and the Administrator and the Secretary shall consult with the Federal Energy

Administrator, the Chairman of the Council on Environmental Quality, and the Secretary of the Treasury. The Office of Management and Budget may review such report before its submission to such committees of the Congress, but such Office may not revise the report or delay its submission beyond the date prescribed for its submission, and may submit to Congress its comments respecting such report. In connection with such study, the Administrator may utilize the authority provided in section 307(a) of this Act to obtain necessary information. OMB review and comments. 84 Stat. 1707; 85 Stat. 464.

"(2) For the purpose of this section, the term 'fuel economy improvement standard' means a requirement of a percentage increase in the number of miles of transportation provided by a manufacturer's entire annual production of new motor vehicles per unit of fuel consumed, as determined for each manufacturer in accordance with test procedures established by the Administrator pursuant to this Act. Such term shall not include any requirement for any design standard or any other requirement specifying or otherwise limiting the manufacturer's discretion in deciding how to comply with the fuel economy improvement standard by any lawful means." 42 USC 1857h-5. "Fuel economy improvement standard."

SEC. 11. REPORTING OF ENERGY INFORMATION. 15 USC 796.

(a) For the purpose of assuring that the Federal Energy Administrator, the Congress, the States, and the public have access to and are able to obtain reliable energy information, the Federal Energy Administrator shall request, acquire, and collect such energy information as he determines to be necessary to assist in the formulation of energy policy or to carry out the purposes of this Act or the Emergency Petroleum Allocation Act of 1973. The Federal Energy Administrator shall promptly promulgate rules pursuant to subsection (b)(1)(A) of this section requiring reports of such information to be submitted to the Federal Energy Administrator at least every ninety calendar days. 87 Stat. 627. 15 USC 751 note. Rules.

(b)(1) In order to obtain energy information for the purpose of carrying out the provisions of subsection (a), the Federal Energy Administrator is authorized—

(A) to require, by rule, any person who is engaged in the production, processing, refining, transportation by pipeline, or distribution (at other than the retail level) of energy resources to submit reports;

(B) to sign and issue subpenas for the attendance and testimony of witnesses and the production of books, records, papers, and other documents;

(C) to require any person, by general or special order, to submit answers in writing to interrogatories, requests for reports or for other information; and such answers or other submissions shall be made within such reasonable period, and under oath or otherwise, as the Federal Energy Administrator may determine; and

(D) to administer oaths.

(2) For the purpose of verifying the accuracy of any energy information requested, acquired, or collected by the Federal Energy Administrator, the Federal Energy Administrator, or any officer or Accuracy, verification.

employer duly designated by him, upon presenting appropriate credentials and a written notice from the Federal Energy Administrator to the owner, operator, or agent in charge, may—

(A) enter, at reasonable times, any business premise or facility; and

(B) inspect, at reasonable times and in a reasonable manner, any such premise or facility, inventory and sample any stock of energy resources therein, and examine and copy books, records, papers, or other documents, relating to any such energy information.

Compliance order.

(3) Any United States district court within the jurisdiction of which any inquiry is carried on may, upon petition by the Attorney General at the request of the Federal Energy Administrator, in the case of refusal to obey a subpena or order of the Federal Energy Administrator issued under this section, issue an order requiring compliance therewith; and any failure to obey the order of the court may be punished by the court as a contempt thereof.

(c)(1) The Federal Energy Administrator shall exercise the authorities granted to him under subsection (b)(1)(A) to develop, within thirty days after the date of enactment of this Act, as full and accurate a measure as is reasonably practicable of—

(A) domestic reserves and production;

(B) imports; and

(C) inventories;

of crude oil, residual fuel oil, refined petroleum products, natural gas, and coal.

Energy information, quarterly report.

(2) For each calendar quarter beginning with the first complete calendar quarter following the date of enactment of this Act, the Federal Energy Administrator shall develop and publish a report containing the following energy information:

(A) Imports of crude oil, residual fuel oil, refined petroleum products (by product), natural gas, and coal, identifying (with respect to each such oil, product, gas, or coal) country of origin, arrival point, quantity received, and the geographic distribution within the United States.

(B) Domestic reserves and production of crude oil, natural gas, and coal.

(C) Refinery activities, showing for each refinery within the United States (i) the amounts of crude oil run by such refinery, (ii) amounts of crude oil allocated to such refinery pursuant to regulations and orders of the Federal Energy Administrator, his delegate pursuant to the Emergency Petroleum Allocation Act of 1973, or any other person authorized by law to issue regulations and orders with respect to the allocation of crude oil, (iii) percentage of refinery capacity utilized, and (iv) amounts of products refined from such crude oil.

(D) Report of inventories, on a national, regional, and State-by-State basis—

(i) of various refined petroleum products, relating refiners, refineries, suppliers to refiners, share of market, and allocation fractions;

(ii) of various refined petroleum products, previous quarter deliveries and anticipated three-month available supplies;

(iii) of anticipated monthly supply of refined petroleum products, amount of set-aside for assignment by the State, anticipated State requirements, excess or shortfall of supply, and allocation fraction of base year; and

(iv) of LPG by State and owner: quantities stored, and existing capacities, and previous priorities on types, inventories of suppliers, and changes in supplier inventories.

Confidential information.

(d) Upon a showing satisfactory to the Federal Energy Administrator by any person that any energy information obtained under this section from such person would, if made public, divulge methods or processes entitled to protection as trade secrets or other proprietary information of such person, such information, or portion thereof, shall be confidential in accordance with the provisions of section 1905 of title 18, United States Code; except that such information, or part thereof, shall not be deemed confidential for purposes of disclosure, upon request, to (1) any delegate of the Federal Energy Administrator for the purpose of carrying out this Act and the Emergency Petroleum Allocation Act of 1973, (2) the Attorney General, the Secretary of the Interior, the Federal Trade Commission, the Federal Power Commission, or the General Accounting Office, when necessary to carry out those agencies' duties and responsibilities under this and other statutes, and (3) the Congress, or any committee of Congress upon request of the Chairman.

62 Stat. 791.

87 Stat. 627.
15 USC 751 note.

Definitions.

(e) As used in this section:

(1) The term "energy information" includes (A) all information in whatever form on (i) fuel reserves, exploration, extraction, and energy resources (including petrochemical feedstocks) wherever located; (ii) production, distribution, and consumption of energy and fuels wherever carried on; and (B) matters relating to energy and fuels, such as corporate structure and proprietary relationships, costs, prices, capital investment, and assets, and other matters directly related thereto, wherever they exist.

(2) The term "person" means any natural person, corporation, partnership, association, consortium, or any entity organized for a common business purpose, wherever situated, domiciled, or doing business, who directly or through other persons subject to their control does business in any part of the United States.

(3) The term "United States" when used in the geographical sense means the States, the District of Columbia, Puerto Rico, and the territories and possessions of the United States.

Information, availability.

(f) Information obtained by the Administration under authority of this Act shall be available to the public in accordance with the provisions of section 552 of title 5, United States Code.

81 Stat. 54.

(g)(1) The authority contained in this section is in addition to, independent of, not limited by, and not in limitation of, any other authority of the Federal Energy Administrator.

Expiration date.

(2) The provisions of this section expire at midnight, June 30, 1975, but such expiration shall not affect any administrative or judicial proceeding which relates to any act or failure to act if such act or failure to act was not in compliance with the requirements and authorities of this section and occurred prior to midnight, June 30, 1975.

15 USC 797.

SEC. 12. ENFORCEMENT.

(a) It shall be unlawful for any person to violate any provision of section 2 (relating to coal conversion and allocation) or section 11 (relating to energy information) or to violate any rule, regulation, or order issued pursuant to any such provision.

Penalties.

(b) (1) Whoever violates any provision of subsection (a) shall be subject to a civil penalty of not more than $2,500 for each violation.

88 STAT. 264

88 STAT. 265

(2) Whoever willfully violates any provision of subsection (a) shall be fined not more than $5,000 for each violation.

(3) It shall be unlawful for any person to offer for sale or distribute in commerce any coal in violation of an order or regulation issued pursuant to section 2(d). Any person who knowingly and willfully violates this paragraph after having been subjected to a civil penalty for a prior violation of the same provision of any order or regulation issued pursuant to section 2(d) shall be fined not more than $50,000, or imprisoned not more than six months, or both.

(4) Whenever it appears to the Federal Energy Administrator or any person authorized by the Federal Energy Administrator to exercise authority under this section 2 or section 11 of this Act that any individual or organization has engaged, is engaged, or is about to engage in acts or practices constituting a violation of subsection (a) the Federal Energy Administrator or such person may request the Attorney General to bring a civil action to enjoin such acts or practices, and upon a proper showing, a temporary restraining order or a preliminary or permanent injunction shall be granted without bond. In such action, the court may also issue mandatory injunctions commanding any person to comply with any provision, the violation of which is prohibited by subsection (a).

(5) Any person suffering legal wrong because of any act or practice arising out of any violation of subsection (a) may bring a civil action for appropriate relief, including an action for a declaratory judgment or writ of injunction. United States district courts shall have jurisdiction of actions under this paragraph without regard to the amount in controversy. Nothing in this paragraph shall authorize any person to recover damages.

SEC. 13. EXTENSION OF CLEAN AIR ACT AUTHORIZATION.

87 Stat. 11.

42 USC 1857b-1.

(a) Section 104(c) of the Clean Air Act is amended by striking "and $150,000,000 for the fiscal year ending June 30, 1974" and inserting in lieu thereof ", $150,000,000 for the fiscal year ending June 30, 1974, and $150,000,000 for the fiscal year ending June 30, 1975."

42 USC 1857f-6e.

(b) Section 212(i) of such Act is amended by striking "three succeeding fiscal years." and inserting in lieu thereof "four succeeding fiscal years.".

42 USC 1857l.

(c) Section 316 of such Act is amended by striking "and $300,000,000 for the fiscal year ending June 30, 1974" and inserting in lieu thereof ", $300,000,000 for the fiscal year ending June 30, 1974, and $300,000,000 for the fiscal year ending June 30, 1975".

15 USC 798.

SEC. 14. DEFINITIONS.

81 Stat. 485; 84 Stat. 1676.

42 USC 1857.

(a) For purposes of this Act and the Clean Air Act the term "Federal Energy Administrator" means the Administrator of the Federal Energy Administration established by Federal Energy

Administration Act of 1974 (Public Law 93-275); except that until such Administrator takes office and after such Administration ceases to exist, such term means any officer of the United States designated as Federal Energy Administrator by the President for purposes of this Act and section 119 of the Clean Air Act. Ante, p. 96. Ante, p. 248.

(b) For purposes of this Act, the term "petroleum product" means crude oil, residual fuel oil, or any refined petroleum product (as defined in section 3(5) of the Emergency Petroleum Allocation Act of 1973). 87 Stat. 628. 15 USC 752.

Approved June 22, 1974.

LEGISLATIVE HISTORY:

and No. 93-1085 (Comm. of Conference).
CONGRESSIONAL RECORD, Vol. 120 (1974):
May 1, considered and passed House.
May 14, considered and passed Senate, amended.
June 11, House agreed to conference report.
June 12, Senate agreed to conference report.
WEEKLY COMPILATION OF PRESIDENTIAL DOCUMENTS, Vol. 10, No. 26:
June 26, Presidential statement.

PRESIDENT'S APPROVAL—ENERGY SUPPLY AND ENVIRONMENTAL COORDINATION ACT OF 1974

STATEMENT BY THE PRESIDENT UPON SIGNING THE BILL INTO LAW
JUNE 26, 1974

I have signed H.R. 14368, the Energy Supply and Environmental Coordination Act of 1974. This bill represents a first step by the Congress toward achieving a balance between our environmental requirements and our energy requirements. While the Congress has begun to address the complex problem of reconciling these two priorities, it must be clear that this step is only a beginning and that more remains to be done.

This bill provides two principal authorities. First, the bill amends the Clean Air Act by extending for up to 2 years the automotive emission standards that currently apply to 1975-model, light-duty vehicles and engines. This amendment will provide additional time for the development of emission control technology and permit manufacturers to focus attention on improving automobile fuel economy.

Second, the bill provides authority for a limited program to convert powerplants and other major fuel-burning installations from the use of petroleum products and natural gas to the use of coal. This authority represents a step in the right direction, but it does not provide a basis for the long term program of coal conversion necessary to achieve our goal of developing the capacity for energy self-sufficiency.

As I indicated to the Congress in my January 23, 1974, energy crisis message, the Clean Air Act has provided the basis for major improvements in air quality, and we must continue our progress toward even greater improvement. It has become clear, however, that certain requirements established by the act cannot be achieved within the deadlines allotted and others have unacceptable economic and social implications.

A thorough review of the Clean Air Act was undertaken by the appropriate executive branch agencies. Following that review, EPA Administrator Russell Train submitted proposed amendments to the Clean Air Act to the Congress on behalf of the administration.

Since the bill that I have signed deals in only a limited way with the problem of insuring that our environmental priorities and our energy needs are managed evenhandedly, I urge the Congress to review the administration's proposed amendments and to act quickly and favorably upon them.

[NOTE.—As enacted, the bill (H.R. 14368) is Public Law 93–319, approved June 22, 1974.]

CHAPTER 2

Conference Report and Debates on H.R. 14368

93D CONGRESS 2d Session } HOUSE OF REPRESENTATIVES { REPORT No. 93-1085

ENERGY SUPPLY AND ENVIRONMENTAL COORDINATION ACT OF 1974

JUNE 6, 1974.—Ordered to be printed

Mr. STAGGERS, from the committee of conference, submitted the following

CONFERENCE REPORT

[To accompany H.R. 14368]

The committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 14368) to provide for means of dealing with energy shortages by requiring reports with respect to the energy resources, by providing for temporary suspension of certain air pollution requirements, by providing for coal conversion, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the House recede from its disagreement to the amendment of the Senate and agree to the same with an amendment as follows:

In lieu of the matter proposed to be inserted by the Senate amendment insert the following:

SECTION 1. SHORT TITLE; PURPOSE.

(a) This Act, including the following table of contents, may be cited as the "Energy Supply and Environmental Coordination Act of 1974".

TABLE OF CONTENTS

(b) The purposes of this Act are (1) to provide for a means to assist in meeting the essential needs of the United States for fuels, in a manner which is consistent, to the fullest extent practicable, with existing national commitments to protect and improve the environment, and (2) to provide requirements for reports respecting energy resources.

SEC. 2. COAL CONVERSION AND ALLOCATION.

(a) The Federal Energy Administrator—

(1) shall, by order, prohibit any powerplant, and

(2) may, by order, prohibit any major fuel burning installation, other than a powerplant,

from burning natural gas or petroleum products as its primary energy source, if the Federal Energy Administrator determines such powerplant or installation on the date of enactment of this Act has the capability and necessary plant equipment to burn coal, and if the requirements of subsection (b) are met.

(b) The requirements referred to in subsection (a) are as follows:

(1) An order under subsection (a) may not be issued with respect to a powerplant or instaliation unless the Federal Energy Administrator finds (A) that the burning of coal by such plant or installation, in lieu of petroleum products or natural gas, is practicable and consistent with the purposes of this Act, (B) that coal and coal transportation facilities will be available during the period the order is in effect, and (C) in the case of a powerplant, that the prohibition under subsection (a) will not impair the reliability of service in the area served by such plant. Such an order shall be rescinded or modified to the extent the Federal Energy Administrator determines that any requirement described in subparagraph (A), (B), or (C) of this paragraph is no longer met: and such an order may at any time be modified if the Federal Energy Administrator determines that such order, as modified, complies with the requirements of this section.

(2)(A) Before issuing an order under subsection (a) which is applicable to a powerplant or installation for a period ending on or before June 30, 1975, the Federal Energy Administrator (i) shall give notice to the public and afford interested persons an opportunity for written presentations of data, views, and arguments, (ii) shall consult with the Administrator of the Environmental Protection Agency, and (iii) shall take into account the likelihood that the powerplant or installation will be permitted to burn coal after June 30, 1975.

(B) An order described in subparagraph (A) of this paragraph shall not become effective until the date which the Administrator of the Environmental Protection Agency certifies pursuant to section 119(d)(1)(A) of such Act is the earliest date that such plant or installation will be able to comply with the air pollution requirements which will be applicable to it. Such order shall not be effective for any period certified by the Administrator of the Environmental Protection Agency pursuant to section 119(d)(3)(B) of such Act.

(3)(A) Before issuing an order under subsection (a) which is applicable to a powerplant or installation after June 30, 1975 (or modifying an order to which paragraph (2) applies, so as to apply

such order to a powerplant or installation after such date), the Federal Energy Administrator shall give notice to the public and afford interested persons an opportunity for oral and written presentations of data, views, and arguments.

(B) An order (or modification thereof) described in subparagraph (A) of this paragraph shall not become effective until (i) the Administrator of the Environmental Protection Agency notifies the Federal Energy Administrator under section 119(d)(1)(B) of the Clean Air Act that such plant or installation will be able on and after July 1, 1975, to burn coal and to comply with all applicable air pollution requirements without a compliance date extension under section 119(c) of such Act, or (ii) if such notification is not given, the date which the Administrator of the Environmental Protection Agency certifies pursuant to section 119(d)(1)(B) of such Act is the earliest date that such plant or installation will be able to comply with all applicable requirements of such section 119. Such order (or modification) shall not be effective during any period certified by the Administrator of the Environmental Protection Agency under section 119(d)(3)(B) of such Act.

(c) The Federal Administrator may require that any powerplant in the early planning process (other than a combustion gas turbine or combined cycle unit) be designed and constructed so as to be capable of using coal as its primary energy source. No powerplant may be required under this subsection to be so designed and constructed, if the Administrator determines that (1) to do so is likely to result in an impairment of reliability or adequacy of service, or (2) an adequate and reliable supply of coal is not expected to be available. In considering whether to impose a design and construction requirement under this subsection, the Federal Energy Administrator shall consider the existence and effects of any contractual commitment for the construction of such facilities and the capability of the owner to recover any capital investment made as a result of any requirement imposed under this subsection.

(d) The Federal Energy Administrator may, by rule or order, allocate coal (1) to any powerplant or major fuel-burning installation to which an order under subsection (a) has been issued, or (2) to any other person to the extent necessary to carry out the purposes of this Act.

(e) For purposes of this section:

(1) The term "powerplant" means a fossil-fuel fired electric generating unit which produces electric power for purposes of sale or exchange.

(2) The term "coal" includes coal derivatives.

(f)(1) Authority to issue orders or rules under subsections (a) through (d) of this section shall expire at midnight, June 30, 1975. Such a rule or order may take effect at any time before January 1, 1979.

(2) Authority to amend, repeal, rescind, modify, or enforce such rules or orders shall expire at midnight, December 31, 1978; but the expiration of such authority shall not affect any administrative or judicial proceeding which relates to any act or omission which occurred prior to January 1, 1979.

SEC. 3. SUSPENSION AUTHORITY.

Title I of the Clean Air Act is amended by adding at the end thereof the following new section:

"ENERGY-RELATED AUTHORITY

"SEC. 119. (a) *For purposes of this section:*

"(1) *The term 'stationary source fuel or emission limitation' means any emission limitation, schedule or timetable of compliance, or other requirement, which is prescribed under this Act (other than this section, or section 111(b), 112, or 303) or contained in an applicable implementation plan (other than a requirement imposed under authority described in section 110(a)(2)(F)(v)), and which limits, or is designed to limit, stationary source emissions resulting from combustion of fuels, including a prohibition on, or specification of, the use of any fuel of any type, grade, or pollution characteristic.*

"(2) *The term 'air pollution requirement' means any emission limitation, schedule or timetable for compliance, or other requirement, which is prescribed under any Federal, State, or local law or regulation, including this Act (except for any requirement prescribed under subsection (c) or (d) of this section, section 110(a)(2)(F)(v), or section 303), and which limits stationary source emissions resulting from combustion of fuels (including a prohibition on, or specification of, the use of any fuel of any type, grade, or pollution characteristic).*

"(3) *The terms 'stationary source' and 'source' have the same meaning as the term 'stationary source' has under section 111(a)(3); except that such terms include any owner or operator (as defined in section 111(a)(5)) of such source.*

"(4) *The term 'coal' includes coal derivatives.*

"(5) *The term 'primary standard condition' means a limitation, requirement, or other measure, prescribed by the Administrator under subsection (d)(2)(A) of this section.*

"(6) *The term 'regional limitation' means the requirement of subsection (c)(2)(D) of this section.*

"(b)(1)(A) *The Administrator may, for any period beginning on or after the date of enactment of this section and ending on or before June 30, 1975, temporarily suspend any stationary source fuel or emission limitation as it applies to any person—*

"(i) *if the Administrator finds that such person will be unable to comply with any such limitation during such period solely because of unavailability of types or amounts of fuels (unless such unavailability results from an order under section 2(a) of the Energy Supply and Environmental Coordination Act of 1974), or*

"(ii) *if such person is a source which is described in subsection (c)(1)(A) or (B) of this section and which has converted to coal, and the Administrator finds that the source will be able to comply during the period of the suspension with all primary standard conditions which will be applicable to such source.*

Any suspension under this paragraph, the imposition of any interim requirement on which such suspension is conditioned under paragraph (3) of this subsection, and the imposition of any primary standard

condition which relates to such suspension, shall be exempted from any procedural requirements set forth in this Act or in any other provision of Federal, State, or local law; except as provided in subparagraph (B) of this paragraph.

"(B) The Administrator shall give notice to the public and afford interested persons an opportunity for written and oral presentations of data, views, and arguments prior to issuing a suspension under subparagraph (A), or denying an application for such a suspension, unless otherwise provided by the Administrator for good cause found and published in the Federal Register. In any case, before issuing such a suspension, he shall give actual notice to the Governor of the State in which the affected source or sources are located, and to appropriate local governmental officials (as determined by the Administrator). The issuing or denial of such a suspension, the imposition of an interim requirement, and the imposition of any primary standard condition shall be subject to judicial review only on the grounds specified in paragraph (2)(B), (2)(C), or (2)(D), of section 706 of title 5, United States Code, and shall not be subject to any proceeding under section 304(a)(2) or 307 (b) and (c) of this Act.

"(2) In issuing any suspension under paragraph (1), the Administrator is authorized to act on his own motion or upon application by any person (including a public officer or public agency).

"(3) Any suspension under paragraph (1) shall be conditioned upon compliance with such interim requirements as the Administrator determines are reasonable and practicable. Such interim requirements shall include, but need not be limited to, (A) a requirement that the persons receiving the suspension comply with such reporting requirements as the Administrator determines may be necessary, (B) such measures as the Administrator determines are necessary to avoid an imminent and substantial endangerment to health of persons, and (C) in the case of a suspension under paragraph (1)(A)(i), requirements that the suspension shall be inapplicable during any period during which fuels which would enable compliance with the suspended stationary source fuel or emission limitations are in fact reasonably available (as determined by the Administrator) to such person.

"(c)(1) Except as provided in paragraph (2) of this subsection, the Administrator shall issue a compliance date extension to any fuel-burning stationary source—

"(A) which is prohibited from using petroleum products or natural gas by reason of an order which is in effect under section 2 (a) and (b) of the Energy Supply and Environmental Coordination Act of 1974, or

"(B) which the Administrator determines began conversion to the use of coal as its primary energy source during the period beginning on September 15, 1973, and ending on March 15, 1974, and which, on or after September 15, 1973, converts to the use of coal as its primary energy source. If a compliance date extension is issued to a source, such source shall not, until January 1, 1979, be prohibited, by reason of the application of any air pollution requirement, from burning coal which is available to such source, except as provided in subsection (d)(3). For purposes of this paragraph, the term 'began conversion' means action by the source during the period beginning on

September 15, 1973, and ending on March 15, 1974 (such as entering into a contract binding on such source for obtaining coal, or equipment or facilities to burn coal; expanding substantial sums to permit such source to burn coal; or applying for an air pollution variance to enable such source to burn coal) which the Administrator finds evidences a decision (made prior to March 15, 1974) to convert to burning coal as a result of the unavailability of an adequate supply of fuels required for compliance with the applicable implementation plan, and a good faith effort to expeditiously carry out such decision.

"(2)(A) A compliance date extension under paragraph (1) of this subsection may be issued to a source only if—

(i) the Administrator finds that such source will not be able to burn coal which is available to such source in compliance with all applicable air pollution requirements without a compliance date extension,

(ii) the Administrator finds that the source will be able during the period of the compliance date extension to comply with all the primary standard conditions which are required under subsection (d)(2) to be applicable to such source, and with the regional limitation if applicable to such source, and

(iii) the source has submitted to the Administrator a plan for compliance for such source which the Administrator has approved.

A plan submitted under clause (iii) of the preceding sentence shall be approved only if it meets the requirements of regulations prescribed under subparagraph (B). The Administrator shall approve or disapprove any such plan within 60 days after such plan is submitted.

"(B) Not later than 90 days after the date of enactment of this section, the Administrator shall prescribe regulations requiring that any source to which a compliance date extension applies submit and obtain approval of its means for and schedule of compliance with the requirements of subparagraph (C) of this paragraph. Such regulations shall include requirements that such schedules shall include dates by which any such source must—

"(i) enter into contracts (or other obligations enforceable against such source) which the Administrator has approved as being adequate to provide for obtaining a long-term supply of coal which enables such source to achieve the emission reduction required by subparagraph (C), or

"(ii) if coal which enables such source to achieve such emission reduction is not available to such source, enter into contracts (or other obligations enforceable against such source) which the Administrator has approved as being adequate to provide for obtaining (I) a long-term supply of other coal, and (II) continuous emission reduction systems necessary to permit such source to burn such coal and to achieve the degree of emission reduction required by subparagraph (C).

Regulations under this subparagraph shall provide that contracts or other obligations required to be approved under this subparagraph must be approved before they are entered into (except that a contract or obligation which was entered into before the date of enactment of this section may be approved after such date).

"(C) Regulations under subparagraph (B) shall require that the source achieve the most stringent degree of emission reduction that

such source would have been required to achieve under the applicable implementation plan which was in effect on the date of submittal (under subparagraph (B) of this paragraph) of the means for and schedule of compliance (or if no applicable implementation plan was in effect on such date, under the first applicable implementation plan which takes effect after such date). Such degree of emission reduction shall be achieved as soon as practicable, but not later than December 31, 1978; except that, in the case of a source for which a continuous emission reduction system is required for sulfur-related emissions, reduction of such emissions shall be achieved on a date designated by the Administrator (but not later than January 1, 1979). Such regulations shall also include such interim requirements as the Administrator determines are reasonable and practicable, including requirements described in subparagraphs (A) and (B) of subsection (b) (3) and requirements to file progress reports.

"(D) A source which is issued a compliance date extension under this subsection, and which is located in an air quality control region in which a national primary ambient air quality standard for an air pollutant is not being met, may not emit such pollutant in amounts which exceed any emission limitation (and may not violate any other requirement) which applies to such source, under the applicable implementation plan for such pollutant. For purposes of this subparagraph, applicability of any such limitation or requirement to a source shall be determined without regard to this subsection or subsection (b).

"(3) A source to which this subsection applies may, upon the expiration of a compliance date extension, receive a one-year postponement of the application of any requirement of an applicable implementation plan under the conditions and in the manner provided in section 110(f).

"(4) The Administrator shall give notice to the public and afford an opportunity for oral and written presentations of data, views, and arguments before issuing any compliance date extension, prescribing any regulation under paragraph (2) of this subsection, making any finding under paragraph (2) (A) of this subsection, imposing any requirement on a source pursuant to paragraph (2) or any regulation thereunder, prescribing a primary standard condition under subsection (d) (2) which applies to a source to which an extension is issued under this subsection, or acting on any petition under subsection (d) (2) (C).

"(d) (1) (A) Whenever the Federal Energy Administrator issues an order under section 2(a) of the Energy Supply and Environmental Coordination Act of 1974 which will not apply after June 30, 1975, the Administrator of the Environmental Protection Agency shall certify to him—

"(i) in the case of a source to which no suspension will be issued under subsection (b), the earliest date on which such source will be able to burn coal and to comply with all applicable air pollution requirements, or

"(ii) in the case of a source to which a suspension will be issued under subsection (b) of this section, the date determined under paragraph (2) (B) of this subsection.

"(B) Whenever the Federal Energy Administrator issues an order under section 2(a) of such Act which will apply after June 30, 1975,

the Administrator of the Environmental Protection Agency shall notify him if such source will be able, on and after July 1, 1975, to burn coal and to comply with all applicable air pollution requirements without a compliance date extension under subsection (c).

If such notification is not given—

"(i) in the case of a source which is eligible for a compliance date extension under subsection (c), the Administrator of the Environmental Protection Agency shall certify to the Federal Energy Administrator the date determined under paragraph (2) (B) of this subsection, and

"(ii) in the case of a source which is not eligible for such an extension, the Administrator of the Environmental Protection Agency shall certify to the Federal Energy Administrator the earliest date on which the source will be able to burn coal and to comply with all applicable air pollution requirements.

"(2)(A) The Administrator of the Environmental Protection Agency, after consultation with appropriate States, shall prescribe (and may from time to time, after such consultation, modify) emission limitations, requirements respecting pollution characteristics of coal, or other enforceable measures for control of emissions, for each source to which a suspension under subsection (b)(1)(A)(ii) will apply, and for each source to which a compliance date extension under subsection (c)(1) will apply. Such limitations, requirements, and measures shall be those which he determines must be complied with by the source in order to assure (throughout the period that the suspension or extension will be in effect) that the burning of coal by such source will not result in emissions which cause or contribute to concentrations of any air pollutant in excess of any national primary ambient air quality standard for such pollutant.

"(B) Whenever the Administrator prescribes a limitation, requirement, or measure under subparagraph (A) of this paragraph with respect to a source, he shall determine the earliest date on which such source will be able to comply with such limitation, requirement, or measure, and with any regional limitation applicable to such source.

"(C) An air pollution control agency may petition the Administrator (A) to modify any limitation, requirement, or other measure under this paragraph so as to assure compliance with the requirements of this paragraph, or (B) to issue to the Federal Energy Administration the certification described in paragraph (3)(B) on the grounds described in clause (iii) thereof. The Administrator shall take the action requested in the petition, or deny the petition, within 90 days after the date of receipt of the petition.

"(3)(A) If the Administrator determines that a source to which a suspension under subsection (b)(1)(A)(ii) or to which a compliance date extension under subsection (c)(1) applies is not in compliance with any primary standard condition, or that a source to which a compliance date extension applies is not in compliance with a regional limitation applicable to it, he shall (except as provided in subparagraph (B)) either—

"(i) enforce compliance with such condition or limitation under section 113, or

"(ii) (after notice to the public and affording an opportunity for interested persons to present data, views, and arguments, including oral presentations, to the extent practicable) revoke such suspension or compliance date extension.

"(B) If the Administrator finds that for any period—

"(i) a source, to which an order under section 2(a) of the Energy Supply and Environmental Coordination Act of 1974 applies, will be unable to comply with a primary standard condition or regional limitation,

"(ii) such a source will not be in compliance with such a condition or limitation, but such condition or limitation cannot be enforced because of a court order restraining its enforcement, or

"(iii) the burning of coal by such a source will result in an increase in emissions of any air pollutant for which national ambient air quality standards have not been promulgated (or an air pollutant which is transformed in the atmosphere into an air pollutant for which such a standard has not been promulgated), and that such increase may cause (or materially contribute to) a significant risk to public health,

he shall notify the Federal Energy Administrator of his finding and certify the period for which such order under such section 2(a) shall not be in effect with respect to such source. Subject to the conditions of the preceding sentence, such certification may be modified from time to time. For purposes of this subsection, subsection (c), and section 2(a) or (b) of the Energy Supply and Environmental Coordination Act of 1974, a source shall be considered unable to comply with an air pollution requirement (including a primary standard condition or regional limitation) only if necessary technology or other alternative methods of control are not available or have not been available for a sufficient period of time.

"(4) Nothing in this Act shall prohibit a State, political subdivision of a State, or agency or instrumentality of either, from enforcing any primary standard condition or regional limitation.

"(5) A conversion to coal (A) to which a suspension under subsection (b) or a compliance date extension under subsection (c) applies or (B) by reason of an order under section 2(a) of the Energy Supply and Environmental Coordination Act of 1974 shall not be deemed to be a modification for purposes of section 111(a)(2) and (4) of this Act.

"(e) The Administator may, by rule, establish priorities under which manufacturers of continuous emission reduction systems necessary to carry out subsection (c) shall provide such systems to users thereof, if he finds that priorities must be imposed in order to assure that such systems are first provided to sources in air quality control regions in which national primary ambient air quality standards have not been achieved. No rule under this subsection may impair the obligation of any contract entered into before the date of enactment of this section. To the extent necessary to carry out this section, the Administrator may prohibt any State or political subdivision of a State, or an agency or instrumentality of either, from requiring any person to use a continuous emission reduction system for which priorities have been

established under this subsection, except in accordance with such priorities.

"*(f) No State, political subdivision of a State, or agency or instrumentality of either, may require any person to whom a suspension has been issued under subsection (b) (1) to use any fuel the unavailability of which is the basis of such person's suspension (except that this subsection shall not apply to requirements identical to Federal requirements under subsection (b) (3) or subsection (d) (2)).*

"*(g) (1) It shall be unlawful for any person to whom a suspension has been issued under subsection (b) (1) to violate any requirement on which the suspension is conditioned pursuant to subsection (b) (3) or any primary standard condition applicable to him.*

"*(2) It shall be unlawful for any person to fail to comply with any requirement under subsection (c), or any regulation, plan, or schedule thereunder (including a primary standard condition or regional limitation), which is applicable to such person.*

"*(3) It shall be unlawful for any person to violate any rule under subsection (e).*

"*(4) It shall be unlawful for any person to fail to comply with an interim requirement under subsection (i) (3).*

"*(h) Nothing in this section shall affect the power of the Administrator to deal with air pollution presenting an imminent and substantial endangerment to the health of persons under section 303 of this Act.*

"*(i) (1) In order to reduce the likelihood of early phaseout of existing electric generating powerplants, any electric generating powerplant (A) which, because of the age and condition of the plant, is to be taken out of service permanently no later than January 1, 1980, according to the power supply plan (in existence on January 1, 1974) of the owner or operator of such plant, (B) for which a certification to that effect has been filed by the owner or operator of the plant with the Environmental Protection Agency and the Federal Power Commission, and (C) for which such Commission has determined that the certification has been made in good faith and that the plan to cease operations no later than January 1, 1980, will be carried out as planned in light of existing and prospective power supply requirements, shall be eligible for a single one-year postponement as provided in paragraph (2).*

"*(2) Prior to the date on which any powerplant eligible under paragraph (1) is required to comply with any requirement of an applicable implementation plan, such plant may apply (with the concurrence of the Governor of the State in which such plant is located) to the Administrator to postpone the applicability of such requirement to such plant for not more than one year. If the Administrator determines, after considering the risk to public health and welfare which may be associated with a postponement, that compliance with any such requirement is not reasonable in light of the projected useful life of the plant, the availability of rate base increases to pay for the costs of such compliance, and other appropriate factors, then the Administrator shall grant a postponement of any such requirement.*

"(3) The Administrator shall, as a condition of any postponement under paragraph (2), prescribe such interim requirements as are practicable and reasonable in light of the criteria in paragraph (2).

"(j)(1) The Administrator may, after public notice and opportunity for presentation of data, views, and arguments in accordance with section 553 of title 5, United States Code, and after consultation with the Federal Energy Administrator, designate persons with respect to whom fuel exchange requirements should be imposed under paragraph (2) of this subsection. The purpose of such designation shall be to avoid or minimize the adverse impact on public health and welfare of any suspension under subsection (b) of this section or conversion to coal to which subsection (c) applies or of any allocation under section 2 (d) of the Energy Supply and Environmental Coordination Act of 1974 or under the Emergency Petroleum Allocation Act of 1973.

"(2) The Federal Energy Administrator shall exercise his authority under section 2(d) of the Energy Supply and Environmental Coordination Act of 1974 and under the Emergency Petroleum Allocation Act of 1973 with respect to persons designated by the Administrator of the Environmental Protection Agency under paragraph (1) in order to require the exchange of any fuel subject to allocation under such Acts effective no later than forty-five days after the date of such designation, unless the Federal Energy Administrator determines, after consultation with the Administrator of the Environmental Protection Agency, that the costs or consumption of fuel, resulting from requiring such exchange, will be excessive.

"(k)(1) The Administrator shall study, and report to Congress not later than six months after the date of enactment of this section, with respect to—

"(A) the present and projected impact of fuel shortages and fuel allocation programs on the program under this Act;

"(B) availability of continuous emission reduction technology (including projections respecting the time, cost, and number of units available) and the effects that continuous emission reduction systems would have on the total environment and on supplies of fuel and electricity;

"(C) the number of sources and locations which must use such technology based on projected fuel availability data;

"(D) a priority schedule for installation of continuous emission reduction technology, based on public health or air quality;

"(E) evaluation of availability of technology to burn municipal solid waste in electric powerplants or other major fuel burning installations, including time schedules, priorities, analysis of pollutants which may be emitted (including those for which national ambient air quality standards have not been promulgated), and a comparison of health benefits and detriments from burning solid waste and of economic costs;

"(F) evaluation of alternative control strategies for the attainment and maintenance of national ambient air quality standards for sulfur oxides within the time for attainment prescribed in this

Act, including associated considerations of cost, time for attainment, feasibility, and effectiveness of such alternative control strategies as compared to stationary source fuel and emission regulations;

"*(G) proposed priorities, for continuous emission reduction systems which do not produce solid waste, for sources which are least able to handle solid waste byproducts of such systems;*

"*(H) plans for monitoring or requiring sources to which this section applies to monitor the impact of actions under this section on concentrations of sulfur dioxide in the ambient air; and*

"*(I) steps taken pursuant to authority of section 110(a)(3)(B) of this Act.*

"*(2) Beginning January 1, 1975, the Administrator shall publish in the Federal Register, at no less than one-hundred-and-eighty-day intervals, the following:*

"*(A) A concise summary of progress reports which are required to be filed by any person or source owner or operator to which subsection (c) applies. Such progress reports shall report on the status of compliance with all requirements which have been imposed by the Administrator under such subsection.*

"*(B) Up-to-date findings on the impact of this section upon—*

"*(i) applicable implementation plans, and*

"*(ii) ambient air quality.*"

SEC. 4. IMPLEMENTATION PLAN REVISIONS.

(a) Section 110(a) of the Clean Air Act is amended in paragraph (3) by inserting "(A)" after "(3)" and by adding at the end thereof the following new subparagraph:

"*(B) As soon as practicable, the Administrator shall, consistent with the purposes of this Act and the Energy Supply and Environmental Coordination Act of 1974, review each State's applicable implementation plans and report to the State on whether such plans can be revised in relation to fuel burning stationary sources (or persons supplying fuel to such sources) without interfering with the attainment and maintenance of any national ambient air quality standard within the period permitted in this section. If the Administrator determines that any such plan can be revised, he shall notify the State that a plan revision may be submitted by the State. Any plan revision which is submitted by the State shall, after public notice and opportunity for public hearing, be approved by the Administrator if the revision relates only to fuel burning stationary sources (or persons supplying fuel to such sources), and the plan as revised complies with paragraph (2) of this subsection. The Administrator shall approve or disapprove any revision no later than three months after its submission.*"

(b) Subsection (c) of section 110 of the Clean Air Act is amended by inserting "(1)" after "(c)"; by redesignating paragraphs (1), (2), and (3) as subparagraphs (A), (B), and (C), respectively, and by adding at the end thereof the following new paragraph:

"*(2)(A) The Administrator shall conduct a study and shall submit a report to the Committee on Interstate and Foreign Commerce of the United States House of Representatives and the Committee on Public Works of the United States Senate not later than three months*

after date of enactment of this paragraph on the necessity of parking surcharge, management of parking supply, and preferential bus/carpool lane regulations as part of the applicable implementation plans required under this section to achieve and maintain national primary ambient air quality standards. The study shall include an assessment of the economic impact of such regulations, consideration of alternative means of reducing total vehicle miles traveled, and an assessment of the impact of such regulations on other Federal and State programs dealing with energy or transportation. In the course of such study, the Administrator shall consult with other Federal officials including, but not limited to, the Secretary of Transportation, the Federal Energy Administrator, and the Chairman of the Council on Environmental Quality.

"(B) No parking surcharge regulation may be required by the Administrator under paragraph (1) of this subsection as a part of an applicable implementation plan. All parking surcharge regulations previously required by the Administrator shall be void upon the date of enactment of this subparagraph. This subparagraph shall not prevent the Administrator from approving parking surcharges if they are adopted and submitted by a State as part of an applicable implementation plan. The Administrator may not condition approval of any implementation plan submitted by a State on such plan's including a parking surcharge regulation.

"(C) The Administrator is authorized to suspend until January 1, 1975, the effective date or applicability of any regulations for the management of parking supply or any requirement that such regulations be a part of an applicable implementation plan approved or promulgated under this section. The exercise of the authority under this subparagraph shall not prevent the Administrator from approving such regulations if they are adopted and submitted by a State as part of an applicable implementation plan. If the Administrator exercises the authority under this subparagraph, regulations requiring a review or analysis of the impact of proposed parking facilities before construction which take effect on or after January 1, 1975, shall not apply to parking facilities on which construction has been initiated before January 1, 1975.

"(D) For purposes of this paragraph—

"(i) The term 'parking surcharge regulation' means a regulation imposing or requiring the imposition of any tax, surcharge, fee, or other charge on parking spaces, or any other area used for the temporary storage of motor vehicles.

"(ii) The term 'management of parking supply' shall include any requirement providing that any new facility containing a given number of parking spaces shall receive a permit or other prior approval, issuance of which is to be conditioned on air quality considerations.

"(iii) The term 'preferential bus/carpool lane' shall include any requirement for the setting aside of one or more lanes of a street or highway on a permanent or temporary basis for the exclusive use of buses or carpools, or both.

"(E) No standard, plan, or requirement, relating to management of parking supply or preferential bus/carpool lanes shall be promul-

gated after the date of enactment of this paragraph by the Administrator pursuant to this section, unless such promulgation has been subjected to at least one public hearing which has been held in the area affected and for which reasonable notice has been given in such area. If substantial changes are made following public hearings, one or more additional hearings shall be held in such area after such notice."

SEC. 5. MOTOR VEHICLE EMISSIONS.

(a) Section 202(b)(1)(A) of the Clear Air Act is amended by striking out "1975" and inserting in lieu thereof "1977"; and by inserting after "(A)" the following: "The regulations under subsection (a) applicable to emissions of carbon monoxide and hydrocarbons from light-duty vehicles and engines manufactured during model years 1975 and 1976 shall contain standards which are identical to the interim standards which were prescribed (as of December 1, 1973) under paragraph (5)(A) of this subsection for light-duty vehicles and engines manufactured during model year 1975."

(b) Section 202(b)(1)(B) of such Act is amended by striking out "1976" and inserting in lieu thereof "1978"; and by inserting after "(B)" the following: "The regulations under subsection (a) applicable to emissions of oxides of nitrogen from light-duty vehicles and engines manufactured during model years 1975 and 1976 shall contain standards which are identical to the standards which were prescribed (as of December 1, 1973) under subsection (a) for light-duty vehicles and engines manufactured during model year 1975. The regulations under subsection (a) applicable to emissions of oxides of nitrogen from light-duty vehicles and engines manufactured during model year 1977 shall contain standards which provide that such emissions from such vehicles and engines may not exceed 2.0 grams per vehicle mile."

(c) Section 202(b)(5)(A) of such Act is amended to read as follows:

"(5)(A) At any time after January 1, 1975, any manufacturer may file with the Administrator an application requesting the suspension for one year only of the effective date of any emission standard required by paragraph (1)(A) with respect to such manufacturer for light-duty vehicles and engines manufactured in model year 1977. The Administrator shall make his determination with respect to any such application within sixty days. If he determines, in accordance with the provisions of this subsection, that such suspension should be granted, he shall simultaneously with such determination prescribe by regulation interim emission standards which shall apply (in lieu of the standards required to be prescribed by paragraph (1)(A) of this subsection) to emissions of carbon monoxide or hydrocarbons (or both) from such vehicles and engines manufactured during model year 1977."

(d) Section 202(b)(5)(B) of the Clean Air Act is repealed and the following subparagraphs redesignated accordingly.

SEC. 6. CONFORMING AMENDMENTS.

(a)(1) Section 113(a)(3) of the Clean Air Act is amended by striking out "or" before "112(c)", by inserting a comma in lieu thereof, and by inserting after "hazardous emissions)" the following: ", or 119(g) (relating to energy-related authorities)".

(2) Section 113(b)(3) of such Act is amended by striking out "or 112(c)" and inserting in lieu thereof ", 112(c), or 119(g)".

(3) Section 113(c)(1)(C) of such Act is amended by striking out "or section 112(c)" and inserting in lieu thereof ", section 112(c), or section 119(g)".

(4) Section 114(a) of such Act is amended by inserting "119 or" before "303".

(b) Section 116 of the Clean Air Act is amended by inserting "119 (c), (e), and (f)," before "209".

(c)(1) The second sentence of subsection (b) of section 307 of such Act is amended by inserting ", or his action under section 119(c)(2)(A), (B), or (C) or under regulations thereunder," after "111(d)".

(2) The third sentence of such subsection is amended by striking out "or approval" and inserting in lieu thereof ", approval, or action".

SEC. 7. PROTECTION OF PUBLIC HEALTH AND ENVIRONMENT.

(a) Any allocation program provided for in section 2 of this Act or in the Emergency Petroleum Allocation Act of 1973, shall, to the maximum extent practicable, include measures to assure that available low sulfur fuel will be distributed on a priority basis to those areas of the United States designated by the Administrator of the Environmental Protection Agency as requiring low sulfur fuel to avoid or minimize adverse impact on public health.

(b) In order to determine the health effects of emissions of sulfur oxides to the air resulting from any conversions to burning coal to which section 119 of the Clean Air Act applies, the Department of Health, Education, and Welfare shall, through the National Institute of Environmental Health Sciences and in cooperation with the Environmental Protection Agency, conduct a study of chronic effects among exposed populations. The sum of $3,500,000 is authorized to be appropriated for such a study. In order to assure that long-term studies can be conducted without interruption, such sums as are appropriated shall be available until expended.

(c)(1) No action taken under the Clean Air Act shall be deemed a major Federal action significantly affecting the quality of the human environment within the meaning of the National Environmental Policy Act of 1969 (83 Stat. 856).

(2) No action under section 2 of this Act for a period of one year after initiation of such action shall be deemed a major Federal action significantly affecting the quality of the human environment within the meaning of the National Environmental Policy Act of 1969. However, before any action under section 2 of this Act that has a significant impact on the environment is taken, if practicable, or in any event within sixty days after such action is taken, an environmental evaluation with analysis equivalent to that required under section 102(2)(C) of the National Environmental Policy Act, to the greatest extent practicable within this time constraint, shall be prepared and circulated to appropriate Federal, State, and local government agencies and to the public for a thirty-day comment period after which a public hearing shall be held upon request to review outstanding environmental issues. Such an evaluation shall not be required where the action in question has been preceded by compliance with the National

Environmental Policy Act by the appropriate Federal agency. Any action taken under section 2 of this Act which will be in effect for more than a one-year period or any action to extend an action taken under section 2 of this Act to a total period of more than one year shall be subject to the full provisions of the National Environmental Policy Act, notwithstanding any other provision of this Act.

(d) In order to expedite the prompt construction of facilities for the importation of hydroelectric energy thereby helping to reduce the shortage of petroleum products in the United States, the Federal Power Commission is hereby authorized and directed to issue a Presidential permit pursuant to Executive Order 10485 of September 3, 1953, for the construction, operation, maintenance, and connection of facilities for the transmission of electric energy at the borders of the United States without preparing an environmental impact statement pursuant to section 102 of the National Environmental Policy Act of 1969 (83 Stat. 856) for facilities for the transmission of electric energy between Canada and the United States in the vicinity of Fort Covington, New York.

SEC. 8. ENERGY CONSERVATION STUDY.

(a) The Federal Energy Administrator shall conduct a study on potential methods of energy conservation and, not later than six months after the date of enactment of this Act, shall submit to Congress a report on the results of such study. The study shall include, but not be limited to, the following:

(1) the energy conservation potential of restricting exports of fuels or energy-intensive products or goods, including an analysis of balance-of-payments and foreign relations implications of any such restrictions;

(2) alternative requirements, incentives, or disincentives for increasing industrial recycling and resource recovery in order to reduce energy demand, including the economic costs and fuel consumption tradeoff which may be associated with such recycling and resource recovery in lieu of transportation and use of virgin materials; and

(3) means for incentives or disincentives to increase efficiency of industrial use of energy.

(b) Within ninety days of the date of enactment of this Act, the Secretary of Transportation, after consultation with the Federal Energy Administrator, shall submit to the Congress for appropriate action an "Emergency Mass Transportation Assistance Plan" for the purpose of conserving energy by expanding and improving public mass transportation systems and encouraging increased ridership as alternatives to automobile travel.

(c) Such plan shall include, but shall not be limited to—

(1) recommendations for emergency temporary grants to assist States and local public bodies and agencies thereof in the payment of operating expenses incurred in connection with the provision of expanded mass transportation service in urban areas;

(2) recommendations for additional emergency assistance for the purchase of buses and rolling stock for fixed rail, including the feasibility of accelerating the timetable for such assistance under

section 142(a)(2) of title 23, United States Code (the "Federal Aid Highway Act of 1973"), for the purpose of providing additional capacity for and encouraging increased use of public mass transportation systems;

(3) recommendations for a program of demonstration projects to determine the feasibility of fare-free and low-fare urban mass transportation systems, including reduced rates for elderly and handicapped persons during nonpeak hours of transportation;

(4) recommendations for additional emergency assistance for the construction of fringe and transportation corridor parking facilities to serve bus and other mass transportation passengers;

(5) recommendations on the feasibility of providing tax incentives for persons who use public mass transportation systems.

SEC. 9. REPORT.

The Administrator of the Environmental Protection Agency shall report to Congress not later than January 31, 1975, on the implementation of sections 3 through 7 of this Act.

SEC. 10. FUEL ECONOMY STUDY.

Title II of the Clean Air Act is amended by redesignating section 213 as section 214 and by adding the following new section:

"FUEL ECONOMY IMPROVEMENT FROM NEW MOTOR VEHICLES

"SEC. 213. (a)(1) The Administrator and the Secretary of Transportation shall conduct a joint study, and shall report to the Committee on Interstate and Foreign Commerce of the United States House of Representatives and the Committees on Public Works and Commerce of the United States Senate within one hundred and twenty days following the date of enactment of this section, concerning the practicability of establishing a fuel economy improvement standard of 20 per centum for new motor vehicles manufactured during and after model year 1980. Such study and report shall include, but not be limited to, the technological problems of meeting any such standard, including the leadtime involved; the test procedures required to determine compliance; the economic costs associated with such standard, including any beneficial economic impact; the various means of enforcing such standard; the effect on consumption of natural resources, including energy consumed; and the impact of applicable safety and emission standards. In the course of performing such study, the Administrator and the Secretary of Transportation shall utilize the research previously performed in the Department of Transportation, and the Administrator and the Secretary shall consult with the Federal Energy Administrator, the Chairman of the Council on Environmental Quality, and the Secretary of the Treasury. The Office of Management and Budget may review such report before its submission to such committees of the Congress, but such Office may not revise the report or delay its submission beyond the date prescribed for its submission, and may submit to Congress' its comments respecting such report. In connection with such study, the Administrator may utilize the authority provided in section 307(a) of this Act to obtain necessary information.

"(2) *For the purpose of this section, the term 'fuel economy improvement standard' means a requirement of a percentage increase in the number of miles of transportation provided by a manufacturer's entire annual production of new motor vehicles per unit of fuel consumed, as determined for each manufacturer in accordance with test procedures established by the Administrator pursuant to this Act. Such term shall not include any requirement for any design standard or any other requirement specifying or otherwise limiting the manufacturer's discretion in deciding how to comply with the fuel economy improvement standard by any lawful means.*"

SEC. 11. REPORTING OF ENERGY INFORMATION.

(a) For the purpose of assuring that the Federal Energy Administrator, the Congress, the States, and the public have access to and are able to obtain reliable energy information, the Federal Energy Administrator shall request, acquire, and collect such energy information as he determines to be necessary to assist in the formulation of energy policy or to carry out the purposes of this Act or the Emergency Petroleum Allocation Act of 1973. The Federal Energy Administrator shall promptly promulgate rules pursuant to subsection (b)(1)(A) of this section requiring reports of such information to be submitted to the Federal Energy Administrator at least every ninety calendar days.

(b)(1) In order to obtain energy information for the purpose of carrying out the provisions of subsection (a), the Federal Energy Administrator is authorized—

(A) to require, by rule, any person who is engaged in the production, processing, refining, transportation by pipeline, or distribution (at other than the retail level) of energy resources to submit reports;

(B) to sign and issue subpenas for the attendance and testimony of witnesses and the production of books, records, papers, and other documents;

(C) to require any person, by general or special order, to submit answers in writing to interrogatories, requests for reports or for other information; and such answers or other submissions shall be made within such reasonable period, and under oath or otherwise, as the Federal Energy Administrator may determine; and

(D) to administer oaths.

(2) For the purpose of verifying the accuracy of any energy information requested, acquired, or collected by the Federal Energy Administrator, the Federal Energy Administrator, or any officer or employer duly designated by him, upon presenting appropriate credentials and a written notice from the Federal Energy Administrator to the owner, operator, or agent in charge, may—

(A) enter, at reasonable times, any business premise or facility; and

(B) inspect, at reasonable times and in a reasonable manner, any such premise or facility, inventory and sample any stock of energy resources therein, and examine and copy books, records, papers, or other documents, relating to any such energy information.

(3) Any United States district court within the jurisdiction of which any inquiry is carried on may, upon petition by the Attorney General at the request of the Federal Energy Administrator, in the case of refusal to obey a subpena or order of the Federal Energy Administrator issued under this section, issue an order requiring compliance therewith; and any failure to obey the order of the court may be punished by the court as a contempt thereof.

(c)(1) The Federal Energy Administrator shall exercise the authorities granted to him under subsection (b)(1)(A) to develop, within thirty days after the date of enactment of this Act, as full and accurate a measure as is reasonably practicable of—

(A) domestic reserves and production;

(B) imports; and

(C) inventories;

of crude oil, residual fuel oil, refined petroleum products, natural gas, and coal.

(2) For each calendar quarter beginning with the first complete calendar quarter following the date of enactment of this Act, the Federal Energy Administrator shall develop and publish a report containing the following energy information:

(A) Imports of crude oil, residual fuel oil, refined petroleum products (by product), natural gas, and coal, identifying (with respect to each such oil, product, gas, or coal) country of origin, arrival point, quantity received, and the geographic distribution within the United States.

(B) Domestic reserves and production of crude oil, natural gas, and coal.

(C) Refinery activities, showing for each refinery within the United States (i) the amounts of crude oil run by such refinery, (ii) amounts of crude oil allocated to such refinery pursuant to regulations and orders of the Federal Energy Administrator, his delegate pursuant to the Emergency Petroleum Allocation Act of 1973, or any other person authorized by law to issue regulations and orders with respect to the allocation of crude oil, (iii) percentage of refinery capacity utilized, and (iv) amounts of products refined from such crude oil.

(D) Report of inventories, on a national, regional, and State-by-State basis—

(i) of various refined petroleum products, relating refiners, refineries, suppliers to refiners, share of market, and allocation fractions;

(ii) of various refined petroleum products, previous quarter deliveries and anticipated three-month available supplies;

(iii) of anticipated monthly supply of refined petroleum products, amount of set-aside for assignment by the State, anticipated State requirements, excess or shortfall of supply, and allocation fraction of base year; and

(iv) of LPG by State and owner: quantities stored, and existing capacities, and previous priorities on types, inventories of suppliers, and changes in supplier inventories.

(d) Upon a showing satisfactory to the Federal Energy Administrator by any person that any energy information obtained under this

section from such person would, if made public, divulge methods or processes entitled to protection as trade secrets or other proprietary information of such person, such information, or portion thereof, shall be confidential in accordance with the provisions of section 1905 of title 18, United States Code; except that such information, or part thereof, shall not be deemed confidential for purposes of disclosure, upon request, to (1) any delegate of the Federal Energy Administrator for the purpose of carrying out this Act and the Emergency Petroleum Allocation Act of 1973, (2) the Attorney General, the Secretary of the Interior, the Federal Trade Commission, the Federal Power Commission, or the General Accounting Office, when necessary to carry out those agencies' duties and responsibilities under this and other statutes, and (3) the Congress, or any committee of Congress upon request of the Chairman.

(c) As used in this section:

(1) The term "energy information" includes (A) all information in whatever form on (i) fuel reserves, exploration, extraction, and energy resources (including petrochemical feedstocks) wherever located; (ii) production, distribution, and consumption of energy and fuels wherever carried on; and (B) matters relating to energy and fuels, such as corporate structure and proprietary relationships, costs, prices, capital investment, and assets, and other matters directly related thereto, wherever they exist.

(2) The term "person" means any natural person, corporation, partnership, association, consortium, or any entity organized for a common business purpose, wherever situated, domiciled, or doing business, who directly or through other persons subject to their control does business in any part of the United States.

(3) The term "United States" when used in the geographical sense means the States, the District of Columbia, Puerto Rico, and the territories and possessions of the United States.

(f) Information obtained by the Administration under authority of this Act shall be available to the public in accordance with the provisions of section 552 of title 5, United States Code.

(g)(1) The authority contained in this section is in addition to, independent of, not limited by, and not in limitation of, any other authority of the Federal Energy Administrator.

(2) The provisions of this section expire at midnight June 30, 1975, but such expiration shall not affect any administrative or judicial proceeding which relates to any act or failure to act if such act or failure to act was not in compliance with the requirements and authorities of this section and occurred prior to midnight, June 30, 1975.

SEC. 12. ENFORCEMENT.

(a) It shall be unlawful for any person to violate any provision of section 2 (relating to coal conversion and allocation) or section 11 (relating to energy information) or to violate any rule, regulation, or order issued pursuant to any such provision.

(b)(1) Whoever violates any provision of subsection (a) shall be subject to a civil penalty of not more than $2,500 for each violation.

(2) Whoever willfully violates any provision of subsection (a) shall be fined not more than $5,000 for each violation.

(3) It shall be unlawful for any person to offer for sale or distribute in commerce any coal in violation of an order or regulation issued pursuant to section 2(d). Any person who knowingly and willfully violates this paragraph after having been subjected to a civil penalty for a prior violation of the same provision of any order or regulation issued pursuant to section 2(d) shall be fined not more than $50,000, or imprisoned not more than six months, or both.

(4) Whenever it appears to the Federal Energy Administrator or any person authorized by the Federal Energy Administrator to exercise authority under this section 2 or section 11 of this Act that any individual or organization has engaged, is engaged, or is about to engage in acts or practices constituting a violation of subsection (a) the Federal Energy Administrator or such person may request the Attorney General to bring a civil action to enjoin such acts or practices, and upon a proper showing, a temporary restraining order or a preliminary or permanent injunction shall be granted without bond. In such action, the court may also issue mandatory injunctions commanding any person to comply with any provision, the violation of which is prohibited by subsection (a).

(5) Any person suffering legal wrong because of any act or practice arising out of any violation of subsection (a) may bring a civil action for appropriate relief, including an action for a declaratory judgment or writ of injunction. United States district courts shall have jurisdiction of actions under this paragraph without regard to the amount in controversy. Nothing in this paragraph shall authorize any person to recover damages.

SEC. 13. EXTENSION OF CLEAN AIR ACT AUTHORIZATION.

(a) Section 104(c) of the Clean Air Act is amended by striking "and $150,000,000 for the fiscal year ending June 30, 1974" and inserting in lieu thereof ", $150,000,000 for the fiscal year ending June 30, 1974, and $150,000,000 for the fiscal year ending June 30, 1975."

(b) Section 212(i) of such Act is amended by striking "three succeeding fiscal years." and inserting in lieu thereof "four succeeding fiscal years.".

(c) Section 316 of such Act is amended by striking "and $300,000,000 for the fiscal year ending June 30, 1974" and inserting in lieu thereof ", $300,000,000 for the fiscal year ending June 30, 1974, and $300,000,000 for the fiscal year ending June 30, 1975".

SEC. 14. DEFINITIONS.

(a) For purposes of this Act and the Clean Air Act, the term "Federal Energy Administrator" means the Administrator of the Federal Energy Administration established by Federal Energy Administration Act of 1974 (Public Law 93-275); except that until such Administrator takes office and after such Administration ceases to exist, such term means any officer of the United States designated as Federal Energy Administrator by the President for purposes of this Act and section 119 of the Clean Air Act.

(b) *For purposes of this Act, the term "petroleum product" means crude oil, residual fuel oil, or any refined petroleum product (as defined in section 3(5) of the Emergency Petroleum Allocation Act of 1973).*

And the Senate agree to the same.

JOINT EXPLANATORY STATEMENT OF THE COMMITTEE OF CONFERENCE

The managers on the part of the House and the Senate at the conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 14368) to provide for means of dealing with energy shortages by requiring reports with respect to energy resources, by providing for temporary suspension of certain air pollution requirements, by providing for coal conversion, and for other purposes, submit the following joint statement to the House and the Senate in explanation of the effect of the action agreed upon by the managers and recommended in the accompanying conference report:

The Senate amendment struck out all of the House bill after the enacting clause and inserted a substitute text.

The House recedes from its disagreement to the amendment of the Senate with an amendment which is a substitute for the House bill and the Senate amendment. The differences between the House bill, the Senate amendment, and substitute agreed to in conference are noted below, except for clerical corrections, conforming changes made necessary by agreements reached by the conferees, and minor drafting and clarifying changes.

SECTION 1. SHORT TITLE; PURPOSE

House bill

Section 1(b) of the House bill set forth the purpose of the bill: to assist in meeting the essential needs of the United States for fuels, in a manner which is consistent, to the fullest extent practicable, with existing national commitments to protect and enhance the environment, and to provide requirements for reports respecting energy resources.

Senate amendment

Section 1(b) of the Senate amendment was identical to the House bill, except for the deletion of the reference to reporting requirements which reflected the Senate deletion of the provisions of the House bill relating to reporting of energy information.

Conference substitute

The conference substitute adopts the House provision.

SECTION 2. COAL CONVERSION AND ALLOCATION

House bill

Section 10 of the House bill required the Administrator of the Federal Energy Administration ("FEA"), to the extent practicable and consistent with the objectives of the bill, by order, after balancing on a plant-by-plant basis the environmental effects of use of coal

against the need to fulfill the purposes of the bill to prohibit, as its primary energy source, the burning of natural gas or petroleum products by any major fuel-burning installation (including any existing electric powerplant) which, on the date of enactment of the bill, had the capability and necessary plant equipment to burn coal. Any installation to which such an order would apply was permitted to continue to use coal and coal derivatives as provided in section 119(b) of the Clean Air Act. To the extent coal supplies are limited to less than the aggregate amount of coal supplies which may be necessary to satisfy the requirements of those installations which can be expected to use coal (including installations to which orders may apply under this subsection), the Administrator of FEA was directed to prohibit the use of natural gas and petroleum products for those installations where the use of coal would have the least adverse environmental impact. A prohibition on use of natural gas and petroleum products under this provision of the House bill would have been contingent on the availability of coal, coal transportation facilities, and the maintenance of reliability of service in a given service area.

The Administrator of FEA was directed under the House bill to require that fossil-fuel-fired electric powerplants in the early planning process (other than combustion gas turbine and combined cycle units) be designed and constructed so as to be capable of using coal as a primary energy source instead of or in addition to other fossil fuels. No fossil-fuel-fired electric powerplant would be required to be so designed and constructed, if (1) to do so would result in an impairment of reliability or adequacy of service, or (2) if an adequate and reliable supply of coal is not available and is not expected to be available. In considering whether to impose a design or construction requirement, the Administrator was directed to consider the existence and effects of any contractual commitment for the construction of such facilities and the capability of the owner or operator to recover any capital investment made as a result of the conversion requirements of this section.

Under this section, the FEA Administrator was authorized by rule to prescribe a system for allocation of coal to users thereof in order to attain the objectives specified in this section.

Senate amendment

The Senate amendment differed from the House bill in these respects: (1) Prohibition orders on the use of petroleum products or natural gas were not authorized to be issued to plants located in air quality control regions in which national primary ambient air quality standards are now being exceeded or where the use of coal would cause concentrations of air pollutants to exceed national primary standard levels; (2) the duty to perform an environmental balancing analysis and the responsibility to establish conversion priorities on an environmental basis in a case of a short supply of coal, which responsibilities were vested by the House bill in the FEA Administrator, were deleted; (3) the FEA Administrator was authorized but not required to compel powerplants in the design stage to be designed and built so as to be capable of burning coal; and (4) authority "to enforce" orders prohibiting burning of petroleum products or natural gas was not termi-

nated on June 30, 1975. The effect of this last change was to provide that the mandatory orders prohibiting use of natural gas and petroleum products issued prior to June 30, 1975, could be made effective and enforced without time restriction thereafter.

Under the Senate amendment conversion to coal could only be ordered in accordance with section 119(b) of the Clean Air Act and therefore could not cause an "unavailability" of conforming fuel under section 119(a) of that Act. Thus, short-term suspension under section 119(a) would not be available to converters or other plants subject to a prohibition order.

Conference substitute

Section 2(a) of the conference substitute contains the provisions of the House bill and Senate amendment which required the FEA Administrator to prohibit any existing electric powerplant with the capability and necessary plant equipment to burn coal from burning natural gas or petroleum products as its primary energy source. The effect of this provision is to require FEA to issue such prohibition orders not only to powerplants which are burning petroleum products or natural gas, but also to those which are burning coal. In the former case, the effect of the prohibition order will be to require conversion to the burning of coal as the source's primary energy source. In the latter case, the effect will be to prevent such plant from switching to the burning of petroleum products or natural gas.

The requirement under section 2(a) that FEA prohibit use of natural gas and petroleum products is subject to several qualifications and limitations. First, it applies only to powerplants (as defined in section 2(e)(1)); with respect to other major fuel-burning installations FEA is authorized, but not required, to issue such prohibition orders.

Second, only powerplants and major fuel-burning installations which have the capability and necessary plant equipment to burn coal on the date of enactment can be subject to an FEA prohibition order. "Capability" and "necessary plant equipment", as used in this section, include necessary coal handling facilities and appurtenances both inside and outside the plant; necessary land for storage of coal; equipment such as unloaders, conveyors, pulverizers, scales, burners, soot blowers, and special coal-burning instrumentation and controls. These latter are necessary not only to maintain dependable operation, but to assure operational safety, since coal firing is often a much less stable operation than that obtainable with natural gas or petroleum products.

It is not intended, however, to imply that the absence of any one or combination of these facilities or equipment would be grounds for concluding that the facility lacked capability or necessary plant equipment to burn coal. Nor is it intended that this condition be applied in an overly rigid or strict fashion which would frustrate the intent of the section to encourage burning of coal in lieu of petroleum products or natural gas.

Third, prohibition orders shall be issued, shall become effective, and shall remain in effect only in accordance with the findings and requirements of subsection (b). With respect to any powerplant or major fuel-burning installation, the FEA Administrator is author-

ized to issue a prohibition order only if he finds that the burning of coal is practicable and consistent with the purposes of the bill and that sufficient supplies of coal and coal transportation facilities will be available to plants expected to burn coal during the period the order will be in effect. Assessment of the availability of coal would take into consideration the practicability of its production, transportation to the powerplant, and of any State laws or policies limiting its extraction or use.

With respect to a powerplant, the FEA Administrator must make the additional finding that the prohibition will not impair the reliability of service in the area served by the plant. These findings must be made before a prohibition order may lawfully be issued by FEA.

In addition to findings required of FEA, certain action by the Administrator of the Environmental Protection Agency (EPA) is required before any prohibition order which has been issued by FEA may be made effective.

A prohibition order which FEA intends to apply for a period ending on or before June 30, 1975, could not become effective until the date which EPA certifies pursuant to section 119(d)(1)(A) of such Act is the earliest date that such plant or installation will be able to comply with the air pollution requirements which will be applicable to it.

In the case of a prohibition order which FEA intends to be in effect after June 30, 1975, the order may not take effect until (i) EPA notifies the FEA under section 119(d)(1)(B) of the Clean Air Act that such plant or installation will be able on and after July 1, 1975, to burn coal and to comply with all applicable air pollution requirements without a compliance date extension under section 119(c) of such Act, or (ii) if such notification is not given, the date which the EPA certifies pursuant to section 119(d)(1)(B) of such Act is the earliest date that such plant or installation will be able to comply with all applicable requirements of such section 119. In addition, an order will not be effective for any period certified by EPA under section 119(d)(3)(B) of such Act.

In making the determinations referred to above, the EPA Administrator is to consider only the physical and technological feasibility of the plant or installation complying with the Clean Air Act requirements while subject to a prohibition order. He is not to consider economic feasibility of compliance. The reasonableness of the costs of compliance (and the economic feasibility of compliance) are matters solely to be considered by the Administrator of FEA in determining the practicability of a prohibition order issued under this section.

If the FEA Administrator determines that unreasonably high costs of compliance would be imposed upon a plant or installation which would be required to convert to coal and comply with the requirements of section 119 of the Clean Air Act (or existing requirements under that Act), he may conclude that he cannot make the finding of practicability under section 2(a)(1)(A) of this Act. If he were to reach such a conclusion, he would not be authorized to issue a prohibition order.

If such an order had already been issued and the FEA Administrator subsequently determined that compliance with its terms and

with Clean Air Act requirements would not be practicable, he would be required to rescind the order, or to modify the order so that compliance would be practicable. In no event, however, is the Administrator of FEA authorized to override or modify Clean Air Act requirements (which are and will be in effect under the existing Clean Air Act or prescribed under section 119) in order to make practicable the implementation of a prohibited order.

Of course, whether or not it is physically possible for a plant or installation to burn coal and meet requirements of the Clean Air Act depends on the type of coal to be burned and the availability of emission control equipment, in addition to other factors. Thus, when EPA exercises its judgment under section 119(d) of the Clean Air Act, its findings will be in conditional terms as provided in that section.

These conditional findings are important for two reasons. These conditions are to form the basis for the Administrator's action under section 119 of the Clean Air Act (in making findings, granting suspensions, prescribing primary standard conditions and interim requirements, etc.). Moreover, until such conditions are capable of being met by the plant or source, no prohibition order under section 2(a) of this Act may become effective.

This does not mean that the prohibition order's effectiveness is contingent upon actual compliance by the plant or installation with Clean Air Act requirements. If this were the policy, a plant or installation could resist such a prohibition order merely by refusing to comply with Clean Air Act requirements. The conferees do not intend to permit such a result. A prohibition order will not be in effect if the source is unable to comply with Clean Air Act requirements; however, if the source is able to comply but fails to do so, the prohibition order could stay in effect and the source would be subject to enforcement action under the Clean Air Act.

Under section 119(d), if a source to which a suspension or compliance date extension applies fails to comply with any primary standard condition or with any regional limitation applicable to it, the EPA Administrator must either enforce compliance with such condition or limitation under section 113 or, after appropriate procedure, revoke the suspension or compliance date extension. In the latter case, the source would have to comply with all air pollution requirements which would have otherwise been applicable without the suspension or compliance date extension.

Further discussion of primary standard condition and the regional limitation are to be found in the discussion of section 3 of the conference substitute (the new section 119 of the Clean Air Act). However, it is important to note that the provision of section 119(d) of the Clean Air Act relating to pollutants for which national ambient air quality standards have not been prescribed (which provision is also discussed there) is intended to have a different effect than these other two requirements. While the Administrator of EPA must make a finding that a plant or installation will be able to meet the primary standard condition and the regional limitation (or the requirements under the existing Act) before a prohibition order may become effective, such a prior finding with respect to the plant or installation's

ability to meet the provision respecting such pollutants is not necessary. All that is required is that a prohibition order cease to be effective during any period during which the EPA Administrator notifies the FEA Administrator that burning coal by the plant or installation will not be consistent with such provision.

Still a fourth qualification on the mandate of section 2(a) is to be found in the procedural and consultative measures which are provided for in connection with the issuance of these prohibition orders. Furthermore, prohibition orders must be issued no later than June 30, 1975, although they may be modified or made effective thereafter.

In light of this limitation on FEA's order issuing authority, the conference substitute requires only informal and expedited procedures prior to the issuance of such orders. No formal adjudication or rulemaking is intended, nor is 5 U.S.C. 554, 556, or 557 to apply in the issuance of such orders or in any other proceeding under this Act or under section 119 of the Clean Air Act. To the extent that constitutional requirements may necessitate some opportunity for cross-examination with respect to some issues of fact, it is anticipated by the conferees that this opportunity would be provided by the courts in judicial review or enforcement proceedings or by means of a remand to the appropriate Administrator.

As used in the conference substitute, the term "interested persons" includes the public. Consequently, whenever the conference substitute (including the provisions which amend the Clean Air Act) requires notice and opportunity for presentation of views, the public must be afforded notice and must be given the same opportunity to present views as other interested persons.

While the conference substitute does not require FEA consultation with the Federal Power Commission, the conferees intend that, to the maximum extent practicable prior to the exercise of any authority under this section, the FEA Administrator should consult with all affected departments and agencies of government (including the FPC) in order to obtain recommendations of such agencies covering matters within their administrative jurisdiction and expertise. For example, the physical conversion of electric generating facilities from petroleum products or natural gas firing to coal firing may have implications respecting adequacy and reliability of bulk power supply, matters within the FPC's jurisdiction under the Federal Power Act.

In order to assure that the conferees' intent to encourage the combustion of coal where practicable and consistent with the broad purpose of the Act would not be unduly delayed or frustrated by endless litigation, the conferees adopted the Senate amendment which deleted the third sentence of section 10(a) of the House-passed bill (requiring that conversions be required with respect to plants or installations where the conversion would have the least environmental impact, in the case of a short supply of coal). This decision does not mean that FEA should ignore such considerations. The conferees chose not to impose such a requirement, but rather intend to direct FEA to take account of such factors insofar as practicable after consultation with EPA.

A fifth limitation on section 2(a) is that all prohibition orders and all modifications thereof must expire no later than January 1, 1979.

Section 2(c) of the conference substitute also authorizes the Administrator of FEA to require that fossil-fuel-fired electric powerplants in the early planning process, other than combustion gas turbine and combined cycle units, be designed and constructed so as to be capable of using coal as a primary energy source. (The conferees recognize that any new powerplant would have to comply with applicable new source performance standards under the Clean Air Act.) The conferees thus adopted the discretionary provision of the Senate amendment in this respect. Moreover, no fossil-fuel-fired electric powerplant may be required to be so designed and constructed, if (1) to do so is likely to result in impairment of reliability or adequacy of service, or (2) an adequate and reliable supply of coal is not expected to be available. In considering whether to impose a design or construction requirement, the Administrator shall consider the existence and effects of any contractual commitment for the construction of such facilities and the capability of the owner or operator to recover any capital investment made as a result of requirements imposed under this provision.

Subsection (d) authorizes the FEA Administrator to allocate coal (1) to any powerplant or major fuel-burning installation to which a prohibition order has been issued under subsection (a), or (2) to any person as may be necessary to effectuate the purposes of this Act.

The FEA Administrator's authority to issue (but not to amend or enforce) rules or orders to allocate coal expires June 30, 1975.

It is the conferees' intention to require the FEA Administrator, if he finds it necessary to allocate coal after June 30, 1975, to ensure that the purposes of the bill are carried out, to do so pursuant to general rules which he has promulgated before such date. These rules should establish procedures and criteria for allocating coal after such date as may be necessary for assuring that coal producers or suppliers (or other persons handling coal) will expeditiously comply with any allocation made pursuant to such rules or orders. In addition, any rules or orders issued before July 1, 1975, could be amended as necessary to carry out the purposes of the bill. Thus, a direction after June 30, 1975, to a person to supply coal to a user pursuant to rules issued before that date would not be barred by the June 30, 1975, expiration date for issuing rules or orders. Rules and orders under section 2(d) should also specify procedures for FEA to respond to EPA's designation of persons to whom fuel exchange orders should be issued under section 119(j) of the Clean Air Act and to effectuate the requirement of section 7(a) of this Act.

SECTION 3. SUSPENSION AUTHORITY

House bill (Short Term)

Section 2 of the House bill provided for short term suspension of stationary source fuel or emission limitations but, with one exception, did not authorize long-term delay of such limitations. The bill added a new section 119 to the Clean Air Act which permitted the Administrator of the Environmental Protection Agency to suspend until June 30, 1975, or one year after date of enactment (whichever comes

first), any stationary source fuel or emission limitation. A suspension could be granted by the Administrator either upon his own motion or upon the application of a source or a State, if the source could not comply with such limitations because of the unavailability of fuel. The Administrator of the Environmental Protection Agency was directed to give prior notice to the Governor of the State and the chief executive of the local government unit where the source is located. He was also directed to give notice to the public and to allow for the expression of views on the suspension prior to granting it unless he finds that good cause exists for not providing such opportunity. Judicial review of such suspension was restricted to certain specified grounds.

The Administrator was required to condition the granting of any suspension upon adoption of any interim requirements that he determined to be reasonable and practicable. These interim requirements were to include necessary reporting requirements, and a provision that the suspension would be inapplicable during any period when clean fuels were available to such source. The Administrator was required to determine when such fuels were in fact available. It was the intent of the House that the Administrator in making such determination take into consideration the costs associated with any changes that would be required to be made by the source to enable it to utilize such fuel. No source which converted to coal and to which section 119(b) applies, however, could be required under this provision to return to the use of oil or natural gas.

The suspension was also to be conditioned on adoption of such measures as the Administrator determined were necessary to avoid an imminent and substantial endangerment to the health of persons. This authorized not only requirements that a facility shut down during air pollution emergencies, but also (for example) a requirement that it keep a reserve supply of clean fuels on hand to be burned to avoid such emergencies.

The purpose of the short term suspension provision was to enable sources to continue operation during any fuel shortage which may exist prior to June 30, 1975, while at the same time limiting as much as possible the impact on air quality.

Senate amendment (Short Term)

The provisions of the Senate amendment were substantially similar to those contained in the House bill, except that, in the intention of the Senate, no plant which was prohibited from burning petroleum products or natural gas under the bill could be considered to be eligible for a short term suspension, solely because of the unavailability of fuels. Such sources were eligible only for suspension of air pollution requirements under the long term provisions of section 119(b) and then only if they had converted to the burning of coal.

House bill (Long Term)

The bill provided that no air pollution requirement could have the effect of prohibiting any such source from burning coal, except as provided in the conditions specified in section 119 of the Clean Air Act. The bill prohibited the application of such requirements to sources which are either ordered to convert to coal or which began to convert

to coal during the period September 15, 1973, and ending on date of enactment of this bill. This prohibition against application of such requirements to such source could in some instances continue until as late as January 1, 1979. The prohibition would only apply if the source were placed, after notice and opportunity for oral presentation of views, on a schedule approved by the Administrator of the Environmental Protection Agency. The schedule would have to provide a timetable for compliance with the fuel or emission limitations of the applicable implementation plan no later than January 1, 1979.

All compliance schedules under section 119(b) also had to provide for compliance with interim requirements that will assure that the source will not materially contribute to a significant risk to public health.

Senate amendment (Long Term)

The Senate amendment contained provisions similar to those in the House bill with these important exceptions:

First, because of the mandatory nature of the Senate's coal conversion provision and the fact that the Senate prohibition on the burning of petroleum products or natural gas could be made effective and enforced at any time, before or after June 30, 1975, the Senate's long term Clean Air Act requirements were imposed on the source; they were not left to the option of the source, as in the House bill.

Second, the Senate amendment limited the provisions pertaining to "voluntary converters" (i.e., those plants which began conversion to coal prior to enactment of the bill) to those which began conversion during the 90-day period prior to December 15, 1973.

Third, the Senate amendment limited the application of section 119 (b) to sources (1) which were located outside of a region in which national primary ambient air quality standards are currently being exceeded and (2) which would not, as a result of a conversion to coal, cause or contribute to concentrations of air pollutants in excess of primary standards. The House bill contained no such limitation.

Conference substitute

Section 3 of the conference substitute adds a new section 119 to title I of the Clean Air Act.

Section 119(a).—Definitions. Section 119(a) defines terms used in the new section 119.

Section 119(b)(1).—Short-term suspensions. Subsection (b) of the new section 119 establishes the conditions under which short-term suspension of stationary source fuel or emission limitations may be granted by the Administrator of the Environmental Protection Agency.

Two types of persons are eligible for a suspension during the period ending June 30, 1975. The first is any person whom the Administrator finds will be unable to comply with such limitation during such period solely because of the unavailability of fuels that would permit that person to comply with such limitation. No person to whom a prohibition order has issued under section 2(a) of the Energy Supply and Environmental Coordination Act would be eligible for a suspension of this first type unless he cannot obtain coal which permits compliance with air pollution requirements. Persons who would be eligible for

this type of suspension include, but are not limited to, those to whom conforming fuels are unavailable because of strikes, embargoes, accidents, allocation rules, or orders under the Emergency Petroleum Allocation Act or under section 2(d) of this Act, or exchange orders under section 119(j) of the Clean Air Act. (Unavailability does not include unavailability of natural gas and petroleum products by reason of an order under section 2(a) of the bill).

The second type of person who may receive short-term suspensions under the Clean Air Act is an owner or operator of a fuel-burning stationary source to which subsection 119(c)(1)(A) or (B) applies and which has converted to the burning of coal. This group has two subgroups (1) those installations which are prohibited from burning petroleum products or natural gas under section 2(a) of the Energy Supply and Environmental Coordination Act and have, after September 15, 1973, converted to the burning of coal, and (2) those installations which began conversion to the use of coal during the period September 15, 1973-March 15, 1974, whether or not a prohibition under section 2(a) has been issued with respect to any such installation. No installation which had been burning coal and which did not convert from the burning of petroleum products or natural gas (either in response to a prohibition order or voluntarily beginning during the period September 15, 1973-March 15, 1974) would be eligible for a suspension under section 119(b)(1)(A)(ii).

In the case of a plant or installation which is described in section 119(c)(1)(A) or (B) and which has converted to burning coal, no short-term suspension may be granted by the Administrator of EPA unless he finds that the source will be able to comply with all primary standard conditions which will be applicable to the source.

In addition to the measures he imposes as primary standard conditions, the Administrator is required to condition the granting of any suspension upon adoption of any other interim requirements that he determines are reasonable and practicable. These interim requirements must include necessary reporting requirements and a provision, applicable only to those sources which receive a suspension under section 119(b)(1)(A)(i), that the suspension be inapplicable during any period when clean fuels are available to such source. The Administrator would be required to determine when such fuels are in fact available. It is the intent of the conferees that the EPA Administrator in making a determination to make a short term suspension inapplicable would take into consideration the costs associated with any changes that would be required to be made by the source to enable it to utilize such fuel.

The suspension would also be conditioned on adoption of such measures as the Administrator determines are necessary to avoid an imminent and substantial endangerment to the health of persons. This would authorize not only requirements that a facility shut down during air pollution emergencies, but also (for example) a requirement that it keep a reserve supply of clean fuels on hand to be burned to avoid such emergencies.

Section 119(b)(2).—A suspension may be granted by the Administrator either upon his own motion or upon the application of any person or a State. The Administrator is directed to give notice and

opportunity for public hearing prior to granting a suspension or denying an application therefor, unless he finds that good cause exists for not providing such opportunity. Before granting a suspension he is also directed to give actual notice to the Governor of the State in which the source or person is located and to appropriate local officials (as determined by the Administrator). Judicial review of such suspension and any related interim requirements and primary standard conditions would be restricted to certain specified grounds.

Section 119(c)(1).—Compliance date extension. In recognition of the need to balance energy needs with environmental requirements and the unique problems facing any source which converts to coal in response to the fuel shortage, the conferees adopted a provision that no air pollution requirement (as defined in section 119(a)(2)) could have the effect of prohibiting the burning of coal by any source which is described in section 119(c)(1)(A) or (B), which converts to the burning of coal, and for which the requisite findings have been made under section 119(c)(2)(A), except as provided in section 119(d)(3).

This prohibition against application of such "air pollution requirements" to such source could in some instances continue until as late as January 1, 1979. It would expire on such earlier date as is established pursuant to section 119(c)(2)(B) and (C).

The compliance date extension provision is only applicable to plants or installations which began conversion from petroleum products or natural gas to coal voluntarily between September 15, 1973, and March 15, 1974, or converted from petroleum products or natural gas to coal as a result of an order under section 2.

As noted above, before the provisions of section 119(c)(1) may apply to any person, the Administrator of EPA must make certain findings. First, he must find that the source will be able to comply with all primary standard conditions (just as in the case of a short-term suspension under section 119(b)(1)(A)(ii)). Second, he must find that the source will be able to comply with the regional limitation (defined in section 119(a)(6)).

Section 119(d).—Primary standard conditions. Primary standard conditions are emission limitations, requirements respecting pollution characteristics of coal, or other enforceable measures for control of emissions which the Administrator determines must be complied with by a source in order to assure that the burning of coal by that source will not result in emissions of any air pollutant which cause or contribute to concentrations of such air pollutant in excess of any national primary ambient air quality standard for that pollutant. The Administrator of EPA may require that the source use intermittent or alternative controls during such period if he determines that such measures are enforceable and will provide the necessary assurance pertaining to attainment and maintenance of the national primary air quality standards.

The decision of which measures to impose is left to the discretion of the Administrator. In the conferees' view, however, specific enforceable requirements must be made applicable to specific sources in order to have an effective air pollution control strategy. Moreover, enforcement of any such requirement should not be made contingent upon a showing that the national primary standard is being exceeded at any

place or time. This is not required under the Clean Air Act, as amended in 1970; nor is it required here. The conferees subscribe to the view expressed in S. Rept. No. 91–1196 that: "[National ambient air quality] Standards are only the reference point for the analysis of the factors contributing to air pollution and the imposition of control strategy and tactics."

The regional limitation means, in effect, that no source which is located in an air quality control region (as designated in accordance with section 107 of the Clean Air Act) in which any national primary ambient air quality standard for a particular pollutant is being exceeded may emit that pollutant in amounts which exceed any emission limitation or may violate any other air pollution requirement for that pollutant under the applicable implementation plan. Thus, for instance, if the national primary standard for particulates is being exceeded at any point within an air quality control region, no source located within that region could be permitted by section 119(c) to emit particulates in excess of implementation plan limitations applicable to such source. Sulfur oxide emissions by a source covered by section 119(c) and located in a region exceeding primary standards for particulates could exceed applicable implementation plan limitations for sulfur oxides so long as the national primary standard for sulfur oxides was not being exceeded in the region and the source complies with all primary standard conditions. Moreover, if at any subsequent time it is determined that the national primary standard for particulates is being attained in the region, then such source would no longer be subject to the regional limitation (but of course would continue to be subject to all primary standard conditions).

The purposes of requiring these findings are several. First, since the national primary standards are intended to assure protection of the public health, the conferees felt that no override of air pollution requirements should be permitted if it would cause or contribute to the national primary standards being exceeded. Second, although the conferees did not want to totally preclude conversions to coal in air quality control regions in which national primary standards for any given pollutant may be exceeded, they did want to assure that no implementation plan requirement for such pollutant would be overridden for a source located in such a region.

Primary standard conditions (including requirements respecting pollution characteristics of coal), regional limitations and other requirements applicable to a source under section 119 would be enforceable under the citizens' suit provisions of the Clean Air Act.

While the source's ability to comply with the regional limitation and primary standard conditions are threshold determinations which must be made prior to the issuance of a compliance date extension under section 119(c)(1), this is not the case with respect to the provision relating to emissions of any air pollutant for which national ambient air quality standards have not been promulgated (or an air pollutant which is transformed in the atmosphere into an air pollutant for which such a standard has not been promulgated). If at any time the Administrator determines that the burning of coal by any source to which section 119(c)(1) applies (or which has received a prohibition order under section 2(a) of this Act but to which section 119(c)(1)

does not apply), will result in an increase, which causes (or materially contributes to) a significant risk to public health, in such emissions, he is directed to notify the Administrator of FEA.

Under section 2(b) of this Act, upon receipt of such notice by FEA, the prohibition order section 2(a) would cease to be effective until the EPA Administrator determines that such source no longer causes (or materially contributes) to a significant risk to public health.

In so providing, the conferees did not intend to authorize the Administrator of EPA to circumvent air quality standards and implementation plan procedures and criteria for the regulation of air pollution emissions under the Clean Air Act. However, the conferees are aware of the potential, described in several recent reports, that inadequately considered coal conversion orders may cause or contribute to a significant risk to public health from certain pollutants for which ambient standards have not been prescribed. The pollutants which have been mentioned include sulfuric acid aerosols, sulfate particles, nitrates, cadmium, particulate polycyclic organic matter, arsenic, etc. In the judgment of the conferees, the Administrator of EPA should be authorized to assure that orders prohibiting the burning of petroleum products or natural gas under section 2(a) of the Energy Supply and Environmental Coordination Act would not create major new air pollution threats to health, exacerbate existing serious threats to health as a result of the increased emission of such presently unregulated air pollutants, or prevent sources of such pollutants from reducing a significant risk to health.

Of course, action by the Administrator of EPA to notify FEA and thus to make ineffective a prohibition order on the basis of this determination should not be undertaken without a reasonable basis. To permit such a determination of causing or materially contributing to a significant risk to health to be made on speculative or conjectural bases would be inconsistent with the conferees' strong intention to encourage burning of coal to the maximum extent practicable without endangering public health.

If the Administrator of EPA determines that all primary standard conditions are not being met by any person to whom such conditions are applicable, the Administrator must take one of two actions: he must either commence an enforcement action under section 113 or he must revoke the suspension or compliance date extension. The Administrator is also required to exercise one of these two options if he finds that any person who has converted to coal and who is covered by section 119(c)(1)(A) or (B) is violating the regional limitation.

If, however, the Administrator finds that a person is unable to comply with all primary standard conditions (and with any revised conditions which he might establish), or with the regional limitation and such person is subject to a prohibition order under section 2(a) of the Energy Supply and Environmental Coordination Act, the EPA Administrator must so notify the FEA Administrator. This notice will cause such an order to cease to be effective with respect to such person, until such time as the EPA Administrator determines that compliance is possible (whether due to an FEA coal allocation order or for other reasons). Similarly, the EPA Administrator is required to give notice to the FEA Administrator, if he determines that any such condition

or limitation is unenforceable due to court order. In this instance also the prohibition order ceases to be effective, until EPA determines that such condition or limitation is enforceable.

The conferees reaffirm the following statement of intent from the House report:

There are three basic reasons for the committee's decision to encourage increased burning of coal until at least 1979. First, in order to encourage the opening of new coal mines to increase energy supplies, it is necessary to encourage an on-going substantial demand for such coal. Without reasonable likelihood that new coal mines will be able to market their new production, the opening of new mines and expansion of existing mine capacity may be regarded too risky. Second, to the extent that electric generating power plants can be encouraged to cease burning oil and natural gas, these fuels would be available to meet other energy needs, such as production of gasoline and home heating oil. Finally, since continuous emission reduction technology is available for major sources such as power plants, but is not available for sources such as homes, apartment houses, and small businesses, the purpose of the Clean Air Act can be better effectuated by having low pollution oil and natural gas burned to the maximum extent feasible, in sources for which no effective clean-up technology is available.

The committee believes that the priority effort of each source which is subject to section 119(c) should be to obtain low sulfur coal. If an adequate, long-term supply of low sulfur coal is available to such a source, the Administrator should only approve a plan which requires its use (and thus compliance with air pollution requirements) as expeditiously as practicable. In such a case, the Administrator would have to disapprove a plan which proposed to wait until January 1, 1979, before beginning to burn low sulfur coal. The committee believes that requiring priority consideration to the use of non-metallurgical low sulfur coal will reduce the likelihood of extended violation of applicable emission standards.

If a source is unable to obtain an adequate, long-term supply of low sulfur coal, it may seek to come into compliance by use of a continuous emission reduction system or by use of coal derivatives which would achieve the required degree of emission reduction. In such case, the source would still be required to act expeditiously to obtain an adequate supply of coal. However, compliance with all air pollution requirements would be required on a date established by the Administrator in the case of a source which will require a continuous emission reduction system for sulfur-related emissions, or as soon as practicable in the case of any other source; but in any case not later than January 1, 1979.

The Administrator would be required to impose, but would not be limited to imposing, the following requirements in any compliance schedule:

(1) the dates by which the source will solicit bids and enter into binding contractual agreements (or other equally binding commitment) for the procurement of an adequate coal supply to permit continued long term operation of the source;

(2) where the coal obtained by the source has sulfur content or other characteristics which will require installation of continu-

ous emission reduction equipment to enable the source to comply with emission limitations, the dates for soliciting bids for such equipment, contracting for such equipment, and installation and start-up of such equipment by a date that will permit a reasonable time for necessary adjustments of the equipment to maximize the reliability and efficiency of the system prior to January 1, 1979; and

(3) reasonable interim measures which the source should employ to minimize the adverse impact on air quality.

In establishing dates for contracting for coal, the Administrator should determine the earliest date that is reasonable and which will permit compliance by the time specified in this section. Because the dates of obtaining coal or continuous emission reduction systems may occur at approximately the same time for more than one source which may overburden supplies, the Administrator is specifically authorized to establish differing dates for obtaining coal or such systems to insure availability of supplies of such coal or equipment. In making such decisions, it is expected that the Administrator will provide the earliest date for those sources in areas with the most serious pollution problems.

It is the intent of the committee that when the coal available to the source necessitates the use of continuous emission reduction equipment for control of sulfur-related emissions, the source will have as much time as necessary to install the equipment and achieve timely compliance, in order to permit the orderly development of technology.

In recognition of the complex factors involved in determining schedules for the various sources, the committee intends that the Administrator have broad discretion in prescribing and approving schedules of compliance to insure that sources meet the requirements of this section without overburdening production capacity for continuous emission reduction systems for sulfur control or causing unacceptable disruption in energy production capacity.

The committee does not intend to permit delay of existing compliance schedules for control of particulate emissions. Some slight delay may be necessary in light of revised compliance schedules for control of sulfur-related emissions. However, only such minor adjustments as the Administrator determines to be unavoidable should be permitted in existing compliance schedules and emission limitations for control particulates.

While both the House bill and the Senate amendment required sources to which section 119(c) applied to obtain continuous emission reduction systems if long-term supplies of low sulfur coal were unavailable, the House bill would have permitted sources to opt to return to oil or gas after June 30, 1975, in which case this requirement would not have been applicable. By agreeing to the approach embodied in the Senate amendment which requires prohibition orders to be effective after June 30, 1975, and which precludes any source subject to an effective prohibition order from reverting to petroleum products or natural gas, the conference substitute makes the requirement respecting continuous emission reduction systems mandatory with respect to sources unable to obtain low sulfur coal.

The conferees were concerned with the conflicting reports regarding the effectiveness, reliability, cost, and environmental side effects of presently available continuous emission reduction systems for sulfur oxides. Substantial doubts were expressed about each of these points by several of the conferees. The conferees believed, however, that time remains for these systems to be improved prior to the time binding commitments would have to be made to procure such systems under section 119 of the Clean Air Act. Both House and Senate conferees expressed a commitment to carefully review these questions in upcoming hearings and to promptly modify these amendments, if warranted by the information obtained in the course of such review.

The conferees also take note that the term "long-term supply of coal" as used in both the House bill and the Senate amendment, is not defined or explained. It is the intention of the conferees that this term be interpreted in accordance with the broad objectives of this bill. Thus, for instance, sufficiently long-term contracts should be required to assure that new deep mines can and will be opened and that existing mines can and will be significantly expanded to substantially increase the energy supplies which will be available to the Nation. Furthermore, if the contracts are entered into for low sulfur coal, they should be of sufficient duration to assure a comparable degree of reliability of compliance with Clear Air Act requirements as would be provided by the installation of continuous emission reduction systems for control of sulfur oxide emissions.

The conferees also take note of the following statement in the House report:

In two States—Ohio and Kentucky—however, there is no applicable implementation plan in effect. This is so because of the Sixth Circuit Court of Appeals' opinion and order in *Buckeye Power, Inc.* v. *Environmental Protection Agency*. No. 72–1628 (6th Circ. 1973) and consolidated cases. The committee does not intend to preclude sources located in Ohio or Kentucky from eligibility for the exemption provided in section 119(b)(1). Therefore, the language of section 119 (b)(2)(B) would permit the Administrator to approve a plan for a source located in either of these states if the plan provides a compliance schedule to achieve "the most stringent degree of emission reduction that such source would have been required to achieve . . . under the first applicable implementation plan which takes effect after" the date of enactment.

The conferees intend to make section 119 applicable to plants and installations located in Ohio and Kentucky.

In the conference substitute, eligibility for the application of section 119(c)(1) is conditioned upon submission and approval of a compliance plan which must meet the requirements of regulations (which EPA must promulgate within 90 days after enactment) requiring any source to which a compliance date extension applies, to submit and obtain approval for its means of and schedule for compliance in accordance with the requirements of section 119(c)(2)(B). Failure to comply with such regulations is a prohibited act enforceable under section 113 of the Clean Air Act.

Moreover, the degree of emission reduction which must ultimately be achieved has been changed to that degree of emission reduction

required to be achieved by the applicable implementation plan in effect on the date of submittal of the means of and schedule for compliance (except if no plan is in effect on such date). The purpose of this change was to permit any plan revision under section 4 of this Act to be taken into account if such revision is approved by such date.

SECTION 4. IMPLEMENTATION PLAN REVISIONS

House bill

Section 3 of the House bill provided that the Administrator will only review those State implementation plans for regions in which the application of section 119(b) of the Clean Air Act to sources converting to coal may result in a failure to achieve a national primary ambient air quality standard on schedule. The bill directed the Administrator to order necessary plan revisions within one year after such conversion that would set forth any additional reasonable and practicable measures required to achieve ambient air quality standards. The plan revision would have to consider whether, despite the coal conversion, the national primary ambient standards could be achieved through the use of additional reasonable and practicable measures (which may include energy conservation measures) that were not included in the original plan. In allowing up to a year for the Administrator of the Environmental Protection Agency to act, it was the intent of the House to permit both the Administrator and the States sufficient lead time to obtain adequate information on the impact of coal conversions, both effected and anticipated, and to permit accurate assessment of the additional measures required for State implementation plans.

Senate amendment

The Administrator was required to review State air quality implementation plans to determine whether or not less restrictive emission limitations can be applied to fuel burning stationary sources in designated air quality control regions without causing or contributing to concentrations of air pollutants in excess of applicable primary air quality standards.

Each State retained the authority to determine whether or not, on the basis of the review by the Administrator, a revision of any aspects of applicable implementation plans is appropriate. Should the State decide to revise emission limitations, the Administrator would be required to act on the State's request within 90 days of submission.

TRANSPORTATION CONTROLS

House bill

Section 3 of the House bill amended section 110 of the Clean Air Act to include a provision that parking surcharges must receive explicit authorization by Congress by law before they may legally be imposed by the Environmental Protection Agency. The bill would, however, continue to permit preferential bus/carpool lanes to be implemented by the Environmental Protection Agency as set forth in current transportation control plans.

The bill also empowered the Administrator of the Environmental Protection Agency to suspend for one year the review of new parking facilities.

The House bill also provided that no standard, plan, or requirement relating to management of parking supplies or preferential bus/carpool lanes could be promulgated after enactment unless there has been a public hearing on such requirement, plan, or standard in the affected area.

Senate amendment

No comparable provision.

Conference substitute

Section 4 of the conference substitute retains the provisions of the House-passed bill pertaining to a prohibition on the imposition of parking surcharges by the Environmental Protection Agency, authority for EPA to suspend for one year the applicability of its parking management regulations (both under its transportation control and indirect source regulations), and the requirement for at least one public hearing prior to the imposition by EPA of any standard, plan, or requirement pertaining to parking management or exclusive carpool/bus lanes. The conferees note that on January 15, 1974, the Administrator of EPA published regulations in the Federal Register implementing the first two provisions which were identical to those contained in S. 2589 as reported by the conferees.

With respect to revision of State implementation plans, section 4 of the conference substitute basically follows the Senate amendment version of the provision with certain modifications intended to emphasize the relationship between this provision and the provisions relating to coal conversion. As soon as practicable after enactment, the EPA Administrator would be required to review applicable implementation plans and report to each State whether such plans could be revised with respect to stationary source fuel burning installations and their suppliers without impairing the State plan's effectiveness to attain and maintain the national ambient standards. States could at any time thereafter revise their plans. If effective to attain and maintain the national ambient standards, such revised plans would be required to be approved by the Administrator.

The conference substitute differs from the Senate amendment in that the Administrator's plan review authority is not restricted to air quality control regions in which the national primary ambient standards are being exceeded. This change, like the whole provision, is intended to permit a mechanism by which EPA's clean fuels policy can be implemented to the extent that States agree to do so and by which conversions to the burning of coal can be effectuated more readily consistent with requirements of the Clean Air Act.

SECTION 5. MOTOR VEHICLE EMISSIONS

House bill

The House bill amended section 202 of the Clean Air Act to continue the emission standards established by the Administrator for 1975 model year automobiles during the 1976 model year. The effect of this provision was to maintain in the 1976 model year a Federal 49-State standard of 1.5 grams per mile of hydrocarbons, 15.0 grams per mile of carbon monoxide and 3.1 grams per mile of oxides of nitrogen, and a Federal standard for California of 0.9 gram per mile of hydrocarbons,

9.0 grams per mile of carbon monoxide, and 2.0 grams per mile of oxides of nitrogen. These standards would apply to automobiles produced by all manufacturers, whether or not any individual manufacturer had applied for or received a suspension under section 202(b)(5) previous to the enactment of this section.

The House bill provided that after January 1, 1975, an automobile manufacturer may seek a single one-year suspension of the statutory standards for hydrocarbons and carbon monoxide applicable to the 1977 model year. The Administrator would be required to establish interim emission standards for 1977 model automobiles for hydrocarbons and carbon monoxide if he grants the suspension.

The House bill amended section 202(b)(1)(B) of the Clean Air Act to establish a maximum emission standard for oxides of nitrogen of 2.0 grams per mile applicable nationwide to 1977 model year automobiles. This defers the previous statutory standard of 0.4 gram per mile of oxides of nitrogen until the 1978 model year. No administrative suspension would be possible from either the 1977 or 1978 No_x standard. While the 1977 model year standard is a maximum of 2.0 grams per mile nationwide, California retains the right under section 209 of the Clean Air Act to seek a waiver for a more stringent standard.

Senate amendment

Identical to the House bill.

Conference substitute

The conferees retained the provisions of the House bill and Senate amendment.

SECTION 6. CONFORMING AMENDMENTS

House bill

Certain conforming amendments were adopted to assure the enforceability of certain provisions of new section 119 of the Clean Air Act, in addition to other purposes.

Senate amendment

Identical to the House bill.

Conference substitute

Certain additional conforming amendments were necessitated in light of the changes in the coal conversion and suspension authority provisions of the conference substitute. This section incorporates the needed conforming amendments.

SECTION 7. PROTECTION OF PUBLIC HEALTH AND ENVIRONMENT

House bill

This section contained provisions relating to allocation of low sulfur fuel to minimize adverse effects on health and welfare; a study of the health effects of increased sulfur oxides as a result of coal conversions; an exemption of coal conversion orders from the National Environmental Policy Act for one year; and an exemption of a Canada-New York State transmission line from the requirements of the National Environmental Policy Act.

63-518 O - 76 - 10 (Vol. 1)

Senate amendment

The Senate amendment contained identical provisions relating to low sulfur fuel allocations, the study of health effects of sulfur oxides, and the one-year exemption of coal conversion orders from the National Environmental Policy Act. The Senate amendment also included a provision to clarify the relationship between the National Environmental Policy Act and the Clean Air Act. Under the Senate amendment, no action taken under the Clean Air Act would be deemed a "major Federal action significantly affecting the human environment" within the meaning of section 102(2)(C) of the National Environmental Policy Act. Thus environmental impact statements under NEPA would not be required to be filed with respect to any action under the Clean Air Act.

Conference substitute

The conference substitute retains the provisions of the House bill, but in addition adds the provision of the Senate amendment which sets forth that no action taken under the Clean Air Act would be deemed a "major Federal action significantly affecting the human environment" within the meaning of section 102(2)(c) of the National Environmental Policy Act.

SECTION 8. ENERGY CONSERVATION STUDIES

House bill

This section contained provisions relating to various energy conservation studies.

Senate amendment

No comparable provision.

Conference substitute

With the exception of two provisions which the conferees deemed duplicative of studies authorized by existing law, the conference substitute retains the provisions of the House bill.

SECTION 9. REPORT

House bill

This section provided for a report by the EPA Administrator on the implementation of sections 2 through 7.

Senate amendment

Identical to the House amendment except for deletion of the reference to section 7.

Conference substitute

The conference substitute provides for a report comparable to that in the Senate amendment.

SECTION 10. FUEL ECONOMY STUDY

House bill

The House bill provided for EPA and the Department of Transportation to conduct a joint study on the feasibility of establishing a 20 percent fuel economy improvement standard for 1980 and later model new motor vehicles.

Senate amendment

No comparable provision.

Conference substitute

The conference substitute retains the provisions of the House bill. In this connection, the conferees' intention is that EPA and DOT should determine whether a 20 percent fuel economy improvement standard is feasible by 1980. If so, the agencies should also notify Congress whether a greater improvement can be realized within such time or whether such improvement can be realized at an earlier date. If not, the agencies should notify Congress of the lesser degree of improvement which can be realized within such time or how much later than 1980 it will be before such an improvement can be achieved.

Furthermore, the conferees wish to emphasize their concurrence with the following statement from the House report:

The purpose of the jointly conducted study is to eliminate duplication with current, ongoing fuel economy studies.

The committee expects, of course, that any current DOT studies will be coordinated with this study to eliminate any potential duplication and minimize waste of funds.

At the same time, the committee agrees that EPA must be actively involved in any fuel economy analysis to assure consistency between the findings of the study and the statutory requirements for automobile emission reductions.

The committee recognizes that DOT has an equally important safety responsibility but does not have either established test procedures, testing facilities or the expertise on engine technology to perform an independent review.

The committee expects this study to utilize EPA's established emission test procedures in order to avoid inconsistency in any subsequent legislation recommendation.

SECTION 11. REPORTING OF ENERGY INFORMATION

House bill

Section 11(a) of the House bill provided that for the purpose of assuring that the Federal Energy Administrator, the Congress, the States, and the public have access to and are able to obtain reliable energy information throughout the duration of this section, the Federal Energy Administrator, in addition to and not in limitation of any other authority, was to request, acquire, and collect such energy information as he determines to be necessary to assist in the formulation of energy policy or to carry out the purposes of this Act or the Emergency Petroleum Allocation Act of 1973. The Federal Energy Administrator was to promptly promulgate rules under the authority of subsection (b) of this section requiring reports of such information to be submitted to the Federal Energy Administrator at least every ninety calendar days.

Subsection (b) of section 11 of the House bill stated that in carrying out the provisions of subsection (a) the Administrator had the power to require, by rule, any person who was engaged in the production, processing, refining, transportation by pipeline, or distribution (other than at the retail level) of energy resources to submit reports;

sign and issue subpenas for the attendance and testimony of witnesses and the production of relevant books, records, papers, and other documents; require of any person, by general or special order, answers in writing to interrogatories, requests for report, or other information; and such answers or submissions were to be made within such reasonable period and under oath or otherwise as the Federal Energy Administrator could determine; and to administer oaths.

Subsection (c) of section 11 of the House bill provided that for the purpose of verifying the accuracy of any energy information requested, acquired, or collected by the Federal Energy Administrator, officers or employees duly designated by him upon presenting appropriate credentials and a written notice to the owner, operator, or at reasonable times and in a reasonable manner, could have entered and inspected any facility or business premises, to inventory and sample any stock of energy resources therein, and to examine and copy records, reports, and documents relating to energy information.

Subsection (d) of this section directed the Federal Energy Administrator to exercise the authorities granted to him under subsection (b) to develop within 30 days after the date of enactment of the House bill, as full and accurate a measure as is reasonably practicable of domestic reserves and production, imports, and inventories, of crude oil, residual fuel oil, or refined petroleum products, natural gas, and coal. This subsection further directed the Federal Energy Administrator, for each calendar quarter beginning with the first, complete calendar quarter following the date of enactment of the House bill, to develop and publish quarterly reports containing the following:

(1) Report of petroleum product, natural gas, and coal imports; relating to country of origin, arrival point, quantity received, geographic distribution within the United States.

(2) Report of domestic reserves and production of crude oil, natural gas, and coal.

(3) Report of crude oil and refinery activity; relating allocation of crude oil to refiners with products to be derived from such crude oil.

(4) Report of inventories, nationally, and by region and State for various refined petroleum products, relating refiners, refineries, suppliers to refiners, share of market, and allocation fractions; for various refined petroleum products, previous quarter deliveries and anticipated 3-month available supplies; for refinery yields of the various refined petroleum products, percent of activity, and type of refinery; with respect to the summary of anticipated monthly supply of refined petroleum products amount of set-aside for assignment by the State, anticipated State requirements, excess or shortfall of supply, and allocation fraction of base year; and with respect to LPG by State and owner: quantities stored, and existing capacities, and previous priorities on types, inventories of suppliers, and changes in supplier inventories.

Section 11(e) of House bill provided that where a person shows that all or part of the energy information required by section 11 was being reported by such person to another Federal agency (other than the Bureau of the Census, the Bureau of Labor Statistics, or the Inter-

nal Revenue Service), the Administrator could exempt such person from providing all or part of such energy information to him, and upon such exemption, such Federal agency, notwithstanding any other provision of law was to provide such energy information to the Administrator.

Section 11(f) of the House bill stated upon a showing satisfactory to the Administrator by any person that any energy information obtained under this section from such person or from a Federal agency would, if made public, have divulged methods or processes entitled to protection as trade secrets or other proprietary information of such person, such information, or portion thereof, was to be confidential in accordance with the provisions of section 1905 of title 18 of the United States Code, except that such information or part therof was not to be deemed confidential for purposes of disclosure, upon request, to (1) any delegate of the Federal Energy Administrator for the purpose of carrying out this bill and the Emergency Petroleum Allocation Act of 1973, (2) the Attorney General, the Secretary of the Interior, the Federal Trade Commission, the Federal Power Commission, or the General Accounting Office when necessary to carry out those agencies' duties and responsibilities under this bill and other statutes, and (3) the Congress or any committee of Congress upon request of the Chairman. This section 11(f) went on to say that the provisions of section 11 were to expire on midnight, June 30, 1975, but such expiration was not to affect any administrative or judicial proceeding pending on such date which related to any act or omission before such date.

Subsection (g) of section 11 contained the defined terms for use in the section.

The term "Federal agency" was to have the meaning of the term "executive agency" as defined in section 105 of title 5, United States Code.

The term "energy information" included all information in whatever form on fuel reserves, exploration, extraction, and energy resources (to include petrochemical feedstocks) wherever located; production, distribution, and consumption of energy and fuels wherever carried on; and included matters relating to energy and fuel, such as corporate structure and proprietary relationships, costs, prices, capital investment and assets, and other matters directly related thereto, wherever they existed.

The term "person" meant any natural person, corporation, partnership, association, consortium, or any entity organized for a common business purpose, wherever situated, domiciled, or doing business, who directly or through other persons subject to their control did business in any part of the United States, its territories and possessions, the Commonwealth of Puerto Rico, or the District of Columbia.

Subsection (h) of the House bill's section 11 stated that information obtained by the Administrator under authority of this bill was to be available to the public in accordance with the provisions of section 552 of title 5, United States Code.

Subsection (i) of the House bill's section 11 provided that any United States district court within the jurisdiction of which any inquiry was carried on was authorized, upon petition by the Attorney General at the request of the Administrator, in the case of refusal to

obey a subpena or order of the Administrator issued under this section, to issue an order requiring compliance therewith; and any failure to obey the order of the court could have been punished by the court as a contempt thereof.

Senate amendment

No provision.

Conference substitute

The conference substitute takes the provisions of section 11 of the House bill with the deletion of subsection (e) thereof and with technical and clarifying changes.

The conferees wish to emphasize two important points with respect to the grant of authority to the Administrator to collect energy related information. First, it should be noted that the authority under this legislation is temporary in nature and will expire on June 30, 1975. This does not represent a decision by the conferees that our informational needs will not extend beyond this point in time. On the contrary, the conferees are convinced that these needs will be with us over the long term and that meeting these needs requires a comprehensive, long term legislative solution. The conferees are aware of the efforts now under way in the Committee on Interior and Insular Affairs of the Senate to develop a centralized energy information agency within the Federal Government. This legislation, S. 2782, the National Energy Information Act, is currently in markup, following extensive hearings and consultation with Federal agencies, industry and other experts in the area during the previous several months. A permanent and comprehensive Energy Information Act is needed to address the long-term energy information needs of the Executive, the Congress, and the public while reducing the burden of duplicative reporting on private industry by coordinating the collection of this information.

The effort represented by S. 2782 should go forward. But we cannot fail to respond to the immediate needs of the short-term situation awaiting the final resolution of the issues which attend the formation of a centralized energy data system.

Secondly, the conferees wish to emphasize that the energy information reporting authorities contained in this bill are intended to be in addition to, independent of, and not limited by any other authority of the Federal Energy Administrator. It is intended thereby to equip the Administrator of the Federal Energy Administration with broad powers, fully enforceable, to reach into any sector of the economy to bring together information relevant to his task and to assure that that information is freely available to the Congress. Moreover, to assure that the public is kept informed on a routine basis, the Administrator is required to publish quarterly reports containing specific and detailed information pertaining to supplies of petroleum products, natural gas, and coal. It is the conferees' intention that the making of periodic reports will assure the continued quality and timeliness of the data required to be obtained under this section.

SECTION 12. ENFORCEMENT

House bill

Section 10 of the House bill contained provisions relating to enforcement of orders relating to prohibition of burning of petroleum products or natural gas, coal allocation rules and orders, and energy information reporting requirements.

Senate amendment

Identical to the House bill, except with respect to enforcement of energy information reporting requirements.

Conference substitute

The conference substitute retains the substantive provisions of the House bill. These provisions appear in section 12 of the conference substitute.

SECTION 13. EXTENSION OF CLEAN AIR ACT AUTHORIZATIONS

House bill

No such provision was included.

Senate amendment

This section extends for one year (FY 1975) the authorizations in the Clean Air Act. The purpose of such amendment was to assure that sufficient funds were authorized to be appropriated for FY 1975 in order to permit the Administrator of EPA to meet its obligations and responsibilities under the bill.

Conference substitute

The conference substitute retains the provision of the Senate amendment.

The conferees wish to emphasize, however, that many important legislative issues pertaining to the Clean Air Act have yet to be resolved. Among these are the issues relating to the prevention of significant deterioration, the effectiveness and enforceability of intermittent control strategies, the reliability of existing sulfur emissions control technology, and many others.

The Senate Public Works Committee has already begun to hold hearings on the Clean Air Act. The House Interstate and Foreign Commerce Committee has stated its intent to schedule hearings on these problems and on legislative measures to address them. These hearings will be held before the Public Health and Environment Subcommittee of the House Interstate and Foreign Commerce Committee beginning in June, 1974. The existence of this provision does not in any way alter or postpone this commitment by the House committee to promptly consider the amendments now pending before the Subcommittee.

SECTION 14. DEFINITIONS

House bill

Section 12 of the House bill defines the term "Federal Energy Administrator" for purposes of the bill and the Clean Air Act. That term

refers to the Administrator of the Federal Energy Administration, which will be established by the Federal Energy Administration Act of 1974. Until that Administrator takes office, this section provides that the term will refer to an officer of the United States designated by the President.

Senate amendment

No comparable provision was included.

Conference substitute

The conference substitute retains the House bill provision with an additional amendment to explain the meaning of the term "petroleum products" as used in the provisions of both bills pertaining to orders prohibiting the burning of natural gas or petroleum products.

○

HOUSE CONSIDERATION AND PASSAGE OF CONFERENCE REPORT ON H.R. 14368, JUNE 11, 1974

Mr. STAGGERS. Mr. Speaker, I call up the conference report on the bill (H.R. 14368) to provide for means of dealing with energy shortages by requiring reports with respect to the energy resources by providing for temporary suspension of certain air pollution requirements, by providing for coal conversion, and for other purposes, and ask unanimous consent that the statement of the managers be read in lieu of the report.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

The Clerk read the statement.

(For conference report and statement, see proceedings of the House of June 6, 1974, pp. 97 and 119.)

Mr. STAGGERS. (during the reading). Mr. Speaker, I ask unanimous consent that the further reading of the statement be dispensed with.

The SPEAKER. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

Mr. STAGGERS. Mr. Speaker, I rise in support of the conference report on H.R. 14368, the "Energy Supply and Environmental Coordination Act."

In many ways, the conference report represents a victory for the House-passed bill. The Senate sought to delete the House provision banning the Environmental Protection Agency from imposing parking surcharges. **[Sec. 110(c)(2)(B) CAA.]** In Conference, the House view prevailed. The House prevailed on the "parking management" provision, as well. **[Sec. 110(c)(2)(C) CAA.]**

The House provisions pertaining to the use of enforceable intermittent or alternative controls between now and 1979 were retained. **[Sec. 119(c)(1)(C) CAA.]** The House's energy conservation studies **[Sec. 8 ESECA]** and motor vehicle fuel economy studies **[Sec. 213 CAA]** were retained. The House provision on energy information reports was also included in the conference report. **[Sec. 11 ESECA.]**

Of course, in any conference some compromise is necessary. But this bill will help meet the Nation's energy and environmental needs.

Burning of coal will be encouraged in a manner consistent with protection of the public health. **[Sec. 7 ESECA.]** The automobile emission standards will be set at realistic levels. These levels will help conserve gasoline while keeping the progress toward cleaning our Nation's air.

While this bill is not a cure-all for America's energy problems, it will be of some help toward making the Nation more self-sufficient and more reliant on our most abundant fuel—coal.

Mr. GROSS. Mr. Speaker, I would ask the gentleman from West Virginia if I am correct in assuming this bill carries no authorization for appropriations as such?

Mr. STAGGERS. That is correct. When the bill left the House it was estimated at $55 million, but there was no authorization.

In the extension of the Clean Air Act we carried over the same amount as was used this year.

Mr. GROSS. The conference did not change the figure?

Mr. STAGGERS. No.

Mr. GROSS. The figure that was authorized previously?

Mr. STAGGERS. No; it is the same figure.

Mr. GROSS. And all amendments to this bill are germane?

Mr. STAGGERS. So far as I know, we studied that, and they are all germane.

Mr. DINGELL. Mr. Speaker, I agreed to the conference report of H.R. 14368 with great reluctance. I am not satisfied that the extensive amendments made by this bill to the Clean Air Act will prove to be in the public interest. I am even more disturbed by the encroachment of this bill on the National Environmental Policy Act of 1969. **[Sec. 7 (c) ESECA.]**

The House-passed bill did not, except in a minor way, amend NEPA. But the other body adopted a sweeping floor amendment with little debate which provides that hereafter environmental impact statements shall not be required in the case of any "action taken" by EPA under the Clean Air Act.

I think this broad amendment without adequate debate in Congress is a mistake, and I am concerned that many environmental organizations which supported NEPA, including the impact statement requirements of NEPA, did not speak out against it.

I also think that this amendment may cause considerable disruption of the clean air program by unsettling all EPA actions taken under the Clean Air Act prior to the adoption of this amendment. I have argued for some time that section 102(2)(C) of NEPA, which requires every agency to file an environmental impact statement before undertaking a major Federal action, also applies to EPA. But that agency has argued it is exempt from filing such impact statements when acting under the Clean Air Act. Now EPA is in a pickle. The amendment, by its terms, is not retroactive. It is clearly prospective. Thus, one can argue, including those who seek to scuttle the Clean Air Act, that NEPA did in fact apply to the Clean Air Act before the adoption of this amendment. Otherwise, why have the amendment? Such a contention, if accepted by the courts, could upset many EPA actions under the act.

Fortunately, the bill does not exempt EPA completely from NEPA. Except for the requirements of section 102(2)(C) of NEPA, all other provisions of the 1969 act still apply to EPA actions under the Clean Air Act, as they should.

I will support the bill—with reluctance—primarily because of **section 11**—the energy information section which I sponsored. **[Sec. 11 ESECA.]**

It provides broad powers to the Federal Energy Administration to collect energy data. Most importantly it directs that the FEA "promptly" promulgate regulations requiring energy data reports at

least every 90 days from a broad range of persons engaged in the production, including exploration and mining, processing, refining, transportation by pipeline, and distribution, except at the retail level, of all energy resources, including oil, natural gas, coal, uranium, geothermal steam, and so forth. It is intended by the conferees that the FEA promulgate these regulations within a short period of time, such as 45 days.

It provides that the data collected will not be given blanket confidentiality. Nor will such data be withheld under any other laws. Instead, to gain confidentiality, the person providing the energy information must make an affirmative showing to the FEA that disclosure would "divulge methods or processes entitled to protection as trade secrets or other proprietary information." Even if such a showing is made, the data will still be available, upon request, to several Federal agencies identified in the bill and to Congress and to any committee of Congress, upon request of the chairman of the committee.

I particularly call attention to the following conference committee statement (Congressional Record, June 6, 1974, p. H4906):

> The conferees wish to emphasize that the energy information reporting authorities contained in this bill are intended to be in addition to, independent of, and not limited by any other authority of the Federal Energy Administrator.

Thus, to the extent there is any conflict between the provisions of **section 11** of this bill and the provisions of sections 13 and 14 of the Federal Energy Administration Act of 1974, it is intended that the provisions of **section 11** of this bill shall prevail. I have particular reference to the public disclosure provisions of both acts, which may be in conflict. It is the intention of the conferees that **section 11(d)** of H.R. 14368 shall prevail in any instance of conflict.

As the conference report indicates, section 11(e) of the House bill was deleted. That section was added as a convenience to the persons required to provide energy data to the FEA so that they would not have to provide it to several agencies. At the urging of the Commerce Department it was deleted from the bill. Since it did not have any substantive effect on the section, and since its deletion would not relieve anyone of his duty to provide the data to FEA, I did not object to its deletion.

Mr. NELSEN. Mr. Speaker, I rise in support of the conference report on H.R. 14368, the Energy Supply and Environmental Coordination Act of 1974.

While I am unsatisfied with the coal conversion stationary source pollution provisions of this conference report, I am in general support of the report as a whole because of the many good features that it contains, particularly the extension of the auto emission standards which we have been trying to enact into law for the last 7 months.

The coal conversion provisions and the accompanying stationary source air pollution requirements **[Sec. 2 ESECA. Sec. 119 CAA]** are somewhat more restrictive than were the original House provisions. This is mainly because of a requirement imposed by the Senate conferees which precludes coal conversion by any source located in an urban area where primary air standards are not being met unless the source can immediately meet all requisite emission standards. This severely restricts coal conversion powerplants in these urban areas where adequate power supply is most needed.

It is my understanding that this bill was originally designed to allow much greater use of coal by electric utilities in an environmentally sound manner. The purpose was to check the increasing reliance by electric power and other industries on expensive imported oil. The mechanism for accomplishing this objective was to give authority to FEA to prevent burning of petroleum and natural gas after a determination by EPA that such an action was consistent with the protection of public health. Assurances were to be given which would not prevent the source from burning coal, by the application of any air pollution requirement, through January 1, 1979, except for an emergency situation set forth in section 303 of the Clean Air Act.

However, the conference report allows EPA to reverse, at any future time, its and FEA's decision to permit conversion by subverting and abbreviating the process by which environmental standards are established for new pollutants under the Clean Air Act. More specifically, the provision added by the conferees, which was neither in the House or Senate bills, allows the Administrator of EPA, upon finding that the burning of coal will result in an increase in emissions of any air pollutant for which National Ambient Air Quality Standards have not been promulgated and that may cause a significant risk to public health, to suspend the order prohibiting the use of oil or natural gas. **[Sec. 119(d)(3)(B) CAA.]** This is the first time that the adequacy of the emergency powers of the Clean Air Act have been questioned and I can recall no testimony or debate on this matter.

On the other hand, the standard-setting process established by the Clean Air Act for nonemergency situations is a very careful and deliberate process based upon the weighing of the latest scientific knowledge not only by representatives of the Federal Government but by members of professional societies and the general public. Any action, by the Federal Government, to monopolize this due process in the name of a potential emergency action is not in the public interest particularly in view of the fact that emergency actions are permitted under existing law.

I am concerned that many of us underestimate the magnitude of the coal deficit. In a recent study made by the Federal Power Commission, the estimated shortage in coal will range between 212 and 382 million tons or 46 to 83 percent of the total demand for coal by utilities in 1975. The provision added by the conferees is hardly an inducement to invest in long-term contracts for coal and, in my opinion, is counter to the mandate expressed by both Houses.

In addition, the total impact of the coal conversion and Clean Air Act provisions **[Sec. 2 ESECA, Sec. 119(c) CAA]** is to lock in the technology of scrubber systems because coal converters are required, within the next few years, to put on such scrubbers unless they can find a long-term supply of very low sulfur fuel. Several members of the conference, myself included, have serious questions about the feasibility of scrubber technology and we are concerned about the excessive cost of such systems and the solid waste that results from their use. As we stated in the conference report, we have "expressed a commitment to carefully review these questions in upcoming hearings and to promptly modify these amendments if warranted by the information obtained in the course of such review." I know that the Senate is in the

process of conducting comprehensive hearings on this and several other questions in the Clean Air Act, and I know that the gentleman from Florida (Mr. Rogers), chairman of our Subcommittee on Public Health and Environment, has promised me that similar hearings will be conducted before our subcommittee very shortly.

It is possible that alternatives to scrubber systems are feasible. These include the requiring of tall stacks to disperse pollutants or the use of intermittent control strategies such as varying levels of operation in accordance with meteorological conditions. Since alternatives exist, the use of scrubbers needs to be examined carefully before we commit the power industry to a questionable technology whose great cost will result in higher and higher utility rates for the consumer.

Even with all these problems in the area of coal conversion, the bill has too many good features for me not to recommend its enactment. It delays the 1975 automobile emission standards for hydrocarbons and carbon monoxide for 1 year, through 1976, and delays the 1977 NO_x standard for 1 year, through 1978. **[Sec. 202(b) CAA.]** These provisions are to my mind the most important in the whole bill. First, the auto industry has to know what requirements will be applicable to the 1976 models for which the air pollution certification process should have already begun. Second, the industry needs an additional year to perfect the devices that have been initiated on the 1975 models.

H.R. 14368 also prohibits the EPA from promulgating parking surcharge regulations and voids any such surcharges which are presently required by EPA. It also delays imposition by EPA of parking supply management regulations until January 1, 1975. As is well recognized by the members, these sorts of regulations have threatened to cause social and economic disruption in many areas of the country. The conference report would eliminate or delay the imposition of such regulations by the EPA, leaving this authority with the States, where it properly should be. **[Sec. 110(c)(2) (B) and (C) CAA.]**

Thus, because of the overriding importance of the auto emissions provisions, I urge adoption of the conference report.

Mr. Staggers. Mr. Speaker, I just want to compliment all of the conferees on their patience and hard work on the bill. It was a matter of give and take, and we had some difficult times while we were trying to get it done.

I also want to compliment the Senators on their part, and especially my own Senator from West Virginia. Senator Jennings Randolph, who is the chairman of the Senate committee on the other side, and Senator Muskie, from whom the legislation came. I wanted to compliment them, Mr. Speaker, because this was a tiresome and hard conference.

The chairman of the committee which represented the Senate in the handling of this energy bill is the senior Senator from my State of West Virginia, Hon. Jennings Randolph. His name is a noted one in the annals of his State and its parent State, the proud State of Virginia. He is a true scion of a noted family, thoroughly steeped in its noblest traditions of loyalty and concern for the public welfare. For 30 years he has represented our State in the House and in the Senate, and gained wisdom with every passing year. He has consistently employed that wisdom in furthering the good of the people he represents as well

as for the great Nation which he and his forbears have helped to build. There is nothing of the self-seeking in Senator Randolph. He can be counted on to be alert for what will advance the interests of all the people. He knows full well that the energy crisis demands a solution calling on the unselfish accord of industry and science in the use of available resources. He knows also that buried deep within the hills of our State lie unmeasured stores of potential power which await only practical exploitation in the public interest. A great deal of that spirit is in the present bill. We are proud of Senator Randolph. His active participation in the writing of this bill and in ironing out the areas of nonagreement between the Senate and the House is a powerful argument for its unquestioned acceptance by the Members of this body today.

Mr. Speaker, I move the previous question on the conference report.

The previous question was ordered.

The conference report was agreed to.

A motion to reconsider was laid on the table.

SENATE CONSIDERATION AND PASSAGE OF CONFERENCE REPORT ON H.R. 14368, JUNE 12, 1974

Mr. Muskie. Mr. President, the conference report on H.R. 14368, the Energy Supply and Coordination Act, is pending before the Senate. This legislation has been before the Senate in differing forms since last fall. It began as a part of the effort of Congress to respond to the energy crisis by enacting short-term energy conservation and environmental modification proposals.

Mr. President, the conference report on H.R. 14368 is a complex but limited measure. It is not, like the House bill, a crisis measure. It is not as general in its terms as the Senate bill. The conference report on this legislation is both a compromise and an improvement. It improves on both the House and Senate bill in that it makes more specific the requirements of each. It is a compromise between the House and the Senate bill because it accepts, in the short term—the period between now and June 30, 1975—much of the approach embodied in the House legislation and it adheres, in the long term—the period between now and January 1, 1979—to the limitations of the Senate amendment.

I think it is important to identify, for the purpose of adequate legislative history, the very significant differences between the House and the Senate approach to the issue of coal conversion. **[Sec. 2 ESECA.]**

As I indicated earlier, the House legislation was crisis-related. It was virtually identical to the previously adopted conference report on this issue—a conference report which was written during the period of severe energy shortage and oil embargo.

The Senate bill, on the other hand, recognized that the public's perception of the crisis had changed—that the energy crisis subsided with the termination of the Arab embargo—and that legislation of this kind must necessarily be within the framework of existing environmental constraints, rather than outside of those constraints.

The House bill was mandatory in the near term and voluntary in the long term. But in both short and long term, the House bill abandoned the existing statutory base for clean air regulations—public health-related primary ambient air quality standards.

The Senate bill in the near term permitted compromise of statutory clean air programs only on the basis of a demonstrated unavailability of fuel. In the long term, the Senate bill mandated coal conversions but insisted on maintaining minimum health-related air quality.

Under the House bill, the existing basis for clean air controls was suspended in favor of a new test to respond to crisis. The House bill would have permitted coal conversions to be required or to continue whenever no significant risk to health could be demonstrated.

The Senate bill proposed that energy self-sufficiency should be a function of our ability to maintain our clean air goals while reducing

our reliance on foreign fuels. The Senate bill completely barred coal conversions in areas where any primary ambient air quality standard was being exceeded and specifically barred any conversions which would cause the primary standard to be exceeded.

Mr. President, while two bills appeared similar, the intent of each body was sufficiently different that the conferees were confronted with an almost impossible task of putting together a conference report which was acceptable in purpose and in scope to the membership of both bodies. I think we have done this.

In terms of the Senate position, there is adequate protection against any long term coal conversion causing an unacceptable environmental impact. On the other hand, the House has achieved the short-term goal of their proposal. And the House has achieved two significant modifications of the Clean Air Act relating to transportation controls—provisions which were in earlier conference reports—provisions which my colleagues in the conference would have preferred to defer to a later time after a more complete review—but provisions on which the House insisted. **[Sec. 110(c)(2) (B) and (C) CAA.]**

The Senate also prevailed in two important respects unrelated to coal conversions. We have House agreement to extend the authorizations of the Clean Air Act for 1 year which will provide time to review carefully the implications of the Clean Air Act. **[Sec. 13 ESECA.]** And we have obtained House acceptance of a Senate provision which clarified the relationship between the National Environmental Policy Act and the Clean Air Act.

Without exception, the Clean Air Act actions will not be subject to the National Environmental Policy Act. **[Sec. 7(c) ESECA.]** This provision should reduce the potential for litigation and delay associated with the development and implementation of clean air regulations. It should improve the certainty and finality which the Congress sought in 1970 when it wrote the Clean Air Act. And, most importantly, it should end the effort of those who would use NEPA as a mechanism to compromise the statutory mandate for clean air.

My colleagues should note that the provisions of both the House and the Senate bill regarding auto emissions standards for 1976 vehicles were identical and remain so. **[Sec. 202(b) CAA.]**

Mr. President, I would like to expand the history of this legislation in terms of coal conversions and the Clean Air Act amendments. I have discussed in general the differences between the two bills. I have outlined the agreement. I have discussed Clean Air Act authorizations, the application of NEPA to the Clean Air Act, the auto emissions questions, and I have referred to the issue of transportation controls. I do not intend to discuss these matters in detail. The conference report and the statement of managers provide an adequate description of each.

The bill provides for a legislative basis to deal with three energy-related problems:

First, the conference report provides a statutory basis for the granting of variances for the period between enactment and June 30, 1975, whenever the Administrator of the Environmental Protection Agency determines that clean air compliance is not possible solely because of the unavailability of fuels necessary to meet the act's requirements.

This is a very limited provision. [Sec. 119(b)(1) CAA.] It is intended to respond to embargo type situations. If compliance with the Clean Air Act is dependent on fuels of certain pollution characteristics, and if fuels of those pollution characteristics—or improved pollution characteristics—are not available, then and only then the Administrator can suspend for the period of the unavailability of such fuels between now and June 30, 1975, the applicability of Federal, State or local clean air requirements. This is unilateral authority. It is intended to provide a quick response mechanism in the event another crisis occurs. It is not a method to grant variances where fuel is available but the price is high, nor is it a method to grant variances where fuel burning stationary sources have dragged their feet on installing necessary pollution control equipment.

This provision specifically and precisely permits the Administrator of EPA to suspend for not more than the period between now and June 30, 1975, the application of any stationary source fuel or emission limitation solely on the basis of the unavailability of fuels necessary to comply with that stationary source fuel or emission limitation.

Second, there is authority for the Administrator of the Environmental Protection Agency to suspend temporarily certain stationary source fuel or emission limitations if, as a result of an order by the Federal Energy Administration Administrator which prohibits a powerplant or other fuel burning stationary source from burning oil or natural gas, that source converts to coal. [Sec. 119(c) CAA.] This means that the Administrator of EPA can grant a suspension from certain clean air requirements in limited instances where facilities are now burning oil and coal, have the necessary capability and plant equipment to burn coal, and either began conversion to coal between September 15 and March 15 or converted to coal as a result of an order subsequent to enactment of this act. Unlike the situation which occurs when there is an unavailability of fuel, however, the Administrator of the Environmental Protection Agency cannot grant a variance from the clean air requirements unless he determines that to do so would not cause or contribute to emissions of air pollutants which would result in levels of such pollutants in excess of national primary ambient air quality standards.

Moreover, in order to assure that any such conversion does not itself cause primary standards to be exceeded, the Administrator must establish emission limitations, determine the pollution characteristics of coal to be used, or require other enforceable emission control measures as a condition of the suspension. [Sec. 119(d)(2)(A) CAA.]

Third, and perhaps the most significant provision of the coal conversion aspect of this bill is the provision which requires the Administrator of the Federal Energy Administration to issue orders prohibiting the use of petroleum products or natural gas to facilities which have on date of enactment of this act the capability and necessary plant equipment to burn coal for the period beyond June 30, 1975. [Sec. 2 ESECA.] This provision is mandatory with respect to powerplants and permissive with respect to other major fuel burning stationary sources. As with the temporary suspension authority, the FEA Administrator must make his determination on a unit-by-unit basis. And, a powerplant which has several units subject to such pro-

hibitions would have to obtain a separate suspension or extension from the EPA Administrator for each unit. [Sec. 119(d)(1)(B) CAA.]

This provision to the extent achieveable within the basic constraints of the Clean Air Act, is intended to reduce the burden and the reliance on foreign oil by increasing utilization of domestic coal. This provision [Sec. 119(c)(2) (C) and (D) CAA] requires that powerplants and other sources which are prohibited from using natural gas and petroleum products and which actually convert to coal comply with the existing implementation emission limitations or other requirements of implementation plans by no later than January 1, 1979. In the interim, these sources must assure compliance with primary ambient air quality standards and in areas where standards are exceeded, with applicable emission limitations.

This is the provision with which the conferees had the most difficulty because it was in the context of this provision that the conferees were treading on the most uncertain ground.

Not only were the conferees confronted with the basic policy question of mandating the use of a certain fuel in the long term but the conferees were also confronted with the need to cause the use of that fuel in a manner consistent with environmental objectives.

The House allowed an extension of the deadline for compliance with all applicable air pollution control requirements to not later than January 1, 1979, if a revised compliance schedule were approved and if no significant health risk would occur in the period of the extended compliance schedule.

The Senate bill required a similar extension of deadline to not later than January 1, 1979, only if a revised compliance plan were approved and primary ambient air quality were not exceeded during the extended compliance period. In addition, under the Senate bill, conversions were barred in air quality regions in which primary ambient air quality standards are now being exceeded.

The conference agreement permits an extension of compliance schedule to not later than January 1, 1979, only if, first, emission limits or other enforceable measures to maintain primary standards will be complied with; second, in any region in which primary standards are now being exceeded, requirements of the implementation plan applicable to any pollutant for which the national primary ambient air quality standards is now being exceeded are complied with; and third, the Administrator has approved a compliance plan.

An approved compliance plan must include adequate assurance that the plant or installation will obtain approval of a revised schedule for and means of compliance with all applicable preconversion implementation plan requirements no later than January 1, 1979. If the source fails to obtain an approved schedule, the compliance extension ceases, and the source is in violation of the Clean Air Act and subject to enforcement action.

The Administrator is required to promulgate regulations within 90 days requiring any source to which a compliance date extension applies to submit and obtain approval of its revised measures for and schedule of compliance. [Sec. 119(c)(2)(B) CAA.]

Such regulations should set forth deadlines for submittal and approval of the revised compliance schedule in order to assure earliest

possible achievement of the emission limitations in the applicable implementation plans. Failure to set deadlines in these regulations could result in unnecessary delay in achieving clean air goals. Also, early submittal and approval of revised compliance schedules is necessary to assure achievement of applicable emission limitations no later than January 1, 1979.

As noted above, long term mandatory conversion can only occur where national primary ambient air quality standards will not be exceeded. While the conference report narrows the scope of the Senate prohibition on such conversions in air quality regions where the primary standard is presently being exceeded, it maintains the thrust of the Senate position by prohibiting any conversion from taking place in any region where the primary standard for a particular pollutant is being exceeded if the effect of the conversion would be to cause emissions of that particular pollutant to exceed the limits specified in the applicable implementation plans. **[Sec. 119(c)(2)(D) CAA.]**

Mr. President, this means that if a region has not achieved the primary standard for oxides of sulfur and a conversion would cause sulfur oxide emissions to exceed limitations applicable to the plant in question, a conversion would be barred until the implementation plan limitations could be achieved. This is the so-called regional limitation.

Further, Mr. President, even if there is no "regional limitation" on the conversion, if the result were to cause emissions which would cause or contribute to concentrations of pollutants in excess of the primary standard—the "primary standard condition"—the conversion would be delayed until the plant was capable of achieving emission limitations or other enforceable measures which would assure compliance with the primary standard condition.

It is important to note that this policy does not prohibit conversions—it only prohibits those conversions limited by the "primary standard condition" or the "regional limitation" until the powerplant or other major installation has installed the necessary pollution control capacity—or obtained clean coal—which permits the unit in question to meet applicable emission limitations.

In other words our purpose is to give the Federal Energy Administrator authority to put plants with the capability and necessary plant equipment on notice that they will be required to convert to coal by a date certain with legal requirement that the plant or installation acquire the necessary pollution control capability to assure compliance with the Clean Air Act at the time conversion occurs. Failure of the plant to acquire the control equipment or clean coal would not be a defense against the FEA prohibition. If the capability to comply were not acquired, the plant or installation would be in violation of Clean Air Act emission limitations and subject to statutory and criminal penalties.

The inclusion of the noncriteria pollutant requirement in no way relieves the administrator from his nondiscretionary duty to develop and publish criteria for such pollutants in order to trigger national standards as required under the Clean Air Act. This provision **[Sec. 119(d)(3)(A) CAA]** is included in recognition that some pollutants may need to be regulated before that process can be completed. It recognizes that the air quality standards process entials a time lag. We

deemed it unwise to wait for the completion of that entire process before providing some protection from these pollutants.

Mr. President, this bill is special legislation to deal with a special situation. It is not intended to set precedents. The bill is temporary in time and limited in application.

The auto emissions question is resolved for 2 years. The statutory standards will take effect in 1978 which should provide more than ample time to achieve them. **[Sec. 202(b) CAA.]**

The transportation control limitations are only temporary. Congress must determine whether parking surcharges, parking management regulations and other transportation control measures are necessary and appropriate aspects of urban pollution control strategies. **[Sec. 110(c)(2) (B) and (C) CAA.]**

The variance authority both as a result of unavailability of fuels and short-term coal conversions is temporary. This authorization is for 1 year. While the NEPA–EPA clarification is not time limited, this issue was intended to be resolved in 1969 and therefore is neither new or precedent-setting. **[Sec. 7(c) ESECA.]**

There are significant limitations on the authority of FEA to prohibit the burning of petroleum products or natural gas.

Only those units of powerplants and other major fuel burning stationary sources with the "capability and necessary plant equipment" on the date of enactment of this act may be subject to an FEA order and only those which actually convert to coal—as opposed to facilities which meet the capability and equipment test but presently burn coal—can receive either a short-term suspension or long-term extension under the Clean Air Act. **[Sec. 2 (a) and (b) ESECA.]**

The test of "capability and necessary plant equipment" is important. As the conference report indicates, each plant or installation would have to have had the capability to burn coal at one time. Also the addition of components necessary to renew that capability would have to be simple and inexpensive.

The conferees were aware of the proposed administration amendment to require that necessary plant equipment only be reasonably available. This amendment was rejected by both House and Senate because it suggested a broader application of the FEA authority to effect conversion than intended by either body.

One example of the kind of modification necessary to facilitate conversion is discussed in a copy of a letter from Charles E. Monty, vice president of Central Maine Power Co. to Mr. Clark Grover, Director, Coal Switching Task Force, Federal Energy Office.

This plant and others like it would simply not meet the test of necessary plant equipment and capability required by the act, even though such equipment might be reasonably available as proposed by FHA and rejected by the Congress.

Finally, the necessary plant equipment has to be available to the unit for which conversion is required on date of enactment, not at some later date.

An important clarification in the conference report relates to enforcement of interim procedures to assure compliance. Senate conferees insisted that the Environmental Protection Agency's determination that emissions from coal converters would not cause primary standards

to be exceeded must be articulated in emission limitations or other precise, enforceable measures for regulating what comes out of the stack. [Sec. 119(d)(2)(A) CAA.] The conference report on this bill underscores the fact that it is not ambient standards which are enforced but emission limitations or other stack related emission control measures. Ambient standards are only a guide to the levels of emission controls which must be achieved by specific sources. In 1970, we recognized that a control strategy based on a determination of ambient air pollutant levels in relation to each individual source would be unenforceable. Existing clean air implementation relies specifically on the application of enforceable controls aganst specific sources. We have continued that procedure in this law.

To the extent intermittent control strategies are permitted as an interim measure applicable to coal conversion, they too must be enforceable. The bill specifically and precisely sets forth that such strategies must be enforceable. They must be enforceable by the Administrator of EPA [Sec. 119(d)(3)(A)(i) CAA] not the States—not the local governments—not polluters—but by the Administrator of EPA who will have the responsibility for imposing such strategies if they are to be allowed at all.

It may be a non sequitur to suggest that intermittent control strategies are enforceable by EPA. An analysis of EPA's monitoring is severely limited. Budgetary constraints have meant that necessary monitoring equipment and personnel have not been available and in fact the situation has gotten worse in certain regions where EPA has entirely abandoned the monitoring effort to the States. An EPA memo states:

> As a result of decentralization of the national air monitoring networks, required information to define levels of non-criteria pollutants is not available to the scientific community. Specifically, data on sulfates, nitrates, ammonia, aerosols, fine particulates and other non-criteria pollutants is not being obtained on a scientifically defensible basis nor in a timely fashion.
>
> The existing sites of the former National Air Sampling Network (NASN) are not suitable to serve as a foundation of an experimental network. They are generally incorporated into the States' Implementation Plans and are operated as such. Lacking direct control of these stations, because of decentralization to the Regions, EPA has to rely on voluntary cooperation. The net result is an ill-defined program; changing sampling schemes, not being able to demand additional quality control and non-uniform operation of the network. EPA simply cannot expect State and local agencies to conduct such a program over and above their present monitoring requirements.

While this information was requested in relation to so-called non-criteria pollutants, I am advised that it is generally applicable to pollutants for which standards have been set.

Even if the State monitoring efforts were adequate, we cannot rely on the States to enforce the requirements which result from this legislation. Most States would prefer to make the decisions on coal conversions themselves. They would prefer to determine the extent to which their clean air requirements are modified without Federal interference. They would prefer to enforce emission limitations of their own implementation plans to meet the standards which they have determined they want to meet and not just the primary standards as required by this act.

And certainly the polluters themselves cannot be depended upon either now or in the future as a source of information as to the ade-

quacy of the intermittent control strategy. An April 1973, EPA paper states:

An intermittent control system is a very tenuous mechanism to protect air quality. At TVA, a utility with a reputation for concern for maintaining "acceptable" air quality, the decision to take control action is made by persons whose performance is judged by their capability to produce power at a minimum cost. Their concern for the environment rarely, if ever, is a significant factor in evaluating their "efficiency." The operation at Paradise may at times severely circumscribe the implementation of controls. The outlook for a truly effective use of an intermittent control system by smelters and private utilities is not encouraging.

EPA will have the responsibility and, therefore, must have the capacity to enforce these strategies. And the information developed on compliance with intermittent controls must be readily available so that citizens can act under the citizen suit procedure. This would not be possible if EPA relied on the private monitoring efforts of the polluters.

Yet another reason for caution in considering alternative or intermittent control strategies is identified in a statement presented by Mr. Christopher P. Quigley, head, mechanical and structural design division, engineering and construction department, at the American Power Conference.

He said:

Finally, before committing such large investments—to scrubber—we must assess the probability that utilities may be allowed to institute alternative and more economical methods for achieving SO_2 control such as the use of a fuel switching program based on meteorological conditions.

Endorsement of inadequate or unenforceable interim control measures as continuous control strategies could negate ongoing developmental activities. Our efforts to force technology would be further eroded.

Mr. President, as I have amply indicated. I have serious doubts about the viability of intermittent control strategies, whether or not EPA has the capacity to monitor the ambient impact of emissions from coal conversions. These doubts are summarized in the hearings of the Subcommittee on Environmental Pollution. I ask unanimous consent that annotated excerpts from the subcommittee hearings and files be included in the Record at the close of my statement.

It is these doubts that lead me to underscore the fact that no one should view limited application of enforceable strategies related to this legislation as a precedent for future legislation or as a reinterpretation of the requirements of the existing law which bar the application of intermittent control strategies as a substitute for emission limitations.

Mr. President, the legislation points out both the significance of the Clean Air Act as well as the frailities of our efforts to protect and improve our environment. The primary reason that we are talking about coal conversion today is because the users of fuel in this country chose the cheap and convenient way to meet clean air requirements. Rather than develop the technology which would make each fuel burning stationary source capable of using domestic fuels, the power industry and others switched to low sulfur foreign fuel.

Most utilities and others have steadfastly refused to participate in any major effort to develop the technology of stack gas control. To the

extent that anyone has come forward to demonstrate stack gas control technology, these same utilities have led the effort to discredit that technology and the credibility of those who would propose it.

I do not know whether effective stack gas control technology for major powerplants is available or not. But I do know that unless powerplants and other major fuel burning stationary sources are required by law to achieve a high degree of emission reduction from their stacks without regard to the fuel to be used, we will never know whether or not technology is or can be made available.

Our dilemma simply put is as it always has been—those who pollute also control the technology of pollution control. For more than 10 years I have participated in the development of legislation to impose an environmental ethic on these polluters. To encourage them to develop the technology of pollution control, I have opposed efforts to determine, by legislative fiat, the choice of technology.

Both the Clean Air Act and the Federal Water Pollution Control Act articulate pollution control requirements as performance standards rather than technological standards. EPA, too, is expected to articulate regulations in terms of performance rather than technology. Those laws demand only that the pollution controls be enforceable on a continuous basis against precisely defined criteria, so that both regulators and the public will know that the performance test is being met.

Thus far, our reliance on performance standards has been only partially adequate. The automobile companies refused to change their technology and so we have catalysts. The utilities refused to develop new technology and so, when foreign oil disappears, we have an energy crisis.

We have come only a small part of the way in developing an environmental ethic. We have not even begun to press our technological capability. We have only stirred the innovative instincts of those in the private sector who profit from pollution control equipment. We have moved only a little toward the best and the cheapest ways to transfer pollution to a recovered resource rather than a discharged waste.

This legislation is but one example of the failure of industry to move aggressively. But the fact that it does not abandon the clean air goals that we set in 1970 and earlier years is an expression of the national commitment of the goals of the Clean Air Act.

Mr. President, there is a typographical error in the conference report. **Section 119(c)(1)** refers to "expanding substantial sums to permit such source to burn coal." The word "expanding" should have been "expending."

I move the adoption of the conference report.

Mr. President, I want to commend all the members of the conference committee for the constructive and cooperative roles they played in developing this legislation. I particularly want to say how much I appreciate the efforts of the chairman of the Senate Public Works Committee, the gentleman from West Virginia (Mr. Jennings Randolph). He was always there to help bring us to a common ground, to help find the solution to issues that would allow a breakthrough and resolution of problems. His unfailing efforts made this legislation possible. His decades of efforts to make this country aware of the

energy problems this Nation faces gave him an unusual ability to merge the need for energy with the need for clean air.

I also want to point out the assistance given by the ranking Republican of the Senate Public Works Committee, the gentleman from Tennessee (Mr. Howard Baker). He has never lost sight of the environmental goals this Nation should pursue, and his efforts in balancing those goals with the energy needs of the country were crucial in achieving the agreements laid out in this legislation. The Nation should know of his constructive role.

This legislation could never have been completed without the masterful guidance of the gentleman from West Virginia (Mr. Harley Staggers), chairman of the House Commerce Committee. When others might have abandoned the cause he continued to press this legislation along, meeting the arguments of all sides, and adjusting and improving the bill in light of those arguments. In fact, this was the approach of all of the House conferees, as well as those of the Senate. The mutual cooperation of all concerned deserves commendation, and brought about the agreement now before the Senate.

Mr. President, I do not think there is any need to discuss this matter at length. It has been before the Senate in differing forms since last fall, previously as a part of a broader so-called emergency energy bill. It has been agreed to by the Senate basically in legislative form. The conferees have reached agreement, as they did twice previously.

I ask unanimous consent to have material in connection with this matter printed in the Record.

There being no objection, the material was ordered to be printed in the Record, as follows:

ENVIRONMENTAL PROTECTION AGENCY,
Washington, D.C., March 2, 1973.

Subject, Intermittent Control Systems (ICS).

To, Bernard J. Steigerwald, Director, Office of Air Quality Planning and Standards.

The 53 page Staff Report on Intermittent Control Systems (ICS) submitted to our Division by OAQPS is a lengthly and complex description of a relatively simple process. Major sources of sulfur dioxide emissions are attempting to exploit this process in order to avoid the cost of responsible environmental management based on reduction of emission through conventional methods of permanent emission control. We are particularly perplexed as to the reasons that the OAQPS report was submitted to our office on February 27, 1973, with a request for comments on or before March 2. Although the concept of ICS is simple, enforcement of ICS is not. Nevertheless, in the limited time available for review, we have determined that ICS is unacceptable from an enforcement standpoint.

We cannot comment on the report without drawing attention to several basic errors detected in our review. The report states "The effectiveness of ICS is intuitively obvious for short term standards" and "ICS is a superior approach to achieving annual standards as well." Experience tells a different story. ICS was attempted in Washington and Montana with sufficient lack of success to encourage the Puget Sound Agency in Washington, and the State of Montana to adopt direct emission standards, what the OAQPS report calls permanent emission controls (PEC). The failures were attributed chiefly to (1) insufficient curtailment of operations due to inability to forecast adverse meteorological conditions, and (2) information to prove a violation was completely dependent on self-monitoring by the source without an effective means of policing the monitoring stations. Similar experiences have been recorded in New Jersey, Kentucky, and Pennsylvania. Congress recognized the inherent problems of enforcing ambient air quality standards and deleted from the 1970 Clean Air Act any requirements that enforcement of emission regulations be conditioned on violations of ambient standards. That the

OAQPS report would claim ICS is superior to PEC for achieving annual standards is indeed surprising. ICS simply is not designed or needed to achieve long term air quality standards.

We feel the OAQPS report misinterpreted the philosophy of the Clean Air Act and its legislative history with respect to the importance of cost of controls to meet standards. Since national standards must be attained, the cost of a necessary control system is irrelevant to the acceptability of the control technique or regulatory approach utilized to attain the standards although cost is of course important to the polluter.

New source performance standards (NSPS) provisions within Section 111 of the Clean Air Act did reference cost by defining a standard of performance as "a standard for emissions of air pollutant which reflects the degree of emission limitation achievable through the application of *the best system of emission reduction* which (taking into account the cost of achieving such reduction) the Administrator determines has been adequately demonstrated." (Emphasis added.) An ICS system such as the one operated by TVA at its Paradise Power Plant obviously is not what Congress had in mind as "the best system of emission reduction", since the Paradise Plant achieved only a 0.13% reduction in annual SO_2 emissions in 1972. In addition, since the factors described on page 36 vary from plant to plant, there would be no way to set a *national* standard uniformly applicable to all new sources in the class, which is the intent of Section 111.

The OAQPS report describes two requirements as necessary and essential prior to approval of any ICS for sulfur dioxide emissions. These are that (1) reasonably available control (of the PEC-type) be applied to limit emissions of other pollutants, and (2) good faith efforts (presumably PEC) must be made to augment ICS leading to a reduction in annual emissions. The report says monitors similar to those employed in an SO_2 ICS are not available for particulate matter. This appears to be only a technicality, since continuous tape samplers are available for particulate matter and continuous monitors for other pollutants also are available. If ICS is legally and technically acceptable for SO_2, it should be equally acceptable for particulate matter and all other pollutants. Thus, this prerequisite of applicability of ICS exclusively to SO_2 cannot be met. The other prerequisite, that of requiring PEC along with ICS, is impractical from a legal standpoint. If ICS is an acceptable method for achieving emission reductions to meet national standards, it would appear that no other type of control legally could be required within the authority of the Clean Air Act. Hence both necessary prerequisites are legally impractical.

The OAQPS report advocates an ICS based on enforcement of ambient standards with fines used as "incentives" to operate the system conscientiously. The large sources for which ICS is recommended can well afford to pay many fines rather than install alternative permanent emission controls. The nature of ICS encourages violations of ambient standards and hardly qualifies as maintenance of the standard. Consider the case of a source which has obtained EPA approval of its operations curtailment procedures and has apparently made good faith efforts not to exceed ambient air quality standards. Assume this source exceeds a standard anyway, and reports this violation to EPA. We do not anticipate the fine a judge would impose for such infraction would be large enough to offer an incentive for control, particularly since the curtailment procedures followed were approved by EPA. (One can afford to pay a lot of $25,000 fines rather than install control systems costing millions.)

The OAQPS report suggests various combinations of PEC and ICS. One alternative (number 8) is to "Require RACT for attaining primary standards but allow ICS for attaining secondary standards." Any type of control acceptable for attaining secondary standards would be acceptable for attaining primary standards. Therefore, option 8 probably is illegal; in any event, it seriously weakens any arguments EPA may have for requiring permanent controls.

It was noted that all air quality monitors about the Paradise Power Plant were in a sector which the plume passed over only 10% of the time. Perhaps it is inappropriate to claim an ICS is effective when 90% of the time the plume impacts in an area where no monitors are placed. By careful placement of monitors, it should be possible to demonstrate that practically any ICS scheme "works."

Enforcement of ICS, as the report admits, be complex. Fines levied pursuant to violations of ambient air quality standards cannot be used to prevent these

standards from being exceeded in the future, as the Act requires. This is an established Agency policy initially presented by DSSE, OEGC, in a 1972 position paper (copy attached). The only alternative is an ICS operated on a daily variance basis, with provisions for revoking the variance should changing meteorological conditions warrant such revocation. This would require the control agency, whether State or Federal, to provide meteorologists on a 24-hour/day basis. Any source using ICS must be required to reduce emissions at the direction of an authorized Agency meteorologist, whether or not the source's meteorologist orders a reduction. There is a distinct legal problem involved in granting daily variances, but it is felt this problem can be resolved.

Additional conditions must be met for ICS to be enforceable. A plume can be extremely narrow (less than 15°) and can cause maximum ground level concentrations at distances exceeding 5 miles. Simply to guarantee that the plume would pass over a monitor would require a "circle" of 24 monitors (assuming a plume angle of 15). To cover a downwind range of 5 miles at ½ mile intervals would require 240 monitors. With this enormous number, illegal 1-hour concentrations from "looping" plumes could avoid detection, but such a system probably would serve to validate meteorological predictions. In combination with a suitable air quality display model, the number of monitors could be reduced to perhaps 50, with a substantial percentage of these operated by the Agency to ensure "accuracy" of the remainder. For terrain where models cannot be developed, the full complement of monitors will be required. Any enforceable ICS must provide for extensive recordkeeping, for both ambient and emission data.

An enforceable ICS could include no overriding factors which would serve to prevent emissions reduction when environmental considerations indicated the necessity of such reduction. For example, TVA stated that electrical load requirements could make curtailment impossible, even though environmental considerations required the curtailment. ASARCO said protection of equipment might necessitate continuing operation to some extent when atmospheric conditions required total shutdown. Production demands could not influence operation of the system as ASARCO implied was the case. At ASARCO the plant manager could, and did, override the meteorologist's determination to curtail operation.

We feel that the economic advantages of ICS will make the system, even with its enforcement requirements, acceptable to large sources. It may be necessary for sources wishing to exploit the advantages of ICS to reimburse a control agency for the additional cost of administering such a system.

It should be noted that our comments relate to a *permanent* ICS, rather than an *interim* ICS. If ICS is adopted as an interim measure to be employed until permanent emission controls (acid plants, etc.) can be installed, the Act allows greater discretion by the Administrator with respect to enforceability. Since an interim measure can be whatever "the Administrator determines to be reasonable"; an interim ICS could be designed which would closely approximate the system OAQPS recommends. Additionally, such an interim system would have little impact on State or Federal environmental programs, and would not conscience a fundamental change in Agency policy. We do not wish to appear to advocate such a system, but we do feel the option of an interim ICS differs markedly from permanent ICS in enforceability requirements and may be a workable solution to the problem of control. Essential elements for such an interim system include:

1. Sources must assume liability for any violation of NAAQS. Where there is more than one source, each must be held accountable for any violation. Apportioning of blame is relevant only in a Court's consideration of the amount of a fine, not in the determination of a violation. Sources should be precluded from showing the violation was the fault of others; i.e., there should be some form of absolute liability;

2. Failure to follow the approved operations manual must constitute a violation;

3. Sources must agree that any violation after the first is a continuation of the first and thus no new notice of violation is required and criminal penalties are immediately applicable;

4. Extensive recordkeeping requirements must provide for retention of data reflecting both air quality measurements and stack emissions.

These requirements reflect measures this Division considers reasonable to make an interim ICS something more than a license to pollute. They are not adequate to ensure the degree of enforceability necessary for a permanent ICS.

If you wish to further discuss the enforceability of ICS, please feel free to contact me.

WILLIAM H. MEGONNELL,
Director, Division of Stationary Source Enforcement.

Attachment.

ENFORCEABILITY OF INTERMITTENT CONTROL SYSTEMS (ICS)

APRIL 21, 1972.

MR. DON R. GOODWIN: Attached is a paper giving our position on enforceability of an ICS as you requested. After careful analysis it is our conclusion that ICS is unenforceable and its efficiency unknown to achieve and maintain the national standards. Mr. Baum in the Office of General Counsel has reviewed this position paper and gives his concurrence.

I believe our position is nearly the same as OAP with the exception of putting a date-certain on the interim use of ICS. In our opinion, a date-certain for installation of permanent controls is essential and no plan should be approved or promulgated that does not contain such.

WILLIAM H. MEGONNELL,
Director, Division of Stationary Source Enforcement.

DIVISION OF STATIONARY SOURCE ENFORCEMENT, OFFICE OF ENFORCEMENT AND GENERAL COUNSEL

Position paper on the acceptability of intermittent control systems for achieving and maintaining the national ambient air quality standards.

ISSUE

The Office of Air Programs, EPA, has requested the advice of the Office of Enforcement and General Counsel regarding the acceptability of an intermittent control system for meeting the national standards. An intermittent control system (ICS) is defined as any procedure to temporarily curtail emissions through reduced source operations as may be needed to prevent air quality standards from being exceeded.

There are basically two types of intermittent control systems, one based on enforcement of a violation of an ambient air quality standard monitored by ground-level instruments, and one based on enforcement of predetermined emission rates calculated by meteorological forecasting and monitored by in-stack instruments. In both cases since production is curtailed only on a temporary basis it is not likely that total annual emissions will be noticeably reduced, but only that emissions will be reduced during adverse meteorological conditions and increased during favorable meteorological conditions.

BACKGROUND

Section 110(a)(2)(B) of the Clean Air Act, as amended, provides that the Administrator shall approve an implementation plan if "it includes emission limitations, schedules, and timetables for compliance with such limitations, and such other measures as may be necessary to insure attainment and maintenance of such primary or secondary standard, including but not limited to, land use and transportation controls . . ." Section 110 of the Act does not provide a definition of the meaning of this requirement for an implementation plan. However, the Senate report (91–1196) of the Committee on Public Works on pages 11 and 12 provides some insight on this matter as evidenced by the following comments:

"The establishment alone of ambient air quality standards has little effect on air quality. Standards are only the reference point for the analysis of factors contributing to air pollution and the imposition of control strategy and tactics. This program is an implementation plan . . . The Committee bill would establish certain tools as potential parts of an implementation plan and would *require* that emission requirements be established by each States for sources of air pollution agents or combinations of such agents in such region and that these emission requirements be monitored and enforceable. *In addition to* direct emission con-

trol. other potential parts of an implementation plan include land use and surface transportation controls . . ." (emphasis added)

The Administrator has elaborated on this requirement, as interpreted by EPA at the recent oversight hearings. He stated:

"The problem is that whenever we adopt a control strategy, the purpose of the strategy is to reduce emissions in that particular air quality region so as to meet the ambient air quality standard and what we mean by emission limitations is really emission reduction so that anything which reduces, including the transportation controls that Senator Randolph was concentrating on, anything that reduces the total emissions in that air quality control region so as to meet the air quality standards, as I read the Act, I have to approve as a control strategy that in fact complies with the Act."

In commenting on a question whether EPA would approve a plan with a "closed loop theory" (another term for an intermittent control system), the Administrator stated: . . . "only if we can become convinced that such a closed loop theory, or any strategy that is adopted, will in fact achieve the ambient air quality standard and can be enforced."

The acceptability of an intermittent control system was evaluated in terms of the requirements of the Act, the quoted statements above.

Question No. 1. Is an intermittent control system that provides for enforcement after violation of an ambient air quality standard approvable by EPA?

Answer No. 1. No; the purpose of an implementation plan is to prevent a violation of an ambient air quality standard, by the enforcement of specific measures applicable to sources. A plan which on its face provides for enforcement only after a standard has been exceeded does not provide for the achievement and maintenance of the national standards.

Question No. 2. Is an intermittent control system that provides for enforcement on the basis of predetermined emission rates based on meteorological forecasting techniques and monitored by in-stack instruments, approvable by EPA?

Answer No. 2. Although this type of intermittent control might be legally acceptable, it is unenforceable because it is too complex and unmanageable and places an unreasonable burden on EPA and the States. Moreover, its efficacy is uncertain. This type of control strategy is unacceptable as a permanent means of achieving and maintaining the national standards. It is recommended that ICS be restricted for use in certain limited situations discussed below.

DISCUSSION

The discussion is numbered to correspond to the questions and gives the basis of OFGC's opinion.

1. Experience with enforcement of an ambient air quality standard on an intermittent basis has been unsatisfactory. The system has validity only for a point source that is sufficiently remote to be unaffected by emissions from other sources. An extensive ambient monitoring network is required—one that is beyond effective policing by a control agency but rather depends more on the "honor system". We are aware of certain experiences with such systems at large point sources in the States of Washington and Montana. Numerous violations occurred during the period when curtailment systems supposedly were in effect. Penalties were assessed but to no avail. Principal reasons for failure of ICS have been that (1) sources did not curtail operations as often and to the degree needed usually through inability to forecast meteorological conditions requiring curtailment; (2) direct cause-effect relationship for violation of an air quality standard has been difficult to prove, and (3) information to prove a violation was completely dependent on self-monitoring by the source without an effective means of policing the monitoring stations. After this experience with enforcement of ambient air quality standards, the Puget Sound Agency in Washington and the State of Montana adopted direct emission standards.

This experience is not limited to these States. The States of New Jersey, Kentucky and Pennsylvania also experimented with dispersion methods for enforcement of air quality standards for many years and eventually all came to renounce such methods. In 1970 the Congress recognized the problem of enforcing an ambient air quality standard and deleted the requirement that enforcement be conditioned on violations of such standards. We do not consider this type of intermittent control system to be enforceable.

2. An intermittent control system can be refined to provide for enforcement of emission limits. Such a system would have to be developed separately for each affected source. Although, probably due to its complexity, to date, no such system has been fully developed. It would appear that it is not possible to develop an ICS system that includes emission limitations before July 31, 1975. Therefore, if EPA were to accept this concept, the development of the control strategy would have to take place beyond the statutory deadline.

Although this is a sufficient basis for rejection of an ICS as a permanent control strategy, there are more important technical and enforcement problems leading to the same conclusion. This type of intermittent control system is much like an emergency episode plan which is required by all States as part of the implementation plan. However, ICS is not backed up by the enforcement power that EPA or the States have during an emergency; that is the power to shut down sources prior to even giving the source an opportunity for a hearing. This power is essential since *shut down* of source operations is the *control strategy* in an ICS system and this decision cannot be dependent on the source operator who is primarily concerned with meeting production demands. Lack of this power by EPA or the States would make an intermittent control system difficult to effectively enforce.

TVA pioneered the effort to develop ICS and has documented its experience in several publications. TVA has many reservations about the technical feasibility of the system and considers it to be an interim method to be used only until permanent emission control techniques can be installed. The following comment was made by TVA in a statement presented at a hearing of the New Mexico Environmental Improvement Board on October 19, 1971:

"At the outset we should like to emphasize the "interim" aspects of this type program, as in most cases, it should serve only as an *interim method* for maintaining air quality until such time when a satisfactory SO_2 removal process can be installed. Also, it should be emphasized that this type of control program may not be feasible for all plants as its application depends on plant design and operation, regional and local meteorology, local terrain effects, power system size and flexibility, and regional air quality goals." (emphasis added by TVA)

TVA comments in the same paper that they have been working with interim operational controls since 1955 at their Kingston steam plant. TVA goes on to describe a highly sophisticated operational control program at their Paradise steam plant. Several years were spent for detailed studies in developing a system for Paradise since each operational control scheme must be tailor-made.

For the Paradise Steam Plant the nine criteria listed below were developed by TVA for the limited mixing layer model which was found to be critical for this large power plant:

(1) Potential temperature gradient between stack top, 180 m. and 900 m.
(2) Potential temperature gradient between stack top, 180 m. and 1500 m.
(3) Difference between daily minimum and maximum surface temperature.
(4) Maximum daily surface temperature.
(5) Maximum mixing height.
(6) Maximum mixing height and plume centerline height.
(7) Time for mixing height to develop from plume centerline to critical mixing height.
(8) Mean wind speed stack top and 900 m.
(9) Cloud cover.

TVA further states that for some plants more than one model may be necessary and that certain physiographic features, e.g., valley ridge configuration may cause frequent occurrences of high surface concentrations involving one or more plume dispersion models, thus making operational control not feasible.

Emission limitations are determined daily for the Paradise plant. A TVA meteorologist takes daily early morning meteorological measurements, including temperature profile (by instrumented fixed-wing aircraft) and wind profile (by standard pibal) from surface to 7000 feet. These data along with input from a 15 station ambient monitoring network plus mobile sensing units are processed by a computer for limiting control. The special computer program provides the limiting SO_2 emission rate in terms of megawatt load generation. Even so the system failed on 18 percent of the days to forecast the need for control actions.

It is apparent that an ICS is highly complex and its success (limited as it is) depends on the good faith of the source operator. Neither EPA or the States would have sufficient resources to review this system or to police it if put into

effect where the emission limit can vary on a daily basis. Therefore, our position is that ICS must be restricted to an interim measure in certain limited situations which EPA will define.

ICS should be used as an interim measure only when reasonably available technology cannot achieve the primary standard by July 31, 1975. "Interim" is defined as until 1977 for achievement of the primary standards inasmuch as this is the latest date allowed by the Act for achievement of the standards by a permanent enforceable control strategy. Further as regards achievement of secondary standards, "interim" is defined as such "reasonable time," established by OAP, when practicable technology could be developed. The situations where ICS is acceptable as an *interim* measure should be limited to the following:

(a) Sources for which reasonably available control technology is inadequate.

(b) Point sources that are sufficiently remote to avoid interference to the ICS system from other point sources or background.

(c) Pollutants for which in-stack monitors are available for continuous measurement.

(d) Short-term standards only, i.e., 3-hour secondary standard and 24-hour primary standard.

We are particularly concerned that any ICS system that is approved or promulgated contain a date-certain when permanent controls will be instituted.

FEDERAL ENERGY OFFICE,
Washington, D.C., May 20, 1974.

Hon. JENNINGS RANDOLPH,
Chairman, Committee on Public Works,
U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: The Energy Supply and Environmental Coordination Act of 1974, H.R. 14368, which is now under consideration by the conferees, contains provisions allowing the Administrator, Federal Energy Administration, to order major fuel burning installations, including electric power plants, to cease burning natural gas or petroleum products as their primary energy source. It also has complementary provisions which amend the Clean Air Act to provide that a plant converting to coal under such an order cannot be prohibited by reason of the application of any air pollution requirement from using coal until January 1, 1979, provided the emissions from the source do not cause certain standards that are specified in the bills to be exceeded.

The provisions of H.R. 14368 will provide a flexible, useful approach to short-term coal conversions; sections 119 (a) and (b) contain provisions applicable through the end of the 1970's. These short-term conversions, however, are only an emergency measure. Only long-term conversions to coal will permit us to achieve our goals of energy self-sufficiency. As you know, the Administration has submitted to the Congress, by letter dated March 22, a package of amendments, of which the coal conversion provisions are only a part, that are designed to encourage these long-term coal conversions. We urge the Congress to turn their attention to these additional amendments as soon as they complete work on H.R. 14368.

We are also concerned with several specific aspects of the coal conversion provisions of H.R. 14368. We would like to take this opportunity to bring these concerns to your attention and suggest possible alternative language.

Coal conversion provision.—Our first concern is with the language of the Senate-passed Bill which provides that a suspension under Section 119(b)(1) is conditioned on the source being "located in an air quality control region in which applicable National primary ambient air quality standards are not being exceeded." This language would unnecessarily impair our ability to convert plants to coal.

A number of air quality control regions cover large geographic areas. The air quality control regions may have a metropolitan area combined with a large rural area. Levels exceeding primary ambient air quality standards are generally found in the densely populated areas. However, a number of power plants that are candidates for conversion are located in suburban or rural portions of regions with a major metropolitan center. Thus, it is likely that a number of non-urban power plants may be excellent candidates for conversion (based on a plant-by-plant analysis of predicted ground-level pollutant concentrations), yet be blocked from conversion because primary ambient air quality standards are being exceeded many miles away. In many such cases, the converted source would not con-

tribute to any violation of the primary ambient air quality standards being exceeded in the urban area.

Accordingly, we believe that the test for conversions should be solely on a plant-by-plant basis. The priority classification of an air quality control region should not be a constraint. The latest data available to EPA show that during 1972 primary ambient air quality standards for sulfur dioxide, were exceeded in 13 to 15 air quality control regions. The primary ambient air quality standard for total suspended particulates was exceeded in 102 air quality control regions during that same period. There are 247 air quality control regions in the country.

A preliminary analysis of the situation shows that 8 of 10 plants analyzed by EPA and FEO as candidates for long-term conversion would not cause to be exceeded or exceed the primary ambient air quality standards, but would not be candidates for conversion under the Senate provision because of the air quality control region in which they are located. This analysis is based on the most recent published data on the ranking of AQCR's. A situation that vividly illustrates the point includes the Morgantown and Chalk Point plants in Maryland which emit pollutants into the same air shed yet are situated in different air quality control regions. Under the formula of the Senate bill, one could be converted, while the other one could not, despite the fact that both plants could meet primary standards.

Further, the addition of the air quality control region test would insert further uncertainties and factors for dispute into the process of identifying plants that are candidates for conversion. Regional priority classifications are based on imprecise procedures. We understand that air quality monitoring data or diffusion modeling calculations may serve as the basis for a priority classification determination. Often the classification for an air quality control region is based on monitoring results from only a few, or even only one, monitor operated by Federal, state or local agencies. EPA quality control studies of monitoring programs have revealed deficiencies in both accuracy and consistency, and a significant margin of error from instrument malfunctions as well as inedaquate procedures.

Finally, the data used to rank air quality control regions are generally up to a year or more out of date at the time of the reclassification. Such data and the resulting regional rankings are nearly functionally irrelevant when emissions from a converted source will not in fact occur for some time. Some plants ordered to convert may not actually begin to burn coal for two to four years, which is the time needed to open new mines.

Accordingly, the above reasons clearly indicate to us that the proper approach is to make determinations on a plant-by-plant basis. Such a procedure should rely on state-of-the-art diffusion models and assessments of existing, relevant air monitoring data.

The House-passed bill has no language limiting the provisions of section 119(b) to regions where primary air quality standards are not being exceeded. We recommend conforming the Senate bill to the House-passed bill by deleting from section 2 of the Senate-passed bill the following words, appearing in the first sentence of section 119(b)(1) of the Clean Air Act: "and which is located in an air quality control region in which applicable national primary ambient air quality standards are not being exceeded."

If the conferees wish to make it absolutely clear that a statutory source may not cause or contribute to concentrations of air pollutants in excess of national primary ambient air quality standards, the first sentence of section 119(b)(1) can be further amended by adding at the end of that sentence: "subject to the provisions of subparagraph (b)(2)(A)."

A conforming amendment is needed in subsection 8(a) of the Senate-passed bill, which deals with FEA-ordered coal conversions. The second sentence of that subsection should be amended to delete the following phrase: "the installation is located in a region described in the first sentence of section 119(b)(1)."

Plant equipment for burning coal.—Section 8(a) of the Senate-passed bill and section 10(a) of the House-passed bill provide that conversions can be ordered only for plants which on the date of enactment have "the capability and necessary plant equipment to burn coal". We understand that it is the intent of the Congress to permit conversions to be ordered where necessary plant equipment is reasonably available and that it is not necessary for a plant to have *all* the equipment already in place. To avoid any uncertainty, however, we urge the conferees to state this intent in the conference report as was done in the House Report on page 28.

Energy information reporting.—The House bill contains, in Section 11, provisions authorizing the Federal Energy Administrator to collect energy information he determines is necessary to assist in the formulation of energy policy or to carry out the purposes of the Act or the Emergency Petroleum Allocation Act.

The Senate Bill contains no such provision.

As you know, the recently enacted FEA legislation now provides the Administrator with broad authority, including subpoena powers, to gather energy information. In view of the enactment of the FEA bill, we strongly support the approach taken by the Senate of deleting Section 11. This will avoid duplication, confusion and conflict with the information gathering sections of the FEA Act.

In particular, subsection 11(e) of the House version is particularly objectionable because it would provide the authority to the Administrator to obtain information directly from other agencies regardless of existing statutes prohibiting such transfer or of the pledge of confidentiality under which it was obtained. Law enforcement and independent regulatory agencies would be required, for example, to make information available which was obtained pursuant to active law enforcement investigations. Other bureaus and agencies who gather statistics on a voluntary basis but with a pledge of confidentiality to the respondent would also be required to make available individual respondent reports, thereby frustrating their ability to collect such data in the future.

There are two aspects of Section 11 which we understand are being considered for inclusion in the conference bill because they have no exact counterparts in the FEA legislation.

Subsection (d)(2) would require quarterly reports setting out a variety of types of energy information. We are very concerned that preparation of such reports would require misdirection of FEA's limited resources. Insofar as is practicable, FEA will publish data in report form, but we would prefer not to be required to prepare such a wide variety of reports, particularly on a quarterly basis.

We are also concerned that this provision might be construed to require publication of data that might be considered proprietary by the persons supplying the data to FEA; for example, inventory data broken down by refiners, and refinery yields by product. Such a provision would be inconsistent with the provisions of section 11(f) of the House bill, which provides confidential treatment for trade secrets and confidential commercial and proprietary data, and the similar provisions of the Emergency Petroleum Allocation Act.

The second provision under consideration, we understand, is one which would provide that the presently applicable restrictions of 18 U.S.C. 1905 against divulging trade secrets and other confidential trade information would not apply to information supplied to congressional committees at their request. We are somewhat concerned that such a provision would impair FEA's capacity to acquire proprietary data necessary for useful statistical information. Our data collection effort depends for its success on having the widest possible sampling. We therefore recommend against inclusion of such a provision. We will, of course, continue to provide Congressional committees with the widest possible range of information, as we have in the past.

Enforcement and penalty provisions.—The enforcement provisions of section 8 of the Senate-passed bill appear to contain some technical shortcoming which should be clarified to accomplish the intent of the Congress.

We recommend amending section 8(d)(4) to make it clear that the Administrator, FEA, and not just his delegates, can request the Attorney General to seek injunctive relief. We suggest the following language in lieu of the present section 8(d)(4): "The Administrator, Federal Energy Administration, or his delegate, may request the Attorney General to bring an action in the appropriate district court of the United States to enjoin acts or practices constituting a violation of this section or any rule, regulation or order issued pursuant to this section, and upon a proper showing, a temporary restraining order or a preliminary or permanent injunction shall be granted without bond. Any such court may also issue mandatory injunctions commanding any person to comply with this section or any such rule, regulation or order issued pursuant to this section."

We also recommend an amendment to subsection 8(e) to make it clear that actions may be taken against offenders after June 30, 1975, for acts or omissions occurring before that date. As now drafted, the section could be construed to require formal administrative proceedings actually to have begun on June 30; this requirement could encourage violations of the Act in the weeks immediately prior to June 30.

We recommend adopting the following language on this subject:

"(e) The authority to promulgate and amend regulations and to issue any order under this section expires at midnight on June 30, 1975 but such expiration shall not affect any action or pending proceedings, civil or criminal, not finally determined on such date, nor any action or proceeding based upon any act committed prior to midnight June 30, 1975."

Reference to additional legislation in conference report.—Let me reiterate my concern that the pending amendments to the Clean Air Act, while helpful if modified substantially, still do not represent long-term solutions to our coal use problems. They provide only limited, short-term assistance and do not correct several major, and I believe, unwarranted provisions or interpretations of the Clean Air Act.

We understand that the conferees are considering a statement in their report that H.R. 14368 deals with only a limited number of topics of extreme urgency and that the committees will be addressing themselves in the near future to other possible amendments, including amendments designed to deal with energy shortages and with insuring the best use of scarce low-sulfur fuels. We strongly support including such a commitment in the conference report.

There are several items included in both House and Senate versions of H.R. 14368 which are not a subject of the conference but which we believe should be discussed now and again during hearings held on additional amendments to the Clean Air Act.

Specifically, we are concerned with the provisions of section 119(b)(2)(B) that require that plants scheduled to convert must be committed to a compliance schedule that provides a date by which the source must enter into contracts for low sulfur coal or scrubbers. This provision is coupled with section 119(b)(2)(C) that requires plants granted suspensions to come into compliance with emission regulations in a state implementation plan that are in effect on the date of enactment of these amendments.

The requirement concerning contracts for low sulfur fuel or scrubbers would effectively preclude the use of intermittent control systems as an alternative method for achieving compliance. If the Administration's proposal to permit use of intermittent control systems, contained in our March 22 amendments to the Clean Air Act, is adopted, this section of H.R. 14368 would have to be amended to conform with it.

The related requirement concerning compliance with state implementation plan emission limitations in effect as of the date of enactment of H.R. 14368, similarly is inconsistent with the Administration's proposal to encourage revision of state implementation plans to avoid "overkill"—the situation in which state implementation plans require the burning of clean fuels in areas where air quality does not necessitate such fuels. If state implementation plans are in fact revised by the states in the interim to avoid overkill, plants should be required to come into compliance at the conclusion of their conversion orders with these revised state plans, not the plans in effect when H.R. 14368 is enacted.

We also strongly believe that the June 30, 1975 deadline for ordering conversions is unduly restrictive. The time-consuming procedure of air quality analysis and compliance plan revisions will be a deterrent to the number of orders FEO can effectively issue by the June 30, 1975, deadline. This deadline should be deleted.

We are interested in the conversion of power plants to coal from natural gas or petroleum products for the purpose of reducing U.S. dependence on foreign fuels. This strategy is designed to assist in achieving the Nation's long-run self-sufficiency goals. Only long-term conversions should be encouraged where secure long-term coal contracts can be established.

We believe there is a serious need to evaluate emission limitations that are designed to achieve ambient air quality cleaner than that required by the health-related standards. EPA's Clean Fuels Policy is essentially addressing this problem. However, this voluntary program has been less than completely successful. As long as overly stringent regulations remain on the books, utilities will not be able to enter long-term coal contracts because of the uncertainty of future emission limitation revisions.

Accordingly, the Federal Energy Office believes that further discussion is needed of several reasonable alternatives:

(1) Require the states to reconsider the emission regulations when a candidate for conversion is ordered to develop a compliance plan, or

(2) Extend the compliance deadline beyond 1979—to a time when resources are reasonably available to attain the welfare-related ambient standard.

Such further modifications to the Clean Air Act will prove necessary we believe to provide the incentive to the mine owner and operator to invest in new coal ventures. Ten to twenty years are needed to assure an economical mine—not just a few years.

I hope these comments have been useful and I look forward to continued cooperation with your Committee.

Sincerely,

JOHN C. SAWHILL,
Administrator.

OCTOBER 12, 1973.

Subject: Proposed Use of Supplementary Control Systems and Implementation of Secondary Standards.

Mr. ROBERT NELIGAN,
Office of Air Quality Planning and Standards, Environmental Protection Agency, Research Triangle Park, N.C.

DEAR MR. NELIGAN: Thank you for the opportunity to comment on the proposed changes as published in the Federal Register, vol. 38, No. 178, Friday, September 14, 1973.

EPA's purposed limitation on the use of supplemental control systems show careful analysis. We agree that it is essential to require the source to reimburse the control agency for the cost of added monitoring and to take responsibility for air quality violations as well as the reliability of the supplemental controls as you have proposed.

We oppose the use of supplemental control systems to achieve ambient SO_2 standards without the requirement of at least 90% sulfur removal. We believe there should be no delay beyond the date presently established by EPA in reducing the total quantity of sulfur emitted to the air. See attached staff memoranda. We also urge the immediate application of curtailment to protect public health when primary standards are exceeded.

The evidence presented in the Swedish acid rain and the CHESS studies support the need to remove at least 90% of the sulfur from the emissions. It is important to provide early relief for those individuals who live downwind of a large point source of SO_2.

If supplementary control systems should be adopted we recommend these changes:

1. Add the following under 40 CFR, Part 51:

The use of supplemental controls shall be implemented at the earliest practical date to protect public health in places where primary standards for SO_2 are exceeded.

2. Ninety percent of the sulfur shall be removed from the emissions of smelter and power plants by the earliest practical date. The use of curtailment of emissions in excess of 90% shall be required if such curtailment is necessary to avoid exceeding SO_2 standards.

3. The installation of SO_2 control equipment for large point sources located in urban areas shall be given priority.

Eliminate the following under Supplementary Control Systems of 40 CFR, Part 51, column 2, page 25699:

Constant emission limitation techniques capable of achieving this degree of emission reduction are not available for every smelter. The alternatives in most cases will be either to close these facilities (or drastically curtail production) or apply supplementary control systems. Weak gas stream scrubbing and process changes may become available for application to many nonferrous smelters in the future.

The same stack-gas technology which EPA considers "adequately demonstrated" for electric generating plants can be applied to weak gas streams (e.g. from reverb furnaces) in smelters. And the top priority for this should be those power plants and smelters located in urban areas.

Thank you for your careful review of these comments and the enclosed memo.

Sincerely yours,

A. R. DAMMKOEHLER,
Air Pollution Control Officer.

October 12, 1973.

To: Air Pollution Control Officer.
From: Chief-Engineering and Air Pollution Engineer-Roberts.
Subject: Use of Supplementary Control Systems and Implementation of Secondary Standards Proposed by E.P.A.

The long-term use of supplementary control systems for large point sources of SO_2 such as curtailment or increased stack height to meet ground level ambient air concentrations are undesirable unless accompanied by at least 90% sulfur removal for the following reasons:

1. Supplementary Control System by itself will not control the total emissions of sulfur oxides even though ambient concentrations are below those set by regulation. The CHESS and Swedish acid rain studies, document the need to limit the total quantity of SO_2 which is emitted to the air at an early date.

2. The experience of this Agency with curtailment of the Tacoma Smelter is not satisfactory as is implied in the Federal Register. The attached chart showing the number of violations and public complaints indicate that there has been a large drop in complaints but there is need for added relief. The real life implementation of SO_2 curtailment by the Tacoma Smelter has produced some 200 public complaints in 1973 up to August 31. Some of the limitations proposed by E.P.A. will limit the number of violations and complaints and should be added the condition of the variance granted ASARCO. The use of curtailment with the Federal standards which are less stringent than those of our Agency would result in a higher number of SOU_2 insults to the public. We still receive large numbers of SO_2 complaints while ambient readings do not exceed the Federal standards.

3. ASARCO has reported that the use of curtailment by the Tacoma Smelter has caused a 30% loss in production. The early installation of effective controls would reduce the loss of power and copper that will occur if curtailment is used as the primary means of meeting SO_2 standards.

4. The technology to achieve 90% SO_2 control is available. The technology to control weak SO_2 streams coming from power plants is "adequately demonstrated" for purposes of Section III of the Clean Air Act. This safer technology can be applied to weak SO_2 streams coming from smelter roasters and reverberatory furnaces.

5. Curtailment programs are difficult to monitor and enforce.

A. ASARCO has recently successfully challenged this Agency's monitoring of * * * process. The State of Washington Pollution Control * * * recently ruled that violation cannot be issued unless the SO_2 ruling is 10% above the value specified in the regulation. On this basis six violations in 1973 were voided.

B. It would be possible to operate a curtailment system with very few violations yet have a large number of SO_2 insults that affect public health and cause the large number of complaints that we still receive. There is a strong tendency to reduce curtailment if the point source plume does not touch the air monitoring station. Requiring the source to pay the cost of additional monitoring is the only practical way to protect the public from SO_2 and sulfate insults.

C. It is impossible to model the SO_2 (and/or sulfate) insults that occur due to wind changes, the break-up of an inversion or the fugitive low level omissions. The only sure way to reduce these insults is to combine 90% control and curtailment.

6. Once supplementary controls are accepted as a means of meeting ambient air SO_2 standards there will be pressure to continue such controls indefinitely.

John W. Roberts.

The Library of Congress,
Congressional Research Service,
Washington, D.C., May 6, 1974.

To: Senate Subcommittee on Environmental Pollution. Attention: Mr. Karl Braithwaite.
From: Maria H. Grimes, Analyst, Environmental Policy Division.
Subject: Supplemental Control Strategies.

The following comments summarize information obtained on certain aspects of the proposed supplementary control strategies which you selected for further

analysis during our meeting on April 18. These included: state-of-the-art and reliability of SCS methods and technology; vulnerability of the system; costs; and enforceability.

To complement the information provided by EPA in its April, 1973 briefing paper, proposed regulations regarding use of intermittent control systems of September 14, 1973, and its hearings on the adequacy of SO_2 control technology in October, 1973, as well as the comments submitted to EPA by Natural Resources Defense Council (attached), I contacted the following persons:

Mr. John W. Frey, Air Quality Branch, TVA, Muscle Shoals, Alabama;

Mr. Robert Foster, Div. of Air Pollution Control, State of Tennessee;

Mr. Frank Dannkoehler, Air Pollution Control Officer, Puget Sound Air Pollution Control Agency, Seattle, Washington;

Mr. Franchot Buhler, National League of Cities, Washington, D.C.

The following observations result from these interviews:

ADEQUATE AND RELIABLE SCS TECHNOLOGY AND METHODOLOGY IS AVAILABLE

There seemed to be general agreement that adequate and reliable technology is now available and components from several vendors are usually selected to make up an SCS system. TVA estimates that a system for one of their plants would require 16–18 months to become fully operational, including field studies, design, state, and installation of equipment all of which can proceed simultaneously. The process requires minimal downtime and there is little malfunction.

Differences of opinion arise as to operational methods. EPA cites TVA's Paradise plant system as an example of the feasibility of the system. The discussion with Mr. Frey yielded the information, however, that the field instruments are not individually checked for calibration and performance, since the employee anticipated to this work has not yet become available. The instruments are monitored by remote control, the resulting data being processed by computer. One employee on an early day-time shift monitors the computer consoles and interprets the data for action as needed. (The need for onsite interpretation of meteorological data appears to vary with the individual location. Paradise requires only low-level interpretation, but the system installed for one section of the Widows Creek plant calls for considerable interpretative skills.)

At Paradise, no monitoring takes place by a trained meteorologist outside of his working hours which end in mid-afternoon. Yet, Mr. Dannkoehler stated that all SCS systems now available require regular servicing of all instruments (calibration, reading, evaluation) in the field, and that the system to be reliable, must be operated on a 24-hour basis. ASARCO's system and the instruments of the Puget Sound region are operated in this manner.

In a second, unsolicited conversation, Mr. Frey modified his previous statements. He did not change his original assertion that TVA SDEL program is being executed both on the basis of previous experiences and the use of new data developed in the course of operation, and that it is still in a state of flux, is not complete, and is still experimental in some of the stages. He did state, however, that TVA's goal is to have continuous meteorological surveillance in the field to interpret and make changes to improve computer accuracy. He apparently is not content to rely solely on the currently used indirect monitoring and remote readouts. Nevertheless, he reiterated that the Paradise operation demonstrates that ambient standards can be met and maintained with SCS, and that the system can be used as an "ongoing sustaining operation with reliable capabiilty." He emphasized that the full-scale program projected for TVA would involve a 24-hour, 3-shift, 7-day workweek operation, anticipated for June or September of this year at the Widows Creek plant. Even now, field instruments apparently are being maintained by TVA personnel not directly related to the SDEL program as part of the regular service schedule for all TVA instrumentation.

COSTS FOR RELIABLE AND ENFORCEABLE OPERATION OF AN SCS PROGRAM ARE CONSIDERABLE

EPA estimates that installation costs for an SCS system will average $300,000 and operational expenses $100,000 a year. A tall stack about 1,000 ft. high, to complement the system would cost $6 million, but require almost no upkeep. TVA's figures for its SDEL technique is about $100 million for installation and some $17 million annually for operation. Mr. Foster's estimate for a large power plant needing 10–12 monitoring sites is $2 million. These costs are about 10% of expenses which would have to be incurred for sulfur oxide scrubbers.

The real costs of using SCS are much higher. According to Mr. Dannkoehler and EPA, ASARCO sustained a 35% loss of production last year as a result of necessary curtailments of operations. While industries in some areas may avail themselves of State or local weather services and meteorological findings to compute and predict adverse conditions, additional funds may be needed for weather balloons and other measuring instruments where such services are not furnished by State or local weather bureaus.

Very significant additional costs, according to the State spokesmen and Mr. Buhler will have to be assumed by the tax payers to provide the necessary instrumentation and personnel to monitor and enforce SCS systems for the States' resources are already taxed to the limit and cannot assume additional surveillance responsibilities. Tennessee is considering a request for a Federal grant of about $100,000 a year for this purpose. Mr. Foster anticipates that, by following EPA criteria of eligibility, 5 or 6 sources would be allowed to use SCS and could be monitored for this amount. Puget Sound 6 or 7 persons are now detailed to monitor one ASARCO plant, using 5 of its 10 stations. About $100,000 a year is needed for this process which includes complex verification procedures to furnish solid proof of violations. It is complicated by obsolete instrumentation. Mr. Dannkoehler's estimate for State manpower needs to monitor all anticipated sources permitted to use SCS was around $400,000 a year. In addition, his agency would require a minimum of $70–80,000 to purchase new and more reliable equipment, since no Federal grants for this purpose have been received since 1968.

ENFORCEMENT OF AMBIENT STANDARDS IS DEFICIENT AND DIFFICULT—SCS SYSTEMS ARE TOO EASILY MANIPULATED TO AVOID DETECTION OF VIOLATIONS

EPA's criteria for allowing the use of SCS systems is that they be measurable and enforceable. TVA claims that the concerned States have free access to all plants and data, and that all necessary information is made available. Tennessee reserves the option for its personnel to enter a source without prior announcement, a requirement which antedates filing of the State implementation plan. The Puget Sound agency uses its own independent instrumentation to verify data submitted by ASARCO.

Confirmation of accuracy, and thus the enforcement of ambient standards are complicated, however.

Mr. Frey said that TVA is still negotiating with the States involved since the latter have not yet decided on a course of action to supervise the system and enforce the standards. Tennessee does give prior warning of a forthcoming inspection unless there is reason to believe that a source is deliberately violating the standard. In that event, a State monitoring instrument is moved into the vicinity of the plant's instrument to verify its data. Sources are required to demonstrate that they have both the expertise and the equipment to comply with regulations; however, expertise is acknowledged to be gained largely through on-the-job training, and Mr. Foster's opinion was that violations might be permitted on a sliding scale, with the system becoming effective over a period of time. Since his agency's primary stated objective is to protect public health, it is concerned with the results, not the internal mechanisms of a system. Sources are responsible for all equipment, including the necessary weather balloons.

Mr. Dannkoehler admits to considerable difficulties in proving violations. In order to disprove ASARCO's data obtained with up-to-date equipment, it must monitor the sources operations independently and, according to State regulations, furnish proof within a plus-minus 10% margin of error. The final strip chart—the final chart of calculations which is the result of preceding measurements and computations—is the required proof.

Puget Sound personnel has become experienced and expert at providing justifiable court data, but ASARCO employees also have become expert at avoiding or bypassing State monitoring stations. ASARCO also was to comply with a State-established inspection protocol which, however, it has yet to implement.

At the start, every citation of a violation was appealed, resulting in cumbersome, time-consuming procedures. The Appeals Court has since defined certain areas of controversy such as reliability of readings, dump cycle arguments (a smelter's purging period of 5–6 minutes at a time when instruments are not read) for which precedent-making judgments have been rendered. As a result, appeals have diminished, but violations have not decreased as a result of the increased number of uncontested fines paid. (See attached documents.)

In the case of multiple sources in a region, Mr. Dannkoehler felt that a separate set of instruments would have to be used for each source to prove a violation, for polluters could claim that the readings did not apply to them. Mr. Foster would use a model allocating a certain percentage of emissions to each source located in fairly close proximity to another.

SUPPLEMENTARY CONTROL STRATEGIES DO NOT ASSURE PROTECTION OF PUBLIC HEALTH

Until definitive proof is available that sulfates, acid rain and other residual pollutants resulting from tall stack emissions of SO_2 into the atmosphere are not harmful to public health, there appeared to be general agreement that SCS should be used solely as an interim measure in the context of the EPA proposal, that is, for existing installations only, and as temporary, immediate relief to the public while permanent controls are perfected. (Admittedly, the interim aspect may complicate enforcement and act as a disincentive to commit capital for installation and operation of SCS.) The Puget Sound region is on record as opposing the use of SCS without the requirement of at least 90 percent SO_2 removal. Emission controls of larger sources, as soon as their effectiveness has been demonstrated, are acknowledged to be the only permanent answer for the protection of public health. However, there seems to be general agreement that not only is control technology still deficient, but that delays in deliveries of equipment already contracted for due to shortages of materials and metals will make achievement of standards within the mandated time limits unfeasible.

Other issues, such as the legality of using SCS as an abatement strategy, are not covered in this memorandum. They are dealt with in the NRDC comments, a copy of which follows:

STATE AIR POLLUTION IMPLEMENTATION PLAN PROGRESS REPORT, JUNE 30 TO DECEMBER 31, 1973

(Prepared by Office of Air Quality Planning and Standards, Office of Air and Water Programs, U.S. Environmental Protection Agency, Research, Triangle Park, N.C., and Office of Enforcement and General Counsel, U.S. Environmental Protection Agency, Washington, D.C.)

AIR QUALITY AND EMISSION DATA

Air Quality Overview

Suspended particulates remain a problem in spite of encouraging evidence of downward trends. One-hundred-thirty-eight AQCR's reported at least one station still above a primary standard (24-hour or annual) in 1972. Thirty-four AQCR's have reported no annual 1972 particulate data. Primary 24-hour or annual sulfur dioxide standards were exceeded at one or more locations in only 19 of 162 AQCR's reporting 1972 data.

Data on oxidants and carbon monoxide are quite sparse, but if the limited results are indicative, substantial problems exist with these two pollutants. The primary exidant standard was exceeded in 21 of 38 AQCR's reporting at least one quarter's data. The primary carbon monoxide standards were exceeded in 42 of 48 AQCR's reporting in 1972.

Adequacy of Air Quality Reporting and Processing

At the conclusion of the fourth quarter of calendar year 1973, data for the second quarter of calendar year 1973 reaching the Storage and Retrieval of Aerometric Data (SAROAD) system represents less than 60 percent of the total stations reporting in calendar year 1972. Consequently, an attempt to characterize nationwide air quality status or trends using the incomplete 1973 data presently in hand would be premature and misleading. Four quarters of 1973 data are expected to be in hand for summarization in the next SIP progress reoprt.

Adequacy of Air Quality Monitoring Networks

The number of air sampling stations by pollutant-type reporting data as required in approved SIP's varies from 60 to 200 percent of requirements. However, when the required reporting stations are related to the SIP requirement the percentage by pollutant-type varies from 39 to 84 percent.

Emission Data Reporting and Processing

Emission data are continually changing due to additions and corrections (e.g., updated emission factors, discovery of new sources, new estimates of emissions from a source, installation of control equipment, shutdown and start up of sources). Consequently, trends due to control activities are characterized as inconclusive. However, the 1972 data based on the National Emission Data System (NEDS) show significantly higher carbon monoxide and lower particulate emission from industrial processes when compared to the 1971 data. NEDS shows more carbon monoxide for nearly every industrial category. It could be concluded either that NEDS has not adequately accounted for carbon monoxide controls or that the methodology used in 1971 overestimated the extent of control. Another possibility, of course, is that sources of carbon monoxide were inadvertently missed in earlier inventories.

Industrial process particulate emissions compare favorably from 1971 to 1972, except for the mineral products industry, which in 1972 had much lower emissions. As in the case of carbon monoxide emissions, the accountability of control measures for this category could cause this discrepancy.

PLAN REVISION MANAGEMENT SYSTEM

Overview

The Plan Revision Management System (PRMS) analysis has been expanded from the original 17 AQCR's to 67 AQCR's. In addition, the PRMS has been expanded from analysis in relationship to annual particulate matter and sulfur dioxide standards to analysis of all current national ambient air quality standards, except that for nitrogen dioxide.

The Office of Air Quality Planning and Standards provides each Regional Office with detailed copies of the individual PRMS site reviews for each monitoring site identified as having a "possible deficiency" within 60 days of the end of each semiannual reporting period. Data review actions have been initiated by the Regional Offices to determine causes of the identified deficiencies in the first 17 AQCR's within the PRMS.

Two important facts are germane in considering results of these actions. First, because the system considers the applicable State and Federal regulations, transportation control plans, and the Federal Motor Vehicle Control Program in the development of the projected air quality trend, an AQCR will not be "flagged" even though the air quality is considerably above the applicable air quality standards, so long as the observed air quality is following the downward trend predicted on the basis of enforcement of regulations and compliance schedules. Second, the PRMS analyzes only the air quality data currently contained in the SAROAD. Therefore, in a number of cases, because of the incomplete implementation of the quarterly reporting requirements for air quality data, there may be an 8- to 10-month time lag in the currentness of the data.

However, as more States begin to implement the reporting requirements, the system will be able to provide an up-to-date analysis of any specific AQCR and its progress toward attainment of the standards.

Results of Analysis

The current PRMS analysis has identified approximately the same percentage of possible deficiencies—an air sampling site where trends in air quality indicate that NAAQS will not be reached as of the specified date—in 10 of the original 17 AQCR's as were identified in the first analysis. Seven AQCR's did not have an increased number of monitoring sites available for review and had the same or an increased percentage of possible deficiencies.

A review of the other 50 AQCR's analyzed showed adequate progress being made toward attainment of air quality standards, with the exception of a few localized problems. The AQCR's that did not follow this general trend were principally divided into two groups: (1) those within limited data base and (2) those with increasing ambient concentrations. The AQCR's with a limited data base had fewer than the minimum number of sites required by the SIP and/or a minimum quantity of available data from each site.

For a particulate matter, 8 of the 67 AQCR's had a limited data base; for sulfur dioxide, 32 of the 67 AQCR's had a limited data base. Similarly, 14 of 25 AQCR's that were required to have carbon monoxide instruments had less than the minimum number of sites required and 18 of 36 AQCR's that were required to have oxidant instruments had less than the minimum number of sites required reporting sufficient data for analysis.

Possible deficiencies associated with particulate matter were noted in 51 of the 67 AQCR's analyzed. Some of these deficiencies appear to be local in nature since the remainder of the AQCR appears to be progressing as predicted.

Possible deficiencies were associated with carbon monoxide in 13 AQCR's and with oxidant in 8. However, 29 AQCR's have values that are currently above the national standards for carbon monoxide (although only 25 of the 67 AQCR's required CO monitors, an additional 4 AQCR's had data, thus, the 29), and 19 of the 36 AQCR required to have oxidant monitors have values above the standard. Again, it should be noted that almost 50 percent of the AQCR's that were required to have carbon monoxide and oxidant monitors had less than the minimum number of sites with sufficient data for analysis. Additionally, some AQCR's have a carbon monoxide instrument where no current SIP requirement exists and have recorded values in excess of the standard.

In general, the PRMS analysis indicates that in most AQCR's adequate progress appears to be made for most sites; however, no relaxation of any of the current ongoing programs should take place. The possible deficiencies should be reviewed to determine their cause and possible solution for that area of the AQCR where the deficiency was noted. The status of sulfur dioxide, carbon monoxide and oxidant will require additional data to really assess the situation and determine if possible deficiencies exist.

SUPPLEMENTARY CONTROL SYSTEMS

A major issue related to implementation plans involves the question of supplementary control systems (SCS) as an acceptable control strategy. SCS involve both the temporal variation of emission rate, based on expected meteorological conditions, to avoid high ground-level concentrations during periods of tall stacks to lower ground-level impact. Early in September 1973, EPA proposed regulations and solicited public comment on them.[1]

SCS are considered less desirable than constant emission limitations and, as proposed, will be allowed only for large, remote existing sources of sulfur dioxide and only where constant emission reduction systems are not available to the source. Generally this restricts their use to nonferrous smelters (after use of acid plant control systems) and rural coal-fired power plants that will not be able to install stack gas cleaning equipment nor find low-sulfur coal. The regulations also proposed many requirements for the design and operation of SCS.

* * * * * * *

Fourth, it should also be noted that many AQCR's have less than the minimum number of sites required in the SIP reporting sufficient data for which any analysis can be performed. This is especially true for sulfur dioxide, carbon monoxide, and oxidants. Thus, for many of the 67 AQCR's, the analysis for those pollutants may not be conclusive until at least the minimum number of required sites are reporting enough data for analysis and review. Consideration should be given to the number of sites for which the analysis was performed compared to the minimum number of sites required by the SIP before any conclusions are made concerning the progress an AQCR is making. Many AQCR's that at this time appear to be making adequate progress based on less than the minimum number of monitors required may have severe SIP deficiencies when the data from all the sites are available in sufficient quantity for review.

A comparison of the initial analysis for the 17 AQCR's to the current analysis indicates that in general, States are submitting more aerometric data, thus providing a larger air quality data base for review.

In some cases, the increased data base alllowed for the identification of some additional possible deficiencies that were not evident in the initial analysis.

The results from the current analysis of 67 AQCR's indicated four principal types of problems: (1) limited data base, (2) localized problem, (3) general problem, and (4) increasing pollutant concentrations.

---

[1] Federal Register, vol. 38, No. 178, Sept. 30, 1973.

The AQCR's with a limited data base resulted from having less than the minimum number of sites required by the SIP. This was not a major problem for particulate matter as only 8 of the 67 AQCR's had less than the amount number or sites currently reporting sufficient data for analysis. However, this was not the case for sulfur dioxide; 32 of the 67 AQCR's had less than the minimum number of monitoring sites reporting sufficient data for analysis. Similarly, 14 of the 25 AQCR's that were required to have carbon monoxide instruments had less than the minimum number of sites required, and 18 of the 36 AQCR's that were required to have oxidant instruments had less than the minimum number of sites required reporting sufficient data for analysis.

Possible deficiencies associated with total suspended particulates were noted in 51 of the 67 AQCR's analyzed. Some of these deficiencies appear to be local in nature since the remainder of the AQCR appears to be progressing as predicted. In addition, 65 of the 67 AQCR's have particulate concentrations above the national ambient air quality standard.

Only 5 of the 67 AQCR's had possible deficiencies relative to sulfur dioxide, and 9 AQCR's had values above the standards. As mentioned previously, however, almost 50 percent of the AQCR's analyzed had less than the minimum number of sites required, and any general conclusions on the status of sulfur dioxide would not be completely accurate at this time.

Possible carbon monoxide deficiencies were noted in 13 AQCR's and oxidant deficiencies in 8. However, 29 of the AQCR's have values that are currently above the national standards for carbon monozide. Nineteen (19) of the 36 AQCR's required to have oxidant instruments were above the standard. Again, it should be noted that almost 50 percent of the AQCR's required to have carbon monoxide and oxidant monitors had less than the minimum number of sites with sufficient data for analysis. Additionally, four AQCR's that have a carbon monoxide instrument where no current SIP requirement exists have recorded values in excess of the standard.[2]

Two AQCR's have been noted as having possible deficiencies throughout the AQCR, and further study should be initiated to determine the real extent of the problem.

To date, 8 AQCR's have reported pollutant concentrations that have increased over the past years. This problem appears to be local in nature as only one or two sites, in these AQCR's have shown increases. This problem relates primarily to particulate concentrations; however, in a few areas, sulfur dioxide levels have also increased slightly.

In general, the PRMS analysis indicates that in most AQCR's adequate progress appears to be being made for most sites; however, no relaxation of any of the current ongoing programs should take place. The possible deficiencies should be reviewed to determine their cause and possible solution for that area of the AQCR where the deficiency was noted. The status of sulfur dioxide, carbon monoxide, and oxidants will require additional data to really assess the situation and determine if possible deficiencies exist. However, for those areas where a deficiency was noted, some work should begin to investigate the extent of the problem.

SECTION 6—AIR QUALITY MONITORING AND DATA REPORTING

Ambient Air Quality

State air pollution control agencies must satisfy two basic requirements with respect to ambient air quality monitoring: (1) establish a network of measurement stations for each designated pollutant (total suspended particulates, sulfur dioxide, carbon monoxide, and oxidants) according to prescribed guidelines, adequate in number and comprehensive in distribution, to yield a representative picture of pollutant means and extremes, and (2) submit the data from these monitoring networks to EPA quarterly as evidence of meeting air quality standards or of making proper progress toward a specified compliance date.

Table 6–1 lists, by State, the level of monitoring activity for calendar year 1972 being reported to EPA's National Aerometric Data Bank (NADB) as of September 1973. Under each pollutant, the initial columns give the numbers of individual stations initially required in the August 14, 1971, Federal Register[3] and the numbers of stations for which data collected in 1972 have been reported.

---

[2] Although only 25 of the 67 AQCR's required CO monitors, an additional 4 AQCR's had data: thus, the 29.

The remaining columns in table 6–1 categorize the number of Air Quality Control Regions (AQCR's) within each State that are (1) reporting less than half the required monitoring, (2) reporting from half up to the required monitoring, and (3) reporting more than the minimum required monitoring. (Requirements for interstate AQCRs are apportioned to the constituent States according to population.)

Note that some States in table 6–1 are reporting as many stations as required, and some are reporting more; but these stations are not always distributed among the AQCR's in accord with minimum requirements for each AQCR. Consequently, even in these States, one or more AQCR's may not yet satisfy minimum monitoring requirements. Further, table 6–1 identifies how many of the minimum required stations are actually being reported in each State. No attempt has yet been made to assess the aspect of how representative these monitoring locations are.

Tables 6–2 to 6–5 summarize the status of air quality in the nation's 247 AQCR's as portrayed by the data reported to NADB for calendar year 1972. For each pollutant, the number of AQCR's in each priority classification is shown, plus the number of AQCRs reporting (1) at least one station-quarter's data and (2) at least one valid station-year of data for particulates and sulfur dioxide, for which annual standards pertain. The final column in each of these tables reports the number of AQCR's wherein one or more reporting stations exceeded a primary standard. The results in these four tables differ from those presented in the previous SIP progress report [4] as a consequence of additional 1972 data and corrections received in the interim. The previously reported counts are shown in parenthese in the tables.

In brief, suspended particulates remain a problem in spite of encouraging evidence of downward trends. One-hundred-thirty-eight AQCR's have reported at least one station still above a primary standard (24-hour and or annual) in 1972. Thirty-four AQCR's had reported no 1972 particulate data at that point. Primary 24-hour and/or annual sulfur dioxide standards were exceeded in only 19 of 162 AQCR's reporting in 1972.

Data for oxidants and carbon monoxide are quite sparse, but if these limited results are indicative, substantial problems exist with respect to these two pollutants. The primary oxidant standard was exceeded in 21 of 38 AQCR's reporting at least one quarter's data. The primary carbon monoxide standards were exceeded in 42 of 48 AQCR's reporting in 1972. More detailed information on AQCR status and individual station results is given in Publication No. EPA–450 1–73–004.[5]

The presence of individual values or annual means over a standard clearly identifies problem AQCR's. The absence of such values or means in the data reported from other AQCR's does not necessarily warrant the conclusion that the standards are being met in those AQCR's until their monitoring networks have been thoroughly appraised for adequacy in number and placement of monitoring sites. Many regions do not have comprehensive networks operating; others are only just beginning to report scattered results from the initial stages of network implementation. Until assessments can be made of network adequacy (not necessarily to be equated with the initially specified minimum requirements listed in Table 6–1) a technical distinction exists in describing an AQCR reporting no values above standards. For the present, it can only be stated that such an AQCR "experiences no violation." The goal based on data from an adequate network, will be to designate such an AQCR as "in compliance" with national ambient air quality standards.

TABLE 6-3.—SULFUR DIOXIDE, STATUS OF AIR QUALITY, 1972

[Based on data reported by States as of Oct. 6, 1973. Values reported in EPA 450/2-73-005 are given in parentheses]

Priority classification	Number of AQCR's	AQCR's reporting— At least 1 station-quarter	AQCR's reporting— At least 1 station-year	AQCR's exceeding any primary standard
I or Ia	60	52 (51)	41 (40)	[1] 13 (17)
II	41	31 (30)	27 (25)	[1] 4 (8)
III	146	79 (73)	55 (50)	2 (2)
Total	247	162 (154)	123 (115)	19 (27)

[1] These original totals were in error.

TABLE 6-4.—OXIDANTS, STATUS OF AIR QUALITY, 1972 [1]

Priority classification	Number of AQCR's	AQCR's reporting at least 1 station-quarter	AQCR's exceeding primary standard
I	[2] 55 (554)	31 (25)	25 (18)
III	[2] 192 (193)	7 (53)	3 (3)
Total	247 (247)	38 (28)	28 (21)

[1] Based on data reported by States as of Oct. 6, 1973. Values reported in EPA 450/2-73-005 are given in parentheses.
[2] Providence AQCR has been reclassified priority I for oxidants.

TABLE 6-5.—CARBON MONOXIDE, STATUS OF AIR QUALITY, 1972 [1]

Priority classification	Number of AQCR's	AQCR's reporting at least 1 station-quarter	AQCR's exceeding primary standard
I	30 (39)	22 (13)	21 (13)
III	217 (218)	26 (21)	21 (20)
Total	247 (247)	48 (34)	42 (33)

[1] Based on data reported by States as of Oct. 6, 1973. Values reported in EPA 450/2-73-005 are given in parentheses.

In some instances, the lack of stations in an AQCR may be only an apparent deficiency. Stations may exist for which the data are not yet being expeditiously relayed or correctly identified for acceptance in the National Aeromatric Data Bank. Table 6-6 provides clear evidence that the anticipated schedule of data submittal from local or State agencies through the EPA Regional Offices to NADB, Durham, N.C., has not yet been realized. According to this schedule, data should reach NADB 75 days after the close of a quarter; summaries of these data

are then provided 120 days after the close of a quarter. However, at the conclusion of the fourth quarter (CY IV), data for the second quarter of CY 1973 (CY II) reaching NADB represents less than 60 percent of the total stations reporting in CY 1972. Consequently, an attempt to characterize nationwide air quality status or trends using the incomplete 1973 data presently in hand would be premature and misleading at this time. Sufficient 1973 data are expected to be in hand for summarization in the next SIP progress report.

The number of monitors reporting air quality data to NADB by type varies from 60 to 200 percent of nationwide requirements, although the percent of required stations reporting by type is considerably lower, from 39 to 68 percent (see table 6–7).

TABLE 6–6.—NATIONAL SUMMARY OF STATE MONITORING AS REPORTED TO NADB AS OF JAN. 11, 1974

Pollutant	1971	1972	1973		1974 proposed	Legal requirement
			1st quarter	2d quarter		
TSP	1,313	2,683	1,914	1,449	3,511	1,377
SO_2[1]	409	1,064	694	766	2,129	861
O_x	50	113	31	52	458	208
CO	58	128	42	75	457	133
Total	1,830	3,988	2,681	2,342	6,555	2,579

[1] Includes both continuous samplers and West-Gaeke bubbler.

TABLE 6–7.—AIR QUALITY MONITORING SITES, ACTUAL VERSUS REQUIRED

Pollutant	Legal requirement	Total reporting[1]	Ratio reporting/ required	Required not reporting	Required reporting	Ratio required reporting/ required
TSP	1,377	2,667	1.94	233	1,144	0.84
SO_2	861	1,049	1.22	363	498	.58
CO	133	125	.94	69	64	.48
O_x	208	122	.59	128	80	.39

[1] Not all of total reporting sites necessarily satisfy legal requirement.

The wide variance between the percent of total reporting stations and those stations reporting from required sites suggests a need for EPA and State effort to improve the distribution of air quality monitors as well as to increase the number of some types. It is anticipated that this will change as EPA revises guidelines for minimum monitoring networks in the future.

SOURCE EMISSIONS

The 1972 emission estimates shown in Table 6–8 are based on data from the National Emissions Data System (NEDS) data bank. Until 1972, the emission estimates were obtained by applying overall emission factors and industry average control efficiencies to nationwide production or consumption totals to calculate emissions. Emissions in NEDS are calculated for each point and area source and summed to arrive at the totals shown in table 6–8.

TABLE 6–8.—NATIONWIDE EMISSIONS, 1972 (10^6 TONS/YR)[1]

Source	CO	TSP	SO_x	HC	NO_x
Transportation	76.4	0.8	0.6	16.0	8.6
Fuel combustion in stationary sources	1.2	7.5	24.4	.5	12.3
Industrial processes	17.6	8.6	6.6	6.5	.7
Solid waste	5.0	.9	.1	1.6	.2
Miscellaneous	.8	.2	0	1.8	
Total	101.0	18.0	31.7	26.4	21.8

[1] Based on data from the National Emissions Data Bank.

The NEDS data bank lacks adequate data for estimation of emissions from all sources. The most notable deficiencies in NEDS, with respect to table 6–8, are that (1) all New York State point sources are missing, and (2) emission estimates are not made for forest fires, coal refuse burning, and structural fires. According to data from the New York SIP, significant additional emissions for point source fuel combustion and industrial processes could be expected. Perhaps an additional one million tons of sulfur oxides and smaller amounts of other pollutants may be added to the fuel combustion by stationary sources totals to account for New York point sources. Industrial process emissions of particulate in New York may be 200,000 tons, but less than 100,000 tons of the other pollutants. Emissions from forest fires, coal refuse burning, and structural fires should be added to the miscellaneous category to make these totals comparable to the data for previous years. Due to lack of source data on a detailed, county basis for these types of sources NEDS does not presently account for these emissions.

The 1972 data based on NEDS show significantly higher carbon monoxide and much lower particulate emissions from industrial processes when compared to the 1971 data based on the old methodology. NEDS shows more carbon monoxide for 1972 for nearly every industrial category. It is concluded either that NEDS has not adequately accounted for carbon monoxide controls or that the old methodology overestimated the extent of control. Another possibility is that relatively large emitters were not accounted for in the old methodology. The apparent discrepancy is probably due to a combination of these factors. On the other hand, recent industrial process particulate emissions from NEDS agree quite well with old methodology estimates except for the mineral products industry and food and agricultural industry categories. Recent NEDS estimates show much lower emissions for both categories (5.2 versus 2.6 millions tons for food and agricultural industries). Again, the discrepancy could be due to difficulties in correctly determining control efficiencies. A more likely explanation in this case is that NEDS does not adequately account for emissions from all soures in these categories. It is known, for example, that NEDS does not contain adequate source data to estimate emissions for all grain elevators and feed mills.

Comments on Proposed Rules Regarding Use of Supplementary Control Systems

The proposed "supplementary control system" ("SCS") regulations, 38 Fed. Reg. 25697 (Sept. 14, 1973), should not be promulgated. In our view, they violate the Clean Air Amendments and cannot be supported on policy grounds. EPA was correct about a year ago when it stated its opposition to dispersion techniques:[6] "dilution" is not, as the leaden professional jest once had it, "the solution to pollution."

At the outset, we must clarify what these regulations actually provide, for they are written in a way that disguises their true consequences. The proposed regulations provide for indefinite use of SCS and tall stacks as a means of attaining National Air Quality Standards in the vicinity of "isolated sources" of pollution. So long as a state agency concludes that continuous emission control devices capable of meeting the emission limitations necessary to attain Standards are not "available," and the source agrees to undertake a program of research on continuous emission controls, the source may continue using SCS. They are not limited to use as "interim measures of control," within the meaning of the statute, since they are not limited to sources within areas that have received extensions of the deadline for attaining National Standards as provided in § 110(e) of the Act, and since the proposed regulation puts no limit on the time during which they may be used.

This point should be made clear. In our views, SCS may be a legally acceptable interim measure under § 110 (e) and (f) of the Act. But despite the rhetoric of EPA's preamble to the proposed regulations, they do not confine SCS to use as an interim measure in any ordinary sense of the word. In the statute, the word "interim" is used in connection with short periods of time, such as one or two years, with specified beginning and end. A source allowed to use an "interim" measure must be on a binding compliance schedule constructed to insure that emission limitations are met at the close of the interim period.

But EPA's proposed SCS regulations contain none of these earmarks of an interim measure. Instead of requiring a definite date in the near future for

[6] 37 Federal Register 15095 (July 27, 1972).

moving from SCS to continuous controls, they merely require "formal review and reexamination of the permit at intervals of 5 years or less." Proposed App. P, § 3.2(g). Rather than requiring a specific compliance schedule for moving to continuous controls, or even a binding schedule for a program of research on such a control system, they timidly require a mere "description of the firm's research and demonstration programs, or its participation in such programs, which will accelerate the development of constant emission reduction technology [including a description of] schedules and resources to be committed and an anticipated date when adequate emission reduction technology can be applied." Proposed App. P, § 3.2(b)(5). These "requirements" amount to little more than a generalized and totally unenforceable statement from the source that he intends to proceed in good faith. Since the statute requires compliance, the good faith of a source is irrelevant, though it is hard to imagine how the statutory requirements could be attained without it. On the other hand, EPA has already accumulated ample hard evidence, based on performance rather than promises, to justify a conclusion that good faith attempts to develop and install continuous control equipment cannot be anticipated from the utility industry.[7]

Second, though they are drafted to disguise the fact, the proposed regulations are actually a vehicle for legitimizing the use of tall stacks as well as SCS. In fact, they are drafted in a way which allows a source to escape ever having to curtail production (or pollution) so long as he presented a paper program for intermittent curtailment and built a tall enough stack. Proposed 40 C.F.R. § 51.13 (h) places only one limitation on the use of tall stacks to attain Air Quality Standards—that it be "accomplished as part of an approved supplementary control system." The possibility that an SCS will be merely a paper justification for building a tall stack is hardly remote. Process curtailment is expensive, and inconvenient. In the case of power plants, the need to continue operations at full capacity is likely to occur at precisely the times when curtailment would be required if SCS were relied upon without tall stacks—during periods of air stagnation during the summer when massive use of air conditioning produces peak loads on electrical systems. In other industries, it is likely that the increased production that could be provided by being able to operate at full capacity at all times would more than pay the costs of erecting a stack high enough to avoid ever having to invoke SCS process curtailment. For these reasons, the SCS proposal can in no sense be considered a proposal for "emission limitations," as required by the Act. It is, pure and simple, a proposal to supply the mantle of legitimacy to the use of dispersion as a means to attain National Air Quality Standards, and must stand or fall, legally, on the question of whether such a method is allowed by the statute.

I. DISPERSION IS PROHIBITED BY THE ACT AS A MEANS OF ATTAINING NATIONAL STANDARDS

The issue of whether dispersion techniques are allowed by the Clean Air Amendments is now in the Courts.[8] Since NRDC is one of the litigants in this case, it is unnecessary to delineate in detail the statutory basis for our belief that such methods are explicitly prohibited as control strategies by the Act. Instead, we incorporate by reference pages 23–30 in petitioners' brief, and pages 15–19 in petitioners' reply brief in that case, which are attached to these comments as Appendix A. Suffice it to say, however, that NRDC regards that case as placing in issue the principle of whether dispersion is a permissible means of control under the Act, and will regard a holding in our favor there as applying to the whole of the regulations under consideration here.

We also believe that the present SCS proposal does violence to the statutory scheme in another way. In its preamble to the proposed SCS regulations, EPA asserts that SCS is to be considered as a control technique wherever adequate continuous emission control methods are "not available" and the "alternatives will be either to close these facilities (or drastically curtail production), or apply supplementary control systems." 38 Fed. Reg. at 25699. In such situations,

---

[7] In its flue gas desulfurization hearings, the EPA hearing panel concluded that the installation of such technology had been impeded by the stubborn resistence of the utility industry, some segments of which admitted spending more money to fight the requirements for installing such technology than to make it workable and acceptable on their terms. U.S. EPA, Report of Hearing Panel, National Public Hearings on Power Plant Compliance with Sulfur Oxide Air Pollution Regulations (January 1974), at 27–28.

[8] *NRDC, et al.*, v. *EPA*, No. 72–2402 (5th Cir.). This case was argued before the Court of Appeals on May 8, 1973.

the preamble states the Administrator's judgment that "it does not appear to be in the public interest to require shutdown or permanent curtailment of production for existing sources which could temporarily use supplementary control system." *Id.*

This statement does not provide a legally adequate basis for turning to a method of dubious efficacy and legality. The Act does not set itself against the closing of plants which endanger the public health and welfare. Indeed the drafters explicitly recognized the possibility that methods of production that were incompatible with the protection of the public must be curtailed or eliminated. "(E) existing sources of pollution either should meet the standard of the law or be closed down." Sen. Rep. No. 91–1196 (1970), at 3.

The Act also provides a means for dealing with situations when a claim is made that meeting the requirements of the law would result in shutdown, designed to maximize the incentive of the source to find ways of complying with the emission standards contained in the State Plan. First, where emission controls are not available soon enough to insure attainment of National Primary Standards within the three years outer limit required by the Act, a State may receive up to two years extension of the deadline for meeting the Standard. If an individual source finds that he is still unable to install equipment or make other changes to bring him into compliance, he may ask his State Governor to request an additional year's postponement of the application of the emission limitations to him. Such a request must be tested in a judicialized hearing, where there is opportunity of cross-examination and full testing of the source's claim. If, among other things, the Administrator finds that the continued operation of the source is "essential to the national security or to the public health or welfare," he may grant the postponement; if not, he must order shutdown. We find nothing in the statute which precludes additional postponements, so long as they are tested fully through the statutory procedure. But the benefit of this procedure is that it places a heavy burden on the source owner to justify, on a yearly basis, continued failure to meet emission limitations. EPA's proposal, which substitutes an informal administrative judgment, made long before the last deadline for meeting State emission standards and renewed only infrequently, removes this burden and maximizes the incentive to avoid discovering ways of meeting the emission limitations.[9]

Finally, the proposal violates the requirement of the Act that any State Plan, or revision, "provide (i) necessary assurances that the State will have adequate personnel [and] funding. . . ." § 110(a)(2)(F), 42 U.S.C. § 1857c–5(a)(2)(F). An SCS will impose large financial, administrative, and technical burdens on the State agencies. The Puget Sound Air Pollution Control Authority, one of the few State agencies with experience in overseeing such systems, estimates that it presently spends $160,000 to $200,000 per year to monitor the SCS now operating at ASARCO's Tacoma, Washington, smelter.[10] EPA's own estimates, completed prior to the formulation of the proposed regulations, fall in the same range.[11] Yet nothing in the proposed regulation requires a showing by a State agency inclined to allow the use of SCS on a facility of whether such funds are available over and above funds already made available for the remainder of the State program. If such additional funds are not available, they will obviously rob from the existing State program. In many State agency budgets, $200,000 represents a sizable portion of the entire air pollution control effort.[12]

---

[9] The strong financial incentive for sources to drag their feet in discovering that continuous controls are available is apparent. For example, EPA now estimates the cost of installing flue gas desulfurization equipment at $50 to $65 per kilowatt or about $30–40 million at an average sized coal fired power plant. U.S. EPA, Report of Hearing Panel, "National Public Hearings on Power Plant Compliance With Sulfur Oxide Air Pollution Regulations" (January 1974), at 55. By contrast, SCS can be installed for about $300,000, and operated for approximately $100,000 a year. EPA briefing paper on SCS, April 1973, p. 14. A very tall smokestack, perhaps 1,000 feet high, might come to about $6 million in capital costs, with virtually no upkeep.

[10] The figure includes costs for sensors, computer time, and six to eight full time employees. Telephone conversation with Frank Dannkoehler, Air Pollution Control Officer, PSAPCA, Nov. 8, 1973.

[11] Briefing paper prepared for EPA conference on SCS (ICS), April 1973, Tab. 6, at p. 3. Attached as Appendix B.

[12] See NRDC, Action for Clean Air (1971), at 47, for figures on State agency budgets at that time. It is also worth noting that in a recent case where EPA's approval of a State Plan was challenged on the grounds that it did not provide adequate assurances of personnel and funding, the Agency defended its approval in large part by reference to the State Governor's request for an additional $250,000 for the budget of the State Agency. *NRDC, et al.*, v. *EPA*,—F. 2d—, 5 ERC (1st Cir., 1973), post judgment submission of EPA in response to Court order.

To remedy this defect, EPA should require, as a prerequisite to approval of any proposed SCS, a showing that the funds necessary to hire competent personnel, place and maintain monitors, telemeter continuous emission and ambient air quality data to the State agency, and pay for enforcement are available. This funding should not be the responsibility of the State agency. The cost of administering an SCS is a cost of pollution control, just as the cost of any continuous emission control system is, whether it be flue gas desulfurization or clean fuel. Rather than merely encourage the States to require licensing fees to defray to additional costs of SCS (preamble to proposed rulemaking, 38 Fed. Reg. at 25700), the Agency should make such fees a prerequisite to approval of any such system. This was urged within the agency in earlier consideration of the SCS regulation,[13] it should be added to the proposed rule. Wtihout requiring assurance of adequate personnel and funding, the rulemaking cannot meet the legal standard of the Act.

II. DISPERSION SHOULD BE PROHIBITED BECAUSE IT REPRESENTS BAD POLICY

A. *The Use of Dispersion Rather Than Continuous Controls Endangers the Environment Because it Fails to Curtail Atmospheric Loading With Dangerous Pollutants.*—The dangers of atmospheric loading of sulfur oxides, particulate matter, nitrogen oxides, and other toxic materials are increasing well known in the scientific community and within EPA. Evidence is accumulating rapidly that the health effects of sulfur oxides are related to sulfates, interacting with particulate matter and perhaps nitrogen oxides. Sulfates are dangerous to health at concentrations an order of magnitude smaller than the present National Primary Standard for sulfur oxides. Concentrations prevailing in the skies over much of the urbanized areas of the country are often as high as twice those found to have adverse effects on health. Unlike sulfur dioxide, sulfates are distributed in dangerous concentrations over wide areas, not just at the points where plumes from specific sources touch down.

Similarly, a growing body of evidence exists that injury to the biosphere is growing rapidly as a result of acid rains. Like sulfate concentrations, acid rains are related to the total quantity of sulfur oxides emitted into the biosphere rather than the ground level concentrations now regulated under EPA's National Standard for sulfur oxides. Evidence exists that in some parts of the country, the level of acid accumulated in the biosphere has reached very close to a critical point at which natural neutralizing agents can no longer prevent major damage.[14]

As a matter of policy then, it is highly inappropriate for the Agency to be considering regulations which would allow continued atmospheric loading with sulfur oxides and other pollutants. Rather than seeking to legitimize further atmospheric loading, the Agency should be considering additional National Standards that would have the effect of reducing drastically the total quantities of these pollutants emitted into the air. The failure to do so represents a serious dereliction of statutory duty; the present proposal, given this context, may violate the statutory duty to protect public health and welfare.

B. *SCS Is Not a Reliable Method for Meeting the National Air Quality Standards.*—Over a year ago, EPA declared that SCS was not acceptable because, among other things, it was not a reliable means of meeting the National Standards. 37 Fed. Reg. 15095 (July 27, 1972). In the present proposal, it has not presented sufficient basis for a different conclusion.

To begin with, EPA nowhere explicates a consistent or defensible definition of the concept of reliability. An acceptable definition must be grounded in the words of the statute itself, which states that the State Plan must contain measures that "insure attainment and maintenance" of the National Standards, § 110(a)(2)(B), 42 U.S.C. § 1857c–5(a)(2)(B). Plainly, the meaning of this phrase is that Standards must be met at all times, not merely some percentage of the time. Measures that will accomplish full-time compliance are available, and have been adopted by most States. Low sulfur fuel, the most commonly adopted means for attaining the Standards, allows 100% compliance with emission limitations. Similarly, 100% compliance can be attained through a flue gas desulfurization tech-

[13] EPA briefing paper, cited previously, at Tab 6, page 4.

[14] The conclusions stated here are widely shared in the scientific community. We have listed, as a bibliography to these comments, some of the studies in which these conclusions are stated. They are incorporated by reference, as are additional studies to the same effect not listed.

nology, by designing in redundant systems so that malfunctions can be compensated for by switching modules, by ceasing operations when malfunctions become sufficiently serious to prevent compliance with emission standards, and, in some cases, by retaining the capacity to switch to clean fuel during periods of equipment malfunctions.

In considering the SCS proposal, however, EPA appears to have operated under a different, and statutorily deficient, concept of reliability. An EPA briefing paper on SCS (ICS), referred to previously, adopts the position that SCS is acceptable if it attains the ability to prevent violations of National Standards 80 percent of the time.[15] The assumption behind this conclusion, stated in the briefing paper, is that can be attained by continuous emission control equipment, since it must be down for scheduled maintenance a certain number of days and will be down because of malfunction an additional number of days each year.

This assumption is in error for a number of reasons. First, it assumes that the bench mark for reliability is flue gas desulfurization equipment, though using clean fuel enables 100 percent compliance. Second, it assumes that plants will continue to operate regardless of the fact that their pollution control equipment is not functioning—an assumption contrary to the command of the statute, as noted previously. Third, it assumes that scheduled down time will be randomly distributed, as will days of atmospheric stagnation that would assure violation of the National Standards. In fact, air pollution agencies have the power to order scheduled maintenance of pollution control equipment to occur at times when the likelihood of stagnation is lowest. And as a matter of fact, to take one important class of sources, utilities would ordinarily schedule maintenance during the spring and fall because their system load is lowest at that time of the year; it so happens that in most areas of the country, spring and fall are also the seasons when stagnant weather is least likely to occur.

Using this false conception of the degree of reliability required by the statute, and this erroneous set of assumptions about how reliable continuous control measures actually are, the Agency was apparently willing to accept evidence from interested parties tending to show that SCS systems now in operation can achieve similar levels of reliability. In justification of its conclusion that SCS has now been shown reliable, the Agency cites three examples: two smelters operated by ASARCO in Tacoma, Wash., and El Paso, Tex.; and a power plant operated by the Tennessee Valley Authority.

None of these examples constitutes adequate basis for a conclusion with respect to reliability. EPA makes no claim that any of them have shown SCS capable of preventing all violations of National and State Air Quality Standards; instead, it bears its conclusion on data allegedly showing that violations of National and State Standards at each plant have declined to some level it chooses to call tolerable. In fact, even these conclusions are extremely suspect. First, the data from the TVA plant is entirely generated by TVA, a highly interested party. EPA makes no claim that this data was ever tested independently, and it could not, as far as our investigation has been able to discover.[16] Second, the data from both ASARCO plants are flawed by a basic defect. State officials from both Texas and Washington State have indicated to NRDC that the dramatic reductions in violations shown in EPA's figures are in large measure owing to the operators' ability to program the system to avoid sensors. Mr. Kellog, meteorologist with the Puget Sound Air Pollution Control Authority, stated to us that in his judgment, curtailment of operations at the Tacoma smelter begins only when the plume moves toward sensors, rather than when conditions merit curtailment to avoid excessive concentrations at any point in the region affected by the plant.[17] Likewise, officials in the El Paso local agency reported that the violations from the ASARCO smelter there increased 100 percent with the addition of ten monitors.[18]

But the crucial deficiency in the data presented by EPA is even more telling. In both cases, the smelters operate in geographical locations that allow them to

[15] EPA briefing paper, cited previously, at Tab 2, page 2.

[16] NRDC contacted six key EPA officials (in the Office of Stationary Source Enforcement, Office of Air Quality Planning an dStandards, and EPA Region IV office) concerning this data to learn that the federal agency had no monitoring data, indeed no information whatsoever, on the TVA Paradise plant other than TVA's own reports.

[17] Telephone interview with Mr. Kellogg, PSAPCA, November 8, 1973.

[18] Telephone interview with Rubin Chrismeyer, El Paso City-County Health Unit, October 26, 1973.

operate without regard to ground level concentrations much of the time. In Tacoma, the smelter is located close to Puget Sound, where PSAPCA has no meters. And in El Paso, the smelter is able to "aim" its emissions into Mexico much of the time, where no air pollution agency maintains sensors. One State official, who requested that he not be identified, told us that "the only closed-loop system" he knew about was that " a hell of a lot of copper is smelted there when the wind blew towards Mexico.[19]

In short, what the Tacoma and El Paso examples appear to show is the weaknesses in an SCS, rather than its strengths. Both smelters appear to have used their systems merely to learn how to avoid preventing excessive concentrations where they could be detected, rather than how to assure protecting persons from harm. It seems fair to assume that similar learning will occur elsewhere if SCS is widely adopted.

These examples point up the general weakness in SCS that it is open to manipulation in so many ways that it cannot be counted on to protect the public. Clearly, the number of "violations" depends in the first instance on the number and placement of sensors, which is in turn dependent on the financial resources of the control agency. Placement will certainly be the subject of negotiation between source and agency, and this will surely produce anomalies. The number of violations also depends on the time intervals of the standards. Washington State regulations, for example, provide a standard for a 5 minute interval, but the Tacoma smelter now operates under a blanket variance from this, apparently because it would have produced too many violations. By contrasts, the National Primary Standards' short test interval is one day, assuring a maximum number of violations of 365 in a year. (The National Secondary Sulfur Oxides Standard is for a three hour interval, but it is generally conceded that it is set at such a high concentration that its regulatory effect is nil.[20])

In sum, it would appear that virtually any figures on the reliability of SCS for assuring attainment of National Standards at all points affected by a source are bound to be little more than artifacts of the Standard itself and the location and number of sensors. Even more important, it would appear that the improved compliance that allegedly comes with experience is in fact little more than increased sophistication at finding the weaknesses in the monitoring systems surrounding the plant.

C. *SCS Is Not an Enforceable Method for Meeting the National Standards.*—Compliance with SCS is inherently difficult to enforce, because the degree of compliance depends on hundreds or thousands of low visibility actions each year by the plant operator, any one of which can produce a violation of National Standards. By contrast, an enforcement agency finds it relatively easy to enforce a low sulfur fuel requirement, or requirement to install flue gas cleaning equipment, both of which require essentially one or a few very visible actions on the part of the source owner. If a State agency takes seriously the enforcement of an SCS, it will assure jobs for an entire enforcement apparatus on a permanent basis. There will have to be enforcement attorneys to present each violation to a judicial-type administrative body, and such a body to hear each case. Where such bodies already exist, SCS would guarantee imposing immense new responsibilities on them, which most are not now prepared to handle. Where a decision of an administrative agency is contested, there will be appeals to State judicial systems, with attendant expense and strain on the judicial system. Though the proposed requirement that sources forgo the defense that they are not responsible for violations within a given zone (proposed App. P, § 3.2 (d) (1) will help, EPA should not fool itself into believing that meter readings showing violations will not be contested vigorously. PSAPCAs experience with the Tacoma smelter proves this point forcefully.

There will also be a continual temptation on the part of the State agency to compromise the real reliability of the system in assuring compliance with Na-

---

[19] This statement is confirmed in the "Report of Investigation at American Smelting and Refining Company, El Paso, Texas," Texas APCS, Feb. 2–4, 1971, referenced in the Federal Register notice to this proposed rulemaking, 38 Fed. Reg. 25700, Sept. 14, 1973. The report states, (p. 7) :

"There is not curtailment everyday. When the wind is from the Northeast, regardless of the weather conditions, the plant does not curtail because the plume goes into Mexico."

[20] See Vaughn, Dennis J. and Edward J. Stanek II. "Sulfur Dioxide Standards: Primary More Restrictive Than Secondary?", Journal of the Air Pollution Control Association, December 1973, pp. 1039–1041; and Comments on Proposed Revision of Environmental Protection Agency Regulations on Sulfur Oxides Secondary Standards, submitted by Louis Slesin, Dept. of Urban Studies and Planning, MIT, July 11, 1973.

tional Standards rather than "waste" the agency's resources fighting "minor" infractions.

More likely, for the reasons cited above at 7. State agencies will simply not have the manpower and competence to police the sophisticated SCS. Most State agencies do not have the budgets to support the enforcement apparatus necessary to assure compliance. For example, NRDC's investigation of the Tacoma and El Paso smelters mentioned in the EPA proposal repeatedly unearthed mistakes and uncertainties as the number of violations recorded by the agency. The El Paso agency reported violations three times a week from the ASARCO plant yet the State agency could not confirm these figures when NRDC inquired. In November the New Mexico State agency sent NRDC computer printouts of monitor readings indicating numerous violations caused by the same plant, only to inform us this month that these figures were wholly inaccurate because the "technician had mistakenly been doubling the readings." The PSAPCA presented NRDC with three different and inconsistent inventories of violations from the Tacoma smelter for the same period, and confessed to be mystified at the basis of the figures presented by EPA in the preamble to the proposed rulemaking. Kentucky State officials told NRDC that they do not monitor the TVA Paradise plant cited in the EPA preamble at all.

The proposed regulations do not even provide an enforceable means of assuring ultimate compliance with emission limitations through continuous controls. The proposed regulations' requirement of a "formal review" at suggested intervals of 5 years (proposed App. P. § 3.2(g)), and of a "description" of the source's contemplated program of research on continuous means of control (proposed App. P. § 3.2(b)(5)) would provide no means for a State agency to force a source even to undertake a particular line of research, let alone install any specific equipment.

D. *The Use of SCS Cannot be Limited to a Small Number of "Isolated Sources".*—In proposing to authorize the use of SCS, the Agency makes a good deal of its intent to confine the use of SCS to "a limited number of sources" "under carefully controlled conditions." Proposed App. P. Introduction. Through this intent is laudable, NRDC doubts that SCS can be confined. Once the Agency has certified that such systems are legal, reliable, and enforceable, it has placed itself on the slippery slope, with no clear way of drawing a line between a source where SCS is acceptable and where it is not. Given the heavy financial incentive for sources to seek adoption of SCS, it can be expected that sources will seek State and Federal approval for more and more dubious applications of SCS, each relying on a previously granted SCS permit granted to a source only slightly less dubious than itself. Having abandoned the high ground of prohibiting SCS altogether, EPA will inevitably be forced through court action or the threat of it, to capitulate to such demand.

The present proposal is itself a vivid illustration of this danger. When EPA first expressed its objection of SCS on grounds of reliability and enforceability rather than the clear principle of illegality, it virtually invited source owners to produce data designed to allay the Agency's concern. This data has not been produced, and had the predictable effect, even though, as we pointed out previously, pages 13–19, it is riddled with assumptions and defects that vitiate the conclusions drawn from it. Nonetheless, given the immense industry stake in obtaining approval for SCS, and the political divisions within EPA itself, this data has been used as an excuse for the Agency to reverse its better judgment. In the much less visible circumstances of individual applications to use SCS, it can be expected that these forces will operate with even more effect.

E. *The Proposed Regulations Would Allow the Use of SCS in Heavily Populated Areas.*—The proposal is written to contain the use of SCS to what it calls "isolated sources" of pollution. This isolation is defined in terms of other air pollution sources, rather than people, however. Proposed App. P. § 1.0. As as result, nothing prevents the application of SCS to sources such as the Tacoma and El Paso smelters, located within plume range of highly concentrated populations. In our view it is unconscionable for the Agency to adopt a policy of continued atmospheric loading in any such area. Redefining the meaning of "isolated" to prevent this outcome, while it would not in our view make the regulation any more acceptable under the statute, would at least provide some assurance that the public would not, in large numbers, be exposed to continued high levels of sulfates and other toxic materials.

Subject : Definition of Significant Risk.
From : J. F. Finklea, M.D., Director, NERC–RTP.
To : Bernard J. Steigerwald.

Attached is a draft of the requested document defining significant risk to health. The delay in preparation of this draft was caused by our need to do additional work on the acid-sulfate aerosol problem before writing this paper.

Levels of Air Pollutants Associated With Adverse Health Effects and With Significant Risks to Health

(By J. F. Finklea, D. I. Hammer, and G. I. Love)

Estimates of pollutant levels associated with adverse health effects can provide a rational point of departure from which to assess the impact of ambient air quality deterioration. The soundest of such estimates are likely to be ascertained from the current U.S. Primary Air Quality Standards. The Clean Air Act requires that primary air quality standards be set to fully protect the public health and that these standards contain an adequate margin of safety. Thus the law assumes there exists a "no known effects" threshold for each pollutant and for every adverse health effect. Moreover, the Clean Air Act requires that the primary standards be set to fully protect both specifically susceptible subgroups and health members of the population. One can define significant risk in many ways, the most prudent definition would be any adverse health effect, in other words, the present standards without any safety margin. Another more troublesome but undeniably defensible definition would be the threshold concentration at which there is a demonstrable increase in mortality.

Adverse health effects include both the aggravation of preexisting diseases and increased frequency of health disorders. In addition, good preventive medicine would dictate that evidence for an increased risk of future disease is an adverse health effect. Discussion of what constitutes an adverse effect may become quite vigorous at times. Most reasonable men would agree that mortality (death) and morbidity (illness) constitute adverse effects. However, pollutant exposures are usually not the sole cause of death or the sole cause of any single disease or group of disorders. Furthermore, with few exceptions unique disorders do not follow exposure to the pollutants for which we have established primary ambient air quality standards. There is even more room for honest disagreement when one tries to ascertain which changes in body function indicate a risk for clinical disease and which are either simply adaptive or of uncertain significance.

Especially susceptible population segments include persons with pre-existing diseases which may be aggravated by exposure to elevated levels of pollutants in the ambient air. Some quantitative information is available on the aggravating effects of air pollutants on asthma, chronic obstructive lung disease and chronic heart disease. Asthmatics constitute two to five percent of the general population; three to five percent of the adult population report persistent chronic respiratory disease symptoms; and seven percent of the general population report heart disease severe enough to limit their activity. The distribution of these conditions by age, sex, ethnic group, social status, and place of residence is better defined by other reports. One could legitimately be concerned about the aggravating effects of air pollutants on a number of other susceptible population segments; persons with hemolytic neoplasms, premature infants and patients with multiple handicaps. Little quantitative information exists about the aggravating effects of pollutants on these individuals.

In addition to the aggravation of symptoms in persons who are already ill, air pollutants may also increase the risk in the general population for the development of certain disorders. Many if not all of the general population may experience irritation symptoms involving the eyes or respiratory tract during episodic air pollution exposures. Similarly, even healthy members of the general population may experience impaired mental activity or decreased physical performance after sufficiently high pollution exposures. The general population, especially families with young children, is almost universally susceptible to common acute respiratory illnesses including colds, sore throats, bronchitis and pneumonia. Air pollutants can increase either the frequency or severity of these disorders.

Personal air pollution with cigarette smoke, occupational exposures to irritating dusts and fumes and possibly familial factors increase the risk of developing chronic obstructive lung disease and respiratory cancers in large segments of our population. Ambient air pollutants also can contribute to the development of these disorders. A few animal studies indicate that air pollutants may also accelerate atherosclerosis and coronary artery disease. These conditions affect most of our adult population even though they may be clinically silent. There is legitimate concern but few reliable studies to indicate that air pollutants may cause embryotoxicity, fetotoxicity, teratogenesis and mutagenesis. It is difficult to define which segment of the unborn population might be most at risk. In fact

these events are poorly recorded and the relevant existing data are not readily accessible.

Safety margins contained in the present primary air quality standards may be estimated by comparing the present standards to the best judgement estimate of the effects threshold for each pollutant. As previously mentioned, one method of defining significant risk is to accept the best judgement estimates for adverse health effects and sacrifice the safety margins summarized by pollutant in Table 1.

Sulfur dioxide, acid sulfate aerosols and total suspended particulates are considered together because the assessment of their effects is based largely upon community studies in which it is difficult if not impossible to disentangle the effects attributable to one pollutant from those attributable to another pollutant or to a mixture of the pollutants. Studies which were initially thought to have considered isolated exposures to urban particulates really involved exposures containing substantial amounts of acid aerosols or particulate sulfates. With regard to the short-term standards, aggravation of preexisting cardiorespiratory symptoms in the elderly, aggravation of asthma and irritation of the respiratory tract seem to occur a level lower than those permitted by the relevant primary ambient air quality standards.

The effects noted at sulfur dioxide and suspended particulate levels lower than the standard are in our opinion most likely due to elevated levels of finely divided suspended particulate acid sulfate aerosols which arise from reactions involving sulfur dioxide, particulates and other pollutants in the atmosphere. Our best judgement estimates for threshold levels of suspended sulfates in ambient air are further detailed in Table 2 along with illustrative health risks that might accompany exposures substantially above each threshold. Suspended sulfates are the best available though far from perfect proxy for acid sulfate aerosol exposures.

Three points are worth emphasizing: first, the estimates for sulfur oxides and particulates are based on community studies; second, the estimated effects thresholds for particulate sulfates are an order of magnitude lower than those for sulfur dioxide or total suspended particulates; and third, the safety margins present in the ambient air quality standards for sulfur oxides and particulates are quite modest being in all cases less than the standard itself. For the long-term standards, one must realize that average estimates do not always adequately consider the effects of annual repeated short-term peak exposures. For example the lowest best judgment estimate for an effects threshold for increased prevalence of chronic respiratory disease symptoms is based upon annual average estimates in a smelter community where repeated short-term peak exposures occurred. The lowest annual average exposures involving less marked fluctuations in short-term levels were considerably higher. The safety margins contained in the annual average standards seem only slightly more adequate than was the case with the short-term standards.

Nitrogen oxide exposures are now controlled on the basis of an ambient air quality standard for nitrogen dioxide. Investigators have expressed concern that exposures to organic nitrates, nitrous acid, nitric acid and suspended particulate nitrates have not been adequately considered. In fact, preliminary epidemiologic data have associated the aggravation of asthma with suspended nitrate levels of about 4–6 $\mu g/m^3$ per 24 hours. There is no short term Federal standard for nitrogen dioxide. The existing long-term standard, seems adequate with a margin of safety somewhat greater than those for sulfur oxides and suspended particulates.

Adverse health effects attributable to *carbon monoxide* differ markedly from those associated with the other ambient air quality pollutants. Decreased oxygen transport and interferences with tissue respiratory mechanisms result in a different array of worrisome effects. Clinical studies of carbon monoxide effects predominate. A limited number of experimental animal studies and population studies involving certain of the adverse effects associated with cigarette smoking may also be relevant. The existing 8 hour and 1 hour standards permit a 130% and 82% margin of safety, respectively at sea level. At higher altitudes ($\geq$1500 meters). These safety margins would both be less than 100%.

Adverse health effects associated with *photochemical oxidant exposures* involve a different set of considerations. Photochemical oxidants include compounds other than ozone which are quite irritating to the eyes. Ozone itself is thought to be radiomimetic thus focusing concern on accelerating aging, increased risk for malignancies, mutagenesis, embrytoxicity and teratogenesis. Information on sus-

ceptibility to acute respiratory disease, risk for mutations and impaired fetal survival is limited to animal studies. Photochemical oxidants are of interest for another reason, many of the studies were conducted some years ago before research methodologies were refined. These pioneer studies may not have adequately addressed the problem. In estimating effects thresholds, there is little uncertainty regarding irritation phenomenon and a great deal of uncertainty when considering other adverse effects. No estimates are possible for two of the more severe health effects—accelerated aging and malignancies. It is also worth emphasizing that assessment of potentially grave health effects depends on a small number of largely unconfirmed studies.

Several factors must be kept in mind when considering the calculation of safety margins presented in Table 1. First, safety margins are not as precise as the percentage estimates would at first seem to indicate because of the underlying uncertainties in measurement methods and in estimates of effects thresholds. Second, consistency in safety margins was not a major consideration in setting primary ambient air quality standards. Third, the apparent margins of safety have decreased as more complete health studies on susceptible populations have become available. Fourth, the safety margins contained in the primary ambient air quality standards are much smaller than those maintained for the control of ionizing radiation and most environmental chemicals. In no case does the safety margin for a pollutant clearly exceed the standards for that pollutant. Even the most extreme best judgment safety margin is less than ten times the relevant standard. Finally, there is little or no safety margin associated with the sulfur dioxide-suspended particulate-fine particulate sulfate combination. In general, therefore, little or no deterioration of air quality can occur without a subsequent increase in adverse health effects.

Another definition of significant risk might be the earliest level at which increases in daily mortality are observed. This definition can be reasonably applied only to sulfur dioxide, acid sulfate aerosols measured as suspended sulfate and total suspended particulate. Such values are summarized in Table 3. It is our best judgment that there is a significant risk for increased mortality over an urban region for 24 hours if sulfur dioxide levels exceed 400 ug/m^3, if suspended sulfates exceed 25 ug/m^3 or if total suspended particulates exceed 300 ug/m^3. Exposures of this magnitude or larger to small areas where people do not spend an entire day or where susceptible infirmed or apparently healthy elderly persons do not reside might still be deemed permissable. For example, acceptable occupational exposures involving limited numbers of health prescreened adults exposed for 40 hours or less each week might be allowed to exceed significant risk levels for the general population.

Another approach to the significant risk problem would be to recognize the lowest achievable ambient pollution levels consistent with competing broad national goals, calculate the probable resulting unavoidable health damages and endeavor to reduce these health damages as soon as possible. Finally, one could attempt a formal cost-benefit analysis but it is likely that this approach would be most controversial at the present time because health damage functions are not yet precisely defined.

TABLE 1.—EFFECTS THRESHOLD, BEST CHOICE SIGNIFICANT RISK LEVELS AND SAFETY MARGINS CONTAINED IN PRIMARY AMBIENT AIR QUALITY STANDARDS

Pollutant	Lowest best judgment estimate for effects threshold and best choice for significant risk levels		Adverse health effect	U.S. primary air quality standard	Margin of safety* (percent)
	Concentration	Average time			
Sulfur dioxide	300 to 400 ug/m³	24 hr	Mortality increase	365 ug/m³	None
	91 ug/m³	Annual	Increased frequency of acute respiratory disease	80 ug/m³	14
Total suspended particulates	250 to 300 ug/m³	24 hr	Mortality increase	260 ug/m³	None
	70 to 250 ug/m³	do	Aggravation of respiratory disease	260 ug/m³	None
	100 ug/m³	Annual	Increased frequency of chronic bronchitis	75 ug/m³	33
Suspended sulfates	10 ug/m³	24 hr	Increased infections in asthmatics	None	None
	15 ug/m³	Annual	Increased lower respiratory infections in children	None	None
Nitrogen dioxide	140 ug/m³	do	Increased severity of acute respiratory illness in children	100 ug/m³	40
Carbon monoxide	23 ug/m³	8 hr	Diminished exercise tolerance in heart patients	10 ug/m³	**130
	73 ug/m³	1 hr	Diminished exercise tolerance in heart patients	40 ug/m³	**82
Photochemical oxidants	200 ug/m³	do	Increased susceptibility to infection	160 ug/m³	25

*Safety margin equals effects threshold minus standard divided by standard X 100.

**Safety margins based upon carboxyhemoglobin levels would be 100 percent for the 8 hr standard and 67 percent for the 1 hr standard.

TABLE 2.—THRESHOLD AND ILLUSTRATIVE HEALTH RISKS FOR SELECTED AMBIENT LEVELS OF SUSPENDED SULFATES

Adverse health effect	Threshold concentration and exposure duration	Illustrative health risk		
		Definition	Level	Sulfur dioxide equivalent
Increase in daily mortality	25 $\mu g/m^3$ for 24 hr or longer	2½ percent increase in daily mortality	38 $\mu g/m^3$ for 24 hr	600 $\mu g/m^3$ for 24 hr.
Aggravation of heart and lung disease in the elderly	9 $\mu g/m^3$ for 24 hr or longer	50-percent increase in symptom aggravation	48 $\mu g/m^3$ for 24 hr	750 $\mu g/m^3$ for 24 hr.
Aggravation of asthma	6 to 10 $\mu g/m^3$ for 24 hr	75-percent increase in frequency of asthma attacks.	30 $\mu g/m^3$ for 24 hr	450 $\mu g/m^3$ for 24 hr.
Excess acute lower respiratory disease in children	13 $\mu g/m^3$ for several yr	50-percent increase in frequency	20 $\mu g/m^3$ annual average	100 to 250 $\mu g/m^3$ annual average.
Excess risk for chronic bronchitis	10 to 15 $\mu g/m^3$ for up to 10 yr	50-percent increase in risk	15 to 20 $\mu g/m^3$ annual average	100 to 250 $\mu g/m^3$ annual average.

TABLE 3.—BEST JUDGMENT ESTIMATES FOR "SIGNIFICANT RISK" LEVELS FOR EXPOSURES TO SULFUR OXIDES AND SUSPENDED PARTICULATES USING THE MORTALITY CRITERIA

Adverse effect	24-hr exposure level (ug/m³)		
	Sulfur dioxide	Suspended sulfate	Total suspended particulates
Mortality threshold	400	25	300

Mr. Randolph. Mr. President, the conference report on the Energy Supply and Environmental Coordination Act of 1974 is the end product of more than 6 months' work in the Senate. This legislation is concerned with matters that were earlier addressed in the Emergency Energy Act, S. 2589, which was unwisely vetoed by the President. It contains provisions to alleviate conditions like those imposed on this country by the severe energy shortage which struck last winter and which could affect us again.

The conference report before the Senate is not a hastily conceived measure. Nor is it one written in a panic induced by sharply reduced foreign petroleum supplies. The energy crisis, I must emphasize, is not a situation that developed suddenly last autumn. It had been developed for many years as our appetite for oil grew faster than domestic production. The Arab oil embargo merely precipitated a serious shortage earlier than expected.

The Energy Supply and Environmental Coordination Act is our response to a new set of energy and environment realities with which we must live in the years ahead. The production of energy in amounts adequate for our national needs is an attainable goal compatible with our commitment to environmental protection. The writing of this legislation took place with that conviction in mind.

The provisions of this measure were determined following a series of productive conferences with conferees from the House of Representatives. I am particularly appreciative of the contributions of my able colleague from West Virginia, Representative Harley A. Staggers, the distinguished chairman of the House Commerce Committee. His awareness of the issues and his deep concern for the problems we faced were evident in his approach to the task of the conference. He exhibited leadership that enabled us to bring our deliberations to a successful conclusion with realistic and workable legislation.

Major contributions to our efforts were made by Senator Edmund S. Muskie, the knowledgeable chairman of our Subcommittee on Environmental Pollution, and by the diligent Senator from Tennessee (Mr. Baker), the ranking minority member of the committee. I am likewise indebted, for their helpful participation and contributions, to Senator Montoya and Senator Stafford, the other conferees from the Public Works Committee.

The Senate was also represented in the conference by members of the Committee on Interior and Insular Affairs, including the distinguished chairman of that committee, Senator Jackson, and Senators Bible and Fannin.

Mr. President, a major feature of this legislation are provisions facilitating many electric powerplants to switch to coal from other fuels. Coal is our most abundant domestic energy resource, one for

which we need not rely on foreign countries. If this Nation is to be successful in approaching energy self-sufficient in the years ahead, we must increase your utilization of America's most abundant energy resource—coal.

This legislation serves as a clear signal that a national commitment to a greater use of coal is an essential part of our natural energy production system. Furthermore, it reflects congressional belief that the use of coal is not incompatible with environmental quality enhancement. Under the provisions of this measure, according to the EPA, some 23 electric generating plants now fueled with oil or natural gas should be able to convert to coal. These plants involve approximately 40 generating units and produce a substantial amount of power.

It is important to stress that conversion to coal is not permitted in any area where such conversion would endanger public health or violate primary air quality standards. Nevertheless, according to preliminary data furnished by the EPA, units, should be able to immediately convert to coal consistent with the requirements set forth in this conference agreement. An additional 5 powerplants, involving 9 units, before conversion will require additional particulate controls and some 7 more powerplants, or 11 units, will require either low sulfur coal or stack gas scrubbers. **[Sec. 119(c) ESECA.]**

In recognition of the present public debate on the availability of sulfur oxide control, encouragement is provided under the conference agreement to the preferential use of low sulfur coal, at this time, rather than stack gas scrubbers.

The conversion of these 23 powerplants would require approximately 23 million tons of coal per year, or a 4-percent increase in our national demand for coal.

The authority granted by this legislation for powerplants to convert to coal carries with it a challenge. The coal industry, the utility industry and the suppliers of pollution control equipment all must work together so that coal can achieve its potential in meeting the energy needs of our country and the American people. The passage of this legislation also will be a signal of our confidence in coal as a reliable source of energy in the future and our commitment to energy self-sufficiency. Such a signal should encourage the flow of capital resources to the mining industry and thus enable it to make the substantial investments necessary for assured, long-termed coal supplies.

Mr. President, adoption of this conference report by the Senate and its signing by the President will not relieve us, however, of our responsibilities in the energy field. Despite some relief since the lifting of the Arab oil embargo, the energy crisis is far from being resolved.

Government must return without delay to the formulation and implementation of a national fuels and energy policy aimed at freeing this Nation from excessive reliance on foreign energy supplies. It has often been pointed out that our country, with 7 percent of the world's population, consumes more than one-third of the world's energy. This fact makes it essential that energy occupy a continuing and prominent position in our planning for the future.

Other energy legislation will be brought to the Senate. Today we have an opportunity to take an important step forward in meeting immediately our country's energy requirements in a realistic manner,

and I urge the Senate to take that step by approving this conference report.

Mr. Baker. Mr. President, I join my colleagues, the able chairmen of the Subcommittee on Environmental Pollution, the Senator from Maine (Mr. Muskie), and of the full committee, the Senator from West Virginia (Mr. Randolph), in congratulating the conferees on completing action on this valuable and necessary legislation.

The Senate version of H.R. 14368 made a number of improvements over the House version of the bill, and I referred to those when the bill was considered on the floor of the Senate. I am pleased to report that the conference version before us is still better in a number of respects.

I believe that the procedures and criteria have been much improved with regard to authority that the Federal Energy Administrator will be given to order powerplants and other major fuel burning sources to convert to coal.

The Federal Energy Administrator will make a number of determinations regarding the practicability of conversions and with regard to whether those plants have the capability and necessary plant equipment to convert. The Environmental Protection Agency, however, will make the vital determinations as to when and under what conditions such conversions can take place compatibly with Clean Air Act requirements. This division of responsibility, which was a feature of the Senate version of the bill, has been improved by dovetailing the administrative actions required of both agencies. For example, when an FEA order to convert to coal is proposed, EPA must indicate how soon and under what conditions the Clean Air Act requirements can be met. Only after such EPA notification can the coal conversion order take effect. **[Sec. 2(b)(1)(B) ESECA.]** This assures that we can have the maximum practicable conversion to coal over the years ahead while assuring that requirements for clean and healthful air are achieved.

I have faith that the momentum toward cleaner air which was begun with the 1970 amendments to the act will continue unabated. A principal reason for this faith is that—as the conference report clearly provides—before a long-term order by FEA to convert to coal takes effect and before the corresponding long term compliance date extension is granted by EPA—that is, one which extends beyond June 30, 1975, and which permits a utility to burn coal until 1979—EPA must approve a compliance plan, which includes the means for and schedule of compliance, that assures both that interim requirements can be met and that full compliance with more stringent requirements will be attained by 1979. **[Sec. 119(c) CAA.]**

This means that, for a compliance date extension beyond June 30, 1975, a stationary source which converts to coal must comply with primary standard conditions—low sulfur fuel, intermittent controls, continuous emission control devices, or a combination of these—and regional limitations, and, as soon as practicable but not later than 1979, must, pursuant to the plan it submits and has approved before the extension is granted, obtain either a long-term supply of complying coal or, if such coal is not available, another source of coal and a contract or other enforceable obligation for a continuous emission control device. In either event, the source must meet, by the end of its

compliance date extension, the most stringent degree of emission control that it would have had to meet by 1975 or 1977 under the State implementation plan.

These requirements should not delay coal conversions since EPA is required to develop the regulations governing plans for means for and schedules of compliance within 90 days after enactment and must make the requisite findings precedent to granting a compliance date extension within 60 days after it is proposed. **[Sec. 119(c)(2) (A) and (B) CAA.]**

The requirement in the conference report and in the statement of managers for a long-term supply of low-sulfur coal as the preferred method of compliance with the Clean Air Act requirements is one which I sponsored and which I support fully. This does not mean that the conferees intend to push utilities toward the use of low sulfur western coal. On the contrary, the long-term contracts are intended to provide a period in which high Btu, low sulfur eastern coal can be developed by the opening of new deep mines. **[Sec. 119(c)(2)(B)(i) CAA.]**

I am concerned about the conference report provision that powerplants unable to obtain sufficient low sulfur coal or coal alternatives to meet emission limitations applicable under the law must undertake to obtain continuous emission reduction systems which are capable of meeting these limitations by 1979 while burning high sulfur coal. **[Sec. 119(c)(2)(B)(ii) CAA.]** Although the term "continuous emission reduction system" is broad enough to encompass a broad range of technology, I foresee the possibility that certain specific solutions to the problem of sulfur oxide emissions might receive undue emphasis. For this reason, I want to emphasize that the term is meant to indicate any technology involving advanced techniques of combustion of coal—such as the fluidized-bed process—or after-treatment of combustion gases—for example flue gas desulfurization, better known as scrubber technology.

In my estimation, processes which attempt to after-treat combustion gases will not provide the ultimate solution to the sulfur problem. Such processes are of necessity ancillary to the power generation function and must therefore result in compounding power generation problems.

The limestone scrubbing technology, for instance, requires the reheating of cooled stack gases. This and other aspects of the technology entail a considerable cost in energy. Most current scrubbers experience problems with clogging and scaling, and compound environmental problems because they require large amounts of surfaced-mined materials and because they generate large quantities of limestone slurry which must be recovered, stored by ponding or otherwise disposed of. Eventually these problems with scrubbers may be resolved through technological advances. I recognize that only with a sufficient number of demonstrations by industry can this or any other technology be developed. We will make a serious mistake, however, if we dedicate technical research capacities only to the resolution of these problems to the exclusion of other technologies which involve fewer secondary environmental and energy problems than scrubbers. I believe that, in time, liquid or gaseous fuels derived from coal, solvent-refined coal and, fluidized bed combustion will prove to be better alternatives if the

coal and utility industries make large scale efforts to bring these technologies to fruition. Meanwhile, I trust that the Administrator of EPA will not proceed to order all powerplants converted to scrubbers before they are proved reliable, efficient, and cost effective.

Mr. President, the provisions of the conference report with respect to coal conversion and clean air requirements for stationary sources represent a remarkable conciliation of what have appeared to be incompatible goals, that is, further use of our plentiful domestic fuel reserves and continued progress toward clean air. In these objectives and in its specific provisions, I believe that the bill may well serve as a model for other changes in the Clean Air Act that will be required in the months ahead.

I am reassured by the fact that we are at last dealing in this conference report with the critical need of the automobile industry for some temporary extensions in the very stringent requirements which were laid down in the 1970 amendments. **[Sec. 202 CAA.]** This will permit the auto makers to achieve maximum fuel economy, to explore alternative types of engines, and to make reliable progress toward taking the automobile out of the air pollution problem.

I support fully the action the committee has taken today to reaffirm the intention of the National Environmental Policy Act that such environmental regulatory actions as those under the Clean Air Act are not among those for which environmental impact statements are needed. **[Sec. 7(c) ESECA.]** NEPA was intended to inject environmental consciousness into agencies with construction, development and other such responsibilities. It would be redundant and in many cases counterproductive if applied to EPA's environmental regulatory activities.

The extension of the authorizations for appropriations for the Clean Air Act contained in this legislation means that we will be able to consider other changes in the act that may be required without the pressing deadlines of funding expiration facing us. **[Secs. 104(c), 212(i) and 316 CAA.]**

In conclusion, Mr. President, I wish to congratulate my colleagues, the distinguished chairman of the Public Works Committee (Mr. Randolph), the most able and dedicated subcommittee chairman (Mr. Muskie), the knowledgeable ranking minority member of the subcommittee (Mr. Buckley), and my able minority colleague on the conference committee (Mr. Stafford). All of these gentlemen have contributed immeasurably to developing legislation which is much improved over the previous versions which were considered earlier in this session. I urge prompt and unanimous support of this legislation by my Senate colleagues and prompt signature of the bill by the President.

The Presiding Officer. The question is on agreeing to the conference report.

The conference report was agreed to.

CHAPTER 3

H.R. 14368, Together With Debate and Report

63-518 O—76—vol. 1——14

93D CONGRESS
2D SESSION

H. R. 14368

IN THE HOUSE OF REPRESENTATIVES

APRIL 24, 1974

Mr. HASTINGS introduced the following bill; which was referred to the Committee on Interstate and Foreign Commerce

A BILL

To provide for means of dealing with energy shortages by requiring reports with respect to energy resources, by providing for temporary suspension of certain air pollution requirements, by providing for coal conversion, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE; PURPOSE.

(a) This Act may be cited as the "Energy Supply and Environmental Coordination Act of 1974".

(b) The purpose of this Act is to provide for a means to assist in meeting the essential needs of the United States for fuels, in a manner which is consistent, to the fullest extent practicable, with existing national commitments to protect and improve the environment, and to provide requirements for reports respecting energy resources.

SEC. 2. SUSPENSION AUTHORITY.

Title I of the Clean Air Act is amended by adding at the end thereof the following new section:

"ENERGY EMERGENCY AUTHORITY

"SEC. 119. (a) (1) (A) The Administrator may, for any period beginning on or after the date of enactment of this section and ending on or before the earlier of June 30, 1975, or one year after the date of enactment of this section, temporarily suspend any stationary source fuel or emission limitation as it applies to any person, if the Administrator finds that such person will be unable to comply with such limitation during such period solely because of unavailability of types or amounts of fuels. Any suspension under this paragraph and any interim requirement on which such suspension is conditioned under paragraph (3) shall be exempted from any procedural requirements set forth in

this Act or in any other provision of local, State, or Federal law; except as provided in subparagraph (B).

"(B) The Administrator shall give notice to the public of a suspension and afford the public an opportunity for written and oral presentation of views prior to granting such suspension unless otherwise provided by the Administrator for good cause found and published in the Federal Register. In any case, before granting such a suspension he shall give actual notice to the Governor of the State, and to the chief executive officer of the local government entity in which the affected source or sources are located. The granting or denial of such suspension and the imposition of an interim requirement shall be subject to judicial review only on the grounds specified in paragraphs (2) (B) and (2) (C) of section 706 of title 5, United States Code, and shall not be subject to any proceeding under section 304 (a) (2) or 307 (b) and (c) of this Act.

"(2) In issuing any suspension under paragraph (1) the Administrator is authorized to act on his own motion without application by any source or State.

"(3) Any suspension under paragraph (1) shall be conditioned upon compliance with such interim requirements as the Administrator determines are reasonable and

practicable. Such interim requirements shall include, but need not be limited to, (A) a requirement that the source receiving the suspension comply with such reporting requirements as the Administrator determines may be necessary, (B) such measures as the Administrator determines are necessary to avoid an imminent and substantial endangerment to health of persons, and (C) requirements that the suspension shall be inapplicable during any period during which fuels which would enable compliance with the suspended stationary source fuel or emission limitations are in fact reasonably available to that person (as determined by the Administrator). For purposes of clause (C) of this paragraph, availability of natural gas or petroleum products which enable compliance shall not make a suspension inapplicable to a source described in subsection (b) (1) of this section.

"(4) For purposes of this section:

"(A) The term 'stationary source fuel or emission limitation' means any emission limitation, schedule, or timetable for compliance, or other requirement, which is prescribed under this Act (other than section 303, 111(b), or 112) or contained in an applicable implementation plan, and which is designed to limit station-

ary source emissions resulting from combustion of fuels, including a prohibition on, or specification of, the use of any fuel of any type or grade or pollution characteristic thereof.

"(B) The term 'stationary source' has the same meaning as such term has under section 111(a)(3).

"(b)(1) Except as provided in paragraph (2) of this subsection, any fuel-burning stationary source—

"(A) which is prohibited from using petroleum products or natural gas as fuel by reason of an order issued under section 10(a) of the Energy Supply and Environmental Coordination Act of 1974, or

"(B) which (i) the Administrator of the Environmental Protection Agency determines began conversion to the use of coal as fuel during the period beginning on September 15, 1973, and ending on the date of enactment of this section, and (ii) the Federal Energy Administrator determines should use coal after the earlier of June 30, 1975, or one year after the date of enactment of this section, after balancing on a plant-by-plant basis the environmental effects of such conversion against the need to fulfill the purposes of the Energy Supply and Environmental Coordination Act of 1974,

and which converts to the use of coal as fuel, shall not, until January 1, 1979, be prohibited, by reason of the application of any air pollution requirement, from burning coal which is available to such source. For purposes of this paragraph, the term "began conversion" means action by the owner or operator of a source during the period beginning on September 15, 1973, and ending on the date of enactment of this section (such as entering into a contract binding on the operator of the source for obtaining coal, or equipment or facilities to burn coal; expending substantial sums to permit such source to burn coal; or applying for an air pollution variance to enable the source to burn coal) which the Administrator finds evidences a decision (made prior to such date of enactment) to convert to burning coal as a result of the unavailability of an adequate supply of fuels required for compliance with the applicable implementation plan, and a good faith effort to expeditiously carry out such decision.

"(2) (A) Paragraph (1) of this subsection shall apply to a source only if the Administrator finds that emissions from the source will not materially contribute to a significant risk to public health and if the source has submitted to the Administrator a plan for compliance for such source which the Administrator has approved, after notice to interested persons and opportunity for presentation of views (includ-

ing oral presentation of views). A plan submitted under the preceding sentence shall be approved only if it provides (i) for compliance by the means specified in subparagraph (B), and in accordance with a schedule which meets the requirements of such subparagraph; and (ii) that such source will comply with requirements which the Administrator shall prescribe to assure that emissions from such source will not materially contribute to a significant risk to public health. The Administrator shall approve or disapprove any such plan within 60 days after such plan is submitted.

"(B) The Administrator shall prescribe regulations requiring that any source to which this subsection applies submit and obtain approval of its means for and schedule of compliance. Such regulations shall include requirements that such schedules shall include dates by which such sources must—

"(i) enter into contracts (or other enforceable obligations) which have received prior approval of the Administrator as being adequate to effectuate the purposes of this section and which provide for obtaining a long-term supply of coal which enables such source to achieve the emission reduction required by subparagraph (C), or

"(ii) if coal which enables such source to achieve

such emission reduction is not available to such source, (I) enter into contracts (or other enforceable obligations) which have received prior approval of the Administrator as being adequate to effectuate the purposes of this section and which provide for obtaining a long-term supply of other coal or coal byproducts, and (II) take steps to obtain continuous emission reduction systems necessary to permit such source to burn such coal or coal byproducts and to achieve the degree of emission reduction required by subparagraph (C) (which steps and systems must have received prior approval of the Administrator as being adequate to effectuate the purposes of this section).

"(C) Regulations under subparagraph (B) shall require that the source achieve the most stringent degree of emission reduction that such source would have been required to achieve under the applicable implementation plan which was in effect on the date of enactment of this section (or if no applicable implementation plan was in effect on such date, under the first applicable implementation plan which takes effect after such date). Such degree of emission reduction shall be achieved as soon as practicable, but not later than January 1, 1979; except that, in the case a source for which a continuous emission reduction system is required for sulful-related emissions, reduction of such emissions shall be

achieved on a date designated by the Administrator (but not later than January 1, 1979). Such regulations shall also include such interim requirements as the Administrator determines are reasonable and practicable including requirements described in clauses (A) and (B) of subsection (a) (3).

"(D) The Administrator (after notice to interested persons and opportunity for presentation of views, including oral presentations of views, to the extent practicable) (i) may, prior to the earlier of June 30, 1975, or one year after the date of enactment of this section, and shall thereafter prohibit the use of coal by a source to which paragraph (1) applies if he determines that the use of coal by such source is likely to materially contribute to a significant risk to public health; and (ii) may require such source to use coal of any particular type, grade, or pollution characteristic if such coal is available to such source. Nothing in this subsection (b) shall prohibit a State or local agency from taking action which the Administrator is authorized to take under this subparagraph.

"(3) For purposes of this subsection, the term 'air pollution requirement' means any emission limitation, schedule, or timetable for compliance, or other requirement, which is prescribed under any Federal, State, or local law or regula-

tion, including this Act (except for any requirement prescribed under this subsection or section 303), and which is designed to limit stationary source emissions resulting from combustion of fuels (including a restriction on the use or content of fuels). A conversion to coal to which this subsection applies shall not be deemed to be a modification for purposes of section 111(a) (2) and (4) of this Act.

"(4) A source to which this subsection applies may, upon the expiration of the exemption under paragraph (1), obtain a one-year postponement of the application of any requirement of an applicable implementation plan under the conditions and in the manner provided in section 110(f).

"(c) The Administrator may by rule establish priorities under which manufacturers of continuous emission reduction systems shall provide such systems to users thereof, if he finds that priorities must be imposed in order to assure that such systems are first provided to users in air quality control regions with the most severe air pollution. No rule under this subsection may impair the obligation of any contract entered into before enactment of this section. No State or political subdivision may require any person to use a continuous emission reduction system for which priorities have been established under this subsection except in accordance with such priorities.

"(d) The Administrator shall study, and report to Con-

gress not later than six months after the date of enactment of this section, with respect to—

"(1) the present and projected impact on the program under this Act of fuel shortages and of allocation and end-use allocation programs;

"(2) availability of continuous emission reduction technology (including projections respecting the time, cost, and number of units available) and the effects that continuous emission reduction systems would have on the total environment and on supplies of fuel and electricity;

"(3) the number of sources and locations which must use such technology based on projected fuel availability data;

"(4) priority schedule for implementation of continuous emission reduction technology, based on public health or air quality;

"(5) evaluation of availability of technology to burn municipal solid waste in these sources including time schedules, priorities analysis of unregulated pollutants which will be emitted and balancing of health benefits and detriments from burning solid waste and of economic costs;

"(6) projections of air quality impact of fuel shortages and allocations;

"(7) evaluation of alternative control strategies for the attainment and maintenance of national ambient air quality standards for sulfur oxides within the time frames prescribed in the Act, including associated considerations of cost, time frames, feasibility, and effectiveness of such alternative control strategies as compared to stationary source fuel and emission regulations;

"(8) proposed allocations of continuous emission reduction technology for nonsolid waste producing systems to sources which are least able to handle solid waste byproduct, technologically, economically, and without hazard to public health, safety, and welfare; and

"(9) plans for monitoring or requiring sources to which this section applies to monitor the impact of actions under this section on concentration of sulfur dioxide in the ambient air.

"(e) No State or political subdivision may require any person to whom a suspension has been granted under subsection (a) to use any fuel the unavailability of which is the basis of such person's suspension (except that this preemption shall not apply to requirements identical to Federal interim requirements under subsection (a) (1)).

"(f) (1) It shall be unlawful for any person to whom a suspension has been granted under subsection (a) (1) to

violate any requirement on which the suspension is conditioned pursuant to subsection (a) (3).

"(2) It shall be unlawful for any person to violate any rule under subsection (c).

"(3) It shall be unlawful for the owner or operator of any source to fail to comply with any requirement under subsection (b) or any regulation, plan, or schedule thereunder.

"(4) It shall be unlawful for any person to fail to comply with an interim requirement under subsection (i) (3).

"(g) Beginning January 1, 1975, the Administrator shall publish at no less than one hundred and eighty-day intervals, in the Federal Register the following:

"(1) A concise summary of progress reports which are required to be filed by any person or source owner or operator to which subsection (b) applies. Such progress reports shall report on the status of compliance with all requirements which have been imposed by the Administrator under such subsections.

"(2) Up-to-date findings on the impact of this section upon—

"(A) applicable implementation plans, and

"(B) ambient air quality.

"(h) Nothing in this section shall affect the power of

the Administrator to deal with air pollution presenting an imminent and substantial endangerment to the health of persons under section 303 of this Act.

"(i) (1) In order to reduce the likelihood of early phaseout of existing electric generating facilities during the energy emergency, any electric generating powerplant (A) which, because of the age and condition of the plant, is to be taken out of service permanently no later than January 1, 1980, according to the power supply plan (in existence on January 1, 1974) of the operator of such plant, (B) for which a certification to that effect has been filed by the operator of the plant with the Environmental Protection Agency and the Federal Power Commission, and (C) for which the Commission has determined that the certification has been made in good faith and that the plan to cease operations no later than January 1, 1980, will be carried out as planned in light of existing and prospective power supply requirements, shall be eligible for a single one-year postponement as provided in paragraph (2).

"(2) Prior to the date on which any plant eligible under paragraph (1) is required to comply with any requirement of an applicable implementation plan, such source may apply (with the concurrence of the Governor of the State in which the plant is located) to the Administrator to postpone the applicability of such requirement to such

source for not more than one year. If the Administrator determines, after balancing the risk to public health and welfare which may be associated with a postponement, that compliance with any such requirement is not reasonable in light of the projected useful life of the plant, the availability of rate base increases to pay for such costs, and other appropriate factors, then the Administrator shall grant a postponement of any such requirement.

"(3) The Administrator shall, as a condition of any postponement under paragraph (2), prescribe such interim requirements as are practicable and reasonable in light of the criteria in paragraph (2).

"(j) (1) The Administrator may, after public notice and opportunity for presentation of views in accordance with section 553 of title 5, United States Code, and after consultation with the Federal Energy Administrator, designate persons to whom fuel exchange orders should be issued. The purpose of such designation shall be to avoid or minimize the adverse impact on public health and welfare of any suspension under subsection (a) of this section or conversion to coal to which subsection (b) applies or of any allocation under section 10 of the Energy Supply and Environmental Coordination Act of 1974 or the Emergency Petroleum Allocation Act of 1973.

"(2) The Federal Energy Administrator shall issue ex-

63-518 O - 76 - 15 (Vol. 1)

change orders to such persons as are designated by the Administrator under paragraph (1) requiring the exchange of any fuel subject to allocation under the preceding Acts effective no later than forty-five days after the date of the designation under paragraph (1), unless the Federal Energy Administrator determines, after consultation with the Administrator, that the costs or consumption of fuel, resulting from such exchange order, will be excessive.

"(3) Violation of any exchange order issued under paragraph (2) shall be a prohibited act and shall be subject to enforcement action and sanctions in the same manner and to the same extent as a violation of any requirement of the regulation under section 4 of the Emergency Petroleum Allocation Act of 1973."

SEC. 3. IMPLEMENTATION PLAN REVISIONS.

(a) Section 110(a) of the Clean Air Act is amended in paragraph (3) by inserting "(A)" after "(3)" and by adding at the end thereof the following new subparagraph:

"(B) (1) For any air quality control region in which there has been a conversion to coal under section 119(b), the Administrator shall review the applicable implementation plan and no later than one year after the date of such conversion determine whether such plan must be revised in order to achieve the national primary standard which the plan implements. If the Administrator determines that any such plan

is inadequate, he shall require that a plan revision be submitted by the State within three months after the date of notice to the State of such determination. Any plan revision which is submitted by the State after notice and public hearing shall be approved or disapproved by the Administrator, after public notice and opportunity for public hearing, but no later than three months after the date required for submission of the revised plan. If a plan provision (or portion thereof) is disapproved (or if a State fails to submit a plan revision), the Administrator shall, after public notice and opportunity for a public hearing, promulgate a revised plan (or portion thereof) not later than three months after the date required for approval or disapproval.

"(2) Any requirement for a plan revision under paragraph (1) and any plan requirement promulgated by the Administrator under such paragraph shall include reasonable and practicable measures to minimize the effect on the public health of any conversion to which section 119(b) applies."

(b) Subsection (c) of section 110 of the Clean Air Act (42 U.S.C. 1857 C–5) is amended by inserting "(1)" after "(c)"; by redesignating paragraphs (1), (2), and (3) as subparagraphs (A), (B), and (C), respectively; and by adding the following new paragraph:

"(2) (A) The Administrator shall conduct a study and

shall submit a report to the Committee on Interstate and Foreign Commerce of the United States House of Representatives and the Committee on Public Works of the United States Senate not later than three months after date of enactment of this section, on the necessity of parking surcharge, management of parking supply, and preferential bus/carpool lane regulations as part of the applicable implementation plans required under this section to achieve and maintain national primary ambient air quality standards. The study shall include an assessment of the economic impact of such regulations, consideration of alternative means of reducing total vehicle miles traveled, and an assessment of the impact of such regulations on other Federal and State programs dealing with energy or transportation. In the course of such study, the Administrator shall consult with other Federal officials including, but not limited to, the Secretary of Transportation, the Federal Energy Administrator, and the Chairman of the Council on Environmental Quality.

"(B) No parking surcharge regulation may be required by the Administrator under paragraph (1) of this subsection as a part of an applicable implementation plan. All parking surcharge regulations previously required by the Administrator shall be void upon the date of enactment of this subparagraph. This subparagraph shall not prevent the Administrator from approving parking surcharges if they

are adopted and submitted by a State as part of an applicable implementation plan. The Administrator may not condition approval of any applicable implementation plan submitted by a State on such plan's including a parking surcharge regulation.

"(C) The Administrator is authorized to suspend until January 1, 1975, the effective date or applicability of any regulations for the management of parking supply or any requirement that such regulations be a part of an applicable implementation plan approved or promulgated under this section. The exercise of the authority under this subparagraph shall not prevent the Administrator from approving such regulations if they are adopted and submitted by a State as part of an applicable implementation plan. If the Administrator exercises the authority under this subparagraph, regulations requiring a review or analysis of the impact of proposed parking facilities before construction which take effect on or after January 1, 1975, shall not apply to parking facilities on which construction has been initiated before January 1, 1975.

"(D) For purposes of this paragraph, the term 'parking surcharge regulation' means a regulation imposing or requiring the imposition of any tax, surcharge, fee, or other charge on parking spaces, or any other area used for the temporary storage of motor vehicles. The term 'management

of parking supply' shall include any requirement providing that any new facility containing a given number of parking spaces shall receive a permit or other prior approval, issuance of which is to be conditioned on air quality considerations. The term 'preferential bus/carpool lane' shall include any requirement for the setting aside of one or more lanes of a street or highway on a permanent or temporary basis for the exclusive use of buses and/or carpools."

SEC. 4. MOTOR VEHICLE EMISSIONS.

(a) Section 202 (b) (1) (A) of the Clean Air Act is amended by striking out "1975" and inserting in lieu thereof "1977"; and by inserting after "(A)" the following: "The regulations under subsection (a) applicable to emissions of carbon monoxide and hydrocarbons from light-duty vehicles and engines manufactured during model years 1975 and 1976 shall contain standards which are identical to the interim standards which were prescribed (as of December 1, 1973) under paragraph (5) (A) of this subsection for light-duty vehicles and engines manufactured during model year 1975."

(b) Section 202 (b) (1) (B) of such Act is amended by striking out "1976" and inserting in lieu thereof "1978"; and by inserting after "(B)" the following: "The regulations under subsection (a) applicable to emissions of oxides of nitrogen from light-duty vehicles and engines manufac-

tured during model years 1975 and 1976 shall contain standards which are identical to the standards which were prescribed (as of December 1, 1973) under subsection (a) for light-duty vehicles and engines manufactured during model year 1975. The regulations under subsection (a) applicable to emissions of oxides of nitrogen from light-duty vehicles and engines manufactured during model year 1977 shall contain standards which provide that emissions of such vehicles and engines may not exceed 2.0 grams per vehicle mile."

(c) Section 202 (b) (5) (A) of such Act is amended to read as follows:

"(5) (A) At any time after January 1, 1975, any manufacturer may file with the Administrator an application requesting the suspension for one year only of the effective date of any emission standard required by paragraph (1) (A) with respect to such manufacturer for light-duty vehicles and engines manufactured in model year 1977. The Administrator shall make his determination with respect to any such application within sixty days. If he determines, in accordance with the provisions of this subsection, that such suspension should be granted, he shall simultaneously with such determination prescribe by regulation interim emission standards which shall apply (in lieu of the standards required to be prescribed by paragraph (1) (A) of this sub-

section) to emissions of carbon monoxide or hydrocarbons (or both) from such vehicles and engines manufactured during model year 1977."

(d) Section 202(b)(5)(B) of the Clean Air Act is repealed and the following subparagraphs redesignated accordingly.

SEC. 5. CONFORMING AMENDMENTS.

(a)(1) Section 113(a)(3) of the Clean Air Act is amended by striking out "or" before "112(c)", by inserting a comma in lieu thereof, and by inserting after "hazardous emissions)" the following: ", or 119(f) (relating to priorities and certain other requirements)".

(2) Section 113(b)(3) of such Act is amended by striking out "or 112(c)" and inserting in lieu thereof ", 112(c), or 119(f)".

(3) Section 113(c)(1)(C) of such Act is amended by striking out "or section 112(c)" and inserting in lieu thereof ", section 112(c), or section 119(f)".

(4) Section 114(a) of such Act is amended by inserting "119 or" before "303".

(b) Section 116 of the Clean Air Act is amended by inserting "119 (b), (c), and (e)," before "209".

SEC. 6. PROTECTION OF PUBLIC HEALTH AND ENVIRONMENT.

(a) Any allocation program provided for in section

10 of this Act or in the Emergency Petroleum Allocation Act of 1973, shall, to the maximum extent practicable, include measures to assure that available low sulfur fuel will be distributed on a priority basis to those areas of the country designated by the Administrator of the Environmental Protection Agency as requiring low sulfur fuel to avoid or minimize adverse impact on public health.

(b) In order to determine the health effects of emissions of sulfur oxides to the air resulting from any conversions to burning coal to which section 119 of the Clean Air Act applies, the Department of Health, Education, and Welfare shall, through the National Institute of Environmental Health Sciences and in cooperation with the Environmental Protection Agency, conduct a study of chronic effects among exposed populations. The sum of $3,500,000 is authorized to be appropriated for such a study. In order to assure that long-term studies can be conducted without interruption, such sums as are appropriated shall be available until expended.

(c) No action taken under section 10 of this Act shall, for a period of one year after initiation of such action, be deemed a major Federal action significantly affecting the quality of the human environment within the meaning of the National Environmental Policy Act of 1969 (83 Stat. 856). However, before any action under section 10 of this Act that has a significant impact on the environment is

taken, if practicable, or in any event within sixty days after such action is taken, an environmental evaluation with analysis equivalent to that required under section 102(2)(C) of the National Environmental Policy Act, to the greatest extent practicable within this time constraint, shall be prepared and circulated to appropriate Federal, State, and local government agencies and to the public for a thirty-day comment period after which a public hearing shall be held upon request to review outstanding environmental issues. Such an evaluation shall not be required where the action in question has been preceded by compliance with the National Environmental Policy Act by the appropriate Federal agency. Any action taken under section 10 of this Act which will be in effect for more than a one-year period or any action to extend an action taken under section 10 of this Act to a total period of more than one year shall be subject to the full provisions of the National Environmental Policy Act notwithstanding any other provision of this Act.

(d) In order to expedite the prompt construction of facilities for the importation of hydroelectric energy thereby helping to reduce the shortage of petroleum products in the United States, the Federal Power Commission is hereby authorized and directed to issue a Presidential permit pursuant to Executive Order 10485 of September 3, 1953, for the construction, operation, maintenance, and connection of

facilities for the transmission of electric energy at the borders of the United States without preparing an environmental impact statement pursuant to section 102 of the National Environmental Policy Act of 1969 (83 Stat. 856) for facilities for the transmission of electric energy between Canada and the United States in the vicinity of Fort Covington, New York.

SEC. 7. ENERGY CONSERVATION STUDY.

(a) The Federal Energy Administrator shall conduct a study on potential methods of energy conservation and, not later than six months after the date of enactment of this Act, shall submit to Congress a report on the results of such study. The study shall include, but not be limited to, the following:

(1) the energy conservation potential of restricting exports of fuels or energy-intensive products or goods, including an analysis of balance of payments and foreign relations implications of any such restrictions;

(2) federally sponsored incentives for the use of public transit, including the need for authority to require additional production of buses or other means of public transit and Federal subsidies for the duration of the energy emergency for reduced fares and additional expenses incurred because of increased service;

(3) alternative requirements, incentives, or disincentives for increasing industrial recycling and resource

recovery in order to reduce energy demand, including the economic costs and fuel consumption tradeoff which may be associated with such recycling and resource recovery in lieu of transportation and use of virgin materials;

(4) the costs and benefits of electrifying rail lines in the United States with a high density of traffic; including (A) the capital costs of such electrification, the oil fuel economies derived from such electrification, the ability of existing power facilities to supply the additional power load, and the amount of coal or other fossil fuels required to generate the power required for railroad electrification, and (B) the advantages to the environment of electrification of railroads in terms of reduced fuel consumption and air pollution and disadvantages to the environment from increased use of fossil fuel such as coal; and

(5) means for incentives or disincentives to increase efficiency of industrial use of energy.

(b) Within ninety days of the date of enactment of this Act, the Secretary of Transportation, after consultation with the Federal Energy Administrator, shall submit to the Congress for appropriate action an "Emergency Mass Transportation Assistance Plan" for the purpose of conserving energy by expanding and improving public mass transporta-

tion systems and encouraging increased ridership as alternatives to automobile travel.

(c) Such plan shall include, but shall not be limited to—

(1) recommendations for emergency temporary grants to assist States and local public bodies and agencies thereof in the payment of operating expenses incurred in connection with the provision of expanded mass transportation service in urban areas;

(2) recommendations for additional emergency assistance for the purchase of buses and rolling stock for fixed rail, including the feasibility of accelerating the timetable for such assistance under section 142 (a) (2) of title 23, United States Code (the "Federal Aid Highway Act of 1973"), for the purpose of providing additional capacity for and encouraging increased use of public mass transportation systems;

(3) recommendations for a program of demonstration projects to determine the feasbility of fare-free and low-fare urban mass transportation systems, including reduced rates for elderly and handicapped persons during nonpeak hours of transportation;

(4) recommendations for additional emergency assistance for the construction of fringe and transportation corridor parking facilities to serve bus and other mass transportation passengers;

(5) recommendations on the feasibility of providing tax incentives for persons who use public mass transportation systems.

(d) In consultation with the Federal Energy Administrator, the Secretary of Transportation shall make an investigation and study for the purpose of conserving energy and assuring that the essential fuel needs of the United States will be met by developing a high-speed ground transportation system between the cities of Tijuana in the State of Baja California, Mexico, and Vancouver in the Province of British Columbia, Canada, by way of the cities of Seattle in the State of Washington, Portland in the State of Oregon, and Sacramento, San Francisco, Fresno, Los Angeles, and San Diego in the State of California. In carrying out such investigation and study the Secretary shall consider, but shall not be limited to—

(1) the efficiency of energy utilization and impact on energy resources of such a system, including the future impact of existing transportation systems on energy resources if such a system is not established;

(2) coordination with other studies undertaken on the State and local levels; and

(3) such other matters as he deems appropriate.

The Secretary of Transportation shall report the results of the study and investigation pursuant to this Act, together

with his recommendations, to the Congress and the President no later than December 31, 1974.

SEC. 8. REPORTS.

The Administrator of the Environmental Protection Agency shall report to Congress not later than January 31, 1975, on the implementation of sections 2 through 7 of this title.

SEC. 9. FUEL ECONOMY STUDY.

Title II of the Clean Air Act is amended by redesignating section 213 as section 214 and by adding the following new section:

"FUEL ECONOMY IMPROVEMENT FROM NEW MOTOR VEHICLES

"SEC. 213. (a) (1) The Administrator and the Secretary of Transportation shall conduct a joint study, and shall report to the Committee on Interstate and Foreign Commerce of the United States House of Representatives and the Committees on Public Works and Commerce of the United States Senate within one hundred and twenty days following the date of enactment of this section, concerning the practicability of establishing a fuel economy improvement standard of 20 per centum for new motor vehicles manufactured during and after model year 1980. Such study and report shall include, but not be limited to, the technological problems of meeting any such standard, including the lead-

time involved; the test procedures required to determine compliance; the economic costs associated with such standards, including any beneficial economic impact; the various means of enforcing such standard; the effect on consumption of natural resources, including energy consumed; and the impact of applicable safety and emission standards. In the course of performing such study, the Administrator and the Secretary of Transportation shall utilize the research previously performed in the Department of Transportation, and the Administrator and the Secretary shall consult with the Federal Energy Administrator, the Chairman of the Council on Environmental Quality, and the Secretary of the Treasury. The Office of Management and Budget may review such report before its submission to Congress but the Office may not revise the report or delay its submission beyond the date prescribed for its submission, and may submit to Congress its comments respecting such report. In connection with such study, the Administrator may utilize the authority provided in section 307(a) of this Act to obtain necessary information.

"(2) For the purpose of this section, the term 'fuel economy improvement standard' means a requirement of a percentage increase in the number of miles of transportation provided by a manufacturer's entire annual production of new motor vehicles per unit of fuel consumed, as determined

for each manufacturer in accordance with test procedures established by the Administrator pursuant to this Act. Such term shall not include any requirement for any design standard or any other requirement specifying or otherwise limiting the manufacturer's discretion in deciding how to comply with the fuel economy improvement standard by any lawful means."

SEC. 10. COAL CONVERSION AND ALLOCATION.

(a) The Federal Energy Administrator shall, to the extent practicable and consistent with the purposes of this Act, by order, after balancing on a plant-by-plant basis the environmental effects of use of coal against the need to fulfill the purposes of this Act, prohibit, as its primary energy source, the burning of natural gas or petroleum products by any major fuel-burning installation (including any existing electric powerplant) which, on the date of enactment of this Act, has the capability and necessary plant equipment to burn coal. Any installation to which such an order applies shall be permitted to continue to use coal or coal byproducts as provided in section 119(b) of the Clean Air Act. To the extent coal supplies are limited to less than the aggregate amount of coal supplies which may be necessary to satisfy the requirements of those installations which can be expected to use coal (including installations to which orders may apply under this subsection),

63-518 O - 76 - 16 (Vol. 1)

the Administrator shall prohibit the use of natural gas and petroleum products for those installations where the use of coal will have the least adverse environmental impact. A prohibition on use of natural gas and petroleum products under this subsection shall be contingent upon the availability of coal, coal transportation facilities, and the maintenance of reliability of service in a given service area. The Federal Energy Administrator shall require that fossil-fuel-fired electric powerplants in the early planning process, other than combustion gas turbine and combined cycle units, be designed and constructed so as to be capable of using coal as a primary energy source instead of or in addition to other fossil fuels. No fossil-fuel-fired electric powerplant may be required under this section to be so designed and constructed, if (1) to do so would result in an impairment of reliability or adequacy of service, or (2) if an adequate and reliable supply of coal is not available and is not expected to be available. In considering whether to impose a design and construction requirement under this subsection, the Federal Energy Administrator shall consider the existence and effects of any contractual commitment for the construction of such facilities and the capability of the owner or operator to recover any capital investment made as a result of the conversion requirements of this section.

(b) The Federal Energy Administrator may by rule prescribe a system for allocation of coal to users thereof in order to attain the objective specified in this section.

(c) It shall be unlawful for any person to violate any provision of this section, or to violate any rule, regulation, or order issued pursuant to any such provision.

(d) (1) Whoever violates any provision of subsection (c) shall be subject to a civil penalty of not more than $2,500 for each violation.

(2) Whoever willfully violates any provision of subsection (c) shall be fined not more than $5,000 for each violation.

(3) It shall be unlawful for any person to offer for sale or distribute in commerce any product or commodity in violation of an applicable order or regulation issued pursuant to this section. Any person who knowingly and willfully violates this subsection after having been subjected to a civil penalty for a prior violation of the same provision of any order or regulation issued pursuant to this section shall be fined not more than $50,000 or imprisoned not more than six months, or both.

(4) Whenever it appears to any person authorized by the Federal Energy Administrator to exercise authority under this section that any individual or organization has engaged, is engaged, or is about to engage in acts or practices con-

stituting a violation of subsection (c), such person may request the Attorney General to bring an action in the appropriate district court of the United States to enjoin such acts or practices, and upon a proper showing a temporary restraining order or a preliminary or permanent injunction shall be granted without bond. Any such court may also issue mandatory injunctions commanding any person to comply with any provision, the violation of which is prohibited by subsection (c).

(5) Any person suffering legal wrong because of any act or practice arising out of any violation of subsection (c) may bring an action in a district court of the United States, without regard to the amount in controversy, for appropriate relief, including an action for a declaratory judgment or writ of injunction. Nothing in this paragraph shall authorize any person to recover damages.

(c) Authority to issue or enforce orders or rules under this section shall expire on midnight, June 30, 1975, but the expiration of such authority shall not affect any administrative or judicial proceeding pending on such date which relates to any act or omission before such date.

SEC. 11. ENERGY INFORMATION REPORTS.

(a) For the purpose of assuring that the Administrator, the Congress, the States, and the public have access to and are able to obtain reliable energy information throughout the duration of this Act, the Administrator, in addition to and

not in limitation of any other authority, shall request, acquire, and collect such energy information as he determines to be necessary to assist in the formulation of energy policy or to carry out the purposes of this Act or the Emergency Petroleum Allocation Act of 1973. The Administrator shall promptly promulgate rules under the authority of subsection (b) of this section requiring reports of such information to be submitted to the Administrator at least every ninety calendar days.

(b) In carrying out the provisions of subsection (a) the Administrator shall have the power to—

(1) require, by rule, any person who is engaged in the production, processing, refining, transportation by pipeline, or distribution (other than at the retail level) of energy resources to submit reports;

(2) sign and issue subpenas for the attendance and testimony of witnesses and the production of relevant books, records, papers, and other documents;

(3) require of any person, by general or special order, answers in writing to interrogatories, requests for report, or other information; and such answers or submissions shall be made within such reasonable period and under oath or otherwise as the Administrator may determine; and

(4) to administer oaths.

(c) For the purpose of verifying the accuracy of any energy information requested, acquired, or collected by the Administrator, officers or employees duly designated by him upon presenting appropriate credentials and a written notice to the owner, operator, or at reasonable times and in a reasonable manner, enter and inspect any facility or business premises, to inventory and sample any stock of energy resources therein, and to examine and copy records, reports, and documents relating to energy information.

(d) (1) The Administrator shall exercise the authorities granted to him under subsection (b) to develop within 30 days after the date of enactment of this Act, as full and accurate a measure as is reasonably practicable of—

(A) domestic reserves and production;

(B) imports; and

(C) inventories;

of petroleum products, natural gas, and coal.

(2) For each calendar quarter beginning with the first complete calendar quarter following the date of enactment of this Act, the Administrator shall develop and publish quarterly reports containing the following:

(A) Report of petroleum product, natural gas, and coal imports; relating to country of origin, arrival point, quantity received, geographic distribution within the United States.

(B) Report of domestic reserves and production of crude oil, natural gas, and coal.

(C) Report of crude oil activity; relating capacity of producers' allocations to refiners, and fuels to be made.

(D) Report of inventories, nationally, and by region and State—

(i) for various refined petroleum products, relating refiners, refineries, suppliers to refiners, share of market, and allocation fractions;

(ii) for various refined petroleum products, previous quarter deliveries and anticipated 3-month available supplies;

(iii) for refinery yields of the various refined petroleum products, percent of activity, and type of refinery;

(iv) with respect to the summary of anticipated monthly supply of refined petroleum products amount of set aside for assignment by the State, anticipated State requirements, excess or shortfall of supply, and allocation fraction of base year; and

(v) with respect to LPG by State and owner: quantities stored, and existing capacities, and previous priorities on types, inventories of suppliers, and changes in supplier inventories.

(e) Where a person shows that all or part of the energy information required by this section is being reported by such person to another Federal agency, the Administrator may exempt such person from providing all or part of such energy information to him, and upon such exemption, such Federal agency shall, notwithstanding any other provision of law, provide such energy information to the Administrator.

(f) Upon a showing satisfactory to the Administrator by any person that any energy information obtained under this section from such person or from a Federal agency would, if made public, divulge methods or processes entitled to protection as trade secrets or other proprietary information of such person, such information, or portion thereof, shall be confidential in accordance with the provisions of section 1905 of title 18 of the United States Code, except that such information or part thereof shall not be deemed confidential for purposes of disclosure, upon request, to (1) any delegate of the Federal Energy Administration for the purpose of carrying out this Act, (2) the Attorney General, the Secretary of the Interior, the Federal Trade Commission, the Federal Power Commission, or the General Accounting Office when necessary to carry out those agencies' duties and responsibilities under this and other statutes, and (3) the Congress or any committee of Congress upon request of the

Chairman. The provisions of this section shall expire on midnight, June 30, 1975.

(g) As used in this section—

(1) the term "Federal agency" shall have the meaning of the term "executive agency" as defined in section 105 of title 5, United States Code;

(2) the term "energy information" includes all information in whatever form on mineral fuel reserves, exploration, extraction, and natural energy resources (to include petrochemical feedstocks) wherever located; production, distribution, and consumption wherever carried on; and includes matters such as corporate structure and proprietary relationships, costs, prices, capital investment and assets, and other matters directly related thereto, wherever they exist; and

(3) the term "person" means any natural person, corporation, partnership, association, consortium, or any entity organized for a common business purpose; wherever situated, domiciled, or doing business, who directly or through other persons subject to their control do business in any part of the United States, its territories and possessions, or the District of Columbia.

(h) Information obtained by the Administrator under authority of this Act shall be available to the public in

accordance with the provisions of section 552 of title 5, United States Code.

(i) Any United States district court within the jurisdiction of which any inquiry is carried on may, upon petition by the Attorney General at the request of the Administrator, in the case of refusal to obey a subpena or order of the Administrator issued under this section, issue an order requiring compliance therewith; and any failure to obey the order of the court may be punished by the court as a contempt thereof.

SEC. 12. DEFINITION.

The term "Federal Energy Administrator" means the Administrator of the Federal Energy Administration established by H.R. 11793, Ninety-third Congress (popularly known as the Federal Energy Administration Act of 1974) if H.R. 11793 is enacted; except that until such Administrator takes office, such term means any officer of the United States designated by the President.

93D CONGRESS } HOUSE OF REPRESENTATIVES { REPORT
2d Session } { No. 93-1013

ENERGY SUPPLY AND ENVIRONMENTAL COORDINATION ACT OF 1974

APRIL 26, 1974.—Committed to the Committee of the Whole House on the State of the Union and ordered to be printed

Mr. STAGGERS, from the Committee on Interstate and Foreign Commerce, submitted the following

REPORT

[To accompany H.R. 14368]

The Committee on Interstate and Foreign Commerce, to whom was referred the bill (H.R. 14368) to provide for means of dealing with energy shortages by requiring reports with respect to energy resources, by providing for temporary suspension of certain air pollution requirements, by providing for coal conversion, and for other purposes, having considered the same, report favorably thereon with an amendment and recommend that the bill as amended do pass.

The amendment is as follows:

Strike out all after the enacting clause and insert in lieu thereof the following:

SECTION 1. SHORT TITLE; PURPOSE

(a) This Act, including the following table of contents, may be cited as the "Energy Supply and Environmental Coordination Act of 1974".

TABLE OF CONTENTS

(b) The purpose of this Act is to provide for a means to assist in meeting the essential needs of the United States for fuels, in a manner which is consistent, to the fullest extent practicable, with existing national commitments to protect and improve the environment, and to provide requirements for reports respecting energy resources.

2

SEC. 2. SUSPENSION AUTHORITY

Title I of the Clean Air Act is amended by adding at the end thereof the following new section:

"ENERGY-RELATED AUTHORITY

"SEC. 119. (a)(1)(A) The Administrator may, for any period beginning on or after the date of enactment of this section and ending on or before the earlier of June 30, 1975, or one year after the date of enactment of this section, temporarily suspend any stationary source fuel or emission limitation as it applies to any person, if the Administrator finds that such person will be unable to comply with such limitation during such period solely because of unavailability of types or amounts of fuels. Any suspension under this paragraph and any interim requirement on which such suspension is conditioned under paragraph (3) shall be exempted from any procedural requirements set forth in this Act or in any other provision of local, State, or Federal law; except as provided in subparagraph (B).

"(B) The Administrator shall give notice to the public of a suspension and afford the public an opportunity for written and oral presentation of views prior to granting such suspension unless otherwise provided by the Administrator for good cause found and published in the Federal Register. In any case, before granting such a suspension he shall give actual notice to the Governor of the State, and to the chief executive officer of the local government entity in which the affected source or sources are located. The granting or denial of such suspension and the imposition of an interim requirement shall be subject to judicial review only on the grounds specified in paragraphs (2)(B), (2)(C), or (2)(D) of section 706 of title 5, United States Code, and shall not be subject to any proceeding under section 304(a)(2) or 307(b) and (c) of this Act.

"(2) In issuing any suspension under paragraph (1) the Administrator is authorized to act on his own motion without application by any source or State.

"(3) Any suspension under paragraph (1) shall be conditioned upon compliance with such interim requirements as the Administrator determines are reasonable and practicable. Such interim requirements shall include, but need not be limited to, (A) a requirement that the source receiving the suspension comply with such reporting requirements as the Administrator determines may be necessary, (B) such measures as the Administrator determines are necessary to avoid an imminent and substantial endangerment to health of persons, and (C) requirements that the suspension shall be inapplicable during any period during which fuels which would enable compliance with the suspended stationary source fuel or emission limitations are in fact reasonably available to that person (as determined by the Administrator). For purposes of clause (C) of this paragraph, availability of natural gas or petroleum products which enable compliance shall not make a suspension inapplicable to a source described in subsection (b)(1) of this section.

"(4) For purposes of this section:

"(A) The term 'stationary source fuel or emission limitation' means any emission limitation, schedule, or timetable for compliance, or other requirement, which is prescribed under this Act (other than section 303, 111(b), or 112) or contained in an applicable implementation plan *(other than a requirement imposed under authority described in section 110(a)(2)(F)(v))*, and which is designed to limit stationary source emissions resulting from combustion of fuels, including a prohibition on, or specification of, the use of any fuel of any type or grade or pollution characteristic thereof.

"(B) The term 'stationary source' has the same meaning as such term has under section 111(a)(3).

"(b)(1) Except as provided in paragraph (2) of this subsection, any fuel-burning stationary source—

"(A) which is prohibited from using petroleum products or natural gas as fuel by reason of an order issued under section 10(a) of the Energy Supply and Environmental Coordination Act of 1974, or

"(B) which (i) the Administrator of the Environmental Protection Agency determines began conversion to the use of coal as fuel during the period beginning on September 15, 1973, and ending on the date of enactment of this section, and (ii) the Federal Energy Administrator determines should use coal after the earlier of June 30, 1975, or one year after the date of enactment of this section, after balancing on a plant-by-plant basis the environmental effects of such conversion against the need to fulfill the purposes of the Energy Supply and Environmental Coordination Act of 1974,

and which converts to the use of coal as fuel, shall not, until January 1, 1979, be prohibited, by reason of the application of any air pollution requirement, from burning coal which is available to such source. For purposes of this paragraph, the term 'begin conversion' means action by the owner or operator of a source during the period beginning on September 15, 1973, and ending on the date of enactment of this section (such as entering into a contract binding on the operator of the source for obtaining coal, or equipment or facilities to burn coal; expending substantial sums to permit such source to burn coal; or applying for an air pollution variance to enable the source to burn coal) which the Administrator finds evidences a decision (made prior to such date of enactment) to convert to burning coal as a result of the unavailability of an adequate supply of fuels required for compliance with the applicable implementation plan, and a good faith effort to expeditiously carry out such decision.

"(2)(A) Paragraph (1) of this subsection shall apply to a source only if the Administrator finds that emissions from the source will not materially contribute to a significant risk to public health and if the source has submitted to the Administrator a plan for compliance for such source which the Administrator has approved, after notice to interested persons and opportunity for presentation of views (including oral presentation of views). A plan submitted under the preceding sentence shall be approved only if it (i) meets the requirements of regulations prescribed under subparagraph (B); and (ii) provides that such source will comply with requirements which the Administrator shall prescribe to assure that emissions from such source will not materially contribute to a significant risk to public health. The Administrator shall approve or disapprove any such plan within 60 days after such plan is submitted.

"(B) The Administrator shall prescribe regulations requiring that any source to which this subsection applies submit and obtain approval of its means for and schedule of compliance. Such regulations shall include requirements that such schedules shall include dates by which such sources must—

"(i) enter into contracts (or other enforceable obligations) which have received prior approval of the Administrator as being adequate to effectuate the purposes of this section and which provide for obtaining a long-term supply of coal which enables such source to achieve the emission reduction required by subparagraph (C), or

"(ii) if coal which enables such source to achieve such emission reduction is not available to such source, enter into contracts (or other enforceable obligations) which have received prior approval of the Administrator as being adequate to effectuate the purposes of this section and which provide for obtaining (I) a long-term supply of other coal or coal *derivatives*, and (II) continuous emission reduction systems necessary to permit such source to burn such coal or coal *derivatives* and to achieve the degree of emission reduction required by subparagraph (C).

"(C) Regulations under subparagraph (B) shall require that the source achieve the most stringent degree of emission reduction that such source would have been required to achieve under the applicable implementation plan which was in effect on the date of enactment of this section (or if no applicable implementation plan was in effect on that date, under the first applicable implementation plan which takes effect after such date). Such degree of emission reduction shall be achieved as soon as practicable, but not later than January 1, 1979; except that, in the case a source for which a continuous emission reduction system is required for sulfur-related emissions, reduction of such emissions shall be achieved on a date designated by the Administrator (but not later than January 1, 1979). Such regulations shall also include such interim requirements as the Administrator determines are reasonable and practicable including requirements described in clauses (A) and (B) of subsection (a)(3) and requirements to file progress reports.

"(D) The Administrator (after notice to interested persons and opportunity for presentation of views, including oral presentations of views, to the extent practicable) (i) may, prior to the earlier of June 30, 1975, or one year after the date of enactment of this section, and shall thereafter prohibit the use of coal by a source to which paragraph (1) applies if he determines that the use of coal by such source is likely to materially contribute to a significant risk to public health; and (ii) may require such source to use coal of any particular type, grade, or pollution characteristic if such coal is available to such source. Nothing in this subsection (b) shall prohibit a State or local agency from taking action which the Administrator is authorized to take under this subparagraph.

"(3) For purposes of this subsection, the term 'air pollution requirement' means any emission limitation, schedule, or timetable for compliance, or other requirement, which is prescribed under any Federal, State, or local law or regulation, including this Act (except for any requirement prescribed under this subsection, section 110(a)(2)(F)(v), or section 303), and which is designed to limit stationary source emissions resulting from combustion of fuels (including a restriction on the use or content of fuels). A conversion to coal to which this subsection applies shall not be deemed to be a modification for purposes of section 111(a)(2) and (4) of this Act.

"(4) A source to which this subsection applies may, upon the expiration of the exemption under paragraph (1), obtain a one-year postponement of the application of any requirement of an applicable implementation plan under the conditions and in the manner provided in section 110(f).

"(c) The Administrator may by rule establish priorties under which manufacturers of continuous emission reduction systems necessary to carry out subsection (b) shall provide such systems to users thereof, if he finds that priorities must be imposed in order to assure that such systems are first provided to users in air quality control regions with the most severe air pollution. No rule under this subsection may impair the obligation of any contract entered into before enactment of this section. To the extent necessary to carry out this section, the Administrator may prohibit any State or political subdivision from requiring any person to use a continuous emission reduction system for which priorities have been established under this subsection except in accordance with such priorities.

"(d) The Administrator shall study, and report to Congress not later than six months after the date of enactment of this section, with respect to—

"(1) the present and projected impact on the program under this Act of fuel shortages and of allocation and end-use allocation programs;

"(2) availability of continuous emission reduction technology (including projections respecting the time, cost, and number of units available) and the effects that continuous emission reduction systems would have on the total environment and on supplies of fuel and electricity;

"(3) the number of sources and locations which must use such technology based on projected fuel availability data;

"(4) priority schedule for implementation of continuous emission reduction technology, based on public health or air quality;

"(5) evaluation of availability of technology to burn municipal solid waste in these sources including time schedules, priorities analysis of unregulated pollutants which will be emitted and balancing of health benefits and detriments from burning solid waste and of economic costs;

"(6) projections of air quality impact of fuel shortages and allocations;

"(7) evaluation of alternative control strategies for the attainment and maintenance of national ambient air quality standards for sulfur oxides within the time frames prescribed in the Act, including associated considerations of cost, time frames, feasibility, and effectiveness of such alternative control strategies as compared to stationary source fuel and emission regulations;

"(8) proposed allocations of continuous emission reduction systems which do not produce solid waste to sources which are least able to handle solid waste byproducts of such systems; and

"(9) plans for monitoring or requiring sources to which this section applies to monitor the impact of actions under this section on concentration of sulfur dioxide in the ambient air.

"(e) No State or political subdivision may require any person to whom a suspension has been granted under subsection (a) to use any fuel the unavailability of which is the basis of such person's suspension (except that this preemption shall not apply to requirements identical to Federal interim requirements under subsection (a)(3)).

"(f)(1) It shall be unlawful for any person to whom a suspension has been granted under subsection (a)(1) to violate any requirement on which the suspension is conditioned pursuant to subsection (a)(3).

"(2) It shall be unlawful for any person to violate any rule under subsection (c).

"(3) It shall be unlawful for the owner or operator of any source to fail to comply with any requirement under subsection (b) or any regulation, plan, or schedule thereunder.

"(4) It shall be unlawful for any person to fail to comply with an interim requirement under subsection (i)(3).

"(g) Beginning January 1, 1975, the Administrator shall publish at no less than one hundred and eighty-day intervals, in the Federal Register the following:

"(1) A concise summary of progress reports which are required to be filed by any person or source owner or operator to which subsection (b) applies. Such progress reports shall report on the status of compliance with all requirements which have been imposed by the Administrator under such subsections.

"(2) Up-to-date findings on the impact of this section upon—

"(A) applicable implementation plans, and

"(B) ambient air quality.

"(h) Nothing in this section shall affect the power of the Administrator to deal with air pollution presenting an imminent and substantial endangerment to the health of persons under section 303 of this Act.

"(i)(1) In order to reduce the likelihood of early phaseout of existing electric generating facilities, any electric generating powerplant (A) which, because of the age and condition of the plant, is to be taken out of service permanently no later than January 1, 1980, according to the power supply plan (in existence on January 1, 1974) of the operator of such plant, (B) for which a certification to that effect has been filed by the operator of the plant with the Environmental Protection Agency and the Federal Power Commission, and (C) for which the Commission has determined that the certification has been made in good faith and that the plan to cease operations no later than January 1, 1980, will be carried out as planned in light of existing and prospective power supply requirements, shall be eligible for a single one-year postponement as provided in paragraph (2).

"(2) Prior to the date on which any plant eligible under paragraph (1) is required to comply with any requirement of an applicable implementation plan, such source may apply (with the concurrence of the Governor of the State in which the plant is located) to the Administrator to postpone the applicability of such requirement to such source for not more than one year. If the Administrator determines, after balancing the risk to public health and welfare which may be associated with a postponement, that compliance with any such requirement is not reasonable in light of the projected useful life of the plant, the availability of rate base increases to pay for such costs, and other appropriate factors, then the Administrator shall grant a postponement of any such requirement.

"(3) The Administrator shall, as a condition of any postponement under paragraph (2), prescribe such interim requirements as are practicable and reasonable in light of the criteria in paragraph (2).

"(j)(1) The Administrator may, after public notice and opportunity for presentation of views in accordance with section 553 of title 5, United States Code, and after consultation with the Federal Energy Administrator, designate persons to whom fuel exchange orders should be issued. The purpose of such designation shall be to avoid or minimize the adverse impact on public health and welfare of any suspension under subsection (a) of this section or conversion to coal to which subsection (b) applies or of any allocation under section 10 of the Energy Supply and Environmental Coordination Act of 1974 or the Emergency Petroleum Allocation Act of 1973.

"(2) The Federal Energy Administrator shall issue exchange orders to such persons as are designated by the Administrator under paragraph (1) requiring the exchange of any fuel subject to allocation under the preceding Acts effective no later than forty-five days after the date of the designation under paragraph (1), unless the Federal Energy Administrator determines, after consultation with the Administrator, that the costs or consumption of fuel, resulting from such exchange order, will be excessive.

"(3) Violation of any exchange order issued under paragraph (2) shall be a prohibited act and shall be subject to enforcement action and sanctions in the same manner and to the same extent as a violation of any requirement of the regulation under section 4 of the Emergency Petroleum Allocation Act of 1973."

SEC. 3. IMPLEMENTATION PLAN REVISIONS

(a) Section 110(a) of the Clean Air Act is amended in paragraph (3) by inserting "(A)" after "(3)" and by adding at the end thereof the following new subparagraph:

"(B)(1) For any air quality control region in which there has been a conversion to coal to which section 119(b) applies, the Administrator shall review the applicable implementation plan and no later than one year after the date of such conversion determine whether such plan must be revised in order to achieve the national primary ambient air quality standard which the plan implements. If the Administrator determines that any such plan is inadequate, he shall require that a plan revision be submitted by the State within three months after the date of notice to the State of such determination. Any plan revision which is submitted by the State after notice and public hearing shall be approved or disapproved by the Administrator, after public notice and opportunity for public hearing, but no later than three months after the date required for submission of the revised plan. If a plan provision (or portion thereof) is disapproved (or if a State fails to submit a plan revision), the Administrator shall, after public notice and opportunity for a public hearing, promulgate a revised plan (or portion thereof) not later than three months after the date required for approval or disapproval.

"(2) Any requirement for a plan revision under paragraph (1) and any plan requirement promulgated by the Administrator under such paragraph shall include reasonable and practicable measures to minimize the effect on the public health of any conversion to which section 119(b) applies."

(b) Subsection (c) of section 110 of the Clean Air Act (42 U.S.C. 1857 C-5) is amended by inserting "(1)" after "(c)"; by redesignating paragraphs (1), (2), and (3) as subparagraphs (A), (B), and (C), respectively; and by adding the following new paragraph:

"(2)(A) The Administrator shall conduct a study and shall submit a report to the Committee on Interstate and Foreign Commerce of the United States House of Representatives and the Committee on Public Works of the United States Senate not later than three months after date of enactment of this section, on the necessity of parking surcharge, management of parking supply, and preferential bus/carpool lane regulations as part of the applicable implementation plans required under this section to achieve and maintain national primary ambient air quality standards. The study shall include an assessment of the economic impact of such regulations, consideration of alternative means of reducing total vehicle miles traveled, and an assessment of the impact of such regulations on other Federal and State programs dealing with energy or transportation. In the course of such study, the Administrator shall consult with other Federal officials including, but not limited to, the Secretary of Transportation, the Federal Energy Administrator, and the Chairman of the Council on Environmental Quality.

"(B) No parking surcharge regulation may be required by the Administrator under paragraph (1) of this subsection as a part of an applicable implementation plan. All parking surcharge regulations previously required by the Administrator shall be void upon the date of enactment of this subparagraph. This subparagraph shall not prevent the Administrator from approving parking surcharges if they are adopted and submitted by a State as part of an applicable implementation plan. The Administrator may not condition approval of any implementation plan submitted by a State on such plan's including a parking surcharge regulation.

"(C) The Administrator is authorized to suspend until January 1, 1975, the effective date or applicability of any regulations for the management of parking supply or any requirement that such regulations be a part of an applicable implementation plan approved or promulgated under this section. The exercise of the authority under this subparagraph shall not prevent the Administrator from approving such regulations if they are adopted and submitted by a State as part of an applicable implementation plan. If the Administrator exercises the authority under this subparagraph, regulations requiring a review or analysis of the impact of proposed parking facilities before construction which take effect on or after January 1, 1975, shall not apply to parking facilities on which construction has been initiated before January 1, 1975.

"(D) For purposes of this paragraph, the term 'parking surcharge regulation' means a regulation imposing or requiring the imposition of any tax, surcharge,

fee, or other charge on parking spaces, or any other area used for the temporary storage of motor vehicles. The term 'management of parking supply' shall include any requirement providing that any new facility containing a given number of parking spaces shall receive a permit or other prior approval, issuance of which is to be conditioned on air quality considerations. The term 'preferential bus/carpool lane' shall include any requirement for the setting aside of one or more lanes of a street or highway on a permanent or temporary basis for the exclusive use of buses and/or carpools.

"(E) No standard, plan or requirement, relating to management of parking supply or preferential bus/carpool lanes shall be promulgated after the enactment of this paragraph by the Administrator pursuant to this section, unless such promulgation has been subjected to at least one public hearing which has been held in the area affected and for which reasonable notice has been given in such area. If substantial changes are made following public hearings, additional hearings shall be held in such area after such notice."

SEC. 4. MOTOR VEHICLE EMISSIONS

(a) Section 202(b)(1)(A) of the Clean Air Act is amended by striking out "1975" and inserting in lieu thereof "1977"; and by inserting after "(A)" the following: "The regulations under subsection (a) applicable to emissions of carbon monoxide and hydrocarbons from light-duty vehicles and engines manufactured during model years 1975 and 1976 shall contain standards which are identical to the interim standards which were prescribed (as of December 1, 1973) under paragraph (5)(A) of this subsection for light-duty vehicles and engines manufactured during model year 1975."

(b) Section 202(b)(1)(B) of such Act is amended by striking out "1976" and inserting in lieu thereof "1978"; and by inserting after "(B)" the following: "The regulations under subsection (a) applicable to emissions of oxides of nitrogen from light-duty vehicles and engines manufactured during model years 1975 and 1976 shall contain standards which are identical to the standards which were prescribed (as of December 1, 1973) under subsection (a) for light-duty vehicles and engines manufactured during model year 1975. The regulations under subsection (a) applicable to emissions of oxides of nitrogen from light-duty vehicles and engines manufactured during model year 1977 shall contain standards which provide that emissions of such vehicles and engines may not exceed 2.0 grams per vehicle mile."

(c) Section 202(b)(5)(A) of such Act is amended to read as follows:

"(5)(A) At any time after January 1, 1975, any manufacturer may file with the Administrator an application requesting the suspension for one year only of the effective date of any emission standard required by paragraph (1)(A) with respect to such manufacturer for light-duty vehicles and engines manufactured in model year 1977. The Administrator shall make his determination with respect to any such application within sixty days. If he determines, in accordance with the provisions of this susbection, that such suspension should be granted, he shall simultaneously with such determination prescribe by regulation interim emission standards which shall apply (in lieu of the standards required to be prescribed by paragraph (1)(A) of this subsection) to emissions of carbon monoxide or hydrocarbons (or both) from such vehicles and engines manufactured during model year 1977."

(d) Section 202(b)(5)(B) of the Clean Air Act is repealed and the following subparagraphs redesignated accordingly.

SEC. 5. CONFORMING AMENDMENTS

(a)(1) Section 113(a)(3) of the Clean Air Act is amended by striking out "or" before "112(c)", by inserting a comma in lieu thereof, and by inserting after "hazardous emissions)" the following: ", or 119(f) (relating to energy-related authorities)".

(2) Section 113(b)(3) of such Act is amended by striking out "or 112(c)" and inserting in lieu thereof ", 112(c), or 119(f)".

(3) Section 113(c)(1)(C) of such Act is amended by striking out "or section 112(c)" and inserting in lieu thereof ", section 112(c), or section 119(f)".

(4) Section 114(a) of such Act is amended by inserting "119 or" before "303".

(b) Section 116 of the Clean Air Act is amended by inserting "119 (b), (c), and (e)," before "209".

SEC. 6. PROTECTION OF PUBLIC HEALTH AND ENVIRONMENT

(a) Any allocation program provided for in section 10 of this Act or in the Emergency Petroleum Allocation Act of 1973, shall, to the maximum extent practicable, include measures to assure that available low sulfur fuel will be distributed on a priority basis to those areas of the country designated by the Administrator of the Environmental Protection Agency as requiring low sulfur fuel to avoid or minimize adverse impact on public health.

(b) In order to determine the health effects of emissions of sulfur oxides to the air resulting from any conversions to burning coal to which section 119 of the Clean Air Act applies, the Department of Health, Education, and Welfare shall through the National Institute of Environmental Health Sciences and in cooperation with the Environmental Protection Agency, conduct a study of chronic effects among exposed populations. The sum of $3,500,000 is authorized to be appropriated for such a study. In order to assure that long-term studies can be conducted without interruption, such sums as are appropriated shall be available until expended.

(c) No action taken under section 10 of this Act shall, for a period of one year after initiation of such action, be deemed a major Federal action significantly affecting the quality of the human environment within the meaning of the National Environmental Policy Act of 1969 (83 Stat. 856). However, before any action under section 10 of this Act that has a significant impact on the environment is taken, if practicable, or in any event within sixty days after such action is taken, an environmental evaluation with analysis equivalent to that required under section 102(2)(C) of the National Environmental Policy Act, to the greatest extent practicable within this time constraint, shall be prepared and circulated to appropriate Federal, State, and local government agencies and to the public for a thirty-day comment period after which a public hearing shall be held upon request to review outstanding environmental issues. Such an evaluation shall not be required where the action in question has been preceded by compliance with the National Environmental Policy Act by the appropriate Federal agency. Any action taken under section 10 of this Act which will be in effect for more than a one-year period or any action to extend an action taken under section 10 of this Act to a total period of more than one year shall be subject to the full provisions of the National Environmental Policy Act notwithstanding any other provision of this Act.

(d) In order to expedite the prompt construction of facilities for the importation of hydroelectric energy thereby helping to reduce the shortage of petroleum products in the United States, the Federal Power Commission is hereby authorized and directed to issue a Presidential permit pursuant to Executive Order 10485 of September 3, 1953, for the construction, operation, maintenance, and connection of facilities for the transmission of electric energy at the borders of the United States without preparing an environmental impact statement pursuant to section 102 of the National Environmental Policy Act of 1969 (83 Stat. 856) for facilities for the transmission of electric energy between Canada and the United States in the vicinity of Fort Covington, New York.

SEC. 7. ENERGY CONSERVATION STUDY

(a) The Federal Energy Administrator shall conduct a study on potential methods of energy conservation and, not later than 6 months after the date of enactment of this Act, shall submit to Congress a report on the results of such study. The study shall include, but not be limited to, the following:

(1) the energy conservation potential of restricting exports of fuels or energy-intensive products or goods, including an analysis of balance of payments and foreign relations implications of any such restrictions;

(2) federally sponsored incentives for the use of public transit, including the need for authority to require additional production of buses or other means of public transit and Federal subsidies for the duration of the energy emergency for reduced fares and additional expenses incurred because of increased service;

(3) alternative requirements, incentives, or disincentives for increasing industrial recycling and resource recovery in order to reduce energy demand, including the economic costs and fuel consumption tradeoff which may be associated with such recycling and resource recovery in lieu of transportation and use of virgin materials;

(4) the costs and benefits of electrifying rail lines in the United States with a high density of traffic; including (A) the capital costs of such electrification, the oil fuel economies derived from such electrification, the ability of existing power facilities to supply the additional power load, and the amount of coal or other fossil fuels required to generate the power required for railroad electrification, and (B) the advantages to the environment of electrification of railroads in terms of reduced fuel consumption and air pollution and disadvantages to the environment from increased use of fossil fuel such as coal; and

(5) means for incentives or disincentives to increase efficiency of industrial use of energy.

(b) Within ninety days of the date of enactment of this Act, the Secretary of Transportation, after consultation with the Federal Energy Administrator, shall submit to the Congress for appropriate action an "Emergency Mass Transportation Assistance Plan" for the purpose of conserving energy by expanding and improving public mass transportation systems and encouraging increased ridership as alternatives to automobile travel.

(c) Such plan shall include, but shall not be limited to—

(1) recommendations for emergency temporary grants to assist States and local public bodies and agencies thereof in the payment of operating expenses incurred in connection with the provision of expanded mass transportation service in urban areas;

(2) recommendations for additional emergency assistance for the purchase of buses and rolling stock for fixed rail, including the feasibility of accelerating the timetable for such assistance under section 142(a)(2) of title 23, United States Code (the "Federal Aid Highway Act of 1973"), for the purpose of providing additional capacity for and encouraging increased use of public mass transportation systems;

(3) recommendations for a program of demonstration projects to determine the feasibility of fare-free and low-fare urban mass transportation systems, including reduced rates for elderly and handicapped persons during nonpeak hours of transportation;

(4) recommendations for additional emergency assistance for the construction of fringe and transportation corridor parking facilities to serve bus and other mass transportation passengers;

(5) recommendations on the feasibility of providing tax incentives for persons who use public mass transportation systems.

SEC. 8. REPORTS

The Administrator of the Environmental Protection Agency shall report to Congress not later than January 31, 1975, on the implementation of sections 2 through 7 of this Act.

SEC. 9. FUEL ECONOMY STUDY

Title II of the Clean Air Act is amended by redesignating section 213 as section 214 and by adding the following new section:

"FUEL ECONOMY IMPROVEMENT FROM NEW MOTOR VEHICLES

"SEC. 213. (a)(1) The Administrator and the Secretary of Transportation shall conduct a joint study, and shall report to the Committee on Interstate and Foreign Commerce of the United States House of Representatives and the Committees on Public Works and Commerce of the United States Senate within one hundred and twenty days following the date of enactment of this section, concerning the practicability of establishing a fuel economy improvement standard of 20 per centum for new motor vehicles manufactured during and after model year 1980. Such study and report shall include, but not be limited to, the technological problems of meeting any such standard, including the leadtime involved; the test procedures required to determine compliance; the economic costs associated with such standards, including any beneficial economic impact; the various means of enforcing such standard; the effect on consumption of natural resources, including energy consumed; and the impact of applicable safety and emision standards. In the course of performing such study, the Administrator and the Secretary of Transportation shall utilize the research previously

performed in the Department of Transportation, and the Administrator and the Secretary shall consult with the Federal Energy Administrator, the Chairman of the Council on Environmental Quality, and the Secretary of the Treasury. The Office of Management and Budget may review such report before its submission to Congress but the Office may not revise the report or delay its submission beyond the date prescribed for its submission, and may submit to Congress its comments respecting such report. In connection with such study, the Administrator may utilize the authority provided in section 307(a) of this Act to obtain necessary information.

"(2) For the purpose of this section, the term 'fuel economy improvement standard' means a requirement of a percentage increase in the number of miles of transportation provided by a manufacturer's entire annual production of new motor vehicles per unit of fuel consumed, as determined for each manufacturer in accordance with test procedures established by the Administrator pursuant to this Act. Such term shall not include any requirement for any design standard or any other requirement specifying or otherwise limiting the manufacturer's discretion in deciding how to comply with the fuel economy improvement standard by any lawful means."

SEC. 10. COAL CONVERSION AND ALLOCATION

(a) The Federal Energy Administrator shall, to the extent practicable and consistent with the purposes of this Act, by order, after balancing on a plant-by-plant basis the environmental effects of use of coal against the need to fulfill the purposes of this Act, prohibit, as its primary energy source, the burning of natural gas or petroleum products by any major fuel-burning installation (including any existing electric powerplant) which, on the date of enactment of this Act, has the capability and necessary plant equipment to burn coal. Any installation to which such an order applies shall be permitted to continue to use coal or coal derivatives as provided in section 119(b) of the Clean Air Act. To the extent coal supplies are limited to less than the aggregate amount of coal supplies which may be necessary to satisfy the requirements of those installations which can be expected to use coal (including installations to which orders may apply under this subsection), the Administrator shall prohibit the use of natural gas and petroleum products for those installations where the use of coal will have the least adverse environmental impact. A prohibition on use of natural gas and petroleum products under this subsection shall be contingent upon the availability of coal, coal transportation facilities, and the maintenance of reliability of service in a given service area. The Federal Energy Administrator shall require that fossil-fuel-fired electric powerplants in the early planning process, other than combustion gas turbine and combined cycle units, be designed and constructed so as to be capable of using coal as a primary energy source instead of or in addition to other fossil fuels. No fossil-fuel-fired electric powerplant may be required under this section to be so designed and constructed, if (1) to do so would result in an impairment of reliability or adequacy of service, or (2) an adequate and reliable supply of coal is not available and is not expected to be available. In considering whether to impose a design and construction requirement under this subsection, the Federal Energy Administrator shall consider the existence and effects of any contractual commitment for the construction of such facilities and the capability of the owner or operator to recover any capital investment made as a result of the conversion requirements of this section.

(b) The Federal Energy Administrator may by rule prescribe a system for allocation of coal to users thereof in order to attain the objective specified in this section.

(c) It shall be unlawful for any person to violate any provision of this section or section 11, or to violate any rule, regulation, or order issued pursuant to any such provision.

(d)(1) Whoever violates any provision of subsection (c) shall be subject to a civil penalty of not more than $2,500 for each violation.

(2) Whoever willfully violates any provision of subsection (c) shall be fined not more than $5,000 for each violation.

(3) It shall be unlawful for any person to offer for sale or distribute in commerce any product or commodity in violation of an applicable order or regulation issued pursuant to subsection (b). Any person who knowingly and willfully

violates this paragraph after having been subjected to a civil penalty for a prior violation of the same provision of any order or regulation issued pursuant to subsection (b) shall be fined not more than $50,000 or imprisoned not more than six months, or both.

(4) Whenever it appears to any person authorized by the Federal Energy Administrator to exercise authority under this section or section 11 that any individual or organization has engaged, is engaged, or is about to engage in acts or practices constituting a violation of subsection (c), such person may request the Attorney General to bring an action in the appropriate district court of the United States to enjoin such acts or practices, and upon a proper showing a temporary restraining order or a preliminary or permanent injunction shall be granted without bond. Any such court may also issue mandatory injunctions commanding any person to comply with any provision, the violation of which is prohibited by subsection (c).

(5) Any person suffering legal wrong because of any act or practice arising out of any violation of subsection (c) may bring an action in a district court of the United States, without regard to the amount in controversy, for appropriate relief, including an action for a declaratory judgment or writ of injunction. Nothing in this paragraph shall authorize any person to recover damages.

(e) Authority to issue or enforce orders or rules under subsections (a) and (b) of this section shall expire on midnight, June 30, 1975, but the expiration of such authority shall not affect any administrative or judicial proceeding pending on such date which relates to any act or omission before such date.

SEC. 11. ENERGY INFORMATION REPORTS

(a) For the purpose of assuring that the Federal Energy Administrator, the Congress, the States, and the public have access to and are able to obtain reliable energy information throughout the duration of this section, the Federal Energy Administrator, in addition to and not in limitation of any other authority, shall request, acquire, and collect such energy information as he determines to be necessary to assist in the formulation of energy policy or to carry out the purposes of this Act or the Emergency Petroleum Allocation Act of 1973. The Federal Energy Administrator shall promptly promulgate rules under the authority of subsection (b) of this section requiring reports of such information to be submitted to the Federal Energy Administrator at least every ninety calendar days.

(b) In carrying out the provisions of subsection (a) the Administrator shall have the power to—

(1) require, by rule, any person who is engaged in the production, processing, refining, transportation by pipeline, or distribution (other than at the retail level) of energy resources to submit reports;

(2) sign and issue subpenas for the attendance and testimony of witnesses and the production of relevant books, records, papers, and other documents;

(3) require of any person, by general or special order, answers in writing to interrogatories, requests for report, or other infomation; and such answers or submissions shall be made within such reasonable period and under oath or otherwise as the Federal Energy Administrator may determine; and

(4) to administer oaths.

(c) For the purpose of verifying the accuracy of any energy information requested, acquired, or collected by the Federal Energy Administrator, officers or employees duly designated by him upon presenting appropriate credentials and a written notice to the owner, operator, or at reasonable times and in a reasonable manner, enter and inspect any facility or business premises, to inventory and sample any stock of energy resources therein, and to examine and copy records, reports, and documents relating to energy information.

(d)(1) The Federal Energy Administrator shall exercise the authorities granted to him under subsection (b) to develop within 30 days after the date of enactment of this Act, as full and accurate a measure as is reasonably practicable of—

(A) domestic reserves and production;

(B) imports; and

(C) inventories;

of crude oil, residual fuel oil, or refined petroleum products, natural gas, and coal.

(2) For each calendar quarter beginning with the first complete calendar quarter following the date of enactment of this Act, the Federal Energy Administrator shall develop and publish quarterly reports containing the following:

(A) Report of petroleum product, natural gas, and coal imports; relating to country of origin, arrival point, quantity received, geographic distribution within the United States.

(B) Report of domestic reserves and production of crude oil, natural gas, and coal.

(C) Report of crude oil and refinery activity; relating allocation of crude oil to refiners with products to be derived from such crude oil.

(D) Report of inventories, nationally, and by region and State—

(i) for various refined petroleum products, relating refiners, refineries, suppliers to refiners, share of market, and allocation fractions;

(ii) for various refined petroleum products, previous quarter deliveries and anticipated 3-month available supplies;

(iii) for refinery yields of the various refined petroleum products, percent of activity, and type of refinery;

(iv) with respect to the summary of anticipated monthly supply of refined petroleum products amount of set aside for assignment by the State, anticipated State requirements, excess or shortfall of supply, and allocation fraction of base year; and

(v) with respect to LPG by State and owner: quantities stored, and existing capacities, and previous priorities on types, inventories of suppliers, and changes in supplier inventories.

(e) Where a person shows that all or part of the energy information required by this section is being reported by such person to another Federal agency, the Administrator may exempt such person from providing all or part of such energy information to him, and upon such exemption, such Federal agency shall, notwithstanding any other provision of law, provide such energy information to the Administrator.

(f) Upon a showing satisfactory to the Administrator by any person that any energy information obtained under this section from such person or from a Federal agency would, if made public, divulge methods or processes entitled to protection as trade secrets or other proprietary information of such person, such information, or portion thereof, shall be confidential in accordance with the provisions of section 1905 of title 18 of the United States Code, except that such information or part thereof shall not be deemed confidential for purposes of disclosure, upon request, to (1) any delegate of the Federal Energy Administrator for the purpose of carrying out this Act and the Emergency Petroleum Allocation Act of 1973, (2) the Attorney General, the Secretary of the Interior, the Federal Trade Commission, the Federal Power Commission, or the General Accounting Office when necessary to carry out those agencies' duties and responsibilities under this and other statutes, and (3) the Congress or any committee of Congress upon request of the Chairman. The provisions of this section shall expire on midnight, June 30, 1975, but such expiration shall not affect any administrative or judicial proceeding pending on such date which relates to any act or omission before such date.

(g) As used in this section—

(1) the term "Federal agency" shall have the meaning of the term "executive agency" as defined in section 105 of title 5, United States Code;

(2) the term "energy information" includes all information in whatever form on fuel reserves, exploration, extraction, and energy resources (to include petrochemical feedstocks) wherever located; production, distribution, and consumption of energy and fuels wherever carried on; and includes matters relating to energy and fuels, such as corporate structure and proprietary relationships, costs, prices, capital investment and assets, and other matters directly related thereto, wherever they exist; and

(3) the term "person" means any natural person, corporation, partnership, association, consortium, or any entity organized for a common business purpose; wherever situated, domiciled, or doing business, who directly or through other persons subject to their control do business in any part of the United States, its territories and possessions, the Commonwealth of Puerto Rico, or the District of Columbia.

(h) Information obtained by the Administrator under authority of this Act shall be available to the public in accordance with the provisions of section 552 of title 5, United States Code.

(i) Any United States district court within the jurisdiction of which any inquiry is carried on may, upon petition by the Attorney General at the request of the Administrator, in the case of refusal to obey a subpena or order of the Administrator issued under this section, issue an order requiring compliance therewith; and any failure to obey the order of the court may be punished by the court as a contempt thereof.

SEC. 12. DEFINITION

For purposes of this Act and the Clean Air Act, the term "Federal Energy Administrator" means the Administrator of the Federal Energy Administration established by H.R. 11793, Ninety-third Congress (popularly known as the Federal Energy Administration Act of 1974) if H.R. 11793 is enacted; except that until such Administrator takes office, such term means any officer of the United States designated as Federal Energy Administrator by the President for purposes of this Act.

Purpose of the Legislation

The purpose of this legislation is to grant specific authority to increase the use of coal resources so as to increase the energy supplies available to the Nation, to obtain information about the energy supplies available to the Nation, and to permit certain adjustment of environmental requirements, so that the Nation's essential energy needs may be met in a manner which is consistent with our national commitment to protect and improve the environment.

In brief summary, the bill directs steps to be taken to make more effective use of our Nation's coal resources, authorizes and directs the Federal Energy Administrator to obtain information on the Nation's energy supply situation, and permits narrowly defined and limited variances from certain specific Clean Air requirements so as to effectuate proper coordination between measures taken with respect to energy supplies and measures respecting environmental protection and enhancement.

Basis for the Legislation

On December 10, 1973, the committee ordered reported for House consideration H.R. 11450, the predecessor of what finally became the "Energy Emergency Act" (S. 2589). At that time, the committee noted that, our Nation was confronted with an energy emergency of unprecedented scope whose dimensions were only then coming into sharp focus. A little over one month before the Arab oil-producing nations, then engaged in armed conflict with Israel, initiated a program to curtail their collective crude oil production in an attempt to influence U.S. policy in the Middle East. This was followed by a total embargo on shipments to the United States.

Even before this, our nation had drawn down its primary inventories of gasoline, distillates and heavy fuel oil to dangerous levels. As the embargo began to take hold it became clear that emergency actions would have to be taken to maintain vital industries and public services. Thus, the committee acted quickly to report omnibus legislation to equip the President with the necessary powers to cope with the developing situation.

As is well known this legislative effort failed when the final conference report was vetoed by the President and the Senate fell short in an attempt to override the veto.[1] In the interim, the American people survived the winter months due, in large part, to their willingness to significantly alter their life patterns and to begin cutting back on their use of energy. In general, governmental institutions responded well to the crises situation, but the need for additional authorities became evident.

Subsequently the embargo was lifted and things returned to a near-normal situation. Shortages still exist; but, with demand outstripping supply to the extent that it has over the past years, that is to be expected. Moreover, the potential for crises remains. Strikes, bad weather, a reassertion of the embargo, accelerated increases in demand—any of these alone could bring about a substantial energy short-fall in a relatively short time.

Convinced that comprehensive legislation was still needed, Chairman Staggers initiated a series of discussions and negotiations on the substance of the Energy Emergency Act with White House and administration representatives in an attempt to devise legislation which could overcome the objections of the Executive and achieve early enactment. These discussions were terminated after approximately two weeks without resolution. Fundamental policy differences continued to divide the administration and the committee.

Accordingly, a new bill, H.R. 13834, was introduced containing much of what was contained in the Energy Emergency Conference Agreement. Seeking to expedite the already protracted consideration of the energy legislation, Chairman Staggers scheduled hearings on this legislation before the full committee on April 2, 3, and 4, 1974. The committee began mark-up of this bill April 9, 1974, and continued to consider H.R. 13834 and amendments thereto through April 25, 1973.

At the conclusion of these considerations, the committee voted to delete from H.R. 13834, the provisions relating to coal conversion and coal allocation (section 105), energy information reports (section 122), and title II (relating to coordination of environmental requirements). The committee then voted to take up consideration of H.R. 14368, a bill introduced by Representative Hastings, on April 24, 1974, which incorporated these provisions. This bill, with minor amendments to sections 2–9, was ordered reported by voice vote.

In so doing the Committee seeks to bring before the House in a separate bill those essential parts of the comprehensive package of proposals on which there is substantial agreement. In the committee's view we should delay no longer certain steps pending resolution of the more controversial and far reaching questions presented in title I of H.R. 13834. At least three steps should be taken now. First, the Administrator of the Federal Energy Administration must be given, and must exercise, the authority to obtain all information necessary to accurately assess the Nation's current and future energy supply situa-

[1] The veto message cited objections to provisions of the bill which provided for reducing crude oil prices, providing federal aid to those unemployed by the energy crisis, and the granting of loans to homeowners and small businesses for energy conservation purposes. The Senate failed to override the veto, by a vote of 58–40 on March 6, 1974.

tion. Second, the Administrator of the FEA must be authorized and directed to implement a policy which will result in more effective use of our Nation's coal resources. Third, carefully limited adjustments must be made to certain specified environmental requirements. These adjustments, however, are not intended to abrogate or signal the abandonment of the committee's, the House's, the Congress' or the Nation's basic commitment to protection and enhancement of the public health, welfare, and the environment.

Particular mention of the need for comprehensive energy reporting should be made.

In a report completed on February 6, 1974, the General Accounting Office identified 45 bureaus, offices, divisions or administrations of 17 different agencies which are significant collectors or users of energy data. A spot audit showed that in the spring of last year fifteen major Federal agencies were circulating 145 energy-related questionnaires to the States and the private sector. Despite this effort, significant deficiencies exist in the data available to Federal decisionmakers.

In general, Federal agencies have developed individualized systems for data collection and analysis. Informational needs have been tailored to meet the particular task of an agency. Often, the data collected cannot be used for other purposes. Moreover, these agencies typically rely on private industry for their information; the data obtained is unverified and the collection process itself is not monitored. Consequently, as Members have repeatedly found over the course of this last year, information on reserves, supplies, and profits is incomplete and frequently inconsistent.

Without exception, all parties within and without government agree that the present system is inadequate. As former Administrator William E. Simon has testified "Today, and in the years ahead, we need better data on every aspect of energy—reserves, refinery operation, inventories, and production costs. We need data that we can check, verify, and crosscheck . . ." The legislation which the Committee reports today contains the fundamental powers necessary to acquire and develop for the Executive, the Congress, and the public timely, verifiable information whose absence in the past has so confused debate of energy policy issues and divided the American people.

Under the terms of this bill, the Administrator of the Federal Energy Administration is both authorized *and directed* to develop a full and accurate measure of domestic reserves and production, imports and inventories of basic fossil fuels (petroleum products, natural gas, and coal). This information is required to be assembled within 30 days of enactment and kept timely through periodic reporting requirements. To gain the essential perspective that comprehensive data can provide, the Administrator is also given authority to gather together all relevant energy information. Here the Administrator is equipped with the broadest of powers to reach into any sector of the economy to bring together information relevant to his task.

The Committee wishes to emphasize two important points with respect to this grant of authority. First, it should be noted that the authority under this legislation is temporary in nature and will expire on June 30, 1975. This does not represent a decision by the Committee that our informational needs will not stretch beyond that point in

time. On the contrary, the Committee is convinced that these needs will be with us for many, many years. The Committee is aware of efforts to develop within the government a centralized energy data organization to serve both the needs of the Executive and the Congress in the development of energy policy. Those efforts should continue. But we should not fail to respond to the immediate needs of the short-term situation awaiting the final resolution of the issues which attend the formation of a centralized data system. Secondly, the Committee wishes to emphasize that in reporting the energy information authorities contained in this bill, the Committee does not intend to reflect or imply disagreement with the energy information gathering powers which have been made a part of the legislation emanating from the House and Senate Committees on Government Operations dealing with the creation of a permanent Federal Energy Administration. The text of the conference agreement on that legislation (H.R. 11793) was not available to the Committee at the time of its deliberations. The Committee recognizes, therefore, that amendments to the energy information reporting section of this bill may be necessary to rationalize this section with provisions of H.R. 11793.

Explanation of Section-by-Section Amendments

The committee has reported a committee amendment in the nature of a substitute for the text of the introduced bill (H.R. 14368). The committee amendment is substantially identical to the introduced bill, except that a direction to the Secretary of Transportation to conduct a study of west coast rail passenger service was deleted, and a requirement to conduct public hearings before imposing certain transportation controls was added. The committee amendment also contains several technical and conforming changes. An explanation of the committee amendment on a section-by-section basis follows:

Sec. 1. Short Title Purpose

This section provides that the bill may be cited as the "Energy Supply and Environmental Coordination Act of 1974."

The section also sets forth the purpose of the bill: to assist in meeting the essential needs of the United States for fuels, in a manner which is consistent, to the fullest extent practicable, with existing national commitments to protect and enhance the environment, and to provide requirements for reports respecting energy resources.

Sec. 2. Suspension Authority

This section, as well as sections 3–9, is nearly identical to title II of S. 2589, as reported by the conferees on February 7, 1974 (see H. Report No. 93–793), but which was vetoed by the President.

There are two respects in which this section has been changed from section 201 of S. 2589. First, in light of the time which has passed since original consideration of energy emergency legislation, the date November 1, 1974, which appeared in Section 201 of S. 2589, has been changed in all instances to the earlier of June 30, 1974, or one year after date of enactment of this bill.

Second, the provisions applicable to sources which began conversion to coal voluntarily in the 90-day period prior to December 15, 1973, have been extended to cover any source which began such conversion after September 15, 1973, and before date of enactment of this bill.

In all other respects this section is identical to section 201 of S. 2589:

The bill provides for short term suspension of stationary source fuel or emission limitations but, with one exception, does not authorize long-term delay of such limitations. The bill adds a new section 119 to the Clean Air Act which will permit the Administrator of the Environmental Protection Agency to suspend until June 30, 1975 or one year after date of enactment (whichever comes first), any stationary source fuel or emission limitation. A suspension may be granted by the Administrator either upon his own motion or upon the application of a source or a State, if the source cannot comply with such limitations because of the unavailability of fuel. The Administrator of the Environmental Protection Agency is directed to give prior notice to the Governor of the State and the chief executive of the local government unit where the source is located. He is also directed to give notice to the public and to allow for the expression of views on the suspension prior to granting it unless he finds that good cause exists for not providing such opportunity. Judicial review of such suspension would be restricted to certain specified grounds.

The Administrator is required to condition the granting of any suspension upon adoption of any interim requirements that he determines are reasonable and practicable. These interim requirements must include necessary reporting requirements, and a provision that the suspension would be inapplicable during any period when clean fuels were available to such source. The Administrator would be required to determine when such fuels were in fact available. It is the intent of committee that the Administrator in making such determination take into consideration the costs associated with any changes that would be required to be made by the source to enable it to utilize such fuel. No source which has converted to coal and to which section 119(b) applies, however, could be required under this provision to return to the use of oil or natural gas.

The suspension would also be conditioned on adoption of such measures as the Administrator determines are necessary to avoid an imminent and substantial endangerment to the health of persons. This would authorize not only requirements that a facility shut down during air pollution emergencies, but also (for example) a requirement that it keep a reserve supply of clean fuels on hand to be burned to avoid such emergencies.

The purpose of the short term suspension provision is to enable sources to continue operation during the immediate fuel shortage while at the same time limiting as much as possible the impact on air quality.

In recognition of the need to balance energy needs with environmental requirements and the unique problems facing any source which converts to coal in response to the emergency, the committee adopted a provision which provides that no air pollution requirement (as defined in section 119(b)(3)) could have the effect of prohibiting any such source from burning coal, except as provided in section 119(b)(1)(D). The bill would prohibit the application of such requirements

to sources which are either ordered to convert to coal or which began to convert to coal during the period beginning September 15, 1973, and ending on date of enactment of this bill. This prohibition against application of such requirements to such source could in some instances continue until as late as January 1, 1979. The prohibition would only apply if the source were placed, after notice and opportunity for oral presentation of views, on a schedule approved by the Administrator of the Environmental Protection Agency. The schedule must provide a time-table for compliance with the fuel or emission limitations of the applicable implementation plan no later than January 1, 1979.

In two States—Ohio and Kentucky—however, there is no applicable implementation plan in effect. This is so because of the Sixth Circuit Court of Appeals' opinion and order in *Buckeye Power, Inc.* v. *Environmental Protection Agency*, No. 72–1628 (6th Circ. 1973) and consolidated cases. The committee does not intend to preclude sources located in Ohio or Kentucky from eligibility for the exemption provided in section 119(b)(1). Therefore, the language of section 119(b)(2)(B) would permit the Administrator to approve a plan for a source located in either of these states if the plan provides a compliance schedule to achieve "the most stringent degree of emission reduction that such source would have been required to achieve . . . under the first applicable implementation plan which takes effect after" the date of enactment.

All compliance schedules under section 119(b) must also provide for compliance with interim requirements that will assure that the source will not materially contribute to a significant risk to public health.

The committee wishes to emphasize that the Administrator would not be authorized to approve a plan under section 119(b) for a utility generally. Rather, each plan approval must be for a specific plant. Moreover, before ordering the source to convert under section 10 of this Act, the Federal Energy Administrator would be expected to make a careful, case-by-case balancing analysis of the energy need and environmental harm which might result from such an order. The same type analysis must be made by the FEA Administrator prior to permitting a source which began conversion to coal in the period from September 15, 1973, to date of enactment, to continue to burn coal under a section 119(b) exemption. The FEA Administrator in making such an analysis is expected to consult and cooperate with the Administrator of EPA.

There are three basic reasons for the committee's decision to encourage increased burning of coal until at least 1979. First, in order to encourage the opening of new coal mines to increase energy supplies, it is necessary to encourage an on-going substantial demand for such coal. Without reasonable likelihood that new coal mines will be able to market their new production, the opening of new mines and expansion of existing mine capacity may be regarded too risky. Second, to the extent that electric generating power plants can be encouraged to cease burning oil and natural gas, these fuels would be available to meet other energy needs, such as production of gasoline and home

heating oil. Finally, since continuous emission reduction technology is available for major sources such as power plants, but is not available for sources such as homes, apartment houses, and small businesses, the purpose of the Clean Air Act can be better effectuated by having low pollution oil and natural gas burned to the maximum extent feasible, in sources for which no effective clean-up technology is available.

The committee believes that the priority effort of each source which is subject to section 119(b) should be to obtain low sulfur coal. If an adequate, long-term supply of low sulfur coal is available to such a source, the Administrator should only approve a plan which requires its use (and thus compliance with air pollution requirements) as expeditiously as practicable. In such a case, the Administrator would have to disapprove a plan which proposed to wait until January 1, 1979, before beginning to burn low sulfur coal. The committee believes that requiring priority consideration to the use of non-metallurgical low sulfur coal will reduce the likelihood of extended violation of applicable emission standards.

If a source is unable to obtain an adequate, long-term supply of low sulfur coal, it may seek to come into compliance by use of a continuous emission reduction system or by use of coal byproducts which would achieve the required degree of emission reduction. In such case, the source would still be required to act expeditiously to obtain an adequate supply of coal. However, compliance with all air pollution requirements would be required on a date established by the Administrator in the case of a source which will require a continuous emission reduction system for sulfur-related emissions, or as soon as practicable in the case of any other source; but in any case not later than January 1, 1979.

The Administrator would be required to impose, but would not be limited to imposing, the following requirements in any compliance schedule:

(1) the dates by which the source will solicit bids and enter into binding contractual agreements (or other equally binding commitment) for the procurement of an adequate coal supply to permit continued long term operation of the source;

(2) where the coal obtained by the source has sulfur content or other characteristics which will require installation of continuous emission reduction equipment to enable the source to comply with emission limitations, the dates for soliciting bids for such equipment, contracting for such equipment, and installation and start-up of such equipment by a date that will permit a reasonable time for necessary adjustments of the equipment to maximize the reliability and efficiency of the system prior to January 1, 1979; and

(3) reasonable interim measures which the source should employ to minimize the adverse impact on air quality.

In establishing dates for contracting for coal, the Administrator should determine the earliest date that is reasonable and which will permit compliance by the time specified in this section. Because the dates for obtaining coal or continuous emission reduction systems may occur at approximately the same time for more than one source which

may over burden supplies, the Administrator is specifically authorized to establish differing dates for obtaining coal or such systems to insure availability of supplies of such coal or equipment. In making such decisions, it is expected that the Administrator will provide the earliest date for those sources in areas with the most serious pollution problems.

It is the intent of the committee that when the coal available to the source necessitates the use of continuous emission reduction equipment for control of sulfur-related emissions, the source will have as much time as necessary to install the equipment and achieve timely compliance, in order to permit the orderly development of technology.

In recognition of the complex factors involved in determining schedules for the various sources, the committee intends that the Administrator have broad discretion in prescribing and approving schedules of compliance to insure that sources meet the requirements of this section without overburdening production capacity for continuous emission reduction systems for sulfur control or causing unacceptable disruption in energy production capacity.

The committee does not intend to permit delay of existing compliance schedules for control of particulate emissions. Some slight delay may be necessary in light of revised compliance schedules for control of sulfur-related emissions. However, only such minor adjustments as the Administrator determines to be unavoidable should be permitted in existing compliance schedules and emission limitations for control of particulates.

The provision relating to conversions under section 119(b) does not apply to fuel burning stationary sources which would propose to reconvert to oil or natural gas before the earlier of June 30, 1975, or one year after date of enactment. Only fuel burning stationary sources which select coal, receive EPA approval and submit a new compliance schedule which will achieve applicable emission limitations no later than January 1, 1979, can take advantage of section 119(b) beyond that date. After that date, fuel burning stationary sources which choose to reconvert to oil or natural gas remain subject to compliance schedules which were applicable prior to the temporary suspension or exemption.

The bill does provide for two exceptions to the prohibition on enforcing air pollution requirements. The Administrator or a State or local governmental unit, may, after notice and opportunity for oral presentation of views, prohibit the use of coal if it is determined that such use will materially contribute to a significant risk to public health. The Administrator, or a State or local government unit, may also require that a source use a particular grade of coal or coal with particular pollutant characteristics if such coal is in fact available to such source.

The term "significant risk to public health" is used in several instances in section 119. The committee is aware that the Environmental Protection Agency, taking its lead from the Senate Public Works Committee report on section 303 of the Clean Air Amendments of 1970, has defined "imminent and substantial endangerment" by regulation as a significant risk to the health of persons and has specified levels for various pollutants which reflect its judgment as to where those risks

occur. The committee wishes to emphasize that the language which is used in section 119 is not used in the same sense as the EPA regulations. Rather, the language of the bill deals with risks to health which are less severe than those specified by the Agency's "endangerment" regulations. What is intended is that some violation of the national primary ambient air quality standards may be permitted so long as any of the public would not be exposed to significant health risks.

The bill makes explicit that the period of inapplicability under section 119(b) of State implementation plan requirements may be extended for one year under the procedures of section 110(f) of the Clean Air Act. It is the intent of the committee, however, that the requirements of that section be clearly satisfied before any one year suspension is granted; the committee believes that requiring compliance by 1979 should permit adequate time for all sources to achieve compliance.

The bill thus requires these converting sources to come into compliance with all plan requirements by 1979 (or 1980, if a postponement is obtained under section 110(f)) in accordance with a schedule which meets requirements of regulations of EPA. These requirements would require incremental steps toward compliance by utilization of low sulfur coal or coal derivatives, or by continuous emission reduction systems to permit the combustion of high sulfur coal (or coal with high ash content) in compliance with such plan requirements.

The opportunity to continue to burn coal until January 1, 1979, would extend to sources which began converting to coal use at any time between September 15, 1973, and date of enactment. In order to be eligible for the exemption of section 119(b)(1), the source must do more than merely create a contingency capability to burn coal. Rather, the source must have made a firm determination to cease burning oil or natural gas and to burn coal instead. Moreover, the source must carry out this determination expeditiously and in good faith. Thus, the mere solicitation of bids for a coal supply would not necessarily in and of itself constitute action to begin conversion to the use of coal. This provision would permit the Administrator of the Environmental Protection Agency to exercise his discretion in deciding whether any particular source "began conversion to the use of coal" within the meaning of section 119(b)(1).

The committee intends that all limitation of State and local authority which is contained in section 119(b) would cease to be effective on January 1, 1979.

The bill includes a provision which authorizes the Administrator of the Environmental Protection Agency to allocate continuous emission reduction systems among users where supplies fall short of demand. This provision stipulates, however, that such allocation authority shall not impair the obligation of any contract entered into prior to the enactment of this section.

This section also includes provisions which require the Administrator of the Environmental Protection Agency to report to Congress on the impact of fuel shortages on the Clean Air Act programs as well as other factors, including the availability of continuous emission control equipment. The Administrator would also have to publish periodic reports on compliance with requirements imposed as part of any suspension or coal conversion, and other information on the impact

of the section. The bill also makes the violation of any requirement imposed as part of the new section 119 subject to enforcement under section 113 of the Act. Finally, the bill provides for preemption of any State or local government from enforcing a fuel or emission limitation against a source granted a suspension under the section. Such preemption does not apply with respect to requirements which are identical to Federal interim requirements.

New section 119 of the Clean Air Act also authorizes a one year postponement of applicable plan requirements for certain power plants. To be eligible, the power plant must be on a schedule to cease operations by January 1, 1980. The Federal Power Commission must also determine that the facility will in good faith carry out such plan.

To obtain the one year postponement of an emission limitation which is part of a State implementation plan, the Governor of the State must concur in the application to the Administrator of the Environmental Protection Agency. The Administrator shall consider the risk to the public health and welfare and may only grant the postponement if he determines that compliance is not reasonable in light of the projected useful life of the plant and availability of rate increases, as well as other factors. He may prescribe such interim requirements as may be reasonable. It is intended that this bill only address the immediate energy problem and the committee does not intend for any electric generating facility to be shut down in the near future because of the infeasibility of employing required emission control measures due to the age of the facility. The Congress intends to review the long term energy problems and environmental needs during the remainder of this session and will consider such relief as may be justified to alleviate the problems presented to facilities, including power plants, which are scheduled to be phased out.

New section 119 also authorizes the Administrator of EPA, after consultation with the FEA Administrator, to designate persons to whom fuel exchange orders should be issued to enhance protection of public health and welfare. It further requires the FEA Administrator to issue such orders within 45 days after the date of EPA's designation, unless the FEA Administrator finds that the economic or energy costs of such exchange will be excessive.

In order to assure the Administrator of the Environmental Protection Agency an adequate supply of information on the types, amounts, price, pollution characteristics and allocation of available fuels, it is expected that he will have access to all data available to the Administrator of the Federal Energy Administration.

Such information will assist in effective and timely performance of the Administrator of EPA's function under this Act.

The committee expects that both the FEA and EPA Administrators will facilitate interagency cooperation and information exchange. EPA is expected to establish a permanent liaison in the office of the FEA Administrator for the duration of the energy shortage situation and the FEA Administrator is expected to do the same at EPA. This may reduce the confusion which can otherwise be expected to result from those decisions each agency is required to make under statutory authorization.

SEC. 3. IMPLEMENTATION PLAN REVISIONS

The only change made by the committee in this section of the bill from section 202 of S. 2589, as reported by the conferees, is the addition of a requirement that at least one public hearing be conducted in the affected area prior to promulgation by the Administrator of any requirement relating to management of parking supply or preferential bus/carpool lanes.

In all other respects this section is identical to section 202 of S. 2589:

This section provides that the Administrator will only review those plans for regions in which coal conversion under section 119(b) of the Clean Air Act may result in a failure to achieve a primary ambient air quality standard on schedule. The bill directs the Administrator to order necessary plan revisions within one year after such conversion that would set forth any additional reasonable and practicable measures required to achieve ambient air quality standards. The plan revision would have to consider whether, despite the coal conversions, the primary ambient standards could be achieved through the use of additional reasonable and practicable measures (which may include energy conservation measures) that were not included in the original plan. In allowing up to a year for the Administrator of the Environmental Protection Agency to act, it is the intent of the committee to permit both the Administrator and the States sufficient leadtime to develop adequate information on the impact of coal conversions, both effected and anticipated, and to permit accurate assessment of the additional measures required for State implementation plans.

The committee expects that revisions under this section will be required only after careful consideration of a number of factors to assure that existing sources which do not convert will not be subject to new requirements where such requirements are unreasonable or impractical. In determining reasonableness and practicability, the Administrator shall consider whether the source is presently subject to requirements, is on schedule and has expended or is expending funds to comply. In this event, no requirement shall be imposed under this section which will require unreasonable additional expenditures. However, where reasonable measures can be imposed, without penalizing sources which are in compliance or are in the process of complying with the law, the Administrator shall impose such requirements.

Section 3 of the bill amends section 110 of the Clean Air Act to include a provision that parking surcharges must receive the explicit authorization by Congress by law before they may legally be imposed by the Environmental Protection Agency. The bill would, however, continue to permit preferential bus/carpool lanes to be implemented by the Environmental Protection Agency as set forth in current transportation control plans. In implementing requirements for bus/carpool lanes, the basic responsibility rests with State and local governments and transportation agencies, and local hearings should be considered for specific proposals.

The committee notes that the Public Health and Environment Subcommittee will be reviewing the issues involved in transportation

63-518 O - 76 - 18 (Vol. 1)

controls in hearings during the remainder of this session. The study mandated by this bill of the necessity and impact of these specific transportation controls will be useful to the subcommittee in its inquiry.

In addition, the committee directs the Administrator of the Environmental Protection Agency to review all the transportation controls which have been promulgated or proposed as to their efficacy and practicability, and to provide the appropriate committees with the results of that review in connection with hearings during 1974.

The bill would also empower the Administrator of the Environmental Protection Agency to suspend for one year the review of new parking facilities. Although the Agency has already promulgated regulations suspending such activity, the committee wishes to reemphasize its continued support for a moratorium on EPA's parking management regulations until January 1, 1975.

Although the committee does not believe that regulations on the management of parking supply should be made subject to prior congressional approval, the committee has concluded that a period for refining the criteria which will be used in the review of such facilities and establishing the administrative machinery to review them should be permitted before the program is placed in operation. The bill provides that, upon exercise of the suspension authority, no parking facility on which construction is initiated before January 1, 1975, would be subject to review for its impact on air quality as a result of any Environmental Protection Agency regulations on the management of parking supply.

In adopting these provisions, the committee does not intend to question either the need for, or the authority of the Administrator of the Environmental Protection Agency to impose, transportation control plans.

This section, like section 203 of S. 2589, amends section 202 of the Clean Air Act to continue the emission standards established by the Administrator for 1975 model year automobiles during the 1976 model year. The effect of this provision is to maintain in the 1976 model year a Federal 49-State standard of 1.5 grams per mile of hydrocarbons, 15.0 grams per mile of carbon monoxide and 3.1 grams per mile of oxides of nitrogen, and a standard for California of 0.9 gram per mile of hydrocarbons, 9.0 grams per mile of carbon monoxide, and 2.0 grams per mile of oxides of nitrogen. These standards apply to automobiles produced by all manufacturers, whether or not any individual manufacturer had applied for or received a suspension under section 202(b)(5) previous to the enactment of this section.

The bill provides that after January 1, 1975, an automobile manufacturer may seek a single one-year suspension of the statutory standards for hydrocarbons and carbon monoxide applicable to the 1977 model year. The Administrator would be required to establish interim emission standards for 1977 model automobiles for hydrocarbons and carbon monoxide if he grants the suspension.

In authorizing the suspension for the 1977 model year, the conferees point out that one of the considerations advanced by Judge Levanthall in remaining EPA's decision not to authorize a suspension of the 1975 standards for one year was that adverse fuel economy would

deter consumer purchasing of new automobiles, resulting in greater retention of old automobiles with inefficient pollution control devices. As Judge Levanthall pointed out, this might lead to a situation whereby denial of a suspension would result in greater total actual emissions of all cars in use than would be the case if a suspension were authorized. See *International Harvester Company, et al.* v. *Ruckelshaus*, 478 F.2d 615, 633–634 (February 20, 1973). If the Administrator is asked to authorize a suspension for HC and CO for model year 1977, and if the country is experiencing an energy crisis at the time a suspension is requested, the committee would expect the Administrator to weight carefully whether the application of the statutory standard would result in significant increase in fuel consumption.

The conference substitute amends section 202(b)(1)(B) of the Clean Air Act to establish a maximum emission standard for oxides of nitrogen of 2.0 grams per mile applicable nationwide to 1977 model year automobiles. This defers the previous statutory standard of 0.4 grams per mile of oxides of nitrogen until the 1978 model year. No administrative suspensions would be possible from either the 1977 or 1978 standard. While the 1977 model years standard is a maximum of 2.0 grams per mile nationwide, California retains the right under section 209 of the Clean Air Act to seek a waiver for a more stringent standard.

The committee is concerned with what may be unwarranted or, at least, untimely changes in EPA's certification test procedures for new automobile emissions. It is intended that uncertainty as to requirements for compliance with such standards be minimized. Any changes in test procedures shall be kept to an absolute minimum and should occur only where such changes improve instrumentation, reduce cost of testing or improve the reliability and validity of the test results.

SEC. 5 CONFORMING AMENDMENTS

This section contains conforming amendments which are identical to those which were contained in section 204 of S. 2589, as reported by the conferees.

SEC. 6. PROTECTION OF PUBLIC HEALTH AND ENVIRONMENT

This section contains provisions pertaining to studies, fuel allocation, and the filing of environmental impact statements which are identical to those which we contained in section 205 of S. 589, as reported by the conferees.

SEC. 7. ENERGY CONSERVATION STUDY

This section contains provisions relating to various energy conservation studies, which in all respects except one, are identical to those which were contained in section 206 of S. 2589, as reported by the conferees.

The committee voted to delete subsection (d) of that section (pertaining to the Tijuana-Vancouver high-speed ground transportation system study). In doing so, the Committee did not intend to express

any opposition to such a study or system. Rather, the committee deleted the provision because it felt that such a study could not be completed within the time frame of the provision as introduced or within the period of existence of this Act. In addition, it was the committee's belief that additional matters such as consultation with State and local agencies, additional criteria for the study and appropriate time frame and sufficient authorization of funding should be the subject of hearings by an appropriate subcommittee of the House Interstate and Foreign Commerce Committee.

SEC. 8. REPORTS

This section provides for a report by the EPA Administrator on the implementation of sections 2 through 7, a provision which is substantially similar to that contained in section 207 of S. 2589, as reported by the conferees.

SEC. 9. FUEL ECONOMY STUDY

This section provides for EPA and the Department of Transportation to conduct a joint study on the feasibility of establishing a 20 percent fuel economy improvement standard for 1980 and later model new motor vehicles. This provision is identical to that which was contained in section 209 of S. 2589, as reported:

The purpose of the jointly conducted study is to eliminate duplication with current, ongoing fuel economy studies.

The committee expects, of course, that any current DOT studies will be coordinated with this study to eliminate any potential duplication and minimize waste of funds.

At the same time, the committee agrees that EPA must be actively involved in any fuel economy analysis to assure consistency between the findings of the study and the statutory requirements for automobile emission reductions.

The committee recognizes that DOT has an equally important safety responsibility but does not have either established test procedures, testing facilities or the expertise on engine technology to perform an independent review.

The committee expects this study to utilize EPA's established emission test procedures in order to avoid inconsistency in any subsequent legislation recommendation.

SEC. 10. COAL CONVERSION AND ALLOCATION

This section is identical in almost all respects to section 105 of S. 2589, as reported by the conferees. The term "byproducts" has been changed to "derivatives". This change does not reflect a change in policy; rather the change was made to more clearly express the committee's intent to refer to "oil", "gas", or other fuels derived from coal.

In all other respects, this section is identical to section 106 of S. 2589:

Section 10 provides that the Administrator of FEA shall, to the extent practicable and consistent with the objectives of this Act, by order, after balancing on a plant-by-plant basis the environmental effects of use of coal against the need to fulfill the purposes of this

legislation, prohibit, as its primary energy source, the burning of natural gas or petroleum products by any major fuel-burning installation (including any existing electric powerplant) which, on the date of enactment of this legislation, has the capability and necessary plant equipment to burn coal. Any installation to which such an order applies is permitted to continue to use coal and coal derivatives as provided in section 119(b) of the Clean Air Act. To the extent coal supplies are limited to less than the aggregate amount of coal supplies which may be necessary to satisfy the requirements of those installations which can be expected to use coal (including installations to which orders may apply under this subsection), the Administrator of FEA shall prohibit the use of natural gas and petroleum products for those installations where the use of coal will have the least adverse environmental impact. A prohibition on use of natural gas and petroleum products hereunder is contingent upon the availability of coal, coal transportation facilities, and the maintenance of reliability of service in a given service area. Assessment of the availability of coal would take into consideration the physical and economic feasibility of its production, transportation to the powerplant, and of any State laws or policies limiting its extraction or use.

The Administrator of FEA must require that fossil-fuel-fired electric powerplants in the early planning process, other than combustion gas turbine and combined cycle units, be designed and constructed so as to be capable of using coal as a primary energy source instead of or in addition to other fossil fuels. No fossil-fuel-fired electric powerplant is required to be so designed and constructed, if (1) to do so would result in an impairment of reliability or adequacy of service, or (2) if an adequate and reliable supply of coal is not available and is not expected to be available. In considering whether to impose a design or construction requirement, the Administrator shall consider the existence and effects of any contractual commitment for the construction of such facilities and the capability of the owner or operator to recover any capital investment made as a result of the conversion requirements of this section.

The FEA Administrator is authorized by rule to prescribe a system for allocation of coal to users thereof in order to attain the objectives specified in this section.

The committee believes that, in the reasoned administration of this authority to order certain plants to cease burning oil or natural gas, the Administrator should balance all relevant factors, including energy needs of the economy, public health and safety, environmental effects of fuel use, available facilities, adequacy and reliability of electric power supply, among others. He should consult with all affected departments and agencies of government, including the Federal Power Commission in order to obtain the findings and recommendations of that agency covering matters within its administrative jurisdiction and expertise. The committee contemplates that the physical conversion of electric generating facilities from petroleum or natural gas firing to coal firing will have implications respecting adequacy and reliability of bulk power supply, matters wth the FPC's jurisdiction under the Federal Power Act, 16 U.S.C. 791(a) *et seq.*

The committee hearings indicate that in coastal and other regions of the Nation, the conversion of the major or large petroleum and natural gas fired fuel burning installations would assist materially in meeting the current demands upon natural gas and petroleum resources. As respects electric power plants, themselves a major user of petroleum and natural gas resources for boiler fuel purposes, the testimony shows the principal fuel burning plants likely to be affected by this section will be those electric power plants which once burned coal, but which have been converted to oil fuel in recent years to meet more stringent air pollution requirements, and which still retain the necessary coal handling facilities and appurtenance both inside and outside the plant, including necessary land for storage of coal. These include equipment such as unloaders, conveyors, pulverizers, scales, burners, soot blowers and special coal-burning instrumentation and controls. The latter are necessary not only to maintain dependable operation but to assure operational safety, since coal firing is often a much less stable operation than that obtainable with oil or gas. It is not intended, however, to imply that the absence of any one or combination of these facilities would be grounds for concluding that the facility lacked capability or necessary plant equipment to convert to coal firing.

As shown in the committee hearings, electric utilities have reported that within three weeks from the time conversion is started, approximately 13,000 megawatts of capacity normally burning oil or gas fuel could be converted to coal, with an indicated reduction in residual oil demand of about 105 million barrels per year or an average of 288,000 barrels per day. The required increase in coal consumption would be about 26 million tons per year.

The Federal Power Commission reported that there is a potential for an additional 75 million barrels of oil per year saving by reconverting units which require re-establishment of major coal facilities and which could require up to a year or more for complete conversion. With all conversions completed, the annual savings in residual oil for electricity generation would be about 180 million barrels per year or almost 500 thousand barrels per day. The associated increase in coal consumption would be about 45 million tons per year, as compared to the present total production of coal of about 600 million tons per year.

SEC. 11. ENERGY INFORMATION REPORTS

This section is drawn from section 124 of S. 2589, as reported by the conferees, but was modified substantially in the following respects:

This section authorizes and directs the Administrator of the Federal Energy Administration to assemble reliable energy information. The Administrator is granted the power to require, by rule, the submission of reports by persons who are engaged in the production, processing, refining, transportation by pipeline, or distribution (other than at the retail level) of energy resources. To augment this rulemaking authority, the Administrator may sign and issue subpoenas to compel the attendance in testimony of witnesses and the production of relevant books, records, papers and other documents, and to require by special or general orders answers in writing to interrogatories, request for reports, or other information. The authority to issue subpoenas and

general or special orders runs to any "person" who possesses "energy information". These terms are given very broad meanings in order to assure that the Administrator has access to any relevant data.

The Administrator is given two specific authorities to assist in the verification of energy data. First, he is permitted to require that information called for by general or special orders be submitted under oath. Also, the Administrator is given general authority to administer oaths and to conduct on-site inspections, to inventory and sample any stock of energy resources, and to examine and copy records, reports, and documents relating to energy information. The Committee expects this authority to be used. One of the major shortcomings in the current system, is the reliance of federal agencies on unverified information. As long as the reporting of significant information by industry is voluntary and unverified, credibility questions will be raised even though the data may be entirely valid. Most certainly the present inability of government to demonstrate convincingly the nature and extent of the shortage of energy producing resources is due, in large part, to the unavailability of independently verified data.

As has been widely noted by critics of the current energy collection system, Federal regulatory agencies tend to develop individualized systems for energy data collection and typically rely upon the industries they regulate for information. This is true even of those agencies which have been given the authority to mandate the submission of data. To assure that the compulsory reporting authority contained in this bill is not similarly allowed to lie dormant, the Administrator is directed to promptly promulgate rules under the authority contained in subsection (b) (1) to require periodic reports at least every ninety days to assure the timeliness and accuracy of information necessary to the formulation of energy policy. Moreover, the Administrator is directed to use his full information gathering authorities, including the use of subpoenas and general or special orders, to develop within thirty days after enactment of this Act as full and accurate a measure as is reasonably practicable of domestic reserves, production, imports, and inventories of petroleum products, natural gas, and coal. This information would be available, without qualification, to the Congress or any committee thereof upon request of the committee's chairman. Public access to this data is governed by the terms of the Freedom of Information Act.

To assure that the public is kept informed on a routine basis, the Administrator is required to publish quarterly reports containing specific and detailed information pertaining to supplies of petroleum products, natural gas, and coal. It is the Committee's intention that the need to make periodic reports will assure the continued quality and timeliness of the data required to be obtained under this section.

SEC. 12. DEFINITION

This section defines the term "Federal Energy Administrator" for purposes of the bill and the Clean Air Act. That term refers to the Administrator of the Federal Energy Administration, which will be established by the Federal Energy Administration Act of 1974. Until that Administrator takes office, this section provides that the term will refer to an officer of the United States designated by he President.

Cost Estimates

In accordance with section 252(A) of the Legislative Reorganization Act of 1970 (Public Law 91-150, 91st Congress), the committee provides the following estimate of cost:

Fiscal year:	Millions
1974	$5
1975	35
1976	5
1977	5
1978	5

Except for the administrative functions of the Environmental Protection Agency, authorities under this Act expire on June 30, 1975.

Agency Reports

Following normal procedure, the committee requested agency views on the bills, H.R. 13834 and H.R. 14368. No agency comments have been received in response to that request.

Members may, however, find some portions of the following material submitted by Administrator Russell E. Train in connection with the proposed "Clean Air Act Amendments of 1974" to be pertinent to some of the provisions of H.R. 14368:

U.S. Environmental Protection Agency,
Office of the Administrator,
Washington, D.C., March 22, 1974.

Hon. Carl T. Albert,
Speaker of the House of Representatives,
Washington, D.C.

Dear Mr. Speaker: I am pleased to forward to you a proposed bill, "The Clean Air Act Amendments of 1974", which is designed to improve the Federal-State program to achieve clean air.

Air pollution directly affects all of our citizens because of the adverse effects on their health and welfare and because of the increased costs they pay for goods and services. The Clean Air Act Amendments of 1970 have established a strong and effective program to protect the American public from the adverse health effects as well as other effects of air pollution. Under the 1970 law EPA has established air quality standards to protect health and welfare. The States have adopted and are implementing detailed programs to ensure compliance with the standards. The automobile industry has made significant progress in reducing motor vehicle emissions. States and localities are developing transportation control strategies that will not only help achieve higher air quality, but also reduce congestion and provide more balanced transportation systems. These are only illustrative of the major progress that the law has stimulated.

Now, with more than three years of experience, we are in a position to suggest some specific areas in which the law needs to be strengthened or made more workable. The amendments which we are suggesting are intended to improve upon the basic thrust of the Act and to take into account new realities, particularly the energy problems which the Nation faces. They are also intended to deal realistically, but with

continued firm commitment, with specific problems of inability to achieve the statutory deadlines for the ambient air quality standards in severe problem areas such as Los Angeles.

The cornerstone of the Clean Air Act is the establishment of Air Quality Standards designed to protect the Nation's health and welfare and development by the States of implementation plans to insure attainment of those standards by designated statutory deadlines.

We are suggesting three changes dealing with the statutory deadlines for air quality standards: first, to provide greater flexibility in dealing with transportation controls for those areas heavily impacted by motor vehicle pollution; second, to provide for EPA review of State implementation plans in order to encourage the use of clean fuels in geographic areas of most need; and third, when necessary, to temporarily extend compliance dates for certain stationary source fuel limitations.

To date, transportation controls have been proposed for 38 metropolitan areas. Many of these communities can achieve the national photochemical oxidant and carbon monoxide ambient air quality standards by mid-1977 through the application of new motor vehicle emission standards, stringent stationary source standards and in some cases, additional control efforts, such as institution of inspection and maintenance programs and greater use of mass transit and car pools. A number of communities, however, are so heavily impacted by motor vehicle-related pollutants that severe gasoline rationing would be necessary to achieve air quality standards within the statutory deadline, even after all other control measures were instituted.

We are proposing that for those communities where attainment of standards by 1977 would cause serious economic and social disruption, EPA be authorized to allow up to five additional years for compliance with the air quality standards. EPA would grant this extra time only if all reasonable control measures under existing plans have been or will be instituted. EPA would be authorized to provide a further five-year extension in those cases where it would not be possible to achieve compliance within the first five years. Providing additional time in appropriate cases will enable communities to attain the flexibility they need to develop the long-term transportation system solutions necessary to help meet air quality standards.

In developing implementation plans for sulfur oxides control, many States did not assess the aggregate impact of their regulatory requirements on available fuel supplies nationwide. Our projections indicate that there will be a shortage of low-sulfur content fuels as well as stack gas scrubbing technology, to meet the deadline in the Clean Air Act as required in State implementation plans.

In addition, we are proposing authority to permit EPA to issue enforcement orders beyond the statutory deadlines in the Act. In cases where the extension must be given to sources that have failed to make good faith efforts, EPA would be required to seek criminal or civil sanctions.

We are proposing a review of State implementation plans to identify State emission regulations that require the use of lower sulfur fuel than is needed to meet the primary air quality standards. Based on this review, EPA could issue enforcement orders through the amendment

discussed above, to the extent necessary to eliminate the anticipated clean fuels deficit. This would complement EPA's current voluntary program of encouraging revisions of State implementation plans to ensure that limited clean fuel supplies are available where needed to meet health-related primary standards. Neither the current program nor the proposed amendment would infringe on the important principle that States have the prerogative to adopt and enforce more stringent controls if they choose to do so. Such revised schedules would ensure that the primary air quality standards would not be violated and that attainment of State and local standards will be achieved as soon as possible.

Enactment of this proposal would have the benefit of making scarce low-sulfur fuels and control hardware available first in urban areas where they are most needed, allowing for the allocation of low sulfur fuels and new technology in the most logical time sequence to meet our air quality objectives.

The Nation's energy supply problems have been exacerbated by greatly increasing demand which has resulted in dependence on foreign sources of crude oil. To reverse such dependence, it will be necessary for some oil burning power plants to convert to coal.

We are proposing both a short and long-term solution to deal with this problem. These proposals are similar to provisions contained in the recently vetoed Energy Emergency Act. One provision, virtually identical to that in the Energy Emergency Act, would provide authority for the President—through the Federal Energy Office—to mandate coal conversion. Accompanying this provision would be a limited exemption to the National Environmental Policy Act for such actions, which was also covered by the Energy Emergency Act. The exemptions would be for only one year and would require environmental analyses. The thrust of NEPA is protected since any long-term conversion would have to meet all the requirements of NEPA.

In cases where the Federal Energy Office has mandated coal conversion, the Administrator of EPA would have authority to temporarily suspend any emission standard or limitation in violation of primary air quality standards. Once the applicable deadline under the Clean Air Act is reached—either 1975 or 1977—the source would be required to achieve primary standards until June 20, 1980. At that time, the source would have to move beyond primary standards to the extent needed to achieve emission limitations in the original State implementation plan. The interim requirement to achieve primary standards is a departure from the provision in the Energy Emergency Act, which apparently would have allowed limited violations of the primary standard during the period between the implementation plan deadline and the final deadline for this authority.

Although EPA can establish Federal emission standards for new sources and also for sources emitting hazardous pollutants, there are occasions where emission limitations are not the most practical method of control. For example, emission standards are not appropriate in cases where emissions from a source are difficult to measure, such as hydrocarbon emissions from gasoline storage tanks, or in cases where application of a particular product may cause the problem, such as spraying asbestos. EPA is requesting authority to set design or equip-

ment standards for new sources and hazardous pollutants whenever the limitations of measurement technology make emission limitations impracticable. Hence, the use of this new authority would be the exception.

Because the entire risk of innovative technology is borne by the owner of a source, there is a tendency in new source performance standards to freeze current technology. In order to encourage development of new technology by the private sector, we are proposing in certain exceptional cases to waive Federal, State, and local emission requirements where a source would use a new control technology which we believe will either offer significantly greater control of emissions or the same level of emissions as the new source performance standards at substantially reduced cost. Demonstration projects of this type would only be allowed where maintenance of the health-related air quality standards would not be jeopardized.

Currently, EPA is constrained to the use of criminal penalties to enforce stationary source standards and limitations. We are proposing to expand our enforcement authorities to include civil penalties—up to $25,000 for each day of violation. Because a very vigorous enforcement program will likely be required to achieve the objectives of the Clean Air Act, it is important that we have flexibility in the application of sanctions. In many cases, the greater flexibility of civil penalties will be a much more effective mechanism to encourage compliance than criminal penalties; in other cases, criminal penalties will be more appropriate.

In his January 23, 1974, message to the Congress on measures to deal with the energy crisis, the President made his recommendations for extending auto emission standards. He stated this proposal would "permit auto manufacturers to concentrate greater attention on improving fuel economy while retaining a fixed target for lower emissions. These changes can be made without significant effect on our progress in improving air quality." The attached language would extend HC and CO standards at the 1975 interim level for 1976 and 1977 NO_x standards at 3.1 grams per mile for the same two years.

The final item of our proposed legislation would extend the authorizing authorities of the Clean Air Act for two additional years. Last year, the Congress extended the Act's authorizations to June 30, 1974, at the Fiscal Year 1973 levels of $475 million. We are proposing extending the Act for the next two fiscal years at the $475 million level. This amount should be sufficient to carry forward the Nation's air pollution control program.

These above amendments have been discussed intensively throughout the Executive Branch and I support their enactment. There are, however, two proposals set forth in Attachments B and C which I do not support. Nonetheless, other Executive Branch agencies believe they are needed and I am therefore forwarding them for consideration by the Congress. These proposals concern "intermittent control systems" and "significant deterioration."

In support of the proposal permitting indefinite use of intermittent or alternative control systems, other agencies state that: (1) such systems will allow some utilities and industrial sources to meet ambient air quality standards at a cost significantly lower than the cost of

continuous emission control systems and with a smaller energy penalty; (2) such systems involve less solid waste than some of the scrubber technologies; and (3) that use of such systems could encourage the coal industry to make greater investments in new mines. This proposal would permit the use of alternative or intermittent control measures indefinitely as long as they would meet national ambient air quality standards.

EPA's concern with intermittent control systems as a permanent control strategy rests heavily on information becoming increasingly available as to the effects on public health of the sulfates that are formed in the ambient air as a product of the sulfur oxide gaseous emissions. EPA studies indicate that measurable adverse health effects are present at ambient sulfate levels of 8–10 micrograms per cubic meter. These levels are exceeded in large parts of the country, particularly in the Midwest and Northeast. The permitting of uncontrolled emissions of sulfur dioxide except during periods of adverse meteorological conditions would be expected to contribute in a major way in ambient air sulfate loadings. In my opinion, therefore, amending the Act to encourage indefinite or intermittent control systems would be highly inappropriate, and could be more costly in the long run should new requirements to deal with sulfates force expensive retrofits.

Recent court interpretation of the Clean Air Act requires the Administrator of EPA to establish standards to prevent "significant deterioration" of air already cleaner than required by national ambient air quality standards designed to protect public health and welfare. In support of this proposal other agencies state that the effect of this interpretation is to extend the Federal regulatory authority beyond standards set to protect the public health and welfare and to establish a new criterion, namely the quality in a given area at the time the Act was passed. They feel that this extension of the Federal regulatory authority will limit the range of choice of State and local governments in economic development and land use matters to a degree deemed unnecessary and unwarranted. This proposal would remove the authority of the Federal government to promulgate standards more stringent than those set to protect public health or welfare, but would not remove the authority of State and local governments to establish and maintain air quality standards cleaner than required by the Federal government should they choose to do so.

As a result of extensive written comments, public hearings and interagency discussions, EPA believes that meaningful steps can be taken to protect areas with already high air quality through classification by the States of geographic areas into one of three general classes:

(1) Air quality area better than secondary standards in which only restricted growth would take place;

(2) Air quality area better than secondary standard but in which moderate growth would be permitted;

(3) Air quality level to be determined by secondary standards.

The final classification of areas into these categories would take place after public hearings. No hard emission or air quality increments would be promulgated by EPA as limiting factors. Since the

EPA regulation would not provide for firm maximum increments of pollution, it is expected that court challenges as to the adequacy of the EPA promulgation would take place.

Because of the potential for further litigation, the importance of this issue to our environmental and energy problems and the potential impact of EPA's regulations on State and local land use responsibilities. EPA believes that Congress should explore all alternatives for dealing with the significant deterioration issue in testimony and debate.

In closing, I would like to reiterate that significant progress has been made under the Clean Air Act. We look forward to early hearings and full Congressional debate on these proposals.

Sincerely yours,

RUSSELL E. TRAIN,
Administrator.

Changes in Existing Law Made by the Bill, As Reported

In compliance with clause 3 of rule XIII of the Rules of the House of Representatives, changes in existing law made by the bill, as reported, are shown as follows (existing law proposed to be omitted is enclosed in black brackets, new matter is printed in italic, existing law in which no change is proposed is shown in roman):

THE CLEAN AIR ACT

* * * * * * *

TITLE I—AIR POLLUTION PREVENTION AND CONTROL

* * * * * * *

IMPLEMENTATION PLANS

SEC. 110. (a)(1) Each State shall, after reasonable notice and public hearings, adopt and submit to the Administrator, within nine months after the promulgation of a national primary ambient air quality standard (or any revision thereof) under section 109 for any air pollutant, a plan which provides for implementation, maintenance, and enforcement of such primary standard in each air quality control region (or portion thereof) within such State. In addition, such State shall adopt and submit to the Administrator (either as a part of a plan submitted under the preceding sentence or separately) within nine months after the promulgation of a national ambient air quality secondary standard (or revision thereof), a plan which provides for implementation, maintenance, and enforcement of such secondary standard in each air quality control region (or portion thereof) within such State. Unless a separate public hearing is provided, each State shall consider its plan implementing such secondary standard at the hearing required by the first sentence of this paragraph.

(2) The Administrator shall, within four months after the date required for submission of a plan under paragraph (1), approve or disapprove such plan for each portion thereof. The Administrator shall approve such plan, or any portion thereof, if he determines that it was adopted after reasonable notice and hearing and that—

(A)(i) in the case of a plan implementing a national primary ambient air quality standard, it provides for the attainment of such primary standard as expeditiously as practicable but (subject to subsection (e)) in no case later than three years from the date of approval of such plan (or any revision thereof to take account of a revised primary standard); and (ii) in the case of a plan implementing a national secondary ambient air quality

standard, it specifies a reasonable time at which such secondary standard will be attained;

(B) it includes emission limitations, schedules, and timetables for compliance with such limitations, and such other measures as may be necessary to insure attainment and maintenance of such primary or secondary standard, including, but not limited to, land-use and transportation controls;

(C) it includes provision for establishment and operation of appropriate devices, methods, systems, and procedures necessary to (i) monitor, compile, and analyze data on ambient air quality and, (ii) upon request, make such data available to the Administrator;

(D) it includes a procedure, meeting the requirements of paragrap (4), for review (prior to construction or modification) of the location of new sources to which a standard of performance will apply;

(E) it contains adequate provisions for intergovernmental cooperation, including measures necessary to insure that emissions of air pollutants from sources located in any air quality control region will not interfere with the attainment or maintenance of such primary or secondary standard in any portion of such region outside of such State or in any other air quality control region;

(F) it provides (i) necessary assurances that the State will have adequate personnel, funding, and authority to carry out such implementation plan, (ii) requirements for installation of equipment by owners or operators of stationary sources to monitor emissions from such sources, (iii) for periodic reports on the nature and amounts of such emissions; (iv) that such reports shall be correlated by the State agency with any emission limitations or standards established pursuant to this Act, which reports shall be available at reasonable times for public inspection; and (v) for authority comparable to that in section 303, and adequate contingency plans to implement such authority;

(G) it provides, to the extent necessary and practicable, for periodic inspection and testing of motor vehicles to enforce compliance with applicable emission standards; and

(H) it provides for revision, after public hearings, of such plan (i) from time to time as may be necessary to take account of revisions of such national primary or secondary ambient air quality standard or the availability of improved or more expeditious methods of achieving such primary or secondary standard; or (ii) whenever the Administrator finds on the basis of information available to him that the plan is substantially inadequate to achieve the national ambient air quality primary or secondary standard which it implements.

(3)(*A*) The Administrator shall approve any revision of an implementation plan applicable to an air quality control region if he determines that it meets the requirements of paragraph (2) and has been adopted by the State after reasonable notice and public hearings.

(*B*)(*1*) *For any air quality control region in which there has been a conversion to coal to which section 119(b) applies, the Administra-*

tor shall review the applicable implementation plan and no later than one year after the date of such conversion determine whether such plan must be revised in order to achieve the national primary ambient air quality standard which the plan implements. If the Administrator determines that any such plan is inadequate, he shall require that a plan revision be submitted by the State within three months after the date of notice to the State of such determination. Any plan revision which is submitted by the State after notice and public hearing shall be approved or disapproved by the Administrator, after public notice and opportunity for public hearing, but no later than three months after the date required for submission of the revised plan. If a plan provision (or portion thereof) is disapproved (or if a State fails to submit a plan revision), the Administrator shall, after public notice and opportunity for a public hearing, promulgate a revised plan (or portion thereof) not later than three months after the date required for approval or disapproval.

(2) Any requirement for a plan revision under paragraph (1) and any plan requirement promulgated by the Administrator under such paragraph shall include reasonable and practicable measures to minimize the effect on the public health of any conversion to which section 119(b) applies.

(4) The procedure referred to in paragraph (2)(D) for review, prior to construction or modification, of the location of new sources shall (A) provide for adequate authority to prevent the construction or modification of any new source to which a standard of performance under section 111 will apply at any location which the State determines will prevent attainment or maintenance within any air quality control region (or portion thereof) within such State of a national ambient air quality primary or secondary standard, and (B) require that prior to commencing construction or modification of any such source, the owner or operator thereof shall submit to such State such information as may be necessary to permit the State to make a determination under clause (A).

(b) The Administrator may, wherever he determines necessary, extend the period for submission of any plan or portion thereof which implements a national secondary ambient air quality standard for a period not to exceed eighteen months from the date otherwise required for submission of such plan.

(c)(1) The Administrator shall, after consideration of any State hearing record, promptly prepare and publish proposed regulations setting forth an implementation plan, or portion thereof, for a State if—

[(1)**]**(A) The State fails to submit an implementation plan for any national ambient air quality primary or secondary standard within the time prescribed,

[(2)**]**(B) the plan, or any portion thereof, submitted for such State is determined by the Administrator not to be in accordance with the requirements of this section, or

[(3)**]**(C) the State fails, within 60 days after notification by the Administrator or such longer period as he may prescribe, to revise an implementation plan as required pursuant to a provision of its plan referred to in subsection (a)(2)(H).

If such State held no public hearing associated with respect to such plan (or revision thereof), the Administrator shall provide opportunity for such hearing within such State on any proposed regulation. The Administrator shall, within six months after the date required for submission of such plan (or revision thereof), promulgate any such regulations unless, prior to such promulgation, such State has adopted and submitted a plan (or revision) which the Administrator determines to be in accordance with the requirements of this section.

(2)(A) *The Administrator shall conduct a study and shall submit a report to the Committee on Interstate and Foreign Commerce of the United States House of Representatives and the Committee on Public Works of the United States Senate not later than three months after date of enactment of this section, on the necessity of parking surcharge, management of parking supply, and preferential bus/carpool lane regulations as part of the applicable implementation plans required under this section to achieve and maintain national primary ambient air quality standards. The study shall include an assessment of the economic impact of such regulations, consideration of alternative means of reducing total vehicle miles traveled, and an assessment of the impact of such regulations on other Federal and State programs dealing with energy or transportation. In the course of such study, the Administrator shall consult with other Federal officials including, but not limited to, the Secretary of Transportation, the Federal Energy Administrator, and the Chairman of the Council on Environmental Quality.*

(B) *No parking surcharge regulation may be required by the Administrator under paragraph (1) of this subsection as a part of an applicable implementation plan. All parking surcharge regulations previously required by the Administrator shall be void upon the date of enactment of this subparagraph. This subparagraph shall not prevent the Administrator from approving parking surcharges if they are adopted and submitted by a State as part of an applicable implementation plan. The Administrator may not condition approval of any implementation plan submitted by a State on such plan's including a parking surcharge regulation.*

(C) *The Administrator is authorized to suspend until January 1, 1975, the effective date or applicability of any regulations for the management of parking supply or any requirement that such regulations be a part of an applicable implementation plan approved or promulgated under this section. The exercise of the authority under this subparagraph shall not prevent the Administrator from approving such regulations if they are adopted and submitted by a State as part of an applicable implementation plan. If the Administrator exercises the authority under this subparagraph, regulations requiring a review or analysis of the impact of proposed parking facilities before construction which take effect on or after January 1, 1975, shall not apply to parking facilities on which construction has been initiated before January 1, 1975.*

(D) *For purposes of this paragraph, the term "parking surcharge regulation" means a regulation imposing or requiring the imposition*

of any tax, surcharge, fee, or other charge on parking spaces, or any other area used for the temporary storage of motor vehicles. The term "management of parking supply" shall include any requirement providing that any new facility containing a given number of parking spaces shall receive a permit or other prior approval issuance of which is to be conditioned on air quality considerations. The term "preferential bus/carpool lane" shall include any requirement for the setting aside of one or more lanes of a street or highway on a permanent or temporary basis for the exclusive use of buses and/or carpools.

(E) No standard, plan or requirement, relating to management of parking supply or preferential bus/carpool lanes shall be promulgated after the enactment of this paragraph by the Administrator pursuant to this section, unless such promulgation has been subjected to at least one public hearing which has been held in the area affected and for which reasonable notice has been given in such area. If substantial changes are made following public hearings, additional hearings shall be held in such area after such notice.

(d) For purposes of this Act, an applicable implementation plan is the implementation plan, or most recent revision thereof, which has been approved under subsection (a) or promulgated under subsection (c) and which implements a national primary or secondary ambient air quality standard in a State

(e)(1) Upon application of a Governor of a State at the time of submission of any plan implementing a national ambient air quality primary standard, the Administrator may (subject to paragraph (2)) extend the three-year period referred to in subsection (a)(2)(A)(i) for not more than two years for an air quality control region if after review of such plan the Administrator determines that—

(A) one or more emission sources (or classes of moving sources) are unable to comply with the requirements of such plan which implement such primary standard because the necessary technology or other alternatives are not available or will not be available soon enough to permit compliance within such three-year period, and

(B) the State has considered and applied as a part of its plan reasonably available alternative means of attaining such primary standard and has justifiably concluded that attainment of such primary standard within the three years cannot be achieved.

(2) The Administrator may grant an extension under paragraph (1) only if he determines that the State plan provides for—

(A) application of the requirements of the plan which implement such primary standard to all emission sources in such region other than the sources (or classes) described in pragraph (1)(A) within the three-year period, and

(B) such interim measure of control of the sources (or classes) described in paragraph (1)(A) as the Administrator determines to be reasonable under the circumstances.

(f)(1) Prior to the date on which any stationary source or class of moving sources is required to comply with any requirement of an applicable implementation plan the Governor of the State to which such plan applies may apply to the Administrator to postpone the applica-

bility of such requirement to such source (or class) for not more than one year. If the Administrator determines that—

(A) good faith efforts have been made to comply with such requirement before such date,

(B) such source (or class) is unable to comply with such requirement because the necessary technology or other alternative methods of control are not available or have not been available for a sufficient period of time,

(C) any available alternative operating procedures and interim control measures have reduced or will reduce the impact of such source on public health, and

(D) the continued operation of such source is essential to national security or to the public health or welfare.

then the Administrator shall grant a postponement of such requirement.

(2)(A) Any determination under paragraph (1) shall (i) be made on the record after notice to interested persons and opportunity for hearing, (ii) be based upon a fair evaluation of the entire record at such hearing, and (iii) include a statement setting forth in detail the findings and conclusions upon which the determination is based.

(B) Any determination made pursuant to this paragraph shall be subject to judicial review by the United States court of appeals for the circuit which includes such State upon the filing in such court within 30 days from the date of such decision of a petition by any interested person praying that the decision be modified or set aside in whole or in part. A copy of the petition shall forthwith be sent by registered or certified mail to the Administrator and thereupon the Administrator shall certify and file in such court the record upon which the final decision complained of was issued, as provided in section 2112 of title 28, United States Code. Upon the filing of such petition the court shall have jurisdiction to affirm or set aside the determination complained of in whole or in part. The findings of the Administrator with respect to questions of fact (including each determination made under subparagraphs (A), (B), (C), and (D) of paragraph (1) shall be sustained if based upon a fair evaluation of the entire record at such hearing.

(C) Proceedings before the court under this paragraph shall take precedence over all the other causes of action on the docket and shall be assigned for hearing and decision at the earliest practicable date and expedited in every way.

(D) Section 307(a) (relating to subpenas) shall be applicable to any proceeding under this subsection.

* * * * * * *

FEDERAL ENFORCEMENT

SEC. 113. (a)(1) Whenever, on the basis of any information available to him, the Administrator finds that any person is in violation of any requirement of an applicable implementation plan, the Administrator shall notify the person in violation of the plan and the State in which the plan applies of such finding. If such violation extends

beyond the 30th day after the date of the Administrator's notification, the Administrator may issue an order requiring such person to comply with the requirements of such plan or he may bring a civil action in accordance with subsection (b).

(2) Whenever, on the basis of information available to him, the Administrator finds that violations of an applicable implementation plan are so widespread that such violations appear to result from a failure of the State in which the plan applies to enforce the plan effectively, he shall so notify the State. If the Administrator finds such failure extends beyond the thirtieth day after such notice, he shall give public notice of such finding. During the period beginning with such public notice and ending when such State satisfies the Administrator that it will enforce such plan (hereafter referred to in this section as "period of Federally assumed enforcement"), the Administrator may enforce any requirement of such plan with respect to any person—

(A) by issuing an order to comply with such requirement, or

(B) by bringing a civil action under subsection (b).

(3) Whenever, on the basis of any information available to him, the Administrator finds that any person is in violation of section 111(e) (relating to new source performance standards) [or], 112(c) (relating to standards for hazardous emissions), *or 119(f)* (*relating to energy-related authorities*) or is in violation of any requirement of section 114 (relating to inspections, etc.), he may issue an order requiring such person to comply with such section or requirement, or he may bring a civil action in accordance with subsection (b).

(4) An order issued under this subsection (other than an order relating to a violation of section 112) shall not take effect until the person to whom it is issued has had an opportunity to confer with the Administrator concerning the alleged violation. A copy of any order issued under this subsection shall be sent to the State air pollution control agency of any State in which the violation occurs. Any order issued under this subsection shall state with reasonable specificity the nature of the violation, specify a time for compliance which the Administrator determines is reasonable, taking into account the seriousness of the violation and any good faith efforts to comply with applicable requirements. In any case in which an order under this subsection (or notice to a violator under paragraph (1)) is issued to a corporation, a copy of such order (or notice) shall be issued to appropriate corporate officers.

(b) The Administrator may commence a civil action for appropriate relief, including a permanent or temporary injunction, whenever any person—

(1) violates or fails or refuses to comply with any order issued under subsection (a); or

(2) violates any requirement of an applicable implementation plan (A) during any period of Federally assumed enforcement, or (B) more than 30 days after having been notified by the Administration under subsection (a)(1) that such person is violating such requirement; or

(3) violates section 111(e) [or 112(c)], *112(c)*, *or 119(f)*; or

(4) fails or refuses to comply with any requirement of section 114.

Any action under this subsection may be brought in the district court of the United States for the district in which the defendant is located or resides or is doing business, and such court shall have jurisdiction to restrain such violation and to require compliance. Notice of the commencement of such action shall be given to the appropriate State air pollution control agency.

(c) (1) Any person who knowingly—

(A) violates any requirement of an applicable implementation plan (i) during any period of Federally assumed enforcement, or (ii) more than 30 days after having been notified by the Administration under subsection (a) (1) that such person is violating such requirement, or

(B) violates or fails or refuses to comply with any order issued by the Administrator under subsection (a), or

(C) violates section 111(e) [or section 112(c)], *section 112(c), or section 119(f)*

shall be punished by a fine of not more than $25,000 per day of violation, or by imprisonment for not more than one year, or by both. If the conviction is for a violation committed after the first conviction of such person under this paragraph, punishment shall be by a fine of not more than $50,000 per day of violation, or by imprisonment for not more than two years, or by both.

(2) Any person who knowingly makes any false statement, representation, or certification in any application, record, report, plan, or other document filed or required to be maintained under this Act or who falsifies, tampers with, or knowingly renders inaccurate any monitoring device or method required to be maintained under this Act, shall upon conviction, be punished by a fine of not more than $10,000, or by imprisonment for not more than six months, or by both.

INSPECTIONS, MONITORING, AND ENTRY

SEC. 114. (a) For the purpose (i) of developing or assisting in the development of any implementation plan under section 110 or 111(d), any standard of performance under section 111, or any emission standard under section 112(ii) of determining whether any person is in violation of any such standard or any requirement of such a plan, or (iii) carrying out section *119 or* 303—

(1) the Administrator may require the owner or operator of any emission source to (A) establish and maintain such records, (B) make such reports, (C) install, use, and maintain such monitoring equipment or methods, (D) sample such emissions (in accordance with such methods, at such locations, at such intervals, and in such manner as the Administrator shall prescribe), and (E) provide such other information, as he may reasonably require; and

(2) the Administrator or his authorized representative, upon presentation of his credentials—

(A) shall have a right of entry to, upon, or through any premises in which an emission source is located or in which any records required to be maintained under paragraph (1) of this section are located, and

(B) may at reasonable times have access to and copy any records, inspect any monitoring equipment or method required under paragraph (1), and sample any emissions which the owner or operator of such source is required to sample under paragraph (1).

(b)(1) Each State may develop and submit to the Administrator a procedure for carrying out this section in such State. If the Administrator finds the State procedure is adequate, he may delegate to such State any authority he has to carry out this section (except with respect to new sources owned or operated by the United States).

(2) Nothing in this subsection shall prohibit the Administrator from carrying out this section in a State.

(c) Any records, reports, or information obtained under subsection (a) shall be available to the public, except that upon a showing satisfactory to the Administrator by any person that records, reports, or information, or particular part thereof, (other than emission data) to which the Administrator has access under this section if made public, would divulge methods or processes entitled to protection as trade secrets of such person, the Administrator shall consider such record, report, or information or particular portion thereof confidential in accordance with the purposes of section 1905 of title 18 of the United States Code, except that such record, report, or information may be disclosed to other officers, employees, or authorized representatives of the United States concerned with carrying out this Act or when relevant in any proceeding under this Act.

ABATEMENT BY MEANS OF CONFERENCE PROCEDURE IN CERTAIN CASES

SEC. 115. (a) The pollution of the air in any State or States which endangers the health or welfare of any persons and which is covered by subsection (b) or (c) shall be subject to abatement as provided in this section.

(b)(1) Whenever requested by the Governor of any State, a State air pollution control agency, or (with the concurrence of the Governor and the State air pollution control agency for the State in which the municipality is situated) the governing body of any municipality, the Administrator shall, if such request refers to air pollution which is alleged to endanger the health or welfare of persons in a State other than that in which the discharge or discharges (causing or contributing to such pollution) originate, give formal notification thereof to the air pollution control agency of the municipality where such discharge or discharges originate, to the air pollution control agency of the State in which such municipality is located, and to the interstate air pollution control agency, if any, in whose jurisdictional area such municipality is located, and shall call promptly a conference of such agency or agencies and of the air pollution control agencies of the municipalities which may be adversely affected by such pollution, and the air pollution control agency, if any, of each State, or for each area, in which any such municipality is located.

(2) Whenever requested by the Governor of any State, a State air pollution control agency, or (with the concurrence of the Governor and the State air pollution control agency for the State in which the municipality is situated) the governing body of any municipality, the

Administrator shall, if such request refers to alleged air pollution which is endangering the health or welfare of persons only in the State in which the discharge or discharges (causing or contributing to such pollution) originate and if a municipality affected by such air pollution, or the municipality in which such pollution originates, has secrets or secret processes and all information reported shall be considered confidential for the purposes of section 1905 of title 18 of the United States Code.

(2) If any person required to file any report under this subsection shall fail to do so within the time fixed by the Administrator for filing the same, and such failure shall continue for thirty days after notice of such default, such person shall forfeit to the United States the sum of $100 for each and every day of the continuance of such failure, which forfeiture shall be payable into the Treasury of the United States, and shall be recoverable in a civil suit in the name of the United States brought in the district where such person has his principal office or in any district in which he does business: *Provided*, That the Administrator may upon application therefor remit or mitigate any forfeiture provided for under this subsection and he shall have authority to determine the facts upon all such applications.

(3) It shall be the duty of the various United States attorneys, under the direction of the Attorney General of the United States, to prosecute for the recovery of such forfeitures.

(k) No order or judgment under this section, or settlement, compromise, or agreement respecting any action under this section (whether or not entered or made before the date of enactment of the Clean Air Amendments of 1970) shall relieve any person of any obligation to comply with any requirement of an applicable implementation plan, or with any standard prescribed under section 111 or 112.

RETENTION OF STATE AUTHORITY

SEC. 116. Except as otherwise provided in sections *119* (*b*), (*c*), *and* (*e*), 209, 211(c)(4), and 233 (preempting certain State regulation of moving sources) nothing in this Act shall preclude or deny the right of any State or political subdivision thereof to adopt or enforce (1) any standard or limitation respecting emissions of air pollutants or (2) any requirement respecting control or abatement of air pollution; except that if an emission standard or limitation is in effect under an applicable implementation plan or under section 111 or 112, such State or political subdivision may not adopt or enforce any emission standard or limitation which is less stringent than the standard or limitation under such plan or section.

PRESIDENT'S AIR QUALITY ADVISORY BOARD AND ADVISORY COMMITTEES

SEC. 117. (a)(1) There is hereby established in the Environmental Protection Agency an Air Quality Advisory Board, composed of the Administrator or his designee, who shall be Chairman, and fifteen members while serving at the request of the Administrator, shall be entitled to receive compensation at a rate to be fixed by the Administrator, but not exceeding $100 per diem, including traveltime, and while

away from their homes or regular places of business they may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by section 5703 of title 5 of the United States Code for persons in the Government service employed intermittently.

(f) Prior to—

(1) issuing criteria for an air pollutant under section 108(a)(2),

(2) publishing any list under section 111(b)(1)(A) or 112(b)(1)(A),

(3) publishing any standard under section 111(b)(1)(B) or section 112(b)(1)(B), or

(4) publishing any regulation under section 202(a),

the Administrator shall, to the maximum extent practicable within the time provided, consult with appropriate advisory committees, independent experts, and Federal departments and agencies.

CONTROL OF POLLUTION FROM FEDERAL FACILITIES

SEC. 118. Each department, agency, and instrumentality of the executive, legislative, and judicial branches of the Federal Government (1) having jurisdiction over any property or facility, or (2) engaged in any activity resulting, or which may result, in the discharge of air pollutants, shall comply with Federal, State, interstate, and local requirements respecting control and abatement of air pollution to the same extent that any person is subject to such requirements. The President may exempt any emission source of any department, agency, or instrumentality in the executive branch from compliance with such a requirement if he determines it to be in the paramount interest of the United States to do so, except that no exemption may be granted from section 111, and an exemption from section 112 may be granted only in accordance with section 112(c). No such exemption shall be granted due to lack of appropriation unless the President shall have specifically requested such appropriation as a part of the budgetary process and the Congress shall have failed to make available such requested appropriation. Any exemption shall be for a period not in excess of one year, but additional exemptions may be granted for periods of not to exceed one year upon the President's making a new determination. The President shall report each January to the Congress all exemptions from the requirements of this section granted during the preceding calendar year, together with his reason for granting each such exemption.

ENERGY-RELATED AUTHORITY

SEC. 119. (a)(1)(A) The Administrator may, for any period beginning on or after the date of enactment of this section and ending on or before the earlier of June 30, 1975, or one year after the date of enactment of this section, temporarily suspend any stationary source fuel or emission limitation as it applies to any person, if the Administrator finds that such person will be unable to comply with such limitation during such period solely because of unavailability of types or amounts of fuels. Any suspension under this paragraph and any interim requirement on which such suspension is conditioned under paragraph (3) shall be exempted from any procedural require-

ments set forth in this Act or in any other provision of local, State, or Federal law; except as provided in subparagraph (B).

(B) The Administrator shall give notice to the public of a suspension and afford the public an opportunity for written and oral presentation of views prior to granting such suspension unless otherwise provided by the Administrator for good cause found and published in the Federal Register. In any case, before granting such a suspension he shall give actual notice to the Governor of the State, and to the chief executive officer of the local government entity in which the affected source or sources are located. The granting or denial of such suspension and the imposition of an interim requirement shall be subject to judicial review only on the grounds specified in paragrapahs (2)(B), (2)(C), or (2)(D) of section 706 of title 5, United States Code, and shall not be subject to any proceeding under section 304(a)(2) or 307 (b) and (c) of this Act.

(2) In issuing any suspension under paragraph (1) the Administrator is authorized to act on his own motion without application by any source or State.

(3) Any suspension under paragraph (1) shall be conditioned upon compliance with such interim requirements as the Administrator determines are reasonable and practicable. Such interim requirements shall include, but need not be limited to, (A) a requirement that the source receiving the suspension comply with such reporting requirements as the Administrator determines may be necessary, (B) such measures as the Administrator determines are necessary to avoid an imminent and substantial endangerment to health of persons, and (C) requirements that the suspension shall be inapplicable during any period during which fuels which would enable compliance with the suspended stationary source fuel or emission limitations are in fact reasonably available to that person (as determined by the Administrator). For purposes of clause (C) of this paragraph, availability of natural gas or petroleum products which enable compliance shall not make a suspension inapplicable to a source described in subsection (b)(1) of this section.

(4) For purposes of this section:

(A) The term "stationary source fuel or emission limitation" means any emission limitation, schedule, or timetable for compliance, or other requirement, which is prescribed under this Act (other than section 303, 111(b), or 112) or contained in an applicable implementation plan (other than authority described in section 110(a)(2)(F)(v)), and which is designed to limit stationary source emissions resulting from combustion of fuels, including a prohibition on, or specification of, the use of any fuel of any type or grade or pollution characteristic thereof.

(B) The term "stationary source" has the same meaning as such term has under section 111(a)(3).

(b)(1) Except as provided in paragraph (2) of this subsection, any fuel-burning stationary source—

(A) which is prohibited from using petroleum products or natural gas as fuel by reason of an order issued under section 10(a) of the Energy Supply and Environmental Coordination Act of 1974, or

(B) which (i) the Administrator of the Environmental Protection Agency determines began conversion to the use of coal as fuel during the period beginning on September 15, 1973, and ending on the date of enactment of this section, and (ii) the Federal Energy Administrator determines should use coal after the earlier of June 30, 1975, or one year after the date of enactment of this section, after balancing on a plant-by-plant basis the environmental effects of such conversion against the need to fulfill the purposes of the Energy Supply and Environmental Coordination Act of 1974,

and which converts to the use of coal as fuel, shall not, until January 1, 1979, be prohibited, by reason of the application of any air pollution requirement, from burning coal which is available to such source. For purposes of this paragraph, the term "began conversion" means action by the owner or operator of a source during the period beginning on September 15, 1973, and ending on the date of enactment of this section (such as entering into a contract binding on the operator of the source for obtaining coal, or equipment or facilities to burn coal; expending substantial sums to permit such source to burn coal; or applying for an air pollution variance to enable the source to burn coal) which the Administrator finds evidences a decision (made prior to such date of enactment) to convert to burning coal as a result of the unavailability of an adequate supply of fuels required for compliance with the applicable implementation plan, and a good faith effort to expeditiously carry out such decision.

(2)(A) Paragraph (1) of this subsection shall apply to a source only if the Administrator finds that emissions from the source will not materially contribute to a significant risk to public health and if the source has submitted to the Administrator a plan for compliance for such source which the Administrator has approved, after notice to interested persons and opportunity for presentation of views (including oral presentation of views). A plan submitted under the preceding sentence shall be approved only if it (i) meets the requirements of regulations prescribed under subparagraph (B); and (ii) provides that such source will comply with requirements which the Administrator shall prescribe to assure that emissions from such source will not materially contribute to a significant risk to public health. The Administrator shall approve or disapprove any such plan within 60 days after such plan is submitted.

(B) The Administrator shall prescribe regulations requiring that any source to which this subsection applies submit and obtain approval of its means for and schedule of compliance. Such regulations shall include requirements that such schedules shall include dates by which such sources must—

(i) enter into contracts (or other enforceable obligations) which have received prior approval of the Administrator as being adequate to effectuate the purposes of this section and which provide for obtaining a long-term supply of coal which enables such source to achieve the emission reduction required by subparagraph (C), or

(ii) if coal which enables such source to achieve such emission reduction is not available to such source, enter into contracts (or other enforceable obligations) which have received prior approval of the Administrator as being adequate to effectuate the purposes of this section and which provide for obtaining (I) a long-term supply of other coal or coal derivatives, and (II) continuous emission reduction systems necessary to permit such source to burn such coal or coal derivatives and to achieve the degree of emission reduction required by subparagraph (C).

(C) Regulations under subparagraph (B) shall require that the source achieve the most stringent degree of emission reduction that such source would have been required to achieve under the applicable implementation plan which was in effect on the date of enactment of this section (or if no applicable implementation plan was in effect on such date, under the first applicable implementation plan which takes effect after such date). Such degree of emission reduction shall be achieved as soon as practicable, but not later than January 1, 1979; except that, in the case a source for which a continuous emission reduction system is required for sulfur-related emissions, reduction of such emissions shall be achieved on a date designated by the Administrator (but not later than January 1, 1979). Such regulations shall also include such interim requirements as the Administrator determines are reasonable and practicable including requirements described in clauses (A) and (B) of subsection (a)(3) and requirements to file progress reports.

(D) The Administrator (after notice to interested persons and opportunity for presentation of views, including oral presentations of views, to the extent practicable) (i) may, prior to the earlier of June 30, 1975, or one year after the date of enactment of this section, and shall thereafter prohibit the use of coal by a source to which paragraph (1) applies if he determines that the use of coal by such source is likely to materially contribute to a significant risk to public health; and (ii) may require such source to use coal of any particular type, grade, or pollution characteristic if such coal is available to such source. Nothing in this subsection (b) shall prohibit a State or local agency from taking action which the Administrator is authorized to take under this subparagraph.

(3) For purposes of this subsection, the term "air pollution requirement" means any emission limitation, schedule, or timetable for compliance, or other requirement, which is prescribed under any Federal, State or local law or regulation, including this Act (except for any requirement prescribed under this subsection, section 110(a)(2)(F)(v), or section 303), and which is designed to limit stationary source emission resulting from combustion of fuels (including a restriction on the use or content of fuels). A conversion to coal to which this subsection applies shall not be deemed to be a modification for purposes of section 111(a)(2) and (4) of this Act.

(4) A source to which this subsection applies may, upon the expiration of the exemption under paragraph (1), obtain a one-year postponement of the application of any requirement of an applicable im-

plementation plan under the conditions and in the manner provided in section 110(f).

(c) The Administrator may by rule establish priorities under which manufacturers of continuous emission reduction systems necessary to carry out subsection (b) shall provide such systems to users thereof, if he finds that priorities must be imposed in order to assure that such systems are first provided to users in air quality control regions with the most severe air pollution. No rule under this subsection may impair the obligation of any contract entered into before enactment of this section. To the extent necessary to carry out this section, the Administrator may prohibit any State or political subdivision from requiring any person to use a continuous emission reduction system for which priorities have been established under this subsection except in accordance with such priorities.

(d) The Administrator shall study, and report to Congress not later than six months after the date of enactment of this section, with respect to—

(1) the present and projected impact on the program under this Act of fuel shortages and of allocation and end-use allocation programs;

(2) availability of continuous emission reduction technology (including projections respecting the time, cost, and number of units available) and the effects that continuous emission reduction systems would have on the total environment and on supplies of fuel and electricity;

(3) the number of sources and locations which must use such technology based on projected fuel availability data;

(4) priority schedule for implementation of continuous emission reduction technology, based on public health or air quality;

(5) evaluation of availability of technology to burn municipal solid waste in these sources including time schedules, priorities analysis of unregulated pollutants which will be emitted and balancing of health benefits and detriments from burning solid waste and of economic costs;

(6) projections of air quality impact of fuel shortages and allocations;

(7) evaluation of alternative control strategies for the attainment and maintenance of national ambient air quality standards for sulfur oxides within the time frames prescribed in the Act, including associated considerations of cost, time frames, feasibility, and effectiveness of such alternative control strategies as compared to stationary source fuel and emission regulations;

(8) proposed allocations of continuous emission reduction systems which do not produce solid waste to sources which are least able to handle solid waste byproducts of such systems; and

(9) plans for monitoring or requiring sources to which this section applies to monitor the impact of actions under this section on concentration of sulfur dioxide in the ambient air.

(e) No State or political subdivision may require any person to whom a suspension has been granted under subsection (a) to use any fuel the unavailability of which is the basis of such person's suspension (except that this preemption shall not apply to requirements indentical to Federal interim requirements under subsection (a)(3)).

(f)(1) It shall be unlawful for any person to whom a suspension has been granted under subsection (a)(1) to violate any requirement on which the suspension is conditioned pursuant to subsection (a)(3).

(2) It shall be unlawful for any person to violate any rule under subsection (c).

(3) It shall be unlawful for the owner or operator of any source to fail to comply with any requirement under subsection (b) or any regulation, plan, or schedule thereunder.

(4) It shall be unlawful for any person to fail to comply with an interim requirement under subsection (i)(3).

(g) Beginning January 1, 1975, the Administrator shall publish at no less than one hundred and eighty-day intervals, in the Federal Register the following:

(1) A concise summary of progress reports which are required to be filed by any person or source owner or operator to which subsection (b) applies. Such progress reports shall report on the status of compliance with all requirements which have been imposed by the Administrator under such subsections.

(2) Up-to-date findings on the impact of this section upon—

(A) applicable implementation plans, and

(B) ambient air quality.

(h) Nothing in this section shall affect the power of the Administrator to deal with air pollution presenting an imminent and substantial endangerment to the health of persons under section 303 of this Act.

(i)(1) In order to reduce the likelihood of early phaseout of existing electric generating facilities, any electric generating powerplant (A) which, because of the age and condition of the plant, is to be taken out of service permanently no later than January 1, 1980, according to the power supply plan (in existence on January 1, 1974) of the operator of such plant, (B) for which a certification to that effect has been filed by the operator of the plant with the Environmental Protection Agency and the Federal Power Commission, and (C) for which the Commission has determined that the certification has been made in good faith and that the plan to cease operations no later than January 1, 1980, will be carried out as planned in light of existing and prospective power supply requirements, shall be eligible for a single one-year postponement as provided in paragraph (2).

(2) Prior to the date on which any plant eligible under paragraph (1) is required to comply with any requirement of an applicable implementation plan, such source may apply (with the concurrence of the Governor of the State in which the plant is located) to the Administrator to postpone the applicability of such requirement to such source for not more than one year. If the Administrator determines, after balancing the risk to public health and welfare which may be associated with a postponement, that compliance with any such requirement is not reasonable in light of the projected useful life of the plant, the availability of rate base increases to pay for such costs, and other appropriate factors, then the Administrator shall grant a postponement of any such requirement.

(3) The Administrator shall, as a condition of any postponement under paragraph (2), prescribe such interim requirements as are practicable and reasonable in light of the criteria in paragraph (2).

(j) (1) The Administrator may, after public notice and opportunity for presentation of views in accordance with section 553 of title 5, United States Code, and after consultation with the Federal Energy Administrator, designate persons to whom fuel exchange orders should be issued. The purpose of such designation shall be to avoid or minimize the adverse impact on public health and welfare of any suspension under subsection (a) of this section or conversion to coal to which subsection (b) applies or of any allocation under section 10 of the Energy Supply and Environmental Coordination Act of 1974 or the Emergency Petroleum Allocation Act of 1973.

(2) The Federal Energy Administrator shall issue exchange orders to such persons as are designated by the Administrator under paragraph (1) requiring the exchange of any fuel subject to allocation under the preceding Acts effective no later than forty-five days after the date of the designation under paragraph (1), unless the Federal Energy Administrator determines, after consultation with the Administrator, that the costs or consumption of fuel, resulting from such exchange order, will be excessive.

(3) Violation of any exchange order issued under paragraph (2) shall be a prohibited act and shall be subject to enforcement action and sanctions in the same manner and to the same extent as a violation of any requirement of the regulation under section 4 of the Emergency Petroleum Allocation Act of 1973.

TITLE II—EMISSION STANDARDS FOR MOVING SOURCES

SHORT TITLE

SEC. 201. This title may be cited as the "National Emission Standards Act."

PART A—MOTOR VEHICLE EMISSION AND FUEL STANDARDS

ESTABLISHMENT OF STANDARDS

SEC. 202. (a) Except as otherwise provided in subsection (b)—

(1) The Administrator shall by regulation prescribe (and from time to time revise) in accordance with the provisions of this section, standards applicable to the emission of any air pollutant from any class or classes of new motor vehicles or new motor vehicle engines, which in his judgment causes or contributes to, or is likely to cause or to contribute to, air pollution which endangers the public health or welfare. Such standards shall be applicable to such vehicles and engines for their useful life (as determined under subsection (d)), whether such vehicles and engines are designed as complete systems or incorporate devices to prevent or control such pollution.

(2) Any regulation prescribed under this subsection (and any revision thereof) shall take effect after such period as the Administrator finds necessary to permit the development and application of the requisite technology, giving appropriate consideration to the cost of compliance within such period.

(b) (1) (A) *The regulations under subsection (a) applicable to emissions of carbon monoxide and hydrocarbons from light-duty vehicles and engines manufactured during model years 1975 and 1976 shall contain standards which are identical to the interim standards which were prescribed (as of December 1, 1973) under paragraph (5) (A) of this subsection for light-duty vehicles and engines manufactured during model year 1975.* The regulations under subsection (a) applicable to emissions of carbon monoxide and hydrocarbons from light-duty vehicles and engines manufactured during or after model year [1975] *1977* shall contain standards which require a reduction of at least 90 percentum from emissions of carbon monoxide and hydrocarbons allowable under the standards under this section applicable to light duty vehicles and engines manufactured in model year 1970.

(B) *The regulations under subsection (a) applicable to emissions of oxides of nitrogen from light-duty vehicles and engines manufactured during model years 1975 and 1976 shall contain standards which are identical to the standards which were prescribed (as of December 1, 1973) under subsection (a) for light-duty vehicles and engines manufactured during model year 1975. The regulations under subsection (a) applicable to emissions of oxides of nitrogen from light-duty vehicles and engines manufactured during model year 1977 shall contain standards which provide that emissions of such vehicles and engines may not exceed 2.0 grams per vehicle mile.* The regulations under subsection (a) applicable to emissions of oxides of nitrogen from light duty vehicles and engines manufactured during or after model year [1976] *1978* shall contain standards which require a reduction of at least 90 per centum from the average of emissions of oxides of nitrogen actually measured from light duty vehicles manufactured during model year 1971 which are not subject to any Federal or State emission standard for oxides of nitrogen. Such average of emissions shall be determined by the Administrator on the basis of measurements made by him.

(2) Emission standards under paragraph (1), and measurement techniques on which such standards are based (if not promulgated prior to the date of enactment of the Clear Air Amendments of 1970), shall be prescribed by regulation within 180 days after such date.

(3) For purposes of this part—

(A) (i) The term "model year" with reference to any specific calendar year means the manufacturer's annual production period (as determined by the Administrator) which includes January 1 of such calendar year. If the manufacturer has no annual production period, the term "model year" shall mean the calendar year.

(ii) For the purpose of assuring that vehicles and engines manufactured before the beginning of a model year were not manufactured for purposes of circumventing the effective date of a standard required to be prescribed by subsection (b), the Administrator may prescribe regulations defining "model year" otherwise than as provided in clause (i).

(B) The term "light duty vehicles and engines" means new light duty motor vehicles and new light duty motor vehicle engines, as determined under regulations of the Administrator.

(4) On July 1 of 1971, and of each year thereafter, the Administrator shall report to the Congress with respect to the development of systems necessary to implement the emission standards established pursuant to this section. Such reports shall include information regarding the continuing effects of such air pollutants subject to standards under this section on the public health and welfare, the extent and progress of efforts being made to develop the necessary systems, the costs associated with development and application of such systems, and following such hearings as he may deem advisable, any recommendations for additional congressional action necessary to achieve the purposes of this Act. In gathering information for the purposes of this paragraph and in connection with any hearing, the provisions of section 307(a) (relating to subpenas) shall apply.

(5)(A) At any time after January 1, [1972] *1975*, any manufacturer may file with the Administrator an application requesting the suspension for one year only of the effective date of any emission standard required by paragraph (1)(A) with respect to such manufacturer *for light-duty vehicles and engines manufactured in model year 1977*. The Administrator shall make his determination with respect to any such application within [60] *sixty* days. If he determines, in accordance with the provisions of this subsection, that such suspension should be granted, he shall simultaneously with such determination prescribe by regulation interim emission standards which shall apply (in lieu of the standards required to be prescribed[,] by paragraph (1)(A) *of this subsection*) to emissions of carbon monoxide or hydrocarbons (or both) from such vehicles and engines manufactured during model year [1975] *1977*.

[(B) At any time after January 1, 1973, any manufacturer may file with the Administrator an application requesting the suspension, for one year only of the effective date of any emission standard required by paragraph (1)(B) with respect to such manufacturer. The Administrator shall make his determination with respect to any such application within 60 days. If he determines, in accordance with the provisions of this section, that such suspension should be granted, he shall simultaneously with such determination prescribe by regulation interim emission standards which shall apply (in lieu of the standards required to be prescribed by paragraph (1)(B)) to emissions of oxides of nitrogen from such vehicles and engines manufactured during model year 1976.]

[(C)] *(B)* Any interim standards prescribed under this paragraph shall reflect the greatest degree of emission control which is achievable by application of technology which the Administrator determines is available, giving appropriate consideration to the cost of applying such technology within the period of time available to manufacturers.

[(D)] *(C)* Within 60 days after receipt of the application for any such suspension, and after public hearing, the Administrator shall issue a decision granting or refusing such suspension. The Administrator shall grant such suspension only if he determines that (i) such suspension is essential to the public interest or the public health and welfare of the United States, (ii) all good faith efforts have been

made to meet the standards established by this subsection, (iii) the applicant has established that effective control technology, processes, operating methods, or other alternatives are not available or have not been available for a sufficient period of time to achieve compliance prior to the effective date of such standards, and (iv) the study and investigation of the National Academy of Sciences conducted pursuant to subsection (c) and other information available to him has not indicated that technology, processes, or other alternatives are available to meet such standards.

[(E)] *(D)* Nothing in this paragraph shall extend the effective date of any emission standard required to be prescribed under this subsection for more than one year.

(c) (1) The Administrator shall undertake to enter into appropriate arrangements with the National Academy of Sciences to conduct a comprehensive study and investigation of the technological feasibility of meeting the emissions standards required to be prescribed by the Administrator by subsection (b) of this section.

(2) Of the funds authorized to be appropriated to the Administrator by this Act, such amounts as are required shall be available to carry out the study and investigation authorized by paragraph (1) of this subsection.

(3) In entering into any arrangement with the National Academy of Sciences for conducting the study and investigation authorized by paragraph (1) of this subsection, the Administrator shall request the National Academy of Sciences to submit semiannual reports on the progress of its study and investigation to the Administrator and the Congress, beginning not later than July 1, 1971, and continuing until such study and investigation is completed.

(4) The Administrator shall furnish to such Academy at its request any information which the Academy deems necessary for the purpose of conducting the investigation and study authorized by paragraph (1) of this subsection. For the purpose of furnishing such information, the Administrator may use any authority he has under this Act (A) to obtain information from any person, and (B) to require such person to conduct such tests, keep such records, and make such reports respecting research or other activities conducted by such person as may be reasonably necessary to carry out this subsection.

(d) The Administrator shall prescribe regulations under which the useful life of vehicles and engines shall be determined for purposes of subsection (a) (1) of this section and section 207. Such regulations shall provide that useful life shall—

(1) in the case of light duty vehicles and light duty vehicle engines, be a period of use of five years or of fifty thousand miles (or the equivalent), whichever first occurs; and

(2) in the case of any other motor vehicle or motor vehicle engine, be a period of use set forth in paragraph (1) unless the Administrator determines that a period of use of greater duration or mileage is appropriate.

(e) In the event a new power source or propulsion system for new motor vehicles or new motor vehicle engines is submitted for certification pursuant to section 206(a), the Administrator may postpone

certification until he has prescribed standards for any air pollutants emitted by such vehicle or engine which cause or contribute to, or are likely to cause or contribute to, air pollution which endangers the public health or welfare but for which standards have not been prescribed under subsection (a).

* * * * * * *

FUEL ECONOMY IMPROVEMENT FROM NEW MOTOR VEHICLES

SEC. 213. (a)(1) The Administrator and the Secretary of Transportation shall conduct a joint study, and shall report to the Committee on Interstate and Foreign Commerce of the United States House of Representatives and the Committees on Public Works and Commerce of the United States Senate within one hundred and twenty days following the date of enactment of this section, concerning the practicability of establishing a fuel economy improvement standard of 20 per centum for new motor vehicles manufactured during and after model year 1980. Such study and report shall include, but not be limited to, the technological problems of meeting any such standard, including the leadtime involved; the test procedures required to determine compliance; the economic costs associated with such standards, including any beneficial economic impact; the various means of enforcing such standard; the effect on consumption of natural resources, including energy consumed; and the impact of applicable safety and emission standards. In the course of performing such study, the Administrator and the Secretary of Transportation shall utilize the research previously performed in the Department of Transportation, and the Administrator and the Secretary shall consult with the Federal Energy Administrator, the Chairman of the Council on Environmental Quality, and the Secretary of the Treasury. The Office of Management and Budget may review such report before its submission to Congress but the Office may not revise the report or delay its submission beyond the date prescribed for its submission, and may submit to Congress its comments respecting such report. In connection with such study, the Administrator may utilize the authority provided in section 307(a) of this Act to obtain necessary information.

(2) For the purpose of this section, the term "fuel economy improvement standard" means a requirement of a percentage increase in the number of miles of transportation provided by a manufacturer's entire annual production of new motor vehicles per unit of fuel consumed, as determined for each manufacturer in accordance with test procedures established by the Administrator pursuant to this Act. Such term shall not include any requirement for any design standard or any other requirement specifying or otherwise limiting the manufacturer's discretion in deciding how to comply with the fuel economy improvement standard by any lawful means.

DEFINITIONS FOR PART A

SEC. [213]. *214.* As used in this part—

(1) The term "manufacturer" as used in sections 202, 203, 206, 207, and 208 means any person engaged in the manufacturing or assembling of new motor vehicles or new motor vehicle engines,

or importing such vehicles or engines for resale, or who acts for and is under the control of any such person in connection with the distribution of new motor vehicles or new motor vehicle engines, but shall not include any dealer with respect to new motor vehicles or new motor vehicle engines received by him in commerce.

(2) The term "motor vehicle" means any self-propelled vehicle designed for transporting persons or property on a street or highway.

(3) Except with respect to vehicles or engines imported or offered for importation, the term "new motor vehicle" means a motor vehicle the equitable or legal title to which has never been transferred to an ultimate purchaser; and the term "new motor vehicle engine" means an engine in a new motor vehicle or a motor vehicle engine the equitable or legal title to which has never been transferred to the ultimate purchaser; and with respect to imported vehicles or engines, such terms mean a motor vehicle and engine, respectively, manufactured after the effective date of a regulation issued under section 202 which is applicable to such vehicle or engine (or which would be applicable to such vehicle or engine had it been manufactured for importation into the United States).

(4) The term "dealer" means any person who is engaged in the sale or the distribution of new motor vehicles or new motor vehicle engines to the ultimate purchaser.

(5) The term "ultimate purchaser" means, with respect to any new motor vehicle or new motor vehicle engine, the first person who in good faith purchases such new motor vehicle or new engine for purposes other than resale.

(6) The term "commerce" means (A) commerce between any place in any State and any place outside thereof; and (B) commerce wholly within the District of Columbia.

TITLE III—GENERAL

* * * * * * *

EMERGENCY POWERS

SEC. 303. Notwithstanding any other provisions of this Act, the Administrator upon receipt of evidence that a pollution source or combination of sources (including moving sources) is presenting an imminent and substantial endangerment to the health of persons, and that appropriate State or local authorities have not acted to abate such sources, may bring suit on behalf of the United States in the appropriate United States district court to immediately restrain any person causing or contributing to the alleged pollution to stop the emission of air pollutants causing or contributing to such pollution or to take other action as may be necessary.

HOUSE DEBATE AND PASSAGE OF H.R. 14368, MAY 1, 1974

Mr. Bolling. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 1082 and ask for its immediate consideration.

The Clerk read the resolution as follows:

H. Res. 1082

Resolved; That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 14368) to provide for means of dealing with energy shortages by requiring reports with respect to energy resources, by providing for temporary suspension of certain air pollution requirements, by providing for coal conversion, and for other purposes. After general debate, which shall be confined to the bill and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Interstate and Foreign Commerce, the bill shall be read for amendment under the five-minute rule. It shall be in order to consider the amendment in the nature of a substitute recommended by the Committee on Interstate and Foreign Commerce now printed in the bill as an original bill for the purpose of amendment under the five-minute rule. At the conclusion of such consideration, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and any Member may demand a separate vote in the House on any amendment adopted in the Committee of the Whole to the bill or to the committee amendment in the nature of a substitute. The previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit with or without instructions.

Mr. Latta. Mr. Speaker, House Resolution 1082 is the rule on H.R. 14368, the Energy Supply and Environmental Coordination Act. It is an open rule with 1 hour of general debate. In addition, the rule makes the committee substitute in order as an original bill for the purpose of amendment.

The three primary purposes of this bill are: First, to permit narrowly defined variances from specific clean air requirements; second, to grant authority to increase the use of coal resources; and third, to direct the Federal Energy Administrator to obtain information on the Nation's energy supply situation.

Following the veto of the Emergency Energy Act earlier this year, the Committee on Interstate and Foreign Commerce began work on a new energy bill in early April 1974. At the conclusion of this consideration the committee voted to delete from the energy bill the provisions relating to alterations of clean air requirements, coal conversion and energy information reports. These provisions were then incorporated into the present bill, H.R. 14368. According to the committee report, the intent is to bring before the House in a separate bill those essential parts of this comprehensive package on which there is substantial agreement.

The cost of this bill is estimated to be $5,000,000 for fiscal year 1974, $35,000,000 for fiscal year 1975, and $5,000,000 for each of the 3 fiscal years following.

Mr. BOLLING. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

Mr. STAGGERS. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 14368 to provide for means of dealing with energy shortages by requiring reports with respect to energy resources, by providing for temporary suspension of certain air pollution requirements, by providing for coal conversion, and for other purposes.

The SPEAKER. The question is on the motion offered by the gentleman from West Virginia (Mr. Staggers).

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 14368, with Mr. Dorn in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from West Virginia (Mr. Staggers) will be recognized for 30 minutes and the gentleman from Minnesota (Mr. Nelsen) will be recognized for 30 minutes.

The Chair recognizes the gentleman from West Virginia.

Mr. STAGGERS. Mr. Chairman, I rise in support of H.R. 14368, the Energy Supply and Environmental Coordination Act of 1974.

As everyone knows, this body has been considering legislation to cope with the energy situation since October of last year. The Congress did act to pass energy legislation, but that bill—S. 2589—was vetoed by the President.

Now the immediate crisis has passed. But the oil embargo could be reimposed at any time. Bad weather, strikes, or accelerated increases in demand could cause serious energy shortages. In my view and in the unanimous view of the Commerce Committee, there are some steps we can and should take now to deal with this possibility.

First, the Administrator of the new Federal Energy Administration must be given, and must exercise, the authority to get and verify necessary information on the Nation's energy supplies. Second, the FEA Administrator must be authorized and directed to make more effective use of our Nation's coal resources. Third, some carefully limited adjustments must be made to certain specific environmental requirements.

These provisions have been separated from the controversial provisions of the energy legislation. They have passed the committee unanimously and have previously passed both the House and the Senate. The President in his veto message did not oppose these provisions.

This bill will help meet the Nation's energy needs, but will not abandon our commitment to a healthy environment. For these reasons, I urge passage of H.R. 14368.

Mr. HASTINGS. Mr. Chairman, I do not believe that the House has to spend a great deal of time in going over the provisions of title II of the conference report that has been before this body on two separate occasions, and that has received favorable consideration on both of those occasions by the House.

Mr. Chairman, as the gentleman from West Virginia, the chairman of the full committee (Mr. Staggers), has pointed out, the bill before us today is precisely the language of the conference report on the so-called Emergency Energy Act, as it relates to the Clean Air Act. I would like to point out to the committee, however, that we started deliberations on this matter back in October of 1973, and we are now at this point in time of May 1, 1974, where we have not as yet given congressional approval to an energy plan.

The reason that I introduced a separate measure is because of the difficulties we had encountered with title I. I think it is entirely fair to present to the auto industry the means whereby they can proceed to manufacture their automobiles. The Congress holds in its hand the decision as to what type of emission controls standards are going to have to be met by the automobile industry, and we have been delinquent in not providing any date certain for them, and I urge that we today do so as quickly as possible, and try to overcome the 5 months of deliberations and equivocations on the entire question of what standards are in fact going to be in place.

The automobile emission standards referred to in this bill would keep the 1975 standards in place for the year 1976. It would give the Administrator the option of granting an additional year of delay in the implementation of the standards. **[Sec. 4, Sec. 202(b) CAA.]**

The coal diversion sections are as minimal as possible. They allow conversion of plants to coal where the Administrator finds it necessary, and yet protects the environment by demanding down the line that if they continue to utilize coal, they install scrubbing equipment. **[Sec. 2, Sec. 119(b) CAA.]**

Mr. Chairman, I strongly advocate as a compromise measure that we very quickly, without change, pass this measure and let the automobile manufacturers especially know what date they can proceed to manufacture their automobiles with the knowledge of what emission standards they will be required to meet.

Mr. MCCOLLISTER. I wish to associate myself with the remarks of the gentleman from New York, particularly those suggesting to the committee that the bill be passed in its present form, both because it is the result of a legislative process that has been too long at work, and because there are many divergent views. This Member will oppose any amendment, and he will vote for the bill in its present form.

Mr. HASTINGS. I appreciate very much the comments of the gentleman from Nebraska. I might add that there are people who would like to change this measure. There are people who would like to tighten up on the standards. There are people who would like to loosen up on the standards.

The gentleman from Florida, Chairman Rogers, has indicated that the Clean Air Act will undergo complete hearings, and will consider all changes at the appropriate time of hearings. But as the gentleman has mentioned, the time has come to pass this extremely minimal Energy Act and pass it as presently constituted, without any further attempt to change it.

The House can well remember being on this floor for hour after hour after hour debating various amendments. That bill never did see the light of day. Now we have arrived at a point where it is time to move, and pass this measure.

Mr. Chairman, I strongly advocate that this measure be approved without any changes whatsoever.

I yield back the remainder of my time.

Mr. WYMAN. Mr. Chairman, I have a great deal of respect for my colleague, the gentleman from New York, and for the position which he and other members of the committee urge in respect to this bill. However, the hard fact of the matter is that unless certain amendments are offered to this legislation at this time, the prospect is that they will not become a reality in regard to the next run of U.S. automobile production, or possibly in the future at any time.

I want to make very clear at the outset of discussion on this subject that I yield to no one in this House in my enthusiasm for clean air, clean water, noise abatement, and all of the other things that help to make America a better and more comfortable place for its citizens to live in.

But one of the things that is being done in this bill, in my opinion, ought not to be done, and that is to put the 1975 automobile clean air standards into operation. **[Sec. 4, Sec. 202 CAA.]** They are unnecessarily high and far too wide ranging in application. Let me explain, if I may, so that it will be understood. There are two or three basic facts that we need to be aware of. One is that there is no need for automobile emissions controls on any automobiles in better than 90 percent of the geographical area of the United States for any realistic public health interest on the part of our citizens. Specifically, there is no need for any emission controls on automobiles, for example, in the States of North Dakota, New Hampshire, Florida, Maine—one could go right on across almost this whole country.

The only automobile emission pollution that relates to public health in this country extends in a corridor from Boston, Mass., down to Richmond, Va., and in the Chicago area and in and around the Los Angeles area and to some extent in Phoenix and Tucson at certain times, and all of these areas are protected in an amendment which I will offer at the appropriate time in deliberations on this bill.

It seems to me it is unwise and unnecessary, at a time when the country is facing a gasoline shortage, and in fact, whether or not the country faces a gasoline shortage, it is unwise and unnecessary for us to be so enormously wasteful of energy in this country as to insist that everyone in the country have an automobile that is equipped with expensive emission controls unless there is an honest-to-goodness, down-to-earth public necessity for this.

The package of emissions controls in the 1974 models cost about $314 a car and everyone in the country is being required to buy them. At the

proper time, if the language which the gentleman from New York and the chairman of the committee insist upon is maintained in the law of this country, there will have to be catalytic converters on all the 1975 cars. This will add in the vicinity of $150 a car to every single new car cost, which will bring the package of emissions gadgets pretty close to $500 per car. In addition, these catalytic converters will shrivel up and die and become ineffective if they eat leaded gasoline. The country in the future is going to have to have a different kind of gasoline nozzle at the pumps and it is going to have to have unleaded gasoline all over the country at an enormous cost and at a refinery penalty, for a barrel of crude for unleaded gasoline of 4 or 6 percent.

It has been urged that there will be a fuel economy from the use of the catalytic converter, but the economy is lost in the penalty that occurs at the refinery in the reduced number of gallons of gasoline one can obtain from each barrel of oil.

I put in the Record yesterday, and it is in the appendix of the Record today at page E2648, a factsheet attempting to answer some of the questions about my first amendment that will be offered today, to take emissions controls off of automobiles registered to residents of approximately 90 percent of the geographical area of the United States. It will thus relieve Americans who operate and own cars in those areas, because it applies to persons who are residents of those areas. It will relieve them of the very substantial initial cost burden and also relieve them of a fuel penalty burden that EPA itself in its latest report advises is an average for all cars in the country of at least 10 percent or 1 gallon out of every 10. It will provide that residents of those parts that do have a pollution problem—the persons who operate automobiles there better than half of the time will continue to have to have emission-equipped cars.

I think this is a significant improvement on the situation. I cannot understand for the life of me why it is that the committee and members of the committee decline to take America to a two-car policy. It will save billions of gallons of gasoline and billions of dollars. Apparently some of the gentlemen are of the opinion that automobile emissions go up into the atmosphere and pollute the world's air.

The fact of the matter is that the breezes blow and the rains fall and these emissions are dissipated. They are not present in sufficient quantity to injure the public health in most of America. Required on cars in areas in which there is virtually no concentration of pollution they impose an enormous fuel penalty and an enormous capital wastage on the citizens of this country.

Under my amendment the EPA Administrator is authorized to designate the geographical boundaries of the so-called emissions-related problem areas. These are air quality regions. There are 13 of them designated. After he has once designated them, and he must do it within 60 days from the time the amendment becomes law, if he wants to add another area in America that he feels has a problem, he can do so but he must first come to the Congress and to the Commerce Committee and obtain approval of the Congress before he does this.

Now, if we take, just for example, a State such as Florida and we total the number of 1975 cars that will be registered in the State of

Florida, that will be bought there, if we assume it was nothing but 100,000, if there is to be a penalty of nearly $500 a car, to insist upon a requirement that all of the people of Florida should have this kind of a restriction on their automobiles imposes a capital penalty on them of nearly $50 million in that one State alone. It seems to me this is wrong for America—an unjust and unnecessary burden.

Now, how much gasoline will be saved? The answer is that the existing shortage of 15 percent will be virtually wiped out. Seventy-five percent of the cars in this country will be costly and wasteful emissions controls free if this amendment goes through.

The automobile industry can live with this two-car policy very easily. Their production lines will simply have an additional step for the 30 percent of the cars that have to have emissions controls on them. They will not have emissions controls on the 70 percent of the other production. The dealers can live with this also.

What is to stop, we may ask, for example, a person who resides in an air quality region from going outside the region and buying a car that does not have emissions controls on it? The answer is that under the amendment it is a misdemeanor punishable by a fine or a sentence in jail. Everyone can live with this. The savings will be very substantial.

More importantly, the ambient air quality of the regions that the Administrator designates as air quality control regions will not be significantly adversely impacted by the in and out traffic of cars that do not have emission controls because that traffic ranges anywhere from 2 or 6 percent and it is not large enough to create a real problem.

The savings for the people of America would be billions of gallons of gasoline a year. If we are short of gasoline and energy, if we are looking as we are to get more energy from coal and possibly make oil and gas from coal, to expedite additional drilling and recovery of gas and oil from places in this country where it is available, we ought to give our attention to this problem and do it right now. It is the one way we can act right now to end the gasoline shortage in this country overnight.

The facts concerning my amendment are as follows:

GENERAL FACTSHEET

1. The amendment proposes suspension to emissions requirements on light-duty vehicles until September 30, 1977. How many cars will be affected?

Answer: Approximately 70 percent of all new cars manufactured 60 days after passage and a substantial number of older cars already on the road that may legally be modified by dealers to achieve greater mileage and economy.

2. Whose cars are affected?

Answer: Those belonging to persons resident outside of thirteen air quality regions the boundaries of which must be designated by the EPA administrator within 60 days after passage.

3. Will this impair air quality or mess up the clean air of the non-air quality regions?

Answer: Not in the slightest. Most of the United States has no significant air pollution from automobile emissions that adversely affects public health. The winds blow, the air moves, the rains fall. The emissions are not cumulative. They are dispersed and they do not exist in quantities that make people sick or impair their required air quality except in heavy concentrations and these areas are specified as "air quality regions".

4. Will it save gasoline?

Answer: In the billions of gallons each year.

5. Will it save money?

Answer: Hundreds of millions of dollars in costs to consumers in what they must pay for their cars (approximately $314 per car) and for their operation thereafter.

6. Can the automobile industry live with what amounts to a two car standard?

Answer: Yes; the industry will make two types of cars, one with emissions controls and the other without. This assembly line technique is not unduly burdensome.

7. Can the automobile dealers live with the requirement?

Answer: Yes; persons (customers) will purchase the same number of cars but residents outside of air quality regions will mostly purchase cars without emissions controls because they will cost less and operate more inexpensively.

8. What is to prevent persons who reside in air quality regions from going to dealers with emission free cars and buying one?

Answer: This is a criminal misdemeanor under the amendment punishable by fine and imprisonment.

9. What will be the effect of the amendment on the gas shortage?

Answer: It will cut it virtually in half (or at present levels eliminate it entirely). Under the amendment persons owning earlier model cars may have them modified by professional experts to increase their gas mileage. This is prohibited by dealers under existing law. Manuals of instruction on this will be prepared and furnished to dealers by manufacturers.

10. What savings in gas mileage is involved in terms of present cars and new cars yet to be manufactured?

Answer: EPA itself estimates the overall fuel penalty under the 1970 standards ranges downward from 18% on larger cars to an overall average exceeding 10 percent. 70% of new cars will have no fuel penalty because they will have no emissions controls. Older cars may be modified at individual owners option. Net gas savings at least one gallon in ten, and in some instances much more.

11. What about the in-and-out traffic into air quality regions of cars without emissions controls?

Answer: It will not significantly adversely affect the air quality in those regions because the traffic in and out is not that heavy; it ranges from 2–6 percent.

12. What about the inequity between persons who live in such regions and those who live outside of them in terms of what they have to pay for their cars?

Answer: Why require the entire nation to bear the hugely energy wasting burden that is a problem only in a small part of the country? When a person moves from an air quality region to an unrestricted area he may acquire an emissions control free vehicle if he desires. Similarly when the reverse applies the additional cost is part of the price of maintaining clean air standards in the controlled region. There is little sense, for example, in requiring all of the residents of the entire State of North Dakota to purchase emissions control equipped cars when the area has no emissions control related air pollution. Multiplied nationwide the energy cost of such a requirement becomes both ridiculous and energy wasteful to a point deserving of the rising public criticism that prevails in the United States on this matter at this hour.

Mr. Nelsen. Mr. Chairman, I rise in support of this bill. I wish to point out that this bill as originally enacted, including the total energy problem, we will recall, was here for lengthy debate and was finally vetoed.

It seemed crystal clear to the committee that title II of the bill was a necessary step that must be taken at this time so that the automobile industry would know where to go and know what our instructions to them would be. This we have tried to do.

I want to speak briefly to the amendment that has been offered and point out that many changes have been made in engineering, so that some of the catalytic converter attachments have been improved to a degree that some fuel economy has been restored. We will be speaking to that at a later time when the debate centers on that amendment.

I would like to mention the provision in the bill dealing with sta-

tionary standards dealing with emissions where we are seeking to get our coal conversion program going and more use of coal. **[Sec. 10.]** It becomes crystal clear that the United States of America does not have the available crude oil, the available gas, even if the Alaskan pipeline comes in. It means that the only way that the United States of America can finally stand on its own, be independent, have an energy supply, will be with proper attention to our development in the field of coal.

I think as time goes on, when we extend the Clean Air Act, I hope to offer some amendments, and I hope the House will support them, where we can do a better job on developing our own energy resources looking to the future.

In this bill, we do have some provision in it where our stationary sources can convert to coal, and they have been doing so over a period of months. I believe the bill is moving in the right direction.

Mr. Chairman, I want to say that title II of this bill has in it some reporting sections that seem to be in some controversy, but I think can be clarified later. However, I think the bill in itself is a necessary piece of legislation. It ought to be passed; it must be passed. I hope the House gives it its support.

Mr. MOORHEAD of Pennsylvania. Mr. Chairman, I thank the chairman very much for yielding to me. As I advised the chairman, I received a letter today from the Under Secretary of Commerce expressing some concern about the language in **section 11** which might breach the confidentiality of information which people submit to the Department, including the Bureau of the Census.

What I would like to ask the gentleman from West Virginia, in order to establish some legislative history, is about the words in **section 11** "where a person shows" and the words "upon a showing—by any person"—does this mean that the initiation must come from the person who supplied the information, or can the Administrator unilaterally seek it?

Mr. STAGGERS. Mr. Chairman, several Members have expressed the concern that **subsection (e)** of **section 11** appears to give the Administrator of the Federal Energy Administration unqualified access to the files of all other Government agencies. This is not the case. **Subsection (e)** is designed to protect suppliers of information from the burdens of filing duplicate reports. The Administrator would be given access to information in the possession of another agency only when an individual or business concern asks to be relieved from complying with the Administrator's requests for information. It should be emphasized that under the language of **subsection (e)** the Administrator may not exempt business entities on his own motion. If no one asks for an exemption, he cannot get the information from the other agency.

Mr. MOORHEAD of Pennsylvania. Mr. Chairman, I thank the chairman. I presume the explanation would also apply to subsection (f), which uses similar words "upon a showing—by any person."

Mr. STAGGERS. This is correct, at least to my knowledge. I would believe so.

Mr. MOORHEAD of Pennsylvania. I thank the chairman very much.

Ms. ABZUG. Mr. Chairman, I find this a very deceptive bill. It is labeled the "Energy Supply and Environmental and Coordination

Act," but it contains no energy conservation measures. As a matter of fact, the bill, as I read it—and I am not on the committee—provides nothing related to the supply or conservation of energy that we do not already have in existing laws or programs.

What it does, essentially, is use this as a pretext for suspending some very important environmental safeguards. There are some people who want to balance environmental safeguards against energy conservation, and I can appreciate that, but there is not a question of balancing. This bill simply scuttles significant environmental provisions without cause, and without doing anything about energy.

Mr. Chairman, I am really quite concerned that the committee reported out this bill.

What does it do?

One. It would allow major powerplants to convert to coal without having to meet primary health standards for 4 years. It changes the present law which requires such facilities to comply with emission limitations not later than mid-1975. **[Sec. 2, Sec. 119 CAA.]** These plants are encouraged to switch to coal now and control their pollution later, while under present law they could begin to burn coal only after they had installed control equipment. Carl Bagge, president of the National Coal Association, testified before Senator Jackson's committee, that significant new supplies of domestic coal could not be made available for several years—and that it would take several years for railroads to get the kind of rolling stock and refurbish the track needed to deliver coal in quantities to powerplants now burning oil.

The American Public Health Association has estimated that extensive conversion from oil-burning to coal-burning powerplants will cause "an increase of 20 to 40 percent in both morbidity and mortality due to respiratory and cardiovascular disease"—New York Times, January 23, 1974.

Coal conversion is made to look even more absurd when one realizes that coal is currently in shorter supply than oil.

The New York City Environmental Protection Administration revoked a short-term variance to Consolidated Edison to burn coal and high sulfur oil once it realized that the shortage of oil conforming to State and local pollution control standards was far less than expected and this is so all over the country.

The present energy crisis has now made us painfully aware of how good environmental policy is, also good energy policy, by demonstrating another ill effect of our unbalanced transportation system—its unconscionable waste of energy.

In response to the command of the statute, as interpreted by the courts the Environmental Protection Agency last year promulgated transportation control plans for a number of major cities. EPA's transportation control plans encouraged the use of carpools and exclusive bus lanes. As we have found out this winter, carpooling saves energy as well as improving air quality.

A number of EPA's transportation control plans also required the imposition of a so-called parking surcharge, which would have placed a small daily charge on cars parking in parking lots within a metropolitan area during rush hour. The proceeds of this surcharge were to be used to support and expand mass transportation facilities. As

the revenues from the surcharge enabled expansion of mass transit facilities, the surcharge was to be gradually increased. It was hoped that this practical combination of carrot and stick would be an effective means to lure increasing numbers of people from private cars into mass transit, reducing air pollution accordingly.

Yet the bill before you would prohibit EPA altogether from initiating the proposal. **[Sec. 110(c) CAA.]**

Two. This bill would also freeze auto emissions at the interim 1975 levels for 1976 model year vehicles and postpone the achievement of the NO_x standard until 1978. **[Sec. 4, Sec. 202 CAA.]** Since recent EPA hearings showed that auto companies could meet the 1975 standards, further delay is not justified. This delay would actually waste energy. Freezing auto emissions at the interim 1975 level will delay a shift to catalytic converters which, according to GM's own figures, would save up to 13 percent in gasoline consumption. Other figures presented by Ford and other motor companies are much higher.

Third. The bill would also curtail and delay aspects of the transportation control strategies developed by the EPA under the act. The clean air amendments, **section 110(a)(2)(B)**, require that, where necessary to attain air quality meeting the national air quality standards protecting public health, States shall institute measures to curtail the total miles driven, or "transportation controls." This requirement was placed in the act in recognition that in some heavily polluted areas, reductions in emissions from new cars would not be sufficient to produce healthful air quality quickly, if at all.

The congressional decision to require transportation controls was one of the most far-sighted aspects of the clean air amendments. Though focused on reducing air pollution, it represented congressional recognition that a major cause of the unhealthful levels of air pollution in many of our cities was our unbalanced transportation system, which placed far too much reliance on the private car as a means of transporting people on the routine trip to and from work. It was a decision that the States and cities should move toward increased reliance on mass transit facilities for such trips.

In the recent period of the "fuel crisis" it was demonstrated that other ways can be found by the citizens of this country to conserve oil. And they did conserve oil. If the Members believe that they can go back home and say that this is an energy bill, they will not succeed. It has only the word "energy" in it, but there is not one provision in this bill which does anything to roll back prices, which does anything to control profits, or which does anything to make certain there will be a proper allocation of oil on a priority basis so that, for example, low-sulfur oil will be allocated to areas who have serious air pollution problems. The bill does nothing.

If we should pass this bill, then we will have, by this action, participated in invading the atmosphere, not just a bit, but we will be responsible for creating serious hazards to health which will be immediately affected.

There is nothing in this bill which will do anything about the real problems of energy. Such provisions which purport to deal with such problems are already provided for in other regulations or legislation.

As far as the reporting provisions are concerned, as I recall from the FEA Act which we passed has reporting provisions. These may be

a little different but not enough to warrant our turning back the clock. As far as studying the problem of energy and the problem of energy supply, it seems to me we have provided for that in other legislation. With respect to allocation of fuel on the basis of need or priority, the Emergency Petroleum Allocation Act and regulations exist under which the administration could act to properly allocate with a view to priorities if it wished to. With respect to studies on the need for mass transportation they are underway and significant new mass transportation legislation is being drawn.

So, Mr. Chairman, the purpose of this bill seems to be to fool the public. The purpose of this bill seems to be to utilize this moment opportunistically and take unfair advantage of the generations of the future by trying to scuttle and destroy the Environmental Protection Act and the Clean Air Act. This I suggest is a goal many special interests have sought for a long time. Let us not hand it to them on a silver platter.

Mr. Chairman, I urge that if the Members have any sense of responsibility, they should vote this bill down, and then let us proceed to work on a real energy bill.

Mr. Rogers. Mr. Chairman, I rise in support of the provisions of H.R. 14368, a bill authored by our hardworking colleague on the Subcommittee on Public Health and Environment, Mr. Hastings. This bill is virtually identical to the environmental provisions of the conference report on the energy bill adopted by this body in February, but which unfortunately was vetoed. The conference report on these provisions was agreed to after a bipartisan conference consisting of Mr. Hastings and myself for the House, and Senators Randolph, Muskie, and Baker for the other body. It was agreed to by the conferees to the energy bill without dissent. And it was agreed to by this body. Moreover, the Hastings bill—which embodies these provisions—was adopted without dissent by the Interstate and Foreign Commerce Committee last week.

Mr. Chairman, the long and complex deliberations which accompanied development of these provisions, in my judgment, make it vital to the public interest that this bill not be amended on the floor today. The automobile companies must make immediate decisions with respect to automotive controls. They must base their decisions in certain features of this bill. They are entitled to a final decision now.

The provisions of this bill have not been objected to by the Environmental Protection Agency or the White House. They have already received favorable support in the House and in the Senate. They have been thoroughly debated. These provisions deserve continued support—as they now exist—by this body.

Mr. Chairman, these are provisions which are energy related. Other provisions of the Clean Air Act which are not related to the energy situation also need attention. The Subcommittee on Public Health and Environment will conduct hearings on these provisions in June, and we intend to submit further amendments for the consideration of our colleagues before June 30.

Mr. Wyman. Is the gentleman aware of the fact that the automobile industry will start production on the 1975 models within 60 days?

Mr. Rogers. That is exactly the point; that is what they need to do to protect health. I know the gentleman does not want catalytic con-

verters on all automobiles, but the industry is already prepared to do so because they are needed to protect the health of our Nation. The health of the American people ought to be the primary factor. The energy crisis has eased up, and I know the emotions of the gentleman, and I respect his feelings. However, some of the facts that were given do not jibe with the record. For instance, it will not cost $300 an automobile by any means to install converters. The record is very clear on that from the manufacturers themselves who are building it. The cost is more like $150, half the amount the gentleman suggested.

The administration is ready for us to move the bill. People all over the country are ready. The Congress itself ruled on this amendment twice in December, and we are ready to move now.

Mr. WYMAN. If the gentleman will yield further, the people of this country in the places where there is no need for automobile emission controls object to paying the additional hundreds of dollars in the aggregate for the gadgetry that must be put on these cars as well as the fuel penalty. Why should we require the industry to produce cars with emission controls on them with this cost involved if we know in advance of the production of the new cars that we do not need them for 70 percent of the cars involved and therefore can save billions of dollars?

Mr. ROGERS. Because the facts that the gentleman states are not supported by the record or by the experts. As a matter of fact, 66 cities would be adversely affected if the gentleman's amendment were to be adopted and two-thirds of the people of this Nation would be adversely affected by it. I can go right down the line to show you what the health effects would be on the Nation, because it is all documented. It is not just my idea. I am not grabbing facts out of the air. None of the large automobile companies support the gentleman's amendment. They know they should proceed to clean up the air. I do not know of anyone who is supporting the gentleman.

In fact, let me say this: Recently a poll was taken in the suburbs around this metropolitan area, and do you know what its results were? They wanted more done by Government with regard to three things: Schools, transportation, and air pollution, and in some cases this poll, which was just published today in the Washington Post, efforts against air pollution ranked even before more efforts for schools.

Mr. WYMAN. Mr. Chairman, I would ask the gentleman from Florida: Where does the gentleman get the figure of 66 cities in this country with pollution from automobile emissions that significantly impact on the public health? Where does the gentleman get that figure?

Mr. ROGERS. From a study that was done by scientists that I have here with me.

Mr. WYMAN. By what scientists?

Mr. ROGERS. I would be happy to provide the gentleman with a list. I believe he has such a list, and I notice the gentleman from New York also has the list that he can give to the gentleman.

I might say also to the gentleman from New Hampshire that we have had significant problems in Florida contrary to what I know the feeling of the gentleman is. They had an alert in Miami caused by pollution from automobiles in Miami. We have also had that occur in Tampa. Tampa is a city that will be affected along with 66 other cities, two-thirds of the people.

So, Mr. Chairman, I think the House used good judgment when it twice voted down the amendment offered by the gentleman from New Hampshire in December, I recognize the sincerity of the gentleman from New Hampshire, but I do think the House has already rendered a proper judgment or the amendment, and I believe it will do so again.

Mr. WYMAN. Why should the people who do not live in those areas, and do not operate cars in those areas, have to pay such bills?

Mr. ROGERS. Because of the pollution effect.

Mr. WYMAN. How does it do so?

Mr. ROGERS. The gentleman himself recognizes that air moves around. It does not stay in one place. So the pollution can move around. In fact, we had it move from the Northeast to Birmingham a few years ago, with a huge, black cloud of pollution, necessitating temporary closure of the steel mills in the cities.

Mr. WHITE. Mr. Chairman, this bill in its present form threatens to undermine the strict confidentiality historically accorded data relating to individual persons and establishments collected by the Bureau of the Census. Title 13, United States Code, places strict limitations on access to such data. These limitations would be swept aside by the provisions of **section 11(e)** of this bill, which allow the Federal Energy Administrator to obtain data from other Federal agencies notwithstanding any other provision of law.

This bill, if passed in its present form, would jeopardize past promises of confidentiality made by the Government to the people of these United States, the Census Bureau has an outstanding record of preserving the confidentiality of information furnished to it by respondents. A forced violation of such confidentiality practices could damage that reputation and thereby impair the Census Bureau's ability to procure information essential to this country's well-being. Moreover, it would do further damage to the integrity of the Government—integrity which has already been tarnished in too many other areas.

The amendment I propose would keep intact the standards of confidentiality for census data now imposed by title 13. Adoption of this amendment, I believe, is essential if the Government is to continue to depend on the Census Bureau to provide constitutionally mandated population counts and other information on conditions in our society.

The amendment follows:

AMENDMENT TO H.R. 14368, AS REPORTED OFFERED BY MR. WHITE

Page 76, line 17, insert before the comma the following: "Pursuant to any provision of law (other than title 13, United States Code)".

Page 76, line 20, insert before the final comma the following: "(other than title 13, United States Code)"

Mr. Chairman, I only wish to say I reviewed this problem with the chairman, recommending that we might ease the situation and make some change of words. The information that he feels is important can be attained at the same time by a change of structure of the amendment to satisfy the concern that has been expressed, and I wish he would review that at the time for amending.

Mr. VANIK. Mr. Chairman, I should like to tell the committee that I should like to offer an amendment which would slightly change the language relating to fuel efficiency standards. The bill in its present form talks about fuel efficiency standards, and seek a 20-percent improve-

ment by 1980. I think that is entirely inadequate. I do not think it is going to meet the urgency of these times.

I should like to offer and expect to offer an amendment which would provide that by 1980 we would have fuel efficiency of at least 20 miles per gallon, because I think the urgency of the energy crisis calls for that kind of efficiency.

Mr. HARRINGTON. Mr. Chairman, America's consumers, helpless as utility bills have skyrocketed, are demanding relief from Congress.

The response that is being offered today—the so-called Energy Supply and Environmental Coordination Act—would not satisfy their real demands—lower fuel costs and the assurance that they and their children and grandchildren will not be forced to live in a filth-clogged world where every breath of air is a risk.

While the price of coal is presently lower than the equivalent amount of oil, Bureau of Mines figures indicate that the very passage of this bill might change that situation. The wholesale price index, where 1967 coal prices are used as a base, show that the price of coal had risen 97 percent by 1972, 110 percent by 1973, and 160 percent by January 1974.

Coal, therefore, is clearly rising in cost. With the increased coal demand that, of course, would accompany the passage of this bill, the rise in coal costs would surely accelerate. In fact, some experts have warned not of a future "oil crisis" but of a "coal crisis."

In addition, the price of coal will likely be forced to rise even further due to the impending expiration of the United Mine Workers' contract later this year. A new contract will be negotiated under a new union president committed to improved working conditions. Improvements, while certainly needed, are also costly.

Should management and labor fail to reach an acceptable settlement, coal workers may decide to strike. If we increase our dependence upon coal and find ourselves in the unfortunate and crippled position Great Britain was in last winter, we shall hardly have done our constituents a service.

I might add that the utilities want to negotiate long-term contracts, but the coal companies are not willing to do so, since such long-term contracts would involve uniform prices of coal over a number of years. Instead, the utilities are forced to buy coal on the spot market, where prices continually move higher.

The combination of these factors, with the emphasis on the rise in demand in an industry with several production problems, suggests that the now attractive price differential between coal and oil may narrow appreciably.

There are other reasons for opposing the bill, though. Seven of the 15 largest coal producers in the United States are oil companies.

This trend toward horizontal integration poses threats to competition. Oil companies are unlikely to encourage large production of coal to the point where it decreases the price of oil. It is much more likely that coal prices will move upward to meet oil prices, leaving us in the position we are in now—at the mercy of the major oil companies. We can hardly expect price competition when oil companies control a significant sector of the coal industry. Congress simply should not be a party to accelerated anticompetitive behavior, especially in a bill ostensibly designed to cut consumer costs.

By far my greatest reservations, however, are in the environmental and health areas. Relaxed air standards **[Sec. 2, Sec. 119 CAA]** would

directly affect the lives of thousands of people who suffer from respiratory and cardiovascular diseases. Statistics gathered by the American Public Health Association show that long-term conversion by industry to coal would increase the mortality rate 20 to 40 percent among these people. It seems to me that this unthinkable cost in human health and well-being renders unacceptable any conversion to coal as a primary electric-generating fuel in urban areas.

In addition, the safety record among mine workers is appallingly low. Underground mining is one of the most hazardous industrial occupations in the Nation. And surface mining poses questions of soil erosion, pollution of surface waters, and destruction of wildlife habitats. Some look to western coal, which has a low sulfur content—and is therefore, more attractive environmentally—for our new sources of coal. Yet, a National Academy of Sciences study points out that in many parts of the West, where there is little rainfall, soils cannot retain moisture, and reclamation is not possible.

If we opt for a higher sulfur content coal, we may encounter acid mine drainage, where sulfuric acid leached from exposed coal seams contaminates surface and ground waters.

While I oppose the use of coal in the context of this bill, I would propose a crash program to perfect stack gas cleaning techniques, to find ways to liquefy and gasify coal, and to exploit deep coal in the East. Further, I would like assurances that coal prices will stay reasonably priced by diversifying coal company ownership and by removing coal's hidden environmental and health costs. Meanwhile, we must forego strip mines, which are so abhorrent environmentally that it seems pointless to pursue the subject.

Generally speaking, the Congress must stop approving bills without considering long-range, as well as short-range, implications. If we continue to be environmentally and economically shortsighted, we will continue to be plagued by problems that we should have solved ourselves. A little more care will go a long way toward assuring that we will, in fact, alleviate the energy crisis without exacerbating the environmental crisis.

Mr. FRASER. Mr. Chairman, I rise in opposition to H.R. 14368, the Energy Supply and Environmental Coordination Act

In the bill before us this afternoon, we find, in effect, certain of the amendments to the Clean Air Act of 1970, which the administration proposed to Congress on March 22. These amendments would establish congressional authority to delay clean air standards established by the act. I wish to express my opposition to any long-term comprehensive plan to relax air quality standards as proposed in the legislation we are considering this afternoon.

Problems invariably occur in the implementation of a law as far reaching as the 1970 Clean Air Act. Some minor changes in the law may be needed. However, a wholesale sellout to the administration's proposals is not a justifiable answer to the problem. Under the authority we are reviewing today, the President, through the Administrator of the Environmental Protection Agency, would be given outright power to suspend provisions of the present Clean Air Act without opportunity for review and without requiring any environmental or other assessment. **[Sec. 6(c).]**

H.R. 14368 WILL NOT INCREASE COAL SUPPLIES IN SHORT RUN

The declared purpose of the bill before us is to permit increased use of coal resources. The Clean Air Act does not prohibit the burning of coal. It prohibits the burning of coal without emission controls.

No matter how much we relax our air quality standards, the best estimates are that it will be 2 or 3 years at least before significant additional amounts of coal will be available. Labor problems, shortages of railroad equipment for transportation, shortages of mining machinery—all these factors place constraints on the amount of coal we can produce.

EPA Administrator Russell Train has stated that—

Relaxing or relinquishing our environmental effort will release over the long run, only marginal amounts of supply, and over the short run, no new supply at all.

STACK-SCRUBBING EQUIPMENT

If we have to grant variances to permit use of high-sulfur coal, we should at the same time require the use of stack-scrubbing equipment. What is at issue here is the feasibility of stack scrubber technology. The EPA has affirmed, time and again, that the technology is available and practicable. Industry says that it is not—that it is overly costly and unreliable.

This morning's New York Times tells of General Motors' success with a new stack-scrubbing system at its Chevrolet Motor Division plants near Cleveland, which cut sulfur dioxide emissions by 90 percent. The difficulty with the system is that it adds about $10 to the cost of each ton of coal used.

The savings in benefits to human health is not calculated.

COSTS OF AIR POLLUTION IN HUMAN HEALTH

An American Public Health Association study has projected the number of extra deaths among the elderly, and additional respiratory illnesses among the very young, which can be expected from an extensive increase in use of coal by electric powerplants without installation of emission-control equipment. In 1 year alone, the sulfur dioxide pollution that would result in densely populated areas would bring about an additional 13,000 to 14,000 cases of respiratory illness in children under 5 and an extra 12,000 deaths in people over 60.

A February 1973 EPA report calculated the dollar costs of air pollution for 1968 at $16.1 billion. One fourth of this—roughly $4 billion—can be attributed to sulfur dioxide emissions from powerplants. The cost of controlling this pollution could not equal the enormous cost of these emissions in terms of damage to human health and to vegetation and residential property.

H.R. 14368 WOULD MEAN CHANGE IN FEDERAL-STATE ROLE IN AIR QUALITY CONTROL

If the proposed revision in the Clean Air Act is accepted, there would be a change in the relationship of the State and Federal governments in establishing clean air standards. **[Sec. 2, Sec. 119 CAA.]**

In the past, Congress has recognized the right of the individual States to adopt more stringent pollution control standards and to set more stringent deadlines for compliance. With the passage of the amendments, the whole emphasis on cleaning up our environment would be prevented from setting their own standards.

My home State, Minnesota, has made great strides in implementing procedures and establishing deadlines for fulfillment of the act. The Minnesota Pollution Control Agency is charged with the responsibility of implementing and enforcing regulations mandated under the Clean Air Act. In a letter to my office, MPCA executive director Grant Merritt discusses how the proposed amendments will adversely affect Minnesota's efforts to protect and enhance our air. He suggests possible solutions to the problems facing us as we cope with the energy crisis. The health and well-being of our human as well as physical environment are at stake.

I include in the Record at this point the relevant portions of Mr. Merritt's letter:

The [Minnesota Pollution Control] Agency does not believe that problems with the [Clean Air] Act have been of a magnitude sufficient to justify approval of the administration's proposed amendments.

1. Discretionary authority granted the Administration would be excessive. This not only could cause an endless series of administrative changes that would confuse and frustrate enforcement efforts, but would also further limit the role of Congress in establishing national policy—this at a time when there is great concern over the diminishing leadership role of Congress.

2. At least one change, that of "freezing" the 1975 automotive emissions standards through 1977, may have unnecessarily detrimental consequences. In addition to causing potentially serious problems with the maintenance of vehicle emissions standards, this proposal also could result in needless energy waste. To meet the 1975 emissions standards, the automobile industry likely will rely on the oxidation catalyst (a muffler-like device that fits on the tailpipe and converts carbon monoxide and hydrocarbons to harmless carbon dioxide and water). A problem with the catalyst is that emissions of sulfates likely will increase substantially. By freezing the 1975 deadlines, reliance on the catalyst may likewise be extended, not only adding to the sulfate-emission problem but possibly delaying development of energy-efficient and pollution-reducing new engine technologies. Moreover, the catalyst likely would cause a wholesale changeover to lead-free gasoline facilities, for which the energy cost would be high.

As you also are aware, the National Academy of Sciences is engaged in an extensive study on various aspects of the Clean Air Act. The study is to be completed this summer. In view of the importance of the matter, it seems that it would be prudent to wait a few months for the results of this study before action is taken on any major changes in the Clean Air Act.

In carrying out one portion of the Clean Air Act, the Agency devised a transportation-control plan for the Minneapolis central business district where emissions of carbon monoxide violated federal and state standards. The cooperation of the City of Minneapolis and several state agencies, including the Minnesota Highway Department and the Metropolitan Transit Commission, resulted in the development of a plan that will succeed in meeting the standards by the May 31, 1975, compliance date. The Minnesota transportation plan will not be affected by the Administration's proposed amendments.

H.R. 14368 WILL NOT SOLVE OUR ENERGY PROBLEMS

Our energy and environmental problems come from the same source—habitual forms of development and growth that are wasteful both of energy and other environmental resources.

We can achieve significant energy savings through increased emphasis on mass transit, recycling of materials, smaller cars, and other energy-efficiency measures. The preliminary report released by the Ford Foundation's energy policy project estimates that by cutting fuel used for transportation by 7 percent—possibly through rescheduling of airlines and gasoline rationing—we could save as much oil as through a massive switch of powerplants from oil to coal—and without the terrible price in human health.

We must not jeopardize, for an illusory short-term gain, the hard-won advances we have made in air quality over the past few years. The bill before us would unnecessarily relax air quality standards without necessarily increasing our supplies of energy. I ask you to join me in voting against it.

Mr. Bingham. Mr. Chairman, on December 12, during the debate on the original Energy Emergency Act, I said that the bill was an incomplete package of proposals, plans, and short-term authorizations which avoids some of the hardest and most important questions about how this Nation should deal with the impending shortages of petroleum products. That statement is as true today as it was then. We still do not have viable legislation to provide for rationing should it be needed; we have no provision to respond to the inevitable economic hardships caused by the fuel crisis; and we still do not have a Federal commitment to improve mass transit facilities in our Nation's cities. What we have here is a scalpel with which the oil industry and their White House allies can dismember our environmental protection laws.

This legislation represents half of the bill the Congress considered last year. It is the half the President has said he would not veto—the other half which he has promised to veto again contained a provision which would have reduced the price of domestic crude oil in this country to tolerable levels. H.R. 14368, according to the report filed by the Interstate and Foreign Commerce Committee, seeks to consolidate those provisions from the Energy Emergency Act upon which there is substantial agreement that the White House would not exercise its veto.

While some sacrifice in the quality of our atmospheric environment is inevitable as we strive to meet our energy demands, this bill would go far to institutionalize the negation of our environmental protection laws which much of the energy industry has long sought.

Included in this bill are provisions which would sharply relax air quality standards; encourage the burning of high pollutant coal without a concomitant responsibility to install antipollution equipment; ease auto emission standards for 2 years and negate any environmental regulation which would interfere with mandated coal conversion actions.

There are provisions in the bill I would prefer to see enacted into law. For example, the bill would authorize the FEO to collect and disseminate energy data it compels the energy industry to disgorge. **[Sec. 11.]** The publication of verified and accurate energy data is long overdue and constitutes a step in the direction we should have taken a long time ago: make the energy industry responsible to the needs of the American people through their Government. But legislation to gather reliable energy data should not be held captive by what essentially is a bad bill that would gut our environmental laws and

deface our world with a cloud of pollutants. There is enough support for an energy data bill in the House, that one standing on its own merit would gain easy passage.

In addition, I do not believe there are sufficient safeguards, as argued by some, to protect the environment should the bill become law. There is no assurance in the legislation, for example, that New York City, which is a high pollution problem area would be guaranteed sufficient low sulfur fuels to meet its needs, allocating higher sulfur fuels to areas that can sustain the added pollutants without an adverse impact. Just today, John Sawhill, in a meeting with the New York delegation said he could do nothing to aid the city. Moreover, he refused to reallocate New York any domestically produced low sulfur residual oil. I believe it would be a mistake to institutionalize the power to order variances such as I have described when the people running the Federal energy program say they will not help New York solve its severe energy pollution problem.

We have succeeded so far in meeting the majority of the country's energy needs to date without this legislation, and I intend to cast my vote against its adoption because the present situaiton is far preferable to what this bill portends for New York City.

Mr. WOLFF. Mr. Chairman, I rise in opposition to H.R. 14368, "The Energy Supply and Environmental Coordination Act."

During the past several months the energy crisis has been a frustrating experience for all Americans. Few groups, however, have felt the anxieties which the environmental movement has suffered during this period, constantly being bombarded with rhetorical statements placing the blame for the energy crisis on their shoulders. Nothing could be further from the truth. For environmentalists first gave impetus to the energy conservation movement. The legislation we are considering only continues to impugn the evironmental movement.

Allowing coal to be burned without cleaning it, particularly at large urban center generating facilities, will have disastrous effects on the Nation's air quality and on the health of millions of Americans. In the New York metropolitan area, a variance to burn coal by the Consolidated Edison Co. was refused because of the deleterious impact it would have on the quality of life in the region. The decision to burn coal at power generating facilities, because of its critical impact upon the populace, should not be made by the Administrator of the Federal Energy Administration unless the coal is filtered and cleaned. **[Sec. 10, Sec. 119 CAA.]**

However, the most disturbing aspect of the legislation we now have under consideration involves the section **[Sec. 6]** to relax the provisions of the National Environmental Policy Act of 1969. When the House considered the Alaskan Pipeline measure, several months ago, a hole was made in the wall of the dam. Now, we are witnessing legislation which would open the floodgates to NEPA. Again, our environment is to suffer unnecessarily for our energy shortgages. Several months ago, when the Consolidated Edison Co. in New York applied to the New York City Environmental Protection Agency for a variance to burn coal at its Ravenswood facility, an environmental impact analysis was carried out, involving Federal, State, and local authorities. There was no need to suspend NEPA, but only carry out its provisions swiftly and effectively. This same action can be done for all

future variances and conversions involving clean air standards and the National Environmental Policy Act. Consequently, I see no reason for the inclusion of this section in H.R. 14368.

I am also concerned that the legislation we are considering may undermine the decision of the Supreme Court in Sierra Club against Ruckleshaus. According to the majority of the Court, further degradation of air quality in areas subject to standards was contrary to the Clean Air Act of 1970. By suspending provisions of the Clean Air Act, we may actually be in conflict with the principles of the legislation we are amending.

The need to maximize our available fuel resources will not be aided by the provisions of H.R. 14368, which would suspend portions of the Clean Air Act. However, the Nation's fuel supplies could be increased by the continued concerted efforts aimed at energy conservation, efforts to maximize clean sources of energy, action which environmentalists have been proposing for years.

Mr. BROYHILL of North Carolina. Mr. Chairman, I rise in support of H.R. 14368, the Energy Supply and Environmental Coordination Act of 1974. I have spoken before on the floor of the House in support of many of the provisions of this legislation. Enactment of legislation to deal with the energy shortages our Nation is facing is long overdue. This bill comes before us today approximately 6 months after the Congress first began considering legislation to deal with energy shortages.

In the consideration and final passage of such legislation, we have encountered innumerable controversies, delays, and differences of opinion. But the problem which this legislation seeks to deal with is still with us and we must still provide some solutions so that our Nation can get through the years ahead with an adequate supply of energy to meet our needs.

After the President vetoed the recently passed Energy Emergency Act, the House Interstate and Foreign Commerce Committee began consideration of a new vetoed bill. In the final consideration of this legislation, the committee divided the provisions into two separate bills. The bill before us today is one such bill and, I feel, contains the less controversial language to deal with energy shortages.

This bill provides several amendments to the Clean Air Act. It provides temporary suspension of air emission standards under the Clean Air Act to stationary sources which are unable to obtain clean fuels. These suspensions apply until June 30, 1975, or one year after enactment, whichever is earlier. If the Environmental Protection Agency determines that clean fuels are available, or if there is a significant risk to public health, suspension of standards would not be allowed. **[Sec. 2, Sec. 119(a) CAA.]**

This suspension of standards would provide some relief from the shortage of fuels, particularly fuels of low-pollution characteristics, which may make it impossible for many fuel burning stationary sources to comply with existing requirements.

The bill also provides exemption from air pollution requirements until January 1, 1979, for stationary sources which convert to coal as a major source of fuel. **[Sec. 119(b) CAA.]** This exemption may be overridden if conversion to coal results in significant threats to health. This section should result in the opening of new coal mines by sustaining demand for coal, and will tend to shift supplies of natural

gas and oil to the production of gasoline and home heating oil. If necessary, a coal allocation system would be provided for coal users. [Sec. 10.]

Another important section of this bill deals with automobile emissions. [Sec. 4, Sec. 202 CAA.] It provides that emission standards for 1975 model cars would continue during the 1976 model year. A second year of postponement is also authorized if the Administrator of EPA finds it is necessary to prevent a significant increase in fuel use. This section attempts to strike a balance between continued development of a clean automobile engine and the technological problems associated with achieving that goal particularly during a period of critical fuel shortage. Passage of this section, which has previously been approved by the House, is necessary so that automobile manufacturers will know the emission standards for 1975 model cars which are soon to go into production.

The bill also provides for reporting of energy information from those engaged in the production, processing, refining, transportation by pipeline, or distribution of energy resources. [Sec. 11.] The Federal Energy Administration is directed to develop, within 30 days of enactment, an accurate measure of domestic reserves, production, imports and inventories of oil, natural gas, and coal. In addition, industry information must be updated every 90 days to insure timeliness and accuracy of energy information. This section should insure that the Federal Energy Administration and the Congress have the necessary information to evaluate energy problems and will be able to take action based on accurate and complete information.

Congressional passage of this important energy legislation is long overdue. I urge my colleagues to act swiftly to approve this badly needed measure.

Mr. Koch. Mr. Chairman, the Energy Supply and Environmental Coordination Act, now on the floor, would be disastrous for the environment of our cities.

The bill does have some good provisions—requiring reports from persons engaged in the production and distribution of energy resources, and directing the Federal Energy Administration to conduct conservation studies and to publish reports on energy supplies.

However, the sections which would allow pollution of the atmosphere, to a dangerous extent in many cities, including New York, far outweigh the helpful portions of the bill.

The environmentally destructive provisions which I am talking about would temporarily suspend stationary emission limitations under the Clean Air Act, such as smoke from factories; would encourage, and in some cases require, the burning of coal, potentially extremely harmful to the health of many persons in cities already burdened with heavy air pollution, including New York; would suspend stronger automobile emission standards planned for 1976; and would suspend for 1 year actions under the National Environmental Policy Act.

This bill would in a gross, adverse way affect the health of our citizens by further impairing the quality of the very air we breathe. This is neither conscionable nor necessary. Conservative of energy need not conflict with environmental safeguards. This bill dumps the safeguards at the public's expense, and I must therefore vote against it.

Mr. RANDALL. Mr. Chairman, I support H.R. 14368, the Energy Supply Act of 1974. I shall be brief in my remarks. One of the most important provisions of this bill is section 11 on energy information reports. As I have said many times, while we may have suffered from an Arab oil embargo, we continue to suffer today from an energy information embargo. H.R. 14368 should go quite a ways toward correcting that problem. As I read the bill, reports may be required by the Federal Energy Administrator even by means of subpena if necessary to bring in all relevant books, records, papers, and other documents relating to domestic reserves and also all production reports and inventories of crude oil, residual fuel oil, refined petroleum products, and natural gas.

It is required that these reports be furnished for each calendar quarter. If there is no other purpose, then this bill deserves prompt enactment in order that we may know, instead of having to continue to guess, about such things as refinery capacity, stocks on hand, how much product is in the pipeline, how much is in tanks above ground and all of the many other necessary statistics needed to prepare a national energy plan or policy.

Of course, we should also applaud the Committee on Interstate and Foreign Commerce for providing in this measure a sensible suspension of the requirement for devices that must be attached to cars to control emission of pollutants.

In addition, there is an important section on coal conversion [Sec. 10] and a most important section on a fuel economy study [Sec. 9, Sec. 213 CAA.] All in all, H.R. 14368 is a bill which has merit; it provides many benefits, and as far as I can determine it is without any detriments. About the only apology that has to be made is that this legislation should have been passed much earlier in this session.

AMENDMENT OFFERED BY MR. WYMAN

Mr. WYMAN. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. Wyman: On page 59 insert immediately after line 13 the following: I. TEMPORARY SUSPENSION IN DESIGNATED AREAS

(a) Section 203 of the Clean Air Act (42 U.S.C. 1857f–2) is amended by adding at the end thereof the following new subsection:

"(d)(1) During and after the period of partial suspension of emission standards (as defined in paragraph (3)(A))—

"(A) it shall be unlawful for any person to register within an area designated in paragraph (3)(B) a new motor vehicle or new motor vehicle engine which is manufactured during the period of partial suspension of emission standards and which is not labeled or tagged as covered by a certificate of conformity under this part, and

"(B) no State shall permit any person to register a motor vehicle in violation of subparagraph (A).

"(2) During the period of partial suspension of emission standards—

"(A) subsections (a) (1) and (4) of this section shall be inapplicable;

"(B) it shall be unlawful for any manufacturer to sell, offer to sell, or introduce or deliver for introduction into commerce (or for any person except as provided in regulations of the Administrator, to import into the United States), any new motor vehicle or new motor vehicle engine which is labeled or tagged as covered by a certificate of conformity unless such new motor vehicle or new motor vehicle engine is covered by a certificate of conformity issued (and in effect) under this part, or unless such new motor vehicle or new motor vehicle engine was manufactured prior to the period of partial suspension.

"(C) subsection (a)(3) shall not apply to any motor vehicle or engine attached thereto which is registered outside an area described in paragraph (3)(B) of this subsection;

"(D) it shall be unlawful for any manufacturer (i) to sell or lease any new motor vehicle or new motor vehicle engine which is labeled or tagged as covered by a certificate of conformity unless such manufacturer has complied with the requirements of sections 207 (a) and (b), or (ii) to fail to comply with subsection (c) or (d) of section 207 insofar as such sections apply to motor vehicles or motor vehicle engines to which subsection (a)(1) of this section applies or applied or which are labeled or tagged as covered by a certificate of conformity;

"(E) it shall be unlawful for any dealer to sell any new motor vehicle or new motor vehicle engine which is not labeled or tagged as covered by a certificate of conformity to an ultimate purchaser unless such purchaser provides such dealer with a signed statement that such purchaser will not register such vehicle in an area designated under paragraph (3)(B), and

"(F) it shall be unlawful for any ultimate purchaser to provide a statement described in subparagraph (E) knowing such statement to be false.

"(3)(A) For purposes of this subsection and section 209(C) the term 'period of partial suspension of emission standards' means the period beginning sixty days after enactment and ending on the latter of September 30, 1977, or 12 months after the date on which the President determines that there is no longer any significant shortage of petroleum fuels in the United States. Any such determination shall be published in the Federal Register.

"(B) Within sixty days after the date of enactment of this subsection and annually thereafter, the Administrator shall designate, subject to the limitations set forth in this subparagraph, geographic areas of the United States in which there is significant auto emissions related to air pollution. The Administrator shall not designate as such area without subsequent legislative authorization, any part of the United States outside the following air quality control regions as defined by the Administrator as of the date of enactment of this paragraph:

"(i) Phoenix-Tucson, intrastate.

"(ii) Metropolitan Los Angeles, intrastate.

"(iii) San Francisco Bay area, intrastate.

"(iv) Sacramento Valley, intrastate.

"(v) San Diego, intrastate.

"(vi) San Joaquin Valley (California), intrastate.

"(vii) Hartford-New Haven (Connecticut)-Springfield (Massachusetts), interstate.

"(viii) National Capital (District of Columbia-Maryland-Virginia), interstate.

"(ix) Metropolitan Baltimore, intrastate.

"(x) New Jersey-New York-Connecticut, interstate.

"(ix) Metropolitan Philadelphia (Pennsylvania-New Jersey and Delaware), interstate.

"(xii) Metropolitan Chicago (Illinois and Indiana), interstate.

"(xiii) Metropolitan Boston, intrastate.

For purposes of this subparagraph, the term 'significant auto emissions related air pollution' means the persons of air pollutants from automobile emissions at such levels and for such durations as to cause a demonstrable and substantial adverse impact upon public health.

"(C) For purposes of this subsection and section 209(c) a motor vehicle shall be considered to be registered in a geographic area—

"(i) in the case of a motor vehicle registered by an individual if the individual's principal place of abode is in that area, or

"(ii) in the case of a motor vehicle registered by a person other than an individual, if the State of registration determines that such vehicle will be principally operated in such area.

"(D) Each State shall not later than sixty days following enactment of this Act, submit to the Administrator a plan for implementing subsection (d)(1)(B) of this section. Such plan shall contain provisions which give assurance that such State has one or more adequately financed agencies with sufficient legal authority to enforce such subsection (d)(1)(B) as determined in accordance with regulations of the Administrator."

(b)(A) Section 202(a) of the Clean Air Act is amended by inserting "and section 203(d)" after "subsection (b)".

(B) (1) Section 203(a) of such Act is amended by striking out "The following" and inserting in lieu thereof "Except as otherwise provided in subsection (d) of this section, the following:".

(2) Section 203(b)(2) of such Act is amended by inserting "or (d)(2)(A)" after "subsection (a)".

(C) Section 204(a) of such Act is amended by inserting before the period the following: "or section 203(d)".

(D) Section 205 of such Act is amended by inserting "(a)" after "SEC. 205.", by inserting "or paragraph (1)(A) or (2) of section 203(d)" after "section 203(a)", and by adding at the end of such section the following new subsection:

"(b) If a State fails to submit a plan under section 203(d) or if the Administrator determines (after notice and opportunity for hearing) that such State is not adequately enforcing such a plan, then such State (including any political subdivision thereof) shall lose its entitlement to and may not thereafter receive any Federal grant or loan assistance under this Act or under the Federal Water Pollution Control Act."

(E) Section 206(b)(1) of such Act is amended by striking out "being manufactured by a manufacturer" and inserting in lieu thereof "which are being manufactured by a manufacturer and which are covered by a certificate of conformity".

(F) The second sentence of section 209(a) of such Act is amended by striking out "No State" and inserting in lieu thereof "Except as provided in sections 203(d)(1)(B) and 203(a), no State".

(G) Section 209(c) of such Act is amended by striking out "Nothing" and inserting in lieu thereof "(1) Except as provided in paragraph (2) of this subsection, nothing"; and by adding at the end thereof the following new paragraph:

"(d) During the period of partial suspension of emission standards (as defined in section 203(d)(3)(A)—

"(2) no State may (in an applicable implementation plan or otherwise) adopt or attempt to enforce any standard relating to the control of emissions of motor vehicles (including engines attached thereto) registered outside of any area designated under section 203(d)(3)(B); and

"(2) no State may (in an applicable implementation plan or otherwise) adopt or attempt to enforce any law or regulation prohibiting any person from removing or rendering inoperative any device or element of design installed in compliance with regulations under this title in or on a motor vehicle (including any engine attached thereto) which is registered outside of any area designated under section 203(d)(3)(B), and

"(3) the Administrator may not promulgate any implementation plan which contains a provision prohibited by paragraph (1) or (2)."

(c) Willful and deliberate violation of section 203(d)(1)(A) of the Clean Air Act, as amended by subsection (a) of this amendment, shall be punishable by a fine of up to $1,000, or imprisonment up to one year, or both.

(d) Motor vehicles registered in areas other than those designated in paragraph (3)(B) herein on the date of expiration of this amendment shall not be required to be retrofitted with emissions control devices or to comply with emissions control standards or regulations issued pursuant to the Act of 1970 (42 U.S.C. 1857f) as amended.

(e) This amendment shall take effect sixty days after passage.

POINT OF ORDER

Mr. STAGGERS. Mr. Chairman, I make a point of order against the amendment.

Mr. Chairman, it is not germane to the bill. The amendment offered by the gentleman from New Hampshire (Mr. Wyman) is not germane because:

First, it amends **sections 203, 204, 205, 206, and 209** of the Clean Air Act, provisions which are nowhere else amended by this bill (H.R. 14368).

Second, it, in effect, amends the Federal Water Pollution Control Act, by providing for termination of State grant eligibility under that act, if the State fails to take certain actions under this amendment.

Clearly this is not germane. Moreover, it discusses a subject matter clearly within the jurisdiction of the Public Works Committee.

Third, the bill would limit State authority to register motor vehicles, a subject which is not addressed in this bill in any way. It also deals with Federal and State authority to adopt and enforce provisions relating to in-use vehicles, a subject which is not addressed in this bill in any way. It also deals with grant provisions which are not amended in any way by H.R. 14368. It subjects ultimate purchasers to regulation for the first time under the Clean Air Act and no provision of this bill refers to ultimate purchasers of motor vehicles.

Mr. WYMAN. The gentleman is essentially trying to say that an amendment that relates to the standards or emissions controls on automobiles in a time and under a title that relates to clean air is not germane. I think it is so obvious that it is germane that the point of order should be overruled.

The CHAIRMAN [Mr. DORN]. The Chair is prepared to rule.

The gentleman from West Virginia (Mr. Staggers) makes the point of order that the amendment offered by the gentleman from New Hampshire (Mr. Wyman) is not germane to the committee substitute for H.R. 14368.

The Chair has examined the amendment and is aware that it provides that States shall lose their entitlements to Federal grants under the Clean Air Act and under the Water Pollution Control Act for failure to comply with the provisions of the amendment.

While the committee substitute does amend several sections of the Clean Air Act to permit defined and limited variances from certain diverse provisions of that act, in order to coordinate the questions of energy supplies and environmental protection, the committee substitute does not affect entitlements under the Water Pollution Control Act, a matter within the jurisdiction of the Committee on Public Works.

As recently as December 14, 1973, when the Committee of the Whole was considering the Energy Emergency Act, Chairman Bolling ruled that to a proposition temporarily suspending certain requirements of the Clean Air Act, an amendment suspending other provisions of all other environmental protection laws was not germane.

For these reasons, the Chair feels that the amendment is not germane to the committee substitute and sustains the point of order made by the gentleman from West Virginia.

Mr. STAGGERS. Mr. Chairman, I move to strike the requisite number of words.

I wish to assure the gentleman from New Hampshire that when we do consider the Environmental Protection Act his provisions will be considered, when this bill is taken up again. I can assure the gentleman of that.

Mr. WYMAN. Mr. Chairman, if the gentleman will yield on his time, I would simply like to say it will take me about 3 minutes to strike out from the amendment in the form in which it has been proposed the sanctions that relate to the objectionable features of which the Chairman just spoke, and the gentleman from New Hampshire intends to resubmit in the next few minutes the amendment without those features.

Mr. STAGGERS. The gentleman still has time, and I would like to say we would have to oppose the amendment. But I wish to assure the

gentleman he will be given every fair treatment in the committee if he will come before the committee to present his views. There must be a new bill extending the authority of the Clean Air Act before June 30. I think if the gentleman will present his views before the committee, that is the proper time, when the hearings can be held and we can evaluate the situation, and the full membership of the committee will have a chance to hear the gentleman and he can make his points. I believe they will be given every consideration.

I do not believe this is the proper place to offer those amendments because I believe every member of our committee would be impelled to vote against and work against the gentleman's amendment. I believe if the gentleman will come at the proper time and present them in the proper way he will receive a sympathetic hearing from the members of the committee.

Mr. WYMAN. If the gentleman will yield further. I can assure the gentleman first I do not represent the automobile industry. All I am trying to do, as the gentleman knows and has known for some months now, is to get out something on this before the industry goes into the 1975 production in order to save millions of gallons of gasoline and hundreds of millions of dollars of cost to the purchasers and operators of automobiles in this country.

I think the gentleman is taking a position here that appears kindly and courteous but it seems to be contrary to the interests of the consumers of this country and contrary to energy crisis needs at this time. I will endeavor to make the corrections to the amendment in the shortest possible time.

Mr. STAGGERS. Mr. Chairman, in response to the gentleman I will say I do not think the House will accept the amendment and I think the gentleman will be just delaying progress on this bill. We are trying to be helpful to the country and the automobile industry and to the gentleman. We wish to do it in an orderly way.

The gentleman will have an opportunity to appear before our committee.

I would say this, when this part of the bill was broken away from the other parts, we agreed to oppose all amendments to this bill. I hope we can do this in order to get it by and down to the White House in the next day or so.

Mr. WYMAN. Mr. Chairman, if the gentleman will yield. I do not think we ought to be guided by what we think the other body will do. We know that the other body is under the domination of a point of view that accepts no amendment in this field whatsoever.

I am willing to submit the question to the House today. I believe that the House will adopt the amendment and that we ought to insist on it in conference.

Mr. STAGGERS. I would say we have voted it down twice and it is unlikely to get through now.

Mr. WYMAN. We have not considered this precise amendment in this House. It is a more thorough amendment and more carefully considered and worded than the one presented in December.

Mr. STAGGERS. I would like to say that if there is an amendment adopted, it would hold up this bill for some time.

Mr. ROUSSELOT. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count.

Fifty-eight Members are present, not a quorum. The call will be taken by electronic device.

The call was taken by electronic device, and the following Members failed to respond:

[Roll No. 199]

Alexander	Giaimo	Patman
Anderson, Ill.	Grasso	Pepper
Barrett	Gray	Pickle
Blatnik	Haley	Podell
Breaux	Hansen, Wash.	Rees
Brown, Calif.	Harsha	Reid
Buchanan	Hébert	Riegle
Burke, Calif.	Hillis	Roberts
Carey, N.Y.	Howard	Robison, N.Y.
Chisholm	Hudnut	Roncallo, N.Y.
Clark	Kazen	Rooney, N.Y.
Clausen, Don H.	Landrum	Rose
Conyers	Long, La.	Ruppe
Culver	Long, Md.	Stanton, James V.
Davis, Ga.	McFall	Stokes
de la Garza	Martin, N.C.	Stubblefield
Diggs	Mathis, Ga.	Teague
Drinan	Milford	Thompson, N.J.
Esch	Minshall, Ohio	Whitten
Findley	Murphy, Ill.	Williams
Fulton	Myers	
	Passman	

Accordingly the committee rose: and the Speaker having resumed the chair, Mr. Dorn, chairman of the Committee of the Whole House on the State of the Union, reported that that committee having had under consideration the bill H.R. 14368 and finding itself without a quorum he had directed the Members to record their presence by electronic device when 370 Members recorded their presence, a quorum, and he submitted herewith the names of the absentees to be spread upon the Journal.

The committee resumed its sitting.

AMENDMENT OFFERED BY MR. WYMAN

Mr. WYMAN. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. Wyman: On page 59 insert immediately after line 13 the following: I. Temporary Suspension In Designated Areas

(a) Section 203 of the Clean Air Act (42 U.S.C. 1857f–2) is amended by adding at the end thereof the following new subsection:

"(d) (1) During and after the period of partial suspension of emission standards (as defined in paragraph (3) (A)—

"(A) it shall be unlawful for any person to register within an area designated in paragraph (3) (B) a new motor vehicle or new motor vehicle engine which is manufactured during the period of partial suspension of emission standards and which is not labeled or tagged as covered by a certificate of comformity under this part, and

"(B) no State shall permit any person to register a motor vehicle in violation of subparagraph (A).

"(2) During the period of partial suspension of emission standards

"(A) subsection (a) (1) and (4) of this section shall be inapplicable;

"(B) it shall be unlawful for any manufacturer to sell, offer to sell, or introduce or deliver for introduction into commerce (or for any person except as provided in regulations of the Administrator, to import into the United States), any new motor vehicle or new motor vehicle engine which is labeled or tagged as covered by a certificate of conformity unless such new motor vehicle or new motor vehicle engine is covered by a certificate of conformity issued (and in effect) under this part, or unless such new motor vehicle or new motor vehicle engine was manufactured prior to the period of partial suspension;

"(C) subsection (a)(3) shall not apply to any motor vehicle or engine attached thereto which is registered outside an area described in paragraph (3)(B) of this subsection;

"(D) it shall be unlawful for any manufacturer (i) to sell or lease any new motor vehicle or new motor vehicle engine which is labeled or tagged as covered by a certificate of conformity unless such manufacturer has complied with the requirements of sections 207 (a) and (b), or (ii) to fail to comply with subsection (c) or (d) of section 207 insofar as such sections apply to motor vehicles or motor vehicle engines to which subsection (a)(1) of this section applies or applied or which are labeled or tagged as covered by a certificate of conformity;

"(E) it shall be unlawful for any dealer to sell any new motor vehicle or new motor vehicle engine which is not labeled or tagged as covered by a certificate of conformity to an ultimate purchaser unless such purchaser provides such dealer with a signed statement that such purchaser will not register such vehicle in an area designated under paragraph (3)(B), and

"(F) it shall be unlawful for any ultimate purchaser to provide a statement described in subparagraph (E) knowing such statement to be false.

"(3)(A) For purposes of this subsection and section 209(C) the term 'period of partial suspension of emission standards' means the period beginning sixty days after enactment and ending on the later of September 30, 1977, or 12 months after the date on which the President determines that there is no longer any significant shortage of petroleum fuels in the United States. Any such determination shall be published in the Federal Register.

"(B) Within sixty days after the date of enactment of this subsection and annually thereafter, the Administrator shall designate, subject to the limitations set forth in this subparagraph, geographic areas of the United States in which there is significant auto emissions related air pollution. The Administrator shall not designate as such area without subsequent legislative authorization, any part of the United States outside the following air quality control regions as defined by the Administrator as of the date of enactment of this paragraph;

"(i) Phoenix-Tucson, intrastate.

"(ii) Metropolitan Los Angeles, intrastate.

"(iii) San Francisco Bay Area, intrastate.

"(iv) Sacramento Valley, intrastate.

"(v) San Diego, intrastate.

"(vi) San Joaquin Valley (California) intrastate.

"(vii) Hartford-New Haven (Connecticut)-Springfield (Massachusetts), intrastate.

"(viii) National Capital (District of Columbia-Maryland-Virginia), interstate.

"(ix) Metropolitan Baltimore intrastate.

"(x) New Jersey-New York-Connecticut, interstate.

"(xi) Metropolitan Philadelphia (Pennsylvania-New Jersey and Delaware), interstate.

"(xii) Metropolitan Chicago (Illinois and Indiana), interstate.

"(xiii) Metropolitan Boston, intrastate.

For purposes of this subparagraph, the term 'significant auto emissions related air pollution' means air pollutants from automobile emissions at such levels and for such durations as to cause a demonstrable and substantial adverse impact upon public health.

"(C) For purposes of this subsection and section 209(c) a motor vehicle shall be considered to be registered in a geographic area—

"(i) in the case of a motor vehicle registered by an individual if the individual's principal place of abode is in that area, or

"(ii) in the case of a motor vehicle registered by a person other than an individual, if the State of registration determines that such vehicle will be principally operated in such area.

"(D) Each State shall not later than sixty days following enactment of this Act, submit to the Administrator a plan for implementing subsection (d)(1)(B) of this section. Such plan shall contain provisions which give assurance that such State has one or more adequately financed agencies with sufficient legal authority to enforce such subsection (d)(1)(B) as determined in accordance with regulations of the Administrator."

(b)(A) Section 202(a) of the Clean Air Act is amended by inserting "and section 203(d)" after "subsection (b)".

(B)(1) Section 203(a) of such Act is amended by striking out "The following" and inserting in lieu thereof "Except as otherwise provided in subsection (d) of this section, the following:".

(2) Section 203(b)(2) of such Act is amended by inserting "or (d)(2)(A)" after "subsection (a)".

(C) Section 204(a) of such Act is amended by inserting before the period the following: "or section 203(d)".

(D) Section 205 of such Act is amended by inserting "(a)" after "SEC. 205.", by inserting "or paragraph (1)(A) or (2) of section 203(d)" after "section 203(a)", and by adding at the end of such section the following new subsection:

(E) Section 206(b)(1) of such Act is amended by striking out "being manufactured by a manufacturer" and inserting in lieu thereof "which are being manufactured by a manufacturer and which are covered by a certificate of conformity".

(F) The second sentence of section 209(a) of such Act is amended by striking out "No State" and inserting in lieu thereof "Except as provided in sections 203(d)(1)(B) and 203(a), no State".

(G) Section 209(c) of such Act is amended by striking out "Nothing" and inserting in lieu thereof "(1) Except as provided in paragraph (2) of this subsection, nothing"; and by adding at the end thereof the following new paragraph:

"(d) During the period of partial suspension of emission standards (as defined in section 203(d)(3)(A)—

"(2) no State may (in an applicable implementation plan or otherwise) adopt or attempt to enforce any law or regulation prohibiting any person from removing or rendering inoperative any device or element of design installed in compliance with regulations under this title in or on a motor vehicle (including any engine attached thereto) which is registered outside of any area designated under section 203(d)(3)(B), and

"(3) the Administrator may not promulgate any implementation plan which contains a provision prohibited by paragraph (1) or (2)."

(c) Willful and deliberate violation of section 203(d)(1)(A) of the Clean Air Act, as amended by subsection (a) of this amendment, shall be punishable by a fine of up to one thousand ($1,000) dollars, or imprisonment up to one year, or both.

(d) Motor vehicles registered in areas other than those designated in paragraph (3)(B) herein on the date of expiration of this amendment shall not be required to be retrofitted with emissions control devices nor to comply with emissions control standards or regulations issued pursuant to the Act of 1970 (42 U.S.C. 1857f) as amended.

(e) This amendment shall take effect sixty days after passage.

Mr. WYMAN. Mr. Chairman and members of the committee, this is the same amendment to which a point of order was made a little earlier, but without the sanctions that were specified in the original amendment in the interest of compelling State cooperation.

I have caused to be introduced into the Record which is beneath the seat of each of the Members at page E2648, a fact sheet on what this amendment proposes, with relation to objections that may be made to it, some of which are more hysterical than real.

Mr. Chairman, my amendment would essentially remove the requirement of emission controls on automobiles registered to residents of the white areas shown on this map of the United States. This is most of the Nation. The Environmental Protection Administrator

would be authorized to designate the geographical limits of the red areas, and to go outside of those red areas in the instance of residents who live where most of their driving is done within the red area. All persons who reside in those areas would continue to be required to have automobiles equipped with emissions controls.

What would this mean in terms of hard dollars and cents? It would mean that approximately 70 percent of all automobiles in this country manufactured in the years 1975, 1976, and 1977—because this amendment continues until September 1977—would not have to have emissions controls. It would save billions of gallons of gasoline effective almost immediately and hundreds of millions in new car costs.

It would also empower the automobile dealers of this country to modify automobiles in inventory, or that are sold or belong to residents of the white, uncontrolled areas, to increase their gasoline mileage.

You may hear here today that if you tamper with a 1973 or 1974 model, it is likely to increase its fuel consumption. There is a $10,000 fine under the existing law on a dealer who tries to do this. But if you are going to have it done on a new car or done then knowledgeably it should be done by a dealer who has the equipment and who has the necessary handbooks and guidelines to follow from his manufacturer. America's dealers want to be allowed to do this in the cause of solving the energy crisis before us, particularly as it relates to gasoline, as well as the sticker mileage improvement involved.

Let me say to the members of the committee that we had better do this today because if anything should happen, and an oil embargo should go into effect again, and the people start queing up in gasoline lines in America, those who vote against doing this now, today, are going to take the rap, and they are going to deserve the rap in the public's mind because they will be responsible for a gas shortage that can be avoided in America if we take off the emission controls on cars where there is no earthly need for them.

The gentleman from Florida (Mr. Rogers) has continued to say that there are 66 cities and places outside of this area on the map with a pollution problem from automobile emissions. The fact is that the problem is not that big. This is not to urge Members to think that all of what comes out of the tailpipe of a car is pure and clean, because it is not. It is a fact that the automotive industry in America is trying to improve engines so as to maximize gas mileage and reduce emissions. But there is no such health-related problem of any significant proportions in America in the white areas, and there is no earthly justification, my friends, for requiring cars to cost hundreds of dollars more, and have a fuel penalty that the Environmental Protection Administration admits is at least 1 gallon in every 10 on the average across the country to people in this country who are residents of areas with no actual automobile emissions related air pollution.

This sheet which is before the Members in the Congressional Record points out certain facts about this amendment. I hope I have made them clear. I think the Members are familiar with this amendment. Members should also understand that the automotive industry can live with this amendment, and with the two-car policy, and that it is not a meaningful burden upon the automobile industry. But the industry has got to have the answer before it goes into production for the 1975 models, and therefore we should adopt this amendment at this time.

Mr. Rogers. Mr. Chairman, I rise in opposition to the amendment.

I do not think it is necessary for us to go through all of this again. The House has twice turned down this amendment, even at a time when all of us were under very heavy emotional pressures, when there were lines before the filling stations. I think the House then made an intelligent judgment that we must strive for our continued effort to clean up the air in this country, and that the provisions of the bill before us strikes a proper balance between energy needs and clean air.

Mr. Gude. Mr. Chairman, I commend the gentleman on his statement. He is looking at this matter very carefully. As he has pointed out, the House has twice looked at this matter and rejected this idea. I know the gentleman is well intentioned in offering this amendment, but I hope that the House will again act wisely.

As you recall, the House defeated this proposal by a record vote of 210 to 180. I sincerely hope that my colleagues will again move to defeat this proposal.

The arguments on this matter have not changed since December. As I mentioned then, Russell Train, appearing before the House Republican Task Force on the Environment, presented clear evidence that, in EPA tests, when emissions control devices were removed from small automobiles, it caused an increase in fuel consumption—not a savings, as the proponents of this amendment would have one believe—and there is considerable evidence that removal of the devices may well have a similar effect on larger cars.

Additional solid evidence, which argues strongly against the kind of "two-car" emissions standards which would be set up under this amendment, is presented in a report issued by the Aerospace Corp. in April 1973. Aerospace, under contract by EPA to study this very type of proposal, stated that even the auto industry was opposed to this type of system. Aerospace reported on numerous problems such a system would case. They range from its effects on air quality to the problems it would create for auto manufacturers, parts manufacturers and dealers, and mechanics. The problems under such a system would be enormous—and the benefits nonexistent. In light of these facts, I must urge very strongly that the amendment be defeated. There is absolutely no assurance that it would save fuel. Indeed, all indications are to the contrary. If we wish to save fuel, we should press ahead with timely implementation of the full emissions standards, which tests indicate will result in fuel savings of 10 percent and more. This figure, incidently, was reached by General Motors, and has been substantiated by further EPA testing.

If we accept this proposal, there is the absolute certainty that air quality—and, therefore, the public health—will suffer greatly. Administration of a program of this nature would be a true nightmare. I urge the defeat of this amendment.

Mr. Rogers. I thank the gentleman for his comments. I agree with what he has said. It would be really a tremendous step backward to adopt such an amendment.

First of all, the administration itself would oppose this amendment. It is opposed by EPA and by the White House. All of the major automobile companies do not support this amendment. Ford and General Motors representatives have both opposed it.

Mr. WYMAN. Did the gentleman say that the White House opposes this amendment?

Mr. ROGERS. Yes.

Mr. WYMAN. Mr. Chairman, I challenge that statement.

Mr. ROGERS. It was before the committee, and the gentleman can look at the record.

Mr. WYMAN. If the gentleman will yield further, the gentleman knows that my amendment was never before his committee, nor was I granted a hearing before his committee.

Mr. ROGERS. We have assured the gentleman from New Hampshire that he could come before the committee in June with his idea.

Mr. DINGELL. The Administrator of EPA, speaking on behalf of the administration, opposed this bill. The Council on Environmental Quality opposed this amendment. Mr. Sawhill opposed the bill and stated it was not necessary; it was undesirable; and said it would probably not save any gas.

Mr. ROGERS. It is so that they do not support it. Furthermore, another reason for opposing this amendment now is that the automobile companies are ready to move to clean up the air. The initial tests, I think the House would like to know—and this is fairly important—show that on the 1975 model in the 4,500-pound class there has been nearly a 26-percent improvement over 1973 and 1974 models and, similarly, another car in the 5,500-pound class has shown better than 26-percent increase in mileage.

Now to prevent them from going ahead and taking these steps as called for by the law, which will—in 1975—increase mileage and at the same time will help clean up the air, does not make sense.

Mr. DINGELL. Let me read what the Deputy Director, now the Director, of the Federal Energy Office, had to say. He said, referring to removal of emissions control devices from 1970 to 1974 cars, if made by competent mechanics, and in most instances they will not be, it could theoretically result in a 4-percent fuel economy improvement for those model years. He went on to say, and I am now quoting directly:

> However, exhaust emissions do not increase as engines are retuned for better fuel economy and overall hydrocarbon emissions would increase one-sixth, 18 percent, and carbon monoxide by one-quarter, 25 percent. This may be too high a price to pay for better fuel economy, and I think it is.

Mr. ROGERS. Mr. Chairman, may I say we have just so much clean air in this great old world of ours. We know what has been happening. This Congress has made the judgment to help clean up the air. Now to take a step backward at this time when the automobile companies are perfecting and improving the mileage and when the energy situation has eased simply does not make sense.

We cannot stop now in continuing our efforts to clean up the air, particularly when we are almost over this business of the fuel penalty in our cars. The tests on 1975 automobiles are bringing in their first steps up to a 25-percent increase in gasoline mileage, and to do as the gentleman proposes at this time would build in the very worst penalty.

Mr. YOUNG of Illinois. Mr. Chairman, I associate myself with the remarks of the gentleman from Florida.

I also would like to point out if any such amendment were adopted it would create all types of enforcement problems, and it would create havoc among the dealers who are in areas which are supposed to be

full of air pollution, and it would create problems for the State authorities in trying to enforce motor vehicle laws.

Mr. DINGELL. Mr. Chairman, I move to strike the requisite number of words.

It is with some reluctance I rise to oppose the amendment offered by my good friend, the gentleman from New Hampshire (Mr. Wyman). I know he offers the amendment in the best of good faith and I am satisfied he is sincere in the thought that it would be helpful in the problem we face with regard to energy.

In point of fact, Mr. Chairman, the map submitted by Mr. Wyman does not reflect the areas which would be affected by the amendment but rather indicates only the areas where the worst of the air pollution happens to exist in the country.

In real point of fact the best arguments against the Wyman amendment, which I am satisfied my good friend does offer in the best of good faith, were submitted to me in a statement by the National Realty Committee, Inc., which is a national organization of realtors who sent a communication to the Commerce Committee in opposition to the amendment. Let me read some parts of this communication.

The portion reads as follows:

NATIONAL REALTY COMMITTEE, INC.,
Washington, D.C., April 23, 1974.

Hon. JOHN D. DINGELL,
House of Representatives, Rayburn House Office Building,
Washington, D.C.

DEAR CONGRESSMAN DINGELL: The National Realty Committee, Inc. thought that the enclosed letter from Al Walsh, President, to Chairman Harley O. Staggers of the House Committee on Interstate and Foreign Commerce indicating the problems that passage of the Wyman proposal (H.R. 13120) would create for new real estate development in your District would be of considerable interest to you. Please let us know if we can be of any assistance.

Sincerely,

JAMES A. SHARP,
Staff Counsel.

NATIONAL REALTY COMMITTEE, INC.,
Washington, D.C., April 5, 1974.

Re H.R. 13120.

Hon. HARLEY O. STAGGERS,
Chairman, House Committee on Interstate and Foreign Commerce, Rayburn House Office Building, Washington, D.C.

DEAR CHAIRMAN STAGGERS: I regret that, due to the Committee's full schedule this past week, a representative of the National Realty Committee, Inc. ("NRC") was not able to appear in person before the Committee to express the NRC's views on H.R. 13120, the Wyman Amendment to the Clean Air Act of 1970. However, the NRC believes that it is important to bring to the attention of the committee, and of the Congress, the staggering implications of the Wyman Amendment for the future growth of the United States, and for land use and development in particular. Accordingly, I would like to request the Committee to accept this letter as the testimony of the NRC and to incorporate these remarks into the hearing record compiled by the Committee.

The NRC is a business league of several hundred organizations involved, directly or indirectly, in the real estate industry throughout the United States, including real estate owners, investors, developers, and related organizations and institutions. The NRC supports the goals of the Clean Air Act and believes that it is possible to protect and enhance the quality of our nation's air resources without imposing disproportionate economic or social disruption upon any sector of our economy.

As set forth in detail below, the effect of the proposed Wyman Amendment will be substantially to increase air pollution from vehicular emissions in vir-

tually every populated region in the United States. However, the ambient air standards adopted by the Environmental Protection Agency must still be reached by 1975, or, where an extension has been granted, by 1977. Particularly in urban areas, the increased pollutant emissions per vehicular mile which must necessarily result from the Wyman Amendment will require reducing vehicle miles traveled. This, in turn, will require more stringent transportation control plans and indirect source regulations than are currently proposed, thus imposing additional widespread limitations on otherwise desirable growth and development. Thus, construction projects which pump billions of dollars into the nation's economy and provide thousands of jobs will be hindered, delayed, or rendered impossible solely because the Wyman Amendment allows dirtier automobiles, and even though these projects can be carried out in full compliance with the Clean Air Act as now in effect.[1]

As a result, the NRC believes that the Wyman Amendment is not only inconsistent with the national commitment to protecting and promoting air quality, but will cause serious economic harm in virtually every congressional district by unnecessarily hampering desirable development. For these reasons, the NRC is strongly opposed to H.R. 13120.

Administrator Train has testified that the Wyman Amendment will cause the primary standards for one or more pollutants to be exceeded in 66 cities and regions throughout the United States. Hearings before the House Committee on Interstate and Foreign Commerce on H.R. 13834 (April 21, 1974). Thus, the effect of the Wyman Amendment will be nationwide. Most heavily impacted will be the 53 major urban areas in which transportation plans have either been promulgated, are currently proposed as necessary to attain the national ambient air standards, or will be necessary to attain the national standards in light of the effects of the Wyman Amendment, but in which the Wyman Amendment prohibits the enforcement of vehicular emission controls. These impacted urban areas include virtually every major city in the United States except for those in California and much of the Washington-Boston corridor, as well as Chicago and Phoenix-Tucson, which are exempted from the Wyman Amendment.

In order to indicate with some specificity just how pronounced the effects of the Wyman Amendment would be, the NRC retained Jay E. Norco, of Environmental Technology Assessment, Inc. ("ETA"), Oak Brook, Illinois, a recognized authority in the field of pollution control planning and assessment, to analyze the potential increase of vehicular pollutants which could result from passage of the Amendment, and the impact of any such increase upon the EPA's indirect source regulations and transportation plans. In view of the short time available to Mr. Norco and his associates due to the constraints involved in the preparation of this testimony, the complexity of the subject matter, and the incompleteness of available data, the figures set out below cannot be regarded as definitive, nor are they intended to be so. However, we believe that the following data do present a reasonably reliable picture of the magnitude of the impact which can be expected in the event the Wyman Amendment is adopted.

Table I demonstrates that hydrocarbon emissions from vehicles will be approximately one and one-third or two times higher in 1975, and one and three-quarters to three times higher in 1977, if the Wyman Amendment is adopted that if it is not, depending upon whether all or only some of the external pollution control devices are disconnected or not installed as original equipment. Similarly, Table II shows carbon monoxide emissions one and two-thirds to more than two times higher in 1975, and two to three times higher in 1977, with the Wyman Amendment than without it, under the same circumstances. Furthermore, these figures assume that the number of automobiles in service will not increase from 1972, the base year used by ETA in its calculations, to 1975 or 1977; that no crankcase or evaporative devices are disconnected or not installed as original equipment as a result of the Wyman Amendment; and that all eligible automobiles are decontrolled. Insofar as the automobile population increases, or crankcase or evapora-

---

[1] Furthermore, as materials submitted by others to this Committee indicate, there is substantial doubt that the Wyman Amendment will result in significant fuel savings, or indeed, in any fuel savings at all. Thus, while the Amendment's supporters have suggested that fuel savings of up to 17 to 20 percent could result from disconnection of vehicular pollution control devices, the EPA has concluded that it is probable that no fuel savings and perhaps even a slight fuel loss will result from the Wyman Amendment. *Compare* remarks of Representative Wyman, 119 Cong. Rec. H11173 (Dec. 12, 1973) *with* Office of Mobile Source Air Pollution Control, EPA, A Study of Fuel Economy Changes Resulting from Tampering with Emission Controls (January, 1974).

tive devices are eliminated, the pollutants caused by the Wyman Amendment will increase over the foregoing figures. Insofar as not all eligible vehicles are decontrolled, such pollutants will decrease.

TABLE I.—EFFECT OF WYMAN AMENDMENT ON HYDROCARBON EMISSIONS

[In percent]

	Baseline (under present act)	Wyman amendment, case I [1]	Wyman amendment, case II [2]
1975	100	204	133
1977	100	289	173

[1] Case I assumes that the vehicle population size remains stable and that all external control devices (not including crankcase and evaporative controls) are reversible and decontrolled on all vehicles eligible for decontrol under the Wyman amendment.

[2] Case II is based upon EPA data and assumes that the vehicle population size remains stable and that some, but not all, external control devices (not including crankcase and evaporative controls) are reversible and decontrolled on all vehicles eligible for decontrol under the Wyman amendment.

TABLE II.—EFFECT OF WYMAN AMENDMENT ON CO EMISSIONS

[In percent]

	Baseline (under present act)	Wyman amendment, case I [1]	Wyman amendment, case II [2]
1975	100	215	167
1977	100	292	209

[1] Case I assumes that the vehicle population size remains stable and that all external control devices (not including crankcase and evaporative controls) are reversible and decontrolled on all vehicles eligible for decontrol under the Wyman amendment.

[2] Case II is based upon EPA data and assumes that the vehicle population size remains stable and that some, but not all, external control devices (not including crankcase and evaporative controls) are reversible and decontrolled on all vehicles eligible for decontrol under the Wyman amendment.

Tables IIIA and IIIB set forth the impact in 1975 and 1977, based upon the same assumptions as to disconnection of control devices discussed above, of the dramatic increases in vehicular emissions resulting from the Wyman Amendment upon the EPA's indirect source regulations. For example, the present proposed indirect source regulations provide that no parking facility of 1,000 spaces or more may be constructed in any Standard Metropolitan Statistical Area ("SMSA") without an EPA construction permit, and that where the facility will attract vehicle traffic so as to impact the ambient air quality standards, such a permit will be denied. To achieve the same air quality levels in the event that the Wyman Amendment is adopted, the EPA will have to lower its control of construction permits in 1975 to SMSA lots with 464 to 599 spaces and to SMSA lots with 343 to 478 spaces in 1977.

In other words, the amount of pollutants emitted from vehicles using a 1,000 vehicle lot under the Act's present standards could result from a lot half that size in 1975 and one-third that size in 1977 under the Wyman Amendment. This, of course, means, that if a 1,000 vehicle lot is the maximum that can be constructed under the present Act, should the Wyman Amendment become law the permissible development on the same property would be only half as large in 1975 and one-third as large in 1977. As Tables IIIA and IIIB demonstrate, the same parameters hold true for every highway project and development with a parking lot. Thus, the implications of the Wyman bill on land use and development in the United States are truly staggering.

TABLE IIIA.—EFFECT OF WYMAN AMENDMENT UPON INDIRECT SOURCE REGULATIONS, 1975

	Baseline (current minimum size for control)	Equivalent minimum control size Wyman amendment case I [1]	Equivalent minimum control size Wyman amendment case II [2]
Parking lot construction in SMSAS (number of spaces)	1,000	464	599
Parking lot construction outside SMSAS (number of spaces)	2,000	928	1,198
Parking lot modification in SMSAS (number of spaces)	500	232	299
Parking lot modification outside SMSAS (number of spaces)	1,000	464	599
Highway construction (vehicles per day)	20,000	9,282	11,978
Highway modification (vehicles per day)	10,000	4,641	5,989

[1] Case I assumes that the vehicle population size remains stable and that all external control devices (not including crankcase and evaporative controls) are reversible and decontrolled on all vehicles eligible for decontrol under the Wyman amendment.

[2] Case II is based upon EPA data and assumes that the vehicle population size remains stable and that some, but not all, external control devices (not including crankcase and evaporative controls) are reversible and decontrolled on all vehicles eligible for decontrol under the Wyman amendment.

TABLE IIIB.—EFFECT OF WYMAN AMENDMENT UPON INDIRECT SOURCE REGULATIONS, 1977

	Baseline (current minimum size for control)	Equivalent minimum control size Wyman amendment case I [1]	Equivalent minimum control size Wyman amendment case II [2]
Parking lot construction in SMSAS (number of spaces)	1,000	343	478
Parking lot construction outside SMSAS (number of spaces)	2,000	686	955
Parking lot modification in SMSAS (number of spaces)	500	171	239
Parking lot modification outside SMSAS (number of spaces)	1,000	343	478
Highway construction (vehicles per day)	20,000	6,855	9,551
Highway modification (vehicles per day)	10,000	3,425	4,776

[1] Case I assumes that the vehicle population size remains stable and that all external control devices (not including crankcase and evaporative controls) are reversible and decontrolled on all vehicles eligible for decontrol under the Wyman amendment.

[2] Case II is based upon EPA data and assumes that the vehicle population size remains stable and that some, but not all, external control devices (not including crankcase and evaporative controls) are reversible and decontrolled on all vehicles eligible for decontrol under the Wyman amendment.

The Wyman Amendment will have a similar or perhaps even greater impact upon transportation plans in those areas in which emission control devices will not be required. In view of the limited time available for the preparation of this testimony, ETA personnel were not able to examine each of the proposed or promulgated transportation plans. Instead, EPA analyzed the plan for Denver, Colorado, published in the Federal Register on November 7, 1973, 38 Fed. Reg. 30818, and the impact of the Wyman Amendment upon that plan. Denver was chosen for examination because its situation is neither extreme nor atypical and because the Denver data were relatively easily available. While for the reasons set forth above, this analysis is in no way intended as definitive, we believe it does set forth with reasonable accuracy the nature of the impact of the Wyman Amendment.

The results of the examination of the Denver plan are set forth in Tables IV and V. They show that, with the adoption of the Wyman Amendment, it can reasonably be expected that the 1975 eight-hour carbon monoxide reading will be between 36.1 and 38.4 parts per million and the one-hour oxident reading will be .17 to .19 parts per million.[2] In order to improve the air quality levels of carbon monoxide and oxidents to those envisaged for 1975 under the present Act, a reduction of 75% to 76% in vehicle miles traveled is necessary for carbon monoxide and a 53% to 58% reduction is necessary for oxidents.[3] These reductions are in addition to the bus and carpool lanes, parking construction limita-

[2] These calculations assume that present emissions are divided half and half between stationary and mobile sources in Denver, as is the average nationwide.

[3] These calculations assume that all necessary reductions will be borne by mobile sources.

tions, on-street parking limits, and mass transit improvements proposed under the present Denver transportation plan. Such a reduction in vehicle miles traveled could only come through a very stringent gas rationing system, with all its social and economic dislocations and hardships.

TABLE IV.—EFFECT OF WYMAN AMENDMENT ON DENVER TRANSPORTATION PLAN—CARBON MONOXIDE [1]

	Wyman amendment case I [2]	Wyman amendment case II [3]
Carbon monoxide 8 hr reading 1975 (parts per million)	38.4	36.1
Carbon monoxide additional VMT reduction over current plan-1975 (percent)	76.0	75.0
Carbon monoxide 8 hr reading 1977 (parts per million)	39.3	35.1
Carbon monoxide additional VMT reduction over current plan-1977 (percent)	77.0	74.0

[1] Denver calculations include correction for high altitude.
[2] Case I assumes that the vehicle population size remains stable and that all external control devices (not including crankcase and evaporative controls) are reversible and decontrolled on all vehicles eligible for decontrol under the Wyman amendment.
[3] Case II is based upon EPA data and assumes that the vehicle population size remains stable and that some, but not all, external control devices (not including crankcase and evaporative controls) are reversible and decontrolled on all vehicles eligible for decontrol under the Wyman amendment.

TABLE V.—EFFECT OF WYMAN AMENDMENT ON DENVER TRANSPORTATION PLAN—OXIDENT [1]

	Wyman amendment case I [2]	Wyman amendment case II
Oxident 1 hr reading 1975 (parts per million)	0.19	0.17
Oxident additional VMT reduction over current plan—1975 (percent)	58	53
Oxident 1 hr reading 1977 (parts per million)	0.15	0.12
Oxident additional VMT reduction over current plan—1977 (percent)	47	33

[1] Denver calculations include correction for high altitude.
[2] Case I assumes that the vehicle population size remains stable and that all external control devices (not including crankcase and evaporative controls) are reversible and decontrolled on all vehicles eligible for decontrol under the Wyman amendment.
[3] Case II is based upon EPA data and assumes that the vehicle population size remains stable and that some, but not all, external control devices (not including crankcase and evaporative controls) are reversible and decontrolled on all vehicles eligible for decontrol under the Wyman amendment.

Furthermore, the situation is even more serious for 1977 because the similar percentage reductions must occur in addition to the requirements proposed under the present Act—which already include some gas rationing.

The foregoing discussion strongly suggests that the adoption of the Wyman Amendment must either lead to the wholesale abandonment of the goals of the Clean Air Act of 1970 or to sever limitations on growth imposed by indirect source regulations and transportation plans. The former alternative will mean the abandonment of the pursuit of air quality and the protection of our environment and the latter will cause tremendous economic hardship in almost every congressional district as development projects are delayed or cancelled and thousands of jobs lost. The NRC considers both of these alternatives to be unsatisfactory. Fortunately, both of these alternatives can be avoided by the rejection of the Wyman Amendment. The NRC believes that this Committee, and the Congress, should preserve the commitment to protecting both the nation's air quality and its economy. Accordingly, we respectfully urge that the Wyman Amendment be rejected.

Yours truly,

ALBERT A. WALSH, *President.*

Mr. DINGELL. What this says is that the Wyman amendment is going to cause impact in other areas which may not presently be available to view. This is the kind of matter which requires careful consideration, because while we might be able to allow people through backyard mechanics or otherwise to take off air abatement devices,

it follows that the Wyman amendment is going to affect automobiles which are going to be moving throughout the whole of the country.

It furthermore follows, and very regretfully I say, that not only will this have an effect, but it will result in further restrictions, limitations, and reductions in other economic activities which will be required to make the now-fixed statutory standards required by the Clean Air Act.

Mr. KETCHUM. I have asked the gentleman to yield for a question. A few moments ago in the discussion preceding this the gentleman mentioned that someone from EPA testified in opposition to the Wyman amendment.

Mr. DINGELL. That gentleman was Mr. Train.

Mr. KETCHUM. That is Mr. Russell Train?

Mr. DINGELL. That is correct.

Mr. KETCHUM. I would remind the body that this is the same gentleman that established a set of regulations for the city of Los Angeles that were so ridiculous, they wanted to shut the city down.

Mr. DINGELL. That was not Mr. Train. That was Mr. Train's predecessor.

Mr. KETCHUM. If we want to see additional burdens imposed on the city of Los Angeles and other major cities amplified and made more difficult, then vote for the Wyman amendment. That is the way to get it.

Mr. TAYLOR of Missouri. Mr. Chairman, I rise in support of the Wyman amendment. I believe if this House is responsive to the people of the Nation and certainly to the car-buying public of this Nation, it behooves us to accept this amendment, because I believe the people of this Nation are sick and tired of having their lives controlled in all these ways.

The CHAIRMAN. The time of the gentleman has expired.

Mr. NELSEN. Mr. Chairman, I move to strike the requisite number of words.

I rise in opposition to the Wyman amendment.

I yield to my friend, the gentleman from Missouri (Mr. Taylor) for his unfinished statement.

Mr. TAYLOR of Missouri. I thank the gentleman. As I was saying, I believe the car-buying public of this Nation, which is so important to the economy of this Nation, has shown their resentment to these octane octopuses being forced upon them and the gas guzzlers they must buy, by their resistance in the showrooms in this country. Certainly it has been made crystal clear in the plants that have been closed down, in the employees that have been laid off in our assembly plants, because of buyer resistance to automobiles as they are being equipped in the Nation today with so-called emission controls.

I think the people of this country, and certainly the ones that I come in contact with in my district, do resent this. I am an automobile dealer and I can say first-hand there is a great resistance in the people who come into the showrooms to buy automobiles that ordinarily would buy and trade automobiles. They are not trading, because they have a 1970 or 1971 model that gives them good gas mileage.

In the interest of saving millions of dollars to the motoring public, precious gasoline, and thousands of jobs in the automobile industry, I urge the adoption of this amendment.

Mr. NELSEN. Mr. Chairman and members of the committee, I served on the conference committee on the original bill, and at that time I argued with one of our Members on the other side that the standards that we were demanding could not be reached in the time frame allotted in the legislation. So, this Congress really crowded the industry at a time when we should have given more time for engineering and research to do a better job.

In order to try to meet the standards that we set up, some of the gadgetry that we talk about was put on automobiles. Now, it has been suggested that a change can be made by a mechanic. It cannot be made, because some of the construction of the engine is such that even if the catalytic converter was taken off, we would still have our mileage problem with us in the same automobile. We find this, that by research, the catalytic converter has been improved. As has been mentioned, a 26-percent increase in mileage can be expected.

Mr. Chairman, many of us criticize some of the environmentalists for demanding things that are unattainable, but I want to say that certainly we must compliment those who are concerned about our environment. We want to applaud what they have tried to do and the goals they have set.

However, I think sometimes their demands have been too great. I believe we can work these things out. Certainly, we do not want to go backward. If we do have an automobile now that has the mileage potential, and if we do admit we are improving the environment, in my judgment we should not back down, as has been pointed out.

The administration of such a piece of legislation, containing the Wyman language, in my judgment, would be difficult where we have one area up a road with it on and another area with it off. How in the world are we going to enforce a situation like that where we have 66 cities involved? Miami, Fla., has been mentioned. Miami is concerned; Minneapolis would be concerned. How in the world are we going to enforce it?

Mr. Chairman, I want to say this, that I hope that this amendment is voted down, and I hope that when we do get to the Clean Air Act, we may look at all possibilities.

When we get to that bill, I hope the environmentalists of our country will recognize that there is a little give and take in this total picture; that we want to seek goals to improve the environment. At the same time, the economic problems of the country should be considered in conjunction with it. There are things we can do and should do when we extend the Clean Air Act.

Mr. JARMAN. Mr. Chairman, I rise in support of the Wyman amendment. I believe it proposes a commonsense approach to combating our energy shortages while still retaining our commitment to our environmental protection. I am totally aware of the importance of the Clean Air Act and not for a moment am I deferring from this program when I urge my colleagues to support this amendment.

Thirteen areas have been designated as having significant auto emission related air pollution. In the remaining portion of the country, approximately 90 percent of the geographical United States, there is no significant air pollution related to automobile emissions. The point and thrust of this amendment is that there is no sense in burdening the

entire United States with the same emission control standards as are required for the heavily populated metropolitan areas of this country.

To discontinue temporarily the requirement for such auto emission control devices in the less populous areas of our country will save millions of gallons of gasoline annually. Figures indicate that the new emission control devices on cars decrease gasoline mileage by 7 percent or more. These devices are estimated to have increased annual gasoline consumption by more than 300,000 barrels a day.

We have here today the opportunity to correct part of the fuel shortage problem by adopting this amendment. We retain the Clean Air Act standards where they are most needed. This amendment accommodates them because it provides that in the areas most severely affected we will continue to use auto emission controls. I see no reason why we should continue to penalize every driver in the country because of the 13 areas with air quality problems. There is no sense in imposing an enormous energy loss to the Nation by requiring auto emission controls for the entire Nation. This loss of energy is unacceptable in this time of energy crisis.

Mr. Chairman, it is imperative that we strike a balance between our energy concerns and our environmental concerns. I believe this amendment offers that balance and I urge its adoption.

Mr. ICHORD. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I rise in support of the Wyman amendment, and I associate myself with the remarks of the gentleman from Oklahoma Mr. Jarman, and the gentleman from New Hampshire Mr. Wyman.

Mr. Chairman, I truly believe that this amendment should be termed the "Commonsense Amendment of 1974," and I think the vote on this amendment will determine whether the House is going to follow the advice of at least the caricature of the emotional environmentalists mentioned by the gentleman from Louisiana, Mr. Waggonner, who fail to realize that you are in quite a dilemma when you approach the problems of pollution: If you do not wash your body, you pollute the air; but if you do wash your body, you pollute the water.

Mr. Chairman, we are not going to solve the environmental problems overnight. They have been building up for many, many decades. There are tradeoffs to be made.

Mr. Chairman, it is absolutely devoid of commonsense—and I say this to the gentleman from Michigan—to require an emission device on an automobile in Podunk, Mich., where there are no problems of air pollution. Certainly we have problems of air pollution in Washington, D.C., in New York, in Los Angeles, and in several other areas around the country. But there is no real problem in Podunk, Mich.

Mr. Chairman, in a period of gas shortage, at a time when we could possibly be in another gas crisis, to require such an emission device defies commonsense and reason.

Mr. DINGELL. Mr. Chairman, I think the gentleman ought to recognize, first of all, that automobiles do not stand still. Automobiles in Podunk and other automobiles are driven throughout the United States.

Mr. Chairman, this is reflected by the red areas on the map shown by the gentleman from New Hampshire (Mr. WYMAN) the author

of the amendment. But more importantly, two-thirds of the people and two-thirds of the automobiles are in those red areas.

Mr. Ichord. Mr. Chairman, that is quite true, but 90 percent of the time those automobiles will never go into those red areas.

Mr. Dingell. Mr. Chairman, I will say that the gentleman is in grave error.

Mr. Ichord. Mr. Chairman, I will say to the gentleman from Michigan that this requirement is about as silly as the Department of Transportation regulation requiring seatbelts to be hooked up to the ignitions on all 1974 automobiles. I hope the gentleman will agree with me on that point anyway.

Mr. Dingell. Mr. Chairman, if the gentleman will yield further, I do agree that the seatbelt hookup is absolutely insane. In my judgment, I think that perhaps some of the judgments made under the clean air amendment are unwise.

I would point out to the gentleman that many of the Members in this body voted for the requirements of imposing a statutory technology upon the industry before the industry was prepared to meet it.

Now, the gentleman proposes to impose on the automobile industry the duty to produce essentially two different cars. This amendment imposes upon the communities the responsibility of picking and choosing which automobiles would be permitted in the area, where they do not meet the requirements of the law imposed on the residents.

Mr. Ichord. Mr. Chairman, let me ask the gentleman if I understand him correctly.

Is the gentleman saying that because the automobile industry has perhaps tooled up to put this expensive device on automobiles, we should permit them to recover their investment?

Mr. Dingell. Mr. Chairman, the automobile industry is going to make money. Whatever happens, they are going to charge things like this to the price of the automobile, and they are going to make a profit. I am not here to speak for or against the industry. The industry is going to do what the Government requires, and they are going to make a profit.

Mr. Wyman. Mr. Chairman, the gentleman from Michigan has repeatedly given us inaccurate statements. I want to set the record straight.

Seventy percent of the cars in America would be decontrolled under this amendment. Only 30 percent of the cars in America would remain controlled for residents of the red or contiguous areas.

The in-and-out traffic into the red areas from the cars of the white areas would not have any appreciable effect on the ambient air quality in these regions, because there just is not enough of it.

Three previous speakers have suggested that there was a 26-percent improvement in gas mileage. I think the record ought to show that what they are saying really is it is only 74 percent as bad as it was.

Mr. Collins of Texas. I want to say about this particular amendment, which has some merit in it, that I must stress the fact that it would lower the price of gasoline. The reason why the price is so high is because of the shortage. Fifty percent of the crude oil goes for automobiles. I know when you are running an automobile and only getting 9 miles to the gallon, when you used to get 15 miles to the gallon, you

are automatically creating a shortage. Within 2 years we will have the greatest production and we will have a lower price on gasoline.

Mr. Ichord. I agree with the gentleman, and I hope the House will adopt the Wyman commonsense amendment.

Mr. Randall. Mr. Chairman, I move to strike the last word.

Mr. Chairman, yesterday I called into my office some representatives of the EPA from over in Foggy Bottom, not knowing this bill would be on the floor today. We asked them why they were distributing posters and circulars to certain mechanics who are not subject to restrictions as to removal of emission controls. They answered that the distribution was through trade association. They admitted they were preparing and distributing posters and circulars warning mechanics not to modify these emission control devices. I protested that these circulars left the impression and the innuendo that any mechanic who touched a device was proceeding contrary to law. My understanding is that the law only prohibits a dealer from making a modification, but does not apply to an independent mechanic—not working for a new car dealer. If that is true these posters and circulars are false and misleading.

I see the gentleman from Oklahoma, a member of the committee, nodding his head. Let me commend the gentleman, Mr. Jarman, because he proved by his remarks in favor of the Wyman amendment that the committee is not unanimously against the amendment of the gentleman from New Hampshire.

Mr. Chairman, back in early December when we were debating this same amendment I happened to describe a demonstration that I observed. I would like to repeat that description now. It may not change any minds, but it may be an interesting description.

Someone mentioned today that the modification of emission devices would save only 2 or 3 miles to a gallon of gasoline. But if you read the material distributed by the gentleman from New Hampshire (Mr. Wyman) which was alluded to by the gentleman from Texas (Mr. Collins) you will see that the saving of gas is not the only consideration. There would also be a big saving of money. Millions could be saved if this amendment could be adopted.

Now let me describe a modification of emission control devices which I witnessed just a few months ago in one of our county seat towns in our district in west-central Missouri. The site was a vocational school with 35 or 40 young men attending a class in automobile mechanics. The teacher who was giving this demonstration said, "Let me tell you something about emission control devices." He had a 1973 or 1974 Pontiac, with its hood lifted and the engine hooked up to an expensive Sun tester. I do not know exactly what he did except I observed he took an ordinary screwdriver—and he did not have a lot of tools with him—he simply adjusted a certain part on the left side of the engine which I later found out was the recirculating valve. He said, "There are two things you need to know about the performance of an engine. One is the revolutions per minute and the other is the compression." He pointed to a gage on the Sun tester to say "Here is what the emission control devices are doing to the engine—it is causing the engine to drag." Then he adjusted the valve to let in some air. The rpms, which were before at 1,100, jumped up to 1,400 rpms. Then he said, "Watch

carefully," and he went over to the right side of the engine. He said, "Look at that column of mercury. That tells you the compression. Slowed timing can put a load on an engine like a car pulling a big weight. He said, "It is like the car was pulling two or three heavily loaded trailers." Then he took his screwdriver and adjusted the timing. The engine immediately picked up without touching the throttle to almost twice its compression—or from 7 to about 14 inches of mercury on the gage.

This description is not a figment of my imagination. I actually saw it.

Then the teacher asked "Do you notice any increase in the carbon dioxide in this garage?" as he left the car running. My point in giving this description of an expert making an emission control modification, is to emphasize that anyone who could witness such a demonstration would immediately recognize the merits of this amendment offered by the gentleman from New Hampshire.

Mr. Chairman, in the Kansas City, Mo., area there are billboards which advertise the fact that the heart of America has clean air. The wording on the billboards recites that the metropolitan area of Kansas City has the cleanest air of any city in America. That is why mail from my constituents inquires "Why should we be penalized with pollution devices on our cars that reduce the gasoline mileage when we have no pollution problem?" That is a good question. It is one that is difficult or impossible to answer.

One point in this entire argument that is so quickly glossed over is the fact that if an emission device reduces gasoline consumption then that means that for the same car to accomplish all the chores that an owner requires of his car will be using more gasoline and pumping more pollutants into the air. If the pollution control device were removed less gasoline would be used and fewer pollutants would be added to the air.

Unfortunately too many think there should be no balance ever struck at all between strict and unbending environmental controls and some of the necessities of everyday life and living including the factor of unemployment caused from too strict enforcement of environmental regulations.

If there is one fair way to describe the Wyman amendment, it is to call it the "commonsense amendment." It will save billions of gallons of gasoline, and in these times of almost galloping inflation it will save hundreds of millions of dollars of money for consumers.

A quick glance at the map will show that there are really only four areas of significant auto-related air pollution in the United States. Quite frankly, the standards of the 1970 clean air laws as it relates to light duty automotive vehicles have proven to be too strict.

Why require the entire Nation to bear an energy-wasting burden that is a problem in only a small part of the country? A moment ago I mentioned the term "commonsense" to emphasize the proper description of the amendment. What sense is there in the requirement that all the residents of the entire State of North Dakota have to purchase emission control-equipped cars when that entire State has no emission control-related air pollution? The situation in North Dakota multiplied in State after State after State adds up to a huge energy cost all because of a requirement which becomes not only energy wasteful

but ridiculous. This Congress will deserve public condemnation if we do not allow for the partial suspension of auto emission controls.

Mr. Chairman, the Wyman amendment should be adopted.

Mr. SYMMS. Mr. Chairman, I move to strike the requisite number of words, and I rise in favor of the amendment offered by the gentleman from New Hampshire (Mr. Wyman).

Mr. Chairman, I am pleased to associate myself with the remarks made by the gentleman from New Hampshire, Mr. Wyman, and the gentleman from Missouri, Mr. Ichord, and to speak in favor of this commonsense amendment which will help to lower the gasoline prices and make it more convenient for the American consumers in this country who live in the nonpolluted areas shown on the map.

Mr. WYMAN. Mr. Chairman, I thank the gentleman for yielding me this time in order to give me a little time to respond to some of the misstatements that have been made, that are so inaccurate, and I refer first to the statement about the alleged 26-percent improvement in gas mileage. I would like to read one section from ETA's 1974 report on the penalties on this country from emissions controls, and I am quoting from page 1:

> The sales weighted average fuel economy loss due to emission controls (including reduction in compression ratio) for 1973 vehicles, compared to uncontrolled (pre-1968) vehicles, is 10.1 percent. However, vehicles less than 3,500 pounds show an average 3 percent gain (attributable to carburetor changes made to control emissions) while vehicles heavier than 3,500 pounds show losses up to 18 percent. The size of these losses, however, is highly dependent on the type of control systems the manufacturer has chosen to use.

One of the things that has been suggested here is that in some way automobile dealers or the automobile industry would be penalized by my amendment. I would like to call the attention of Members to the fact that one of the Members of this body who has spoken in support of this amendment is an automobile dealer, the gentleman from Missouri.

I want to call the attention of Members also to the fact that one of the things that is troubling the automobile dealers as they try to sell cars in America is that when potential customers look at that sticker on the window, the sticker that shows the low gasoline mileage because of these devices in this time of a gasoline shortage, it is enough to drive most anybody from wanting to buy an automobile.

This amendment would not apply to the areas about which the Members have protested so loudly, such as Chicago and Washington. The amendment does not affect the cars of residents of Washington, Chicago, or Los Angeles. They will still have to have emission controls on their cars.

But why should this requirement be imposed on the whole country, and thus impose an operating cost penalty, and a capital cost penalty on this whole Nation running into billions of dollars? It is a fact—and no one on this floor can refute it—that the in-and-out traffic into the red areas from cars that do not have emissions controls is not going to destroy their clean air. Yet opponents of my amendment would make everybody in the Nation face a capital cost of billions of dollars, and a waste of gasoline in the billions of gallons.

It seems to me that in the interest of fairness it should be noted that the statement that the energy situation has eased is really not

correct, because a gasoline shortage still persists. If we are to earn the commendation of the people of this country we ought not to demand emissions controls on the cars in this country of residents in those areas where there is no honest-to-goodness emissions-related public health problem.

Mr. Goodling. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I would like to make a brief statement, and then pose a question to the gentleman from Florida, Mr. Rogers, if the gentleman will listen to my brief statement.

Mr. Chairman, I have been driving the same model automobile for 20 to 25 years. The last few models I have had I have gotten from 14 to 16 miles per gallon of gasoline, depending on the speed at which I drive, of course.

I am presently driving a 1973 model, and I am now getting 10 miles per gallon of gasoline. This 1973 model has all of the gadgets that we are talking about.

My question to the gentleman from Florida is this: Am I causing less pollution because I am burning one-third more gasoline?

Does the gentleman have an answer to that question?

Mr. Rogers. Is the gentleman from Pennsylvania causing less pollution because he is out driving with less gas, or with more?

Mr. Goodling. No; because I am driving with a third more gasoline. Am I causing less pollution because I have these gadgets on my car and using a third more gasoline?

Mr. Rogers. Yes; the gentleman is creating less because the cars are geared with the pollution devices to produce less pollution per mile. The auto emission standards are based on the health standards and calculated on the basis of grams per mile. This has been checked scientifically. Even the American Medical Association has just reendorsed the standards for health.

I am amazed that people are saying there are no health effects.

Mr. Goodling. What would the American Medical Association know about the mechanics of automobiles?

Mr. Rogers. The gentleman asks, How are they concerned with it? I will tell the gentleman what they are concerned with—carbon monoxide, which is a toxic gas.

Mr. Goodling. The gentleman is not answering my question. I am asking him if I am causing less pollution because I am burning a third more gasoline.

Mr. Rogers. The gentleman is causing less pollution per mile because the devices have reduced it; so for the number of miles he is driving, he is creating less in that same number of miles he has driven.

Mr. Goodling. One further question. The gentleman speaks about the 1975 models. Has the gasoline consumption decreased that much between the 1973 and the 1975 models?

Mr. Rogers. On the new models that they are going into now, which will be in construction very shortly and be marketed in 1975, the initial tests are showing a gain of up to 26 percent. This has already been published in some of the newspapers.

With this advantage of improved mileage—and the companies have already testified before our committees—General Motors said their

1975 models will improve up to 13 percent; Ford said up to 6 or 9. Now the actual tests are showing they are going up as high as 26 percent in the large automobiles.

Mr. GOODLING. My friend, the gentleman from Alaska, would be delighted to hear the gentleman from Florida say that about the Ford, because he just sat there and told me a moment ago he is getting 8-miles-per-gallon on his 1973 model.

Mr. ROGERS. That is in the models coming out in 1975. They are doing the testing; this is what they saw with the new catalytic converter. To adopt the Wyman amendment would actually increase the fuel, if this economy and increased mileage comes about, which it now appears it will.

Mr. COLLIER. So that we understand this 26 percent improvement reference that is being thrown around here, the point is that if one was getting 14 miles a gallon and he is now getting 10, the 26 percent increase means he is still not getting 14 miles; he is getting 11. So, as I said before, what appears to be a 26 percent improvement in mileage is still 74 percent worse than what it was before the emission gadgets were required equipment.

Mr. ROGERS. But the gentleman has not broken down what causes the loss of mileage. If he will break it down as to weight, the 2,500-pound car uses exactly one-half the gas of a 5,000-pound car. The penalty from air-conditioning is 9 to 15 percent, and the penalty from power steering and power windows is anywhere from 9 to 20 percent. The air pollution penalty has been anywhere from 3 to about 15 to 18 percent. The increase of 26 percent has overcome the air pollution penalty.

Mr. ECKHARDT. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I support this bill. This bill is a part of a total package of two bills addressed to the energy problem. It contains not only provisions with respect to certain tolerances, certain reductions of standards with respect to auto emissions and with respect to emissions from plants, but also certain reporting requirements, extremely important concerning petroleum resources provisions. It is part of a total package, as I have said which includes another bill not yet before this body addressed to the total question of fuel allocation and prices.

I urge that this be not made a Christmas tree for relaxation of environmental standards. I want to support this bill. I commend the gentleman from Florida and the able staff of the Committee on Interstate and Foreign Commerce for examining the questions in deep technical detail. We should not simply utilize this instrument to reduce environmental standards. The committee has done a workmanlike job and has produced a balanced program deserving of support.

Mr. ADAMS. Mr. Chairman, I associate myself with the remarks made by the gentleman from Texas. This bill is very much a moderate bill. It is the part of the total energy package that was deemed most noncontroversial and which might be presented in a short period of time today. The other bill is still to be pending before this House and it contains the provisions that many of us want to see in the energy bill. We agreed that this bill should go forward at this time.

I can state if we go into a Christmas tree operation like this, that many of us will be constrained to go back into the amending process

we were in before. This amendment has been before the House. It has been voted down before.

I specifically asked the question, in answer to the gentleman who was previously in the well, as to why his car does not get as much mileage now, and it was agreed by all the witnesses who testified that the pollution devices are far down the list as a cause of loss of mileage. They are far behind air conditioning and power steering and the increase in weight and the power windows and all the other accouterments, including the fact that they have not designed smaller engines and smaller cars.

I associate myself with the remarks made by the gentleman from Texas. I oppose this amendment. I hope it will be voted down. I hope this House will vote for this bill promptly without any further amendments.

Mr. ECKHARDT. I hope the committee will go along with the committee bill.

Mr. SEIBERLING. Mr. Chairman, it seems to me the amendment offered by the gentleman from New Hampshire (Mr. Wyman) is based on the belief that removal of the pollution control devices will save gas and increase mileage.

Last winter a group of auto dealers came to see me, headed by one of the biggest dealers in my district, and he made the same sort of pitch for taking off the pollution device. Two days later his chief mechanic was quoted in the local newspaper as saying: "Do not take the controls off the cars; if you do you will worsen the gas mileage, because today's car engines are designed to operate with these emission controls." It seems to me the amendment is based on a false premise.

Mr. ROGERS. Mr. Chairman, I would think if the author of this amendment really wanted to save energy he would suggest we take off air-conditioning from automobiles which affects mileage more than air pollution control devices, and he would suggest taking off the power systems for windows, or he would suggest reducing the weight of the cars.

Why should we do something that will reduce pollution controls that would be of benefit to the health of the American people? The House has turned this down twice and I think it made a good judgment then and I hope it will do so again.

Mr. MCEWEN. Mr. Chairman, I move to strike the last word.

Mr. Chairman, after I initially supported the efforts of the gentleman from New Hampshire there was one question raised that troubled me, and that was the question of whether or not the emission controls could be removed or modified, because I was told by some that this could not be done. Therefore the amendment that the gentleman from New Hampshire offered then and is offering now might be meaningless.

I took this up with one of the largest of the automobile dealers in my district. For obvious reasons, I will not give his name or give the location of his business. Let me tell the Members what this gentleman wrote to me:

> It has been my opinion, and it is the opinion of some qualified people who work for me—

And he told me specifically he went right into his shop and talked to the mechanics—

that some of the controls can be taken off successfully; and if done properly, the resultant increase in gasoline consumption performance per se is improved some 15 to 25 percent. It is also true, however—

And I would point this out to my friend from Ohio who spoke about the mechanic in his community—

that if the equipment is removed by someone who doesn't know what they are doing, that it can actually result in a decrease in fuel consumption performance. In my opinion, it takes a pretty knowledgeable person to do it and do it correctly because there is no information available from the manufacturer with regard to this.

I called Service personnel in Detroit for Cadillac and in Lansing for Oldsmobile to get suggestions from them as to the proper procedure inasmuch as there is nothing in our maintenance books with regards to this. The answer that I received in each instance was that they did not even want to discuss it, and they also felt that I should not discuss it with anyone. There is a pretty strict law with regard to this, and I know that we as a dealer or service organization, make any attempt to do this that the fines are rather severe, up to $10,000. It is obvious to me that the factory is brain-washed by the Environmental people in the Government responsible for the present law. And as a consequence, I could get no information for you from that source that would give us anything concrete to go on.

Mr. Chairman, I am satisfied that these emission control devices can be modified.

Now, each of us here today will make his own decision; but for me, Mr. Chairman, I am not going back to northern New York and tell farmers that own farm vehicles that never go as far as the State Fair at Syracuse, that go to the grist mill and go to the farm supply store, that they have to have these damnable octane octopuses that are guzzling up gasoline.

The chairman spoke as if the fuel crisis is over. We are happy, I say to my friend from Florida, that the long lines are no longer there; but there is also concern that we are in a false feeling of security, that possibly the energy crisis is not all behind us.

As long as that be true, I hope, that recognizing that, people can make corrections in these devices if they see fit in areas where pollution is not a problem. I hope the amendment of the gentleman from New Hampshire prevails.

Mr. ROGERS. I understand how the gentleman feels. I hope he will cure the health problems of the American people with the pollution we have. This if taken on will increase it dramatically. We are also finding out that the emissions from automobiles are affecting the chromosomes and some will be somewhat amazed when the scientific evidence comes out substantially that change that we had not previously known.

I am sure we know what has happened with lead in the State of Maine, where lead has been carried by the air into the waters of Maine. If we take off the pollution devices in those cars, it simply builds it up in these States and all the other States.

I think it would be tragic if we could not properly balance the health needs of this Nation for clean air vis-a-vis a very emotional argument about taking off a few devices which are not going to increase gasoline mileage, because they are already improved with the new models that are coming out.

Mr. MCEWEN. Mr. Chairman, may I refer to the very authoritative publication of the New York State Department of Environmental Conservation, that air pollution from automobiles is only a problem where

there is a concentration of automobiles. I do not have that concentration in my district.

Mr. ROGERS. Except that the air does not stay just in New York City.

Mr. WYMAN. I just want to say that this argument has been made again and again. To say there is any health problem presented to this country by my amendment is pure unadulterated poppycock.

AMENDMENT OFFERED BY MR. REES TO THE AMENDMENT OFFERED BY MR. WYMAN

Mr. REES. Mr. Chairman, I offer an amendment to the amendment.

The Clerk read as follows:

Amendment offered by Mr. Rees to the amendment offered by Mr. Wyman: Section 203 of Clean Air Act (42 U.S.C. 1857f–2.) is amended by

Section d(1): Strike section G(d)(1)(2)(c)(d) of the amendment and add after G(d):

(1) A state may adopt auto emission standards higher than the standards which are in force during the period of partial emission standards (as defined in Section 203(d)(3)(A)).

(2) A state, or local subdivision, not withstanding any other provisions of law, may adopt Rules and regulations in conformance with regulations adopted by those states or subdivisions to prohibit the use of motor vehicles within their jurisdictions which do not qualify under those jurisdictions criteria on motor vehicle standards.

Mr. REES. Mr. Chairman, this is basically a States rights amendment, and would affect those areas where we have a great deal of air pollution, where we want to see the catalytic converters, where we have to have tough air pollution control laws.

I represent a district in California right in the middle of that red area, the Los Angeles Basin, and we have a very difficult problem there of pollution. The various studies that have been made by the University of California School of Medicine show that because of air pollution, our lives are shorter in the Los Angeles Basin than they are in other parts of the country. So, we are very concerned.

Mr. Chairman, this amendment does two things. It would reaffirm that an area that is within the area defined by the gentleman from New Hampshire to qualify under the partial emission standards criteria of the amendment offered by the gentleman from New Hampshire, could, if it wished, increase the criteria in regards to air pollution control standards. So, if we have a State that is one of those States that is not within that red area, and that State felt that it should have higher air pollution control standards than are designated here in terms of partial emission standard criteria, then that State legislature or the authorized air pollution control body could do that.

Second, and this is even more important, and especially important in my area of southern California, which is a tourist area with a great many people coming to southern California from other parts of the country, it would give us the power to prohibit automobiles from other States that are under the partial emission standard criteria from coming into our area. That is all it would do. It would say that we would keep them from coming in because their cars do not have the equipment that the cars in the southern California area have, and they should not come in there because they will be causing more pollutants than do the automobiles that are registered in the State of California.

Mr. Chairman, it is a very simple amendment, and I would hope that the gentleman from New Hampshire would accept this amendment to his amendment.

Mr. WYMAN. Mr. Chairman, is the gentleman aware of the fact that California was specifically excepted under the Clean Air Act of 1970, and that under existing law California is allowed to make many different standards than the rest of the country because of the Los Angeles problem?

Mr. REES. It is not a Los Angeles problem. Basically, it is a California problem. It would mean that we would have the power to keep other motor vehicles out of the State that did not qualify with the criteria on emission.

Mr. WYMAN. Would the gentleman's amendment applied nationwide mean that a State, if it wanted to, could build a fence around itself?

Mr. REES. If a State wanted to have higher air pollution standards, it could have higher air pollution standards than the standards in the amendment offered by the gentleman from New Hampshire, which are here termed as partial emission standards. The State would be able to come up to the standards of the Environmental Protection Agency. That is the intent of this amendment.

Mr. WYMAN. Under the gentleman's amendment, could a State keep trucks, for example, engaged in interstate commerce, out of the State if they did not have emission controls at the level the excluding State prescribed?

Mr. REES. If the truck did not have emission control standards that are deemed necessary for the State of California for the protection of the health of the people of the State of California, it would not be able to come into the State of California. That would apply also, of course, in the State of New Hampshire.

Mr. WYMAN. The gentleman does not agree with the fact that the in and out traffic is not large enough to adversely affect the air quality of his region?

Mr. REES. Mr. Chairman, I would say that in my area there is a great deal of transit traffic, and it has a very great effect on the air pollution control standards of the State of California.

Mr. WYMAN. Does the gentleman have figures on that?

Mr. REES. Yes; I do. I would say from the figures that I have seen, because I wrote most of the air pollution control law in the State of California when I was in the State Senate, that we have about a 20-to-25-percent inmigration and outmigration of trucks and tourists and people from other parts of the country, and this would definitely affect them.

Mr. WYMAN. But you do not have authority to exclude traffic from other States as it comes into California, do you?

Mr. REES. Mr. Chairman, I have here that wonderful phrase "notwithstanding any other provision of law," and I would hope that that would take care of the situation.

Mr. COLLIER. Mr. Chairman, the gentleman is not serious in thinking that this could withstand any kind of test under the commerce laws, is he?

Mr. REES. We will try that out.

The CHAIRMAN. The question is on the amendment offered by the gentleman from California (Mr. Rees) to the amendment offered by the gentleman from New Hampshire (Mr. Wyman).

The question was taken; and on a division (demanded by Mr. Rees) there were—ayes 30; noes 58.

So the amendment to the amendment was rejected.

Mr. STAGGERS. Mr. Chairman, I move to strike the requisite number of words.

I think we need to think carefully about this matter. We have gone a long way in protecting the health of America and we do not want to go backward.

Mr. Chairman, that is what we would do if we vote for the Wyman amendment. We would be going back in protecting the health of America.

Mr. Wyman's amendment—if accepted—will greatly endanger this bill in the Senate. It would make early enactment impossible.

We must bring another bill to this floor next month to extend the Clean Air Act. We invite Mr. Wyman to press his amendment at that time.

We have been through all of this debate before.

The administration supports the Clean Air Act provisions of this bill—as written.

The committee was nearly unanimous in support of these provisions—as written.

The automobile manufacturers support the bill—as written.

I urge you to vote down this amendment.

Do not lose sight of the fact that the auto industry desperately wants this bill—it needs its enactment in the next few days.

Mr. Chairman, I am asking this House to act with wisdom and act as men of judgment with respect to those who are to come after us, for the health of the Nation and for future generations.

I would like to ask you to pass this bill as it is now and dismiss this amendment which is before this body because it will be considered and voted on at a later time. I ask that the amendment be voted down.

Mr. HEINZ. Mr. Chairman, I move to strike the last word.

Mr. Chairman, we have had a number of very eloquent arguments here today about what the Wyman amendment does and does not do. We have heard a lot of conflicting facts, opinions, and arguments. I will try to give the committee something that maybe we can agree upon; namely, some numbers. Some numbers that I think could be useful to each of us to bear in mind when we make our individual decisions on this amendment.

We know that we use 18 million barrels of petroleum a day in the United States. That is a pretty well-established fact. We also know that about half of that, or 9 million barrels per day is used for transportation purposes. Furthermore, of the 9 million barrels, only about 55 percent is used for automobiles, or about 5 million barrels per day. The rest goes to trucks, which use enormous quantities of fuel, and to airplanes, ships, railroads, and the like.

That brings us down to how much fuel are we talking about when we talk about removing the emission controls. The cars which are the worst offenders in terms of an increase in fuel consumption are the 1973 and 1974 models. We know that some of that increase is due to

heavier weight occasioned by the use of safety devices and to the use of air conditioning. Let us make the inordinately generous assumption that the inefficiency caused by the emission control devices is 20 percent in those models. Then, we must remember that those models constitute only about 20 percent of all the cars on the road, which means that they use about 1 million barrels of oil, as gasoline, per day. Using the 20 percent inefficiency assumption, which I think is a tremendously high figure to attribute just to the emission control devices, 20 percent of 1 million barrels per day amounts to 200,000 barrels per day. Mr. Chairman, that number, 200,000 barrels a day is barely 1 percent of the 18 million barrels of petroleum we use in this country every day. My point is that for an absolute maximum of 1 percent saving in petroleum we are talking about taking a significant risk to the public health, and this assumes that every single one of the some 18–20 million 1973 and 1974 models are converted completely.

No mention has been made of the cost of taking those pollution control devices off the 1973 and 1974 models. I have heard that it could run to several hundred dollars.

Let us not forget the confusion that would exist both in terms of manufacture and enforcement. I must reluctantly say that on a benefit-cost basis analysis the Wyman amendment just does not stand up to a careful analysis.

Mr. WYMAN. The gentleman cannot mean only the 1973 and 1974 models contribute to this, because the 1970 and 1971 and 1972 models also have significant emissions penalties. And the gentleman knows it is optional to modify such existing cars under this amendment. All it says is that you can do it when and if you want to. But when you get the new cars you will get 70 percent of them without any controls and this will save at least 1 gallon in every 10 for these cars on a weighted average.

Mr. HEINZ. The gentleman knows that it is the 1973 and 1974 models that are called the gas guzzlers, and that the 1971 and 1972 models were not nearly so greedy in their use of fuel.

Finally, as we also know, the 1975 models which will be available to us this September are much more efficient and economical, as has been pointed out by many of the Members today.

Mr. STAGGERS. Mr. Chairman, I have asked the gentleman from Pennsylvania to yield to me in order to see if we can get a time limit on the debate on this amendment.

Mr. Chairman, I ask unanimous consent that we have a vote on this amendment immediately.

The CHAIRMAN. Is there objection to the request of the gentleman from West Virginia?

Mr. HUBER. Mr. Chairman, I object. I have been waiting for an opportunity to speak on this amendment.

Mr. STAGGERS. Mr. Chairman, I move that all debate on this amendment and all amendments thereto close in 5 minutes.

The motion was agreed to.

Mr. HUBER. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman and Members of the Committee, about 6 weeks ago we had the president of the Chrysler Corp. meet with the Michigan delegation to discuss this problem. I am rather amazed that my fellow

Members of the Michigan delegation have not been communicating to the other Members that which was brought to their attention at some great length by the president of the Chrysler Motor Corp.

The things that he said I believe bear repeating, and surely that gentleman knows as much as anybody on this floor does about manufacturing automobiles.

Mr. VANIK. Mr. Chairman, will the gentleman yield?

Mr. HUBER. I will yield to the gentleman from Ohio if I have time, but first let me complete my statement.

Mr. Chairman, there are two things that bother me in what that gentleman said.

First, he talked about economics and what is going to happen, in his opinion, if these control devices are forced on the automobile industry. He painted a very bleak picture for production problems as well as for employment in the automotive industry. He did not mince any words about that. And there are Members sitting on this floor today who were present at this presentation, and who had the opportunity to ask questions on that subject.

The second thing that he said that bothered me, and I think probably this is the most important thing, he pointed out that the catalytic converter is set for lead-free gasoline, and if you put in a gas tank full of regular, then you knock out your converter system, and destroy it.

But, Mr. Chairman, when we have gone into gas stations in the last 6 months, we have not asked the gasoline attendant for regular or for ethyl, or for lead-free gasoline; we have said, "What do you have?" And we have taken whatever he has had in order to keep our cars going. Even though a car might be set for ethyl, it will run on regular, and even though it is set for regular, it will run on ethyl, and even though it is set for regular or ethyl, it will run on lead-free gasoline. But when the 1975 models come out with their catalytic converters on them, and you drive into a gas station, and your gasoline tank is down to zero and the man says, "I'm sorry, but we do not have any lead-free gasoline," what do you do? Do you abandon your $5,000 automobile, or will you say, "I will take whatever you have got."

If we want to save lead-free gasoline for the areas shown on the map in red, maybe we ought to pass some law saying that lead-free gasoline should only go into the areas marked in red on the map so that those areas that need the catalytic converters on cars, and need the lead-free gasoline, will have that gasoline available. Thus, areas as San Francisco and Los Angeles will not have an additional problem in obtaining lead-free gasoline when we are in a gasoline shortage.

When we are in a gasoline shortage then we ought to funnel that lead-free gasoline to those areas where it will do the most good. Let us let the ethyl and regular gasoline go into the other areas.

Let us adopt the amendment offered by the gentleman from New Hampshire (Mr. Wyman) and then the lead-free gasoline which is in such short supply all over the country can be concentrated in areas such as California, so that they may use it to maintain their air quality standards.

But for owners in those areas that do not need catalytic converters, and who go into a gasoline station where the only gas that they have is regular, or ethyl, and who do not have the lead-free gasoline, then

they will take whatever they can get so as to keep their $5,000 automobile running, then their catalytic converter is going to be destroyed and will not help insofar as pollution is concerned.

So I think that we should specify that the lead-free gasoline goes into those critical areas that need the catalytic converters, and then those other areas that do not need converters really should not have to have them. Because that catalytic converter is not going to last in any car if the owner finds that he cannot get the lead-free gasoline to use with it. The owner will take whatever kind of gasoline is available. And I think everybody in the United States is going to have the same identical problem unless we do something about it.

So it would seem to me that the thing to do would be to adopt the amendment offered by the gentleman from New Hampshire (Mr. Wyman) and do something to put the lead-free gasoline into those areas on the map that are designated in red so as to help those people with cars who are going to have the catalytic converters in 1975 and need the extra protection.

I would suggest, in connection with what I said in closing a few minutes ago, that if the gentleman is serious—and I know he is—that he come before our committee which has to act within 1 month, he and Mr. Wyman, and we can take care of the situation and debate it then. Then we can have all of the evidence from the different people.

If this bill does not pass now, there will be many thousands out of work at Chrysler within the next week or 2 weeks.

Mr. HUBER. I am of just the opposite opinion, that if the bill does pass, there may be thousands and thousands without jobs in the next 12 months.

Mr. WYMAN. Is it not a fact that if we take the suggestion of the chairman, the gentleman from West Virginia, on this point, the 1975 models will go into production with catalytic converters required for the entire country; is that not correct?

Mr. HUBER. That is correct, and we are going to knock the catalytic converter out on the first gas tank of non-lead-free gas. We are going to destroy the platinum used in the manufacture of the converter. The only places we can get platinum today are Russia and South Africa, so we are dependent upon Russia and South Africa in order to make our automobiles.

Mr. WYMAN. If the gentleman will yield further, for each barrel of crude oil, we get 5 to 6 percent less gallons of unleaded gasoline?

Mr. HUBER. Yes.

Mr. WYMAN. So the claimed 13-percent improvement against the 1974 automobiles for the catalytic converter is a fraud because we have a greater fuel penalty coming out of refinery losses before we ever get started.

Mr. STAGGERS. Every one of the automobile manufacturers say they are for this bill.

The CHAIRMAN. All time has expired.

The question is on the amendment offered by the gentleman from New Hampshire (Mr. Wyman).

The question was taken, and the chairman announced that the ayes appeared to have it.

RECORDED VOTE

Mr. DINGELL. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 169, noes 221, answered "present" 2, not voting 41, as follows:

So the amendment was rejected.

The result of the vote was announced as above recorded.

Mr. STAGGERS. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I rise in order to get some accommodation on further amendments. I know the gentleman from North Carolina has amendments, which I think we on the committee will accept when we have heard them, but I would like to get some understanding on concluding the debate tonight.

Mr. Chairman, I ask unanimous consent that the committee complete its debate on this bill and all amendments thereto at 6 o'clock.

Mr. WYMAN. Mr. Chairman, I reserve the right to object.

Mr. VANIK. Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.

MOTION OFFERED BY MR. STAGGERS

Mr. STAGGERS. Mr. Chairman, I move that all debate on this bill and all amendments thereto close at 6 o'clock.

Mr. WYMAN. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, the gentleman knows, I assume, that I have another amendment on the catalytic converter. Does the gentleman wish to limit the debate on this to 20 minutes?

Mr. STAGGERS. If the gentleman will yield, Mr. Chairman, we have debated for 2 hours or more, and I think the gentleman will have time reserved. The gentleman will have 5 or 10 minutes. I think we are

going to accept the amendment offered by the gentleman from North Carolina (Mr. Broyhill) and then we can proceed with other amendments.

Mr. Chairman, I renew my motion that all debate on this bill and all amendments thereto close at 6 o'clock.

The CHAIRMAN. The question is on the motion offered by the gentleman from West Virginia (Mr. Staggers).

The question was taken; and on a division (demanded by Mr. Derwinski) there were—ayes 104; noes 28.

So the motion was agreed to.

The CHAIRMAN. Members standing at the time the motion was made will be recognized for approximately 1 minute each.

The Chair recognizes the gentleman from North Carolina (Mr. Broyhill).

AMENDMENT OFFERED BY MR. BROYHILL OF NORTH CAROLINA

Mr. BROYHILL of North Carolina. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. Broyhill of North Carolina: Page 76, line 17, insert before the comma the following: "(other than the Bureau of the Census, the Bureau of Labor Statistics, or the Internal Revenue Service)".

Mr. BROYHILL of North Carolina. Mr. Chairman, the purpose of [section 11] is to authorize the Administrator to obtain certain energy information and this subsection says that where this information is reported to certain other Federal agencies, these Federal agencies shall submit this information to the Administrator.

As the Members know, the present law restricts certain agencies from divulging information to other agencies of the Government, particularly the Internal Revenue Service, the Bureau of Census, and the Bureau of Labor Statistics.

So my amendment is saying that these agencies will not be required to report this information to the Administrator.

I yield to the gentleman from Texas, who is the chairman of the Census Subcommittee.

Mr. WHITE. Mr. Chairman, I support the amendment offered by the gentleman, and I ask unanimous consent to yield my time to the gentleman.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. ROUSSELOT. Mr. Chairman. I rise in support of the amendment offered by Mr. Broyhill of North Carolina. As ranking minority member of this subcommittee, I share the gentleman's concern that the confidentiality of the information collected by the Census Bureau—13 U.S.C. 9—must be preserved.

As currently provided in section 9 of title 13:

§ 9. Information as confidential; exception.

(a) Neither the Secretary, nor any other officer or employee of the Department of Commerce or bureau or agency thereof, may, except as provided in section 8 of this title—

(1) use the information furnished under the provisions of this title for any purpose other than the statistical purposes for which it is supplied; or

(2) make any publication whereby the data furnished by any particular establishment or individual under this title can be identified; or

(3) permit anyone other than the sworn officers and employees of the Department or bureau or agency thereof to examine the individual reports.

No department, bureau, agency, officer, or employee of the Government except the Secretary in carrying out the purposes of this title, shall require, for any reason, copies of census reports which have been retained by any such establishment or individual. Copies of census reports which have been so retained shall be immune from legal process, and shall not, without the consent of the individual or establishment concerned, be admitted as evidence or used for any purpose in any action, suit, or other judicial or administrative proceeding.

(b) The provisions of subsection (a) of this section relating to the confidential treatment of data for particular individuals and establishments, shall not apply to the censuses of governments provided for by subchapter III of chapter 5 of this title, nor to interim current data provided for by subchapter IV of chapter 5 of this title as to the subject covered by censuses of governments, with respect to any information obtained therefor that is compiled from, or customarily provided in, public records (Aug. 31, 1954, ch. 1158, 68 Stat. 1013; Oct. 15, 1962, Pub. L. 87-813, 76 Stat. 922.)

The effectiveness of the Bureau's data-collecting activities is rooted in the fact that the confidentiality of the information submitted is safeguarded by the provisions in title 13 **[Sec. 11(e)]** of H.R. 14368 would seriously undermine the Bureau's ability to assure this confidentiality. In connection with the collection of energy information, under this subsection, the Administrator of a new Federal Energy Administration would have the authority, after determining that an individual has submitted information to the Census Bureau, to unilaterally "exempt" this individual, and then compel Census to provide this information.

Mr. Vincent Barabba, Director of the Bureau of the Census, appeared before our subcommittee in January to discuss the role of the Census with regard to energy statistics. In his statement, he discussed the importance of preserving the confidentiality of census information, and I quote:

The Bureau maintains a highly integrated system of production, distribution, and consumption statistics. In these areas we have, over the years, developed an expertise in survey techniques, as well as established reporting relationships with companies, which are unexcelled. There is no doubt that the provisions of Title 13, U.S. Code, which afford complete confidentiality to respondents, have also enabled us to build an invaluable working relationship with business firms, as well as the general public. We have developed an atmosphere of trust based on our past performance of not disclosing to or furnishing any person or group, public or private, with individual respondent data. Although Chapter 7 of Title 13 provides penalties for the falsifying of reported data or for the failure to report in mandatory surveys, it is the contract of trust that gets results rather than the invoking of penalties.

In early April, I participated in a special order which focused on the congressional commitment to privacy. The amendment being offered by Mr. White is a simple one, and would preserve the confidentiality of census information, and I urge all my colleagues who share my concern about protecting the privacy of our citizens to support this amendment.

Mr. BROYHILL of North Carolina. Mr. Chairman, I hope the chairman of the committee could accept this amendment.

Mr. STAGGERS. If I understand the amendment correctly, I would be inclined to agree with the gentleman and accept the amendment on this side as far as I am concerned.

Mr. DINGELL. As I understand it, the amendment then simply says the confidentiality in the Bureau of the Census and the Bureau of Labor Statistics——

Mr. BROYHILL of North Carolina. And the Internal Revenue Service.

Mr. DINGELL [continuing]. And the Internal Revenue Service continues to be preserved but that the information may be procured by the Administrator.

Mr. BROYHILL of North Carolina. That is correct.

Mr. DINGELL. I have no objection to the amendment.

Mr. BROYHILL of North Carolina. Mr. Chairman, may I have a vote now because I have another inquiry I would like to make.

The CHAIRMAN. The question is on the amendment offered by the gentleman from North Carolina (Mr. Broyhill).

The amendment was agreed to.

Mr. BROYHILL of North Carolina. May I ask a question of the chairman?

In the latter part of section 11 the question or the allegation has been raised that where the energy information which has been supplied to the administration is then supplied to other agencies, such as the Federal Trade Commission, when that occurs it might destroy the confidential treatment of that information. I would like to have a response from the chairman with respect to those allegations.

Mr. STAGGERS. Mr. Chairman, in response to the gentleman, I might say that arguments have been raised that information which the Administrator supplies to the Attorney General, the Secretary of the Interior, the Federal Trade Commission, the Federal Power Commission, or the General Accounting Office would no longer be protected and could be freely disclosed by those agencies. That is not the case. The information would have the same right to confidential treatment in the hands of the Attorney General as it would in the hands of the Administrator. This principle of law was well established in the case of the *Grumman Aircraft Engineering Corp.* v. *Renegotiation Board* in 1970 (425 F. 2d 578).

Thus, the Attorney General could only release such information to subordinates or make use of it in law enforcement proceedings. However, like the Administrator, the Attorney General would be barred from releasing to the public trade secrets and other proprietary information.

Mr. MCCORMACK. Mr. Chairman, I am informed by Mr. Rogers, the Secretary of the Subcommittee on Public Health and Environment, that his subcommittee shall initiate hearings early in June on extension of the Clean Air Act which expires on June 30, 1974.

I am also informed by Mr. Rogers that in the extension of the Clean Air Act, we can amend the bill that we are working on at this time. I believe this to be quite important because I am disturbed with the bill before us today insofar as its provisions for the burning of coal are concerned. I think the bill's provisions are a sort of "chewing gum and baling wire" approach, and I think there is room for substantial improvement.

I, therefore, wish to take this opportunity to inform the Members of the House, the members of the Committee on Interstate and Foreign Commerce, and in particular Mr. Rogers and the members of the Subcommittee on Public Health and Environment that I shall appear before the subcommittee when it considers extension of the Clean Air Act to propose an amendment to that act. I will propose that provision be made for any utility with a powerplant burning coal to enter into an agreement on a 1-to-1 basis with the EOA to establish the best desulfurization technology available for the specific plant under consideration and the coal which it will burn. I will propose that under an agreement between EPA and the utility that the best desulfurization technology be agreed upon for each plant and the coal it will burn, provided that the additional cost required for amortization of the desulfurization equipment does not exceed 2 mills per kilowatt-hour, including all costs over a 10-year period. Incidentally, the costs will include any additional incremental cost for transportation of any fuel required under the agreement by EPA.

Under such an agreement, no other requirement for controlling or limiting sulfur dioxide emission would be made upon the plant during the 10-year period of amortization for the equipment; and operation of the plant would not be interfered with by EPA except in the case of an actual state of emergency for health purposes as determined and announced by the Environmental Protection Agency in the vicinity of the plant.

By following this technique of getting the best desulfurization equipment available installed in our coal-burning plants, we will be requiring that most sulfur dioxide be removed. Existing technology will do that. However, we will not be putting utilities in the unrealistic position of being forced to install very expensive scrubber systems or other similar gear which do not operate satisfactorily and which cannot meet today's air quality standards.

By requiring the best possible desulfurization technology at any given time we will, of course, be stimulating industrial competition in this arena. Perhaps over a period of 10 to 20 years we can develop at least one system which will actually meet the air quality standards we are now attempting to enforce.

I think this is a realistic approach. It allows this country to burn coal, and to have the maximum amount of electricity while protecting the environment in the most realistic way possible, protecting the utilities from administrative and economic harassment and working toward an actual solution to our air pollution problems.

AMENDMENT OFFERED BY MR. VANIK

Mr. VANIK. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. Vanik: On page 68, line 2 strike "concerning the practicability of establishing a fuel economy improvement of 20 per centum for new model vehicles manufactured during and after model year 1980."

And substitute "concerning the feasibility of establishing at the earliest practicable date a national fuel economy standard of 20 miles per gallon for all new automobiles."

On page 68, line 6 after the word "to," add "an analysis of the various regulatory and tax policies which could be instituted to implement such standard;".

On page 29, line 14 strike "(1)".
On page 30, strike "Sec. 213 (a) (2)".

Mr. VANIK. Mr. Chairman, the amendment I offer seeks to improve the existing **section 9** of the committee bill. As it is now written, **section 9** calls for a study by EPA and the Department of Transportation to investigate the practicability of establishing a fuel economy improvement standard of 20 percent for new motor vehicles manufactured during and after model year 1980.

I am fearful that this language is not ambitious enough. A 20-percent improvement in fuel economy may sound significant, but a closer look reveals a different story. At present, the average American automobile gets about 13.5 miles per gallon. A 20-percent improvement would only result in a fuel economy of 16.2 miles per gallon for the average car. In essence then, what the existing **section 9** requests is a study of the consequences of setting a national fuel economy standard of 16.2 miles per gallon in model year 1980. Some automakers themselves are projecting more ambitious results. The fact is that we can produce automobiles which meet pollution standards—utilize powered accessories and air-conditioning. If foreign manufacturers can achieve this goal—our producers should be able to follow suit.

In short, I feel a more aggressive investigation of this vital area is needed.

To strengthen the mandate for this study, I am suggesting the EPA and the Department of Transportation study the feasibility of establishing a national fuel economy standard of 20 miles per gallon for all new automobiles. I am suggesting 20 miles per gallon because there have been many studies which assert that it is feasible for Detroit to manufacture—with existing technology—an automobile which gets close to 20 miles per gallon without sacrificing comfort, styling, or exhaust emission control. The problem we face is how to insure that Detroit will make this commitment to efficiency as rapidly as possible without at the same time causing severe economic disruptions. We must investigate the consequences of establishing a national fuel economy goal as well as investigating the best policy options we can follow to achieve this goal.

On August 24 of last year Under Secretary of the Interior John Whitaker endorsed a plan to tax inefficient automobiles in order to encourage Detroit to engineer efficiency into their product. At that time Mr. Whitaker stated that the administration fuel economy proposal would be ready by February 1974, as yet there has been no indication that the administration will submit such a plan. Apparently, the idea has fallen victim to the energy reorganizations in the executive branch. I might mention that **section 9** of this legislation, as drafted, would not include consideration for the policy alternative that Mr. Whitaker endorsed last August. This fact highlights the need to redraw the boundaries of the fuel economy study.

I commend the committee's foresight for recognizing that we must not sweep under the carpet the problem of inefficient automobiles. I seek with my amendment only to strengthen the mandate of this fuel economy study.

I hope the committee will accept my amendment.

Mr. STAGGERS. Mr. Chairman, I reluctantly state I have to oppose the amendment offered by the gentleman from Ohio. We do have a steady proportion in the bill now. It does not restrict it to 20 percent. I can go beyond that to any place it needs to be.

The Senate has agreed to the language of this bill. If we can pass this bill, it will be passed by the Senate, and it will go downtown to be signed by the President. Therefore, I would have to oppose the amendment in its entirety, and I hope that the House will oppose the amendment and take the bill as it is as it came out of the committee unanimously.

Mr. HASTINGS. Mr. Chairman, I rise in opposition to the amendment and ask that it be defeated.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio (Mr. Vanik).

The question was taken; and on a division (demanded by Mr. Vanik), there were—ayes 23, noes 61.

So the amendment was rejected.

The CHAIRMAN. The Chair recognizes the gentleman from New Hampshire.

AMENDMENT OFFERED BY MR. WYMAN

Mr. WYMAN. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. Wyman: Page 59, strike out line 13 and all that follows down through line 11 on page 61, and insert in lieu thereof the following:

"(a) **Section 202(b)(1)(A)** of the Clean Air Act is amended to read: "The regulations under subsection (a) applicable to emissions of carbon monoxide and hydrocarbons from light-duty vehicles and engines manufactured for sale during or after model year 1975 shall contain standards which are identical to the standards which were prescribed (as of July 3, 1971) for light-duty vehicles and engines manufactured during model year 1974, except that no certificate of conformity pursuant to section 206 of such Act shall be required for light-duty vehicles and engines manufactured for sale during model year 1975.

"(b) **Section 202(b)(1)(B)** of such Act is amended to read: "The regulations under subsection (a) applicable to emissions of oxides of nitrogen for light-duty vehicles and engines manufactured for sale during and after model year 1975 shall contain standards which are identical to the standards which were prescribed (as of July 3, 1971) for light-duty vehicles and engines manufactured during model year 1974, except that no certificate of conformity pursuant to section 206 of such Act shall be required for light-duty vehicles and engines manufactured for sale during model year 1975."

Mr. WYMAN. Mr. Chairman, by the action taken on the earlier amendment that I offered, it has been determined now that all cars all over America shall have to continue to conform to the excessively far-ranging standards in the Clean Air Act that apply nationwide. This present amendment would freeze for 1 year the 1974 standards and suspend the certification procedures for a year in order to give a year's extension to allow a more careful approach to the expensive catalytic converter question.

The catalytic converter is a fraud on the country. One of our automobile manufacturers, General Motors, has a plant which is about to manufacture 6 million of these converters, so GM no longer has a neutral position on this issue.

If this amendment is agreed to, then we will not have to take the catalytic converter route until we know the catalytic converter will really work.

In the debate earlier it was pointed out again and again that proper action of the catalytic converter will require unleaded gasoline. All 1975 cars are going to be made with a neck on the gas receiver that comes out from the tank able to be fed only by a certain type of gas nozzle. All over America stations are going to have to have huge capital costs expended on putting in the unleaded gas and new equipment for the special pumps.

Mr. Chairman, there is absolutely no need to do this. It is going to add about $150 to the cost of each car. If we have a run of 9 million cars in 1975 production we are talking about $1.5 billion additional cost on the American consumer for the converters alone to say nothing of the several hundred million additional for the equipment to service them. The sticker price on new cars is going to go up by $150 more and the fuel consumption will be greater with the catalytic converter no matter what is claimed about the saving against the 1974 standards, because they will be getting less gallons of unleaded gas per barrel of crude oil.

Why not wait until we know more about the catalytic converter? I think we ought to do this much at the very least to hold the line for the consumers of this country and to help meet our energy shortages.

Mr. DU PONT. Mr. Chairman, I rise in opposition to the amendment because it seems to me from the testimony that was presented before the committee and from the information we have on the catalytic converter, that we will if we adopt the amendment today offered by the gentleman, freeze in the fuel penalty at the worst possible moment. We now have a 14-percent fuel penalty, roughly speaking, on our pollution control devices. If we adopt this amendment we are never going to be able to do any better than that because it is going to freeze it at the current level, and the 1975 converter will be better and will allow us more mileage.

Mr. HASTINGS. Mr. Chairman, for the reasons the gentleman from Delaware has stated and for the reasons that this would do damage to the Clean Air Act and to the automobile industry, I strongly oppose the amendment offered by the gentleman from New Hampshire.

Mr. WYMAN. Mr. Chairman, the gentleman states the standards for 1973 required only 3 parts per million hydrocarbon and 20 parts per million carbon monoxide. The 1974 standards cut this in half. There is absolutely no need to cut this in half. The Clean Air Act standards were far too high and there is no need to impose this on the American public.

Mr. ROGERS. Mr. Chairman, I strongly urge defeat of this amendment. All of the companies have testified that if the freeze ended in 1974 it would freeze it at a penalty loss. They are going to make a gas gain in 1975. It would be unbelievable to stop in 1974 when they are making progress.

I urge defeat of the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New Hampshire (Mr. Wyman).

The amendment was rejected.

Mr. ANDERSON of California. Mr. Chairman, I would like to ask the chairman, the gentleman from West Virginia (Mr. Staggers) a question. In the previous energy bill, S. 2589, as passed by both Houses of Congress, contained provisions for a Tijuana-Vancouver, high-speed, ground transportation system study. However, in this bill, H.R. 14368, as reported, this necessary study has been deleted. Yet, in so doing, according to the committee report on page 25, the committee states that it "did not intend to express any opposition to such a study or system." The committee merely felt that it should be conducted under the criteria set up by the Committee on Interstate and Foreign Commerce.

Because we on the west coast believe that this study is very urgent, how soon may we expect this study to be commenced by the Interstate and Foreign Commerce Committee?

Mr. STAGGERS. I would say as soon as the committee can get to it. We have some other business to take care of, such as railroad safety, railroad pensions, and the big railroad bill. When those are completed, we will get to this right away. We might be able to do it right along with our other work.

Mr. ANDERSON of California. Could we do it within the next 6 months?

Mr. STAGGERS. If possible.

The CHAIRMAN. All time has expired.

Are there further amendments?

If not, the question is on the committee amendment in the nature of a substitute, as amended.

The committee amendment in the nature of a substitute, as amended, was agreed to.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. Dorn, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee having had under consideration the bill (H.R. 14368) to provide for means of dealing with energy shortages by requiring reports with respect to energy resources, by providing for temporary suspension of certain air pollution requirements, by providing for coal conversion, and for other purposes, pursuant to H.R. 1082, he reported the bill back to the House with an amendment adopted by the Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered.

Is a separate vote demanded on any amendment to the committee amendment in the nature of a substitute adopted in the Committee of the Whole? If not, the question is on the amendment.

The amendment was agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

Mr. HASTINGS. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The vote was taken by electronic device, and there were—yeas 349, nays 43, not voting 41, as follows:

So the bill was passed.

The Clerk announced the following pairs:

On this vote:

Mr. Hébert for, with Mr. Reid against.
Mr. Thompson of New Jersey for, with Mr. Conyers against.

Until further notice:

Mr. Howard with Mr. Barrett.
Mr. Stubblefield with Mrs. Hansen of Washington.
Mr. Carey of New York with Mr. McCloskey.
Mr. Rooney of New York with Mr. Williams.

SENATE DEBATE AND PASSAGE OF SUBSTITUTE AMENDMENT TO H.R. 14368, MAY 14, 1974

Energy Supply and Environmental Coordination Act of 1974

The Acting President pro tempore. Under the previous order, the Senate will now proceed to the consideration of H.R. 14368.

The Senate proceeded to consider the bill (H.R. 14368) to provide for means of dealing with energy shortages by requiring reports with respect to energy resources, by providing for temporary suspension of certain air pollution requirements, by providing for coal conversion, and for other purposes, which was read twice by its title.

Mr. Robert C. Byrd. Mr. President, I suggest the absence of a quorum, and I ask unanimous consent that the time not be charged to either side.

The Acting President pro tempore. Without objection, it is so ordered.

The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. Muskie. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The Acting President pro tempore. Without objection, it is so ordered.

Mr. Muskie. Mr. President, I call up my amendment No. 1303 to the pending measure and ask that it be stated.

The Acting President pro tempore. The amendment will be stated.

The legislative clerk proceeded to read the amendment.

Mr. Muskie. Mr. President, I ask unanimous consent that the further reading of the amendment be dispensed with.

The Acting President pro tempore. Without objection, it is so ordered.

The amendment is as follows:

Strike all after the enacting clause and insert the following:

Section 1. Short Title; Purpose

(a) This act, including the following table of contents, may be cited as the "Energy Supply and Environmental Coordination Act of 1974".

TABLE OF CONTENTS

(b) The purpose of this Act is to provide for a means to assist in meeting the essential needs of the United States for fuels, in a manner which is consistent, to the fullest extent practicable, with existing national commitments to protect and improve the environment.

SECTION 2. SUSPENSION AUTHORITY

Title I of the Clean Air Act is amended by adding at the end thereof the following new section:

"ENERGY-RELATED AUTHORITY

"Sec. 119. (a)(1)(A) The Administrator may, for any period beginning on or after the date of enactment of this section and ending on or before the earlier of June 30, 1975, or one year after the date of enactment of this section, temporarily suspend any stationary source fuel or emission limitation as it applies to any person, if the Administrator finds that such person will be unable to comply with such limitation during such period solely because of unavailability of types or amounts of fuels. Any suspension under this paragraph and any interim requirement on which such suspension is conditioned under paragraph (3) shall be exempted from any procedural requirements set forth in this Act or in any other provision of local, State, or Federal law; except as provided in subparagraph (B).

"(B) The Administrator shall give notice to the public of a suspension and afford the public an opportunity for written and oral presentation of views prior to granting such suspension unless otherwise provided by the Administrator for good cause found and published in the Federal Register. In any case, before granting such a suspension he shall give actual notice to the Governor of the State, and to the chief executive officer of the local government entity in which the affected source of sources are located. The granting or denial of such suspension and the imposition of an interim requirement shall be subject to judicial review only on the grounds specified in paragraphs (2)(B), (2)(C), or (2)(D) of section 706 of title 5, United States Code, and shall not be subject to any proceeding under section 304(a)(2) or 307 (b) and (c) of this Act.

"(2) In issuing any suspension under paragraph (1) the Administrator is authorized to act on his own motion without application by any source or State.

"(3) Any suspension under paragraph (1) shall be conditioned upon compliance with such interim requirements as the Administrator determines are reasonable and practicable. Such interim requirements shall include, but need not be limited to, (A) a requirement that the source receiving the suspension comply with such reporting requirements as the Administrator determines may be necessary, (B) such measures as the Administrator determines are necessary to avoid an imminent and substantial endangerment to health of persons, and (C) requirements that the suspension shall be inapplicable during any period during which fuels which would enable compliance with the suspended stationary source fuel or emission limitations are in fact reasonably available to that person (as determined by the Administrator). For purposes of clause (C) of this paragraph, availability of natural gas or petroleum products which enable compliance shall not make a suspension inapplicable to a source described in subsection (b)(1) of this section.

"(4) For purposes of this section:

"(A) The term 'stationary source fuel or emission limitation' means any emission limitation, schedule, or time table for compliance, or other requirement, which is prescribed under this Act (other than section 303, 11(b), or 112) or contained in an applicable implementation plan (other than a requirement imposed under authority described in section 110(a)(2)(F)(v)), and which is designed to limit stationary source emissions resulting from combustion of fuels, including a prohibition on, or specification of, the use of any fuel of any type or grade or pollution characteristic thereof.

"(B) The term 'stationary source' has the same meaning as such term has under section 111(a)(3).

"(b)(1) Except as provided in paragraph (2) of this subsection, any fuel-burning stationary source—

"(A) which is prohibited from using petroleum products or natural gas as fuel by reason of an order issued under section 8(a) of the Energy Supply and Environmental Coordination Act of 1974, or

"(B) which the Administrator determines began conversion to the use of coal as fuel during the ninety-day period ending December 15, 1973, and, consistent

with the criteria established in this section should use coal after the expiration of any suspension approved pursuant to section 119(a) of the Clean Air Act. and which is located in an air quality control region in which applicable national primary ambient air quality standards are not being exceeded and which converts to the use of coal as fuel, shall not, until January 1, 1979, be prohibited, by reason of the application of any air pollution requirement, from burning coal which is available to such source. For purposes of this paragraph, the term 'began conversion' means action by the owner or operator of a source during the ninety-day period ending on December 15, 1973 (such as entering into a contract binding on the operator of the source for obtaining coal, or equipment or facilities to burn coal; expending substantial sums to permit such source to burn coal; or applying for an air pollution variance to enable the source to burn coal) which the Administrator finds evidences a decision (made prior to December 15, 1973) to convert to burning coal as a result of the unavailability of an adequate supply of fuels required for compliance with the applicable implementation plan, and a good faith effort to expeditiously carry out such decision.

"(2)(A) Paragraph (1) of this subsection shall apply to a source only if (I) the Administrator finds that emissions from the source will not cause or contribute to concentrations of air pollutants in excess of national primary ambient air quality standards and (II) if the source has submitted to the Administrator a plan for compliance for such source which the Administrator has approved, after notice to interested persons and opportunity for presentation of views (including oral presentation of views). A plan submitted under the preceding sentence shall be approved only if it (i) meets the requirements of regulations prescribed under subparagraph (B); and (ii) provides that such source will comply with requirements which the Administrator shall prescribe to assure that emissions from such source will not cause or contribute to concentrations of air pollutants in excess of national primary ambient air quality standards. The Administrator shall approve or disapprove any such plan within 60 days after such plan is submitted.

"(B) The Administrator shall prescribe regulations requiring that any source to which this subsection applies submit and obtain approval of its means for and schedule of compliance. Such regulations shall include requirements that such schedules shall include dates by which such sources must—

"(i) enter into contracts (or other enforceable obligations) which have received prior approval of the Administrator as being adequate to effectuate the purposes of this section and which provide for obtaining a long-term supply of coal which enables such source to achieve the emission reduction required by subparagraph (C), or

"(ii) if coal which enables such source to achieve such emission reduction is not available to such source, enter into contracts (or other enforceable obligations) which have received prior approval of the Administrator as being adequate to effectuate the purposes of this section and which provide for obtaining (I) a long-term supply of other coal or coal derivatives, and (II) continuous emission reduction systems necessary to permit such source to burn such coal or coal derivatives, and to achieve the degree of emission reduction required by subparagraph (C).

"(C) Regulations under subparagraph (B) shall require that the source achieve the most stringent degree of emission reduction that such source would have been required to achieve under the applicable implementation plan which was in effect on the date of enactment of this section (or if no applicable implementation plan was in effect on such date, under the first applicable implementation plan which takes effect after such date). Such degree of emission reduction shall be achieved as soon as practicable, but not later than January 1, 1979; except that, in the case a source for which a continuous emission reduction system is required for sulfur-related emissions, reduction of such emissions shall be achieved on a date designated by the Administrator (but not later than January 1, 1979). Such regulations shall also include such interim requirements as the Administrator determines are reasonable and practicable including requirements described in clauses (A) and (B) of subsection (a)(3) and requirements to file progress reports.

"(D) The Administrator (after notice to interested persons and opportunity for presentation of views, including oral presentations of views to the extent practicable) (i) may, prior to the earlier of June 30, 1975, or one year after the date of enactment of this section, and shall thereafter prohibit the use of

coal by a source to which paragraph (1) applies if he determines that the use of coal by such source may cause or contribute to concentrations of air pollutants in excess of national primary ambient air quality standards; and (ii) may require such source to use coal of any particular type, grade, or pollution characteristic if such coal is available to such source. Nothing in this subsection (b) shall prohibit a State or local agency from taking action which the Administrator is authorized to take under this subparagraph.

"(3) For purposes of this subsection, the term 'air pollution requirement' means any emission limitation, schedule, or timetable for compliance, or other requirement, which is prescribed under any Federal, State, or local law or regulation, including this Act (except for any requirement prescribed under this subsection, section 110(a)(2)(F)(v), or section 303), and which is designed to limit stationary source emissions resulting from combustion of fuels (including a restriction on the use or content of fuels). A conversion to coal to which this subsection applies shall not be deemed to be a modification for purposes of section 111(a)(2) and (4) of this Act.

"(4) A source to which this subsection applies may, upon the expiration of the exemption under paragraph (1), obtain a one-year postponement of the application of any requirement of an applicable implementation plan under the conditions and in the manner provided in section 110(f).

"(c) The Administrator may by rule establish priorities under which manufacturers of continuous emission reduction systems necessary to carry out subsection (b) shall provide such systems to users thereof, if he finds that priorities must be imposed in order to assure that such systems are first provided to users in air quality control regions with the most severe air pollution. No rule under this subsection may impair the obligation of any contract entered into before enactment of this section. To the extent necessary to carry out this section, the Administrator may prohibit any State or political subdivision from requiring any person to use a continuous emission reduction system for which priorities have been established under this subsection except in accordance with such priorities.

"(d) The Administrator shall study, and report to Congress not later than six months after the date of enactment of this section, with respect to—

"(1) the present and projected impact on the program under this Act of fuel shortages and of allocation and end-use allocation programs;

"(2) availability of continuous emission reduction technology (including projections respecting the time, cost, and number of units available) and the effects that continuous emission reduction systems would have on the total environment and on supplies of fuel and electricity;

"(3) the number of sources and locations which must use such technology based on projected fuel availability data;

"(4) priority schedule for implementation of continuous emission reduction technology, based on public health or air quality;

"(5) evaluation of availability of technology to burn municipal solid waste in these sources including time schedules, priorities analysis of unregulated pollutants which will be emitted and balancing of health benefits and detriments from burning solid waste and of economic costs;

"(6) projection of air quality impact of fuel shortages and allocations;

"(7) evaluation of alternative control strategies for the attainment and maintenance of national ambient air quality standards for sulfur oxides within the time frames prescribed in the Act, including associated considerations of cost, time frames, feasibility, and effectiveness of such alternative control strategies as compared to stationary source fuel and emission regulations;

"(8) proposed allocations of continuous emission reduction systems which do not produce solid waste to sources which are least able to handle solid waste byproducts of such systems; and

"(9) plans for monitoring or requiring sources to which this section applies to monitor the impact of actions under this section on concentration of sulfur dioxide in the ambient air.

"(e) No State or political subdivision may require any person to whom a suspension has been granted under subsection (a) to use any fuel the unavailability of which is the basis of such person's suspension (except that this preemption shall not apply to requirements identical to Federal interim requirements under subsection (a)(3)).

"(f)(1) It shall be unlawful for any person to whom a suspension has been granted under subsection (a)(1) to violate any requirement on which the suspension is conditioned pursuant to subsection (a)(3).

"(2) It shall be unlawful for any person to violate any rule under subsection (c).

"(3) It shall be unlawful for the owner or operator of any source to fail to comply with any requirement under subsection (b) or any regulation, plan, or schedule thereunder.

"(4) It shall be unlawful for any person to fail to comply with an interim requirement under subsection (i)(3).

"(g) Beginning January 1, 1975, the Administrator shall publish at no less than one-hundred-and-eighty-day intervals, in the Federal Register, the following:

"(1) A concise summary of progress reports which are required to be filed by any person or source owner or operator to which subsection (b) applies. Such progress reports shall report on the status of compliance with all requirements which have been imposed by the Administrator under such subsections.

"(2) Up-to-date findings on the impact of this section upon—

"(A) applicable implementation plans, and

"(B) ambient air quality.

"(h) Nothing in this section shall affect the power of the Administrator to deal with air pollution presenting an imminent and substantial endangerment to the health of persons under section 303 of this Act.

"(i)(1) In order to reduce the likelihood of early phaseout of existing electric generating facilities, any electric generating powerplant (A) which, because of the age and condition of the plant, is to be taken out of service permanently no later than January 1, 1980, according to the power supply plan (in existence on January 1, 1974) of the operator of such plant, (B) for which a certification to that effect has been filed by the operator of the plan with the Environmental Protection Agency and the Federal Power Commission, and (C) for which the Commission has determined that the certification has been made in good faith and that the plan to cease operations no later than January 1, 1980, will be carried out as planned in light of existing and prospective power supply requirements, shall be eligible for a single one-year postponement as provided in paragraph (2).

"(2) Prior to the date on which any plant eligible under paragraph (1) is required to comply with any requirement of an applicable implementation plan, such source may apply (with the concurrence of the Governor of the State in which the plant is located) to the Administrator to postpone the applicability of such requirement to such source for not more than one year. If the Administrator determines, after balancing the risk to public health and welfare which may be associated with a postponement, that compliance with any such requirement is not reasonable in light of the projected useful life of the plant, the availability of rate base increases to pay for such costs, and other appropriate factors, then the Administrator shall grant a postponement of any such requirement.

"(3) The Administrator shall, as a condition of any postponement under paragraph (2), prescribe such interim requirements as are practicable and reasonable in light of the criteria in paragraph (2).

"(j)(1) The Administrator may, after public notice and opportunity for presentation of views in accordance with section 533 of title 5, United States Code, and after consultation with the Federal Energy Administrator, designate persons to whom fuel exchange orders should be issued. The purpose of such designation shall be to avoid or minimize the adverse impact on public health and welfare of any suspension under subsection (a) of this section or conversion to coal to which subsection (b) applies or of any allocation under section 8 of the Energy Supply and Environmental Coordination Act of 1974 or the Emergency Petroleum Allocation Act of 1973.

"(2) The Federal Energy Administrator shall issue exchange orders to such persons as are designated by the Administrator under paragraph (1) requiring the exchange of any fuel subject to allocation under the preceding Acts effective no later than forty-five days after the date of the designation under paragraph (1), unless the Federal Energy Administrator determines after consultation with the Administrator, that the costs or consumption of fuel, resulting from such exchange order, will be excessive.

"(3) Violation of any exchange order issued under paragraph (2) shall be a prohibited act and shall be subject to enforcement action and sanctions in the same manner and to the same extent as a violation of any requirement of the regulation under section 4 of the Emergency Petroleum Allocation Act of 1973."

SECTION 3. IMPLEMENTATION PLAN REVISIONS

Section 110(a) of the Clean Air Act is amended in paragraph (3) by inserting "(A)" after "(3)" and by adding at the end thereof the following new subparagraph:

"(B) For any air quality control region in which the Administrator determines the applicable primary air quality standard is being exceeded, the Administrator shall review the applicable implementation plan and no later than ninety days after such determination report to the State on whether such plan can be revised in relation to fuel burning stationary sources without interfering with applicable national primary ambient air quality standards which the plan implements. If the Administrator determines that any such plan can be revised he shall notify the State that a plan revision may be submitted by the State within three months after the date of notice to the State of such determination. Any plan revision which is submitted by the State after notice and public hearing shall be approved or disapproved by the Administrator, after public notice and opportunity for public hearing, but no later than three months after the date required for submission of the revised plan."

SECTION 4. MOTOR VEHICLE EMISSIONS

(a) Section 202(b)(1)(A) of the Clean Air Act is amended by striking out "1975" and inserting in lieu thereof "1977"; and by inserting after "(A)" the following: "The regulations under subsection (a) applicable to emissions of carbon monoxide and hydrocarbons from light-duty vehicles and engines manufactured during model years 1975 and 1976 shall contain standards which are identical to the interim standards which were prescribed (as of December 1, 1973) under paragraph (5)(A) of this subsection for light-duty vehicles and engines manufactured during model year 1975."

(b) Section 202(b)(1)(B) of such Act is amended by striking out "1976" and inserting in lieu thereof "1978"; and by inserting after "(B)" the following: "The regulations under subsection (a) applicable to emissions of oxides of nitrogen from light-duty vehicles and engines manufactured during model years 1975 and 1976 shall contain standards which are identical to the standards which were prescribed (as of December 1, 1973) under subsection (a) for light-duty vehicles and engines manufactured during model year 1975. The regulations under subsection (a) applicable to emissions of oxides of nitrogen from light-duty vehicles and engines manufactured during model year 1977 shall contain standards which provide that emissions of such vehicles and engines may not exceed 2.0 grams per vehicle mile."

(c) Section 202(b)(5)(A) of such Act is amended to read as follows:

"(5)(A) At any time after January 1, 1975, any manufacturer may file with the Administrator an application requesting the suspension for one year only of the effective date of any emission standard required by paragraph (1)(A) with respect to such manufacturer for light-duty vehicles and engines manufactured in model year 1977. The Administrator shall make his determination with respect to any such application within sixty days. If he determines, in accordance with the provisions of this subsection, that such suspension should be granted, he shall simultaneously with such determination prescribe by regulation interim emission standards which shall apply (in lieu of the standards required to be prescribed by paragraph (1)(A) of this subsection) to emissions of carbon monoxide or hydrocarbons (or both) from such vehicles and engines manufactured during model year 1977."

(d) Section 202(b)(5)(B) of the Clean Air Act is repealed and the following subparagraphs redesignated accordingly.

SECTION 5. CONFORMING AMENDMENTS

(a)(1) Section 113(a)(3) of the Clean Air Act is amended by striking out "or" before "112(c)", by inserting a comma in lieu thereof, and by inserting after "(hazardous emissions)" the following: ", or 119(f) (relating to energy-related authorities)".

(2) Section 113(b)(3) of such Act is amended by striking out "or 112(c)" and inserting in lieu thereof ", 112(c), or 119(f)".

(3) Section 113(c)(1)(C) of such Act is amended by striking out "or section 112(c)" and inserting in lieu thereof ", section 112(c), or section 119(f)".

(4) Section 114(a) of such Act is amended by inserting "119 or" before "303".

(b) Section 116 of the Clean Air Act is amended by inserting "119 (b), (c), and (e)," before "209".

SECTION 6. PROTECTION OF PUBLIC HEALTH AND ENVIRONMENT

(a) Any allocation program provided for in section 8 of this Act or in the Emergency Petroleum Allocation Act of 1973 shall, to the maximum extent practicable, include measures to assure that available low sulfur fuel will be distributed on a priority basis to those areas of the country designated by the Administrator of the Environmental Protection Agency as requiring low sulfur fuel to avoid or minimize adverse impact on public health.

(b) In order to determine the health effects of emissions of sulfur oxides to the air resulting from any conversions to burning coal to which section 119 of the Clean Air Act applies, the Department of Health, Education, and Welfare shall, through the National Institute of Environmental Health Sciences and in cooperation with the Environmental Protection Agency, conduct a study of chronic effects among exposed populations. The sum of $3,500,000 is authorized to be appropriated for such a study. In order to assure that long-term studies can be conducted without interruption, such sums as are appropriated shall be available until expended.

(c) No action taken under the Clean Air Act, or under section 8 of this Act for a period of one year after initiation of such action, shall be deemed a major Federal action significantly affecting the quality of the human environment within the meaning of the National Environmental Policy Act of 1969 (83 Stat. 856). However, before any action under section 8 of this Act that has a significant impact on the environment is taken, if practicable, or in any event within sixty days after such action is taken, an environmental evaluation with analysis equivalent to that required under section 102(2)(C) of the National Environmental Policy Act, to the greatest extent practicable within this time constraint, shall be prepared and circulated to appropriate Federal, State, and local government agencies and to the public for a thirty-day comment period after which a public hearing shall be held upon request to review outstanding environmental issues. Such an evaluation shall not be required where the action in question has been preceded by compliance with the National Environmental Policy Act by the appropriate Federal agency. Any action taken under section 8 of this Act which will be in effect for more than a one-year period or any action to extend an action taken under section 8 of this Act to a total period of more than one year shall be subject to the full provisions of the National Environmental Policy Act notwithstanding any other provision of this Act.

SECTION 7. REPORTS

The Administrator of the Environmental Protection Agency shall report to Congress not later than January 31, 1975, on the implementation of sections 2 through 6 of this Act.

SECTION 8. COAL CONVERSION AND ALLOCATION

(a) The Federal Energy Administrator shall, to the extent practicable and consistent with the purposes of this Act, by order, prohibit, as its primary energy source, the burning of natural gas or petroleum products by any major fuel-burning installation (including any existing electric powerplant) which, on the date of enactment of this Act, has the capability and necessary plant equipment to burn coal. Any installation to which such an order applies shall not be prohibited from using petroleum products or natural gas unless the installation is located in a region described in the first sentence of section 119(b)(1), and the Administrator has made the finding specified in section 119(b)(2)(A)(I) with respect to emission from such installation. A prohibition on use of natural gas and petroleum products under this subsection shall be contingent upon the availability of coal, coal transportation facilities, and the maintenance of reliability of service in a given service area. The Federal Energy Administrator may require that fossil-fuel-fired electric powerplants in the early planning process, other than combustion gas turbine and combined cycle units, be designed and constructed so as to be capable of using coal as a primary energy source instead of or in addition to other fossil fuels. No fossil-fuel-fired electric powerplant may be required under this section to be so designed and constructed, if (1) to do so would result in an impairment of reliability or adequacy of service, or (2) an adequate and reliable supply of coal is not available and is not expected to be available. In considering whether to impose a design and construction requirement under this subsection, the Federal Energy Administrator shall consider the existence and effects of any contractual

commitment for the construction of such facilities and the capability of the owner or operator to recover any capital investment made as a result of the conversion requirements of this section.

(b) The Federal Energy Administrator may by rule prescribe a system for allocation of coal to users thereof in order to attain the objective specified in this section.

(c) It shall be unlawful for any person to violate any provision of this section, or to violate any rule, regulation, or order issued pursuant to any such provision.

(d)(1) Whoever violates any provision of subsection (c) shall be subject to a civil penalty of not more than $2,500 for each violation.

(2) Whoever willfully violates any provision of subsection (c) shall be fined not more than $5,000 for each violation.

(3) It shall be unlawful for any person to offer for sale or distribute in commerce any product or commodity in violation of an applicable order or regulation issued pursuant to subsection (b). Any person who knowingly and willfully violates this paragraph after having been subjected to a civil penalty for a prior violation of the same provision of any order or regulation issued pursuant to subsection (b) shall be fined not more than $50,000 or imprisoned not more than six months, or both.

(4) Whenever it appears to any person authorized by the Federal Energy Administrator to exercise authority under this section that any individual or organization has engaged, is engaged, or is about to engage in acts or practices constituting a violation of subsection (c), such person may request the Attorney General to bring an action in the appropriate district court of the United States to enjoin such acts or practices, and upon a proper showing a temporary restraining order or a preliminary or permanent injunction shall be granted without bond. Any such court may be also issue mandatory injunctions commanding any person to comply with any provision, the violation of which is prohibited by subsection (c).

(5) Any person suffering legal wrong because of any act or practice arising out of any violation of subsection (c) may bring an action in a district court of the United States without regard to the amount in controversy, for appropriate relief, including an action for a declaratory judgment or writ of injunction. Nothing in this paragraph shall authorize any person to recover damages.

(e) Authority to issue orders, or rules under subsections (a) and (b) of this section shall expire on midnight, June 30, 1975, but the expiration of such authority shall not affect any administrative or judicial proceeding pending on such date which relates to any act or omission before such date.

SECTION 9. EXTENSION OF CLEAN AIR ACT AUTHORIZATIONS

(a) **Section 104** of the Clean Air Act is amended by striking "and $150,000,000 for the fiscal year ending June 30, 1974" and inserting in lieu thereof ", $150,000,000 for the fiscal year ending June 30, 1974, and $150,000,000 for the fiscal year ending June 30, 1975."

(b) **Section 212** of such Act is amended by striking "three succeeding fiscal years." and inserting in lieu thereof "four succeeding fiscal years.".

(c) **Section 316** of such Act is amended by striking "and $300,000,000 for the fiscal year ending June 30, 1974" and inserting in lieu thereof ", $300,000,000 for the fiscal year ending June 30, 1974, and $300,000,000 for the fiscal year ending June 30, 1975".

Mr. MUSKIE. Mr. President, the Committee on Public Works has again examined the legislation passed by the House to amend the Clean Air Act to facilitate energy conservation. We have determined, on the basis of information available to us, that the enactment of limited amendments to the Clean Air Act at this time will be of value.

We do not believe, however, that amendments as far-reaching as the House bill are necessary, and it is for that reason that the committee has taken the rather unusual step of meeting in executive session yesterday to consider the House bill, and to report, by way of this amendment, to the Senate as a whole those amendments which we consider to be necessary at this time. We bore in mind the admonition of the distinguished chairman of the full committee that we should at this point

separate from the controversial issues that have been generated by the attempts to enact emergency energy legislation those elements which are relatively noncontroversial, which have been agreed upon by a sufficient number on both sides of the Capitol so that they have a chance to reach the President's desk in the relatively near future, and it is in this spirit, Mr. President, that the Committee on Public Works has considered what is needed and proposes this amendment in the form of a substitute to H.R. 14368 which deals only with those aspects of the House bill which are critical. Not only is the Committee prepared to offer a substitute, but we are prepared to go immediately to the conference with the House Interstate and Foreign Commerce Committee for the purpose of determining what can be agreed upon at this time and sent to the President.

We believe that prior to the Memorial Day recess, the President can have legislation which is needed to continue the Nation's effort to achieve greater energy conservation and to provide the automobile industry with the certainty needed to proceed with the development, certification and production of 1976 model year automobiles.

Mr. President, the amendments which I have offered fall into five categories:

First, the committee proposes to modify the coal conversion proposal of the House to narrow its application to assure, at a minimum, protection of public health. **[Sec. 8.]**

Second, the committee proposes to limit exceptions to the Clean Air Act to permit coal conversions to areas where public health-related primary ambient air quality standards are not now exceeded. Further, no coal conversions could take place where the conversion itself would cause public health standards to be exceeded. **[Sec. 2, Sec. 119 CAA.]**

Third, the committee proposes to adopt an identical provision to the House bill relating to auto emissions to end any doubt as to what auto emission standards will be required for the 1976 model year vehicle. **[Sec. 4, Sec. 202(b) CAA.]**

Fourth, the committee proposal would clarify the relationship between the National Environmental Policy Act and the Clean Air Act. **[Sec. 6 ESECA.]**

Fifth, finally, the committee proposes to extend the Clean Air Act authorization for 1 year. **[Sec. 9.]**

Let me expand upon these points briefly, for the record.

The Committee on Public Works has tried to respond to the need to continue our efforts to utilize our domestic fuel supplies where such utilization will not interfere with the health of our people. We recognize that the winter of crisis is behind us. We have tried to anticipate future crises, whether those crises result from spot-shortages of fuel or international disputes.

It is in the context of standby authority and in recognition of the need to continue energy conservation efforts that this legislation is proposed. We are not, under the threat of crisis, abandoning our environmental goals, but we are trying to propose a mechanism which will balance those environmental goals with what we perceive to be the long-term energy needs of the country.

In addition to other provisions which are identical to the House bill and the earlier conference agreement, the committee has retained the

emergency suspension features of earlier proposals. Only the final date has been changed. Under this provision the Administration could waive, temporarily, clean air requirements where there was a demonstrated unavailability of conforming fuel. Waiver authority continues until June 30, 1975, but waivers can be granted only when fuels with the pollution characteristics required by State clean air implementation plans are unavailable. **[Sec. 2, Sec. 119(b) CAA.]**

The amendments to both the coal conversion and clean air section would, in accordance with a proposal advanced by Senator Buckley, prohibit coal conversion in air quality control regions where primary air quality standards for sulfur oxides and/or particulates are now being exceeded. **[Sec. 119(c)(2)(b) CAA.]**

Thus, there would be, by statute, a bar to further deterioration of already unhealthy air.

Further, pursuant to another Buckley amendment, no specific conversion could be ordered if the coal to be used in a specific facility would cause concentrations of SO_2 or particulate in excess of national primary ambient air qulaity standards. **[Sec. 119(d)(2)(A) CAA.]**

The floor is protection of public health. This floor combined with the June 30, 1975, expiration date on issuance of conversion orders, should assure minimal environmental risks while providing an adequate opportunity to examine the implications of the policy we propose. **[Sec. 119(b) CAA.]**

I would like at this point, Mr. President, to compliment the distinguished Senator from New York for these two amendments to the bill, which, in my judgment, improve it enormously.

In the near-term, coal conversions, resulting from this act may be as few as a dozen, but those conversions can and will take pressure off the oil market without endangering public health.

They can and will simulate long-term investment in development of domestic coal resources. And they can and will provide a basis for future legislation to increase our capability to use coal.

This limited program can and will be initiated while the Congress continues to review the Clean Air Act and examines the need for broader authority to reduce dependency on foreign fuels.

As a part of that review Congress must determine the extent to which our major fuel burning stationary sources are going to have multiple energy use and environmental control capacity. And we must determine the impact of such policies on consumers.

In order to examine the environmental implications of these proposals, the Administrator of the Environmental Protection Agency is required to report to Congress on the impact of conversion. **[Sec. 7.]**

Also, in order to maximize the potential use of limited resources, the Administrator is required to review State air quality implementation plans to determine whether or not different fuels with different pollution characteristics can be burned in designated air quality control regions without threatening public health. **[Sec. 3.]**

Under the Conference agreement of last year, this review triggered a mandatory revision of State clean air plans. Under this bill, the States retain the authority to determine whether or not, on the basis of the review by the Administrator, a revision of any aspects of applicable implementation plans is desirable. A key feature in the proposal

is the reaffirmation of State authority to make both clean air and economic growth decisions. **[Sec. 3, Sec. 110 CAA.]** For all practical purposes the preemption of prior legislation has been replaced with advice and assistance.

The committee bill also includes certain noncontroversial provisions of the House bill which have been before the Senate in the earlier, vetoed bill. I ask unanimous consent to include in the Record at the end of my remarks appropriate portions of that legislative history modified to reflect the changes in the amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

[See exhibit 1, p. 384.]

Mr. MUSKIE. Mr. President, the committee bill does not include provisions of the House-passed bill relative to air quality transportation and land use controls; fuel economy studies; energy conservation studies; and energy company reporting.

The committee has incuded two additional amendments which were not included in the House-passed bill. We have extended for 1 year Clean Air Act funding authority. **[Sec. 9.]** Though we have commenced hearings to review the Clean Air Act and though we are committed to a thorough review before any necessary modifying legislation is proposed, we believe it is altogether possible that the schedule of congressional activities this summer and fall may make difficult full and adequate consideration of major changes in clean air policy.

The committee wants adequate time to review the act. We want to know the results of the reports required by these amendments, and we want to have an opportunity to review, in detail, the findings of the National Academy of Sciences, expected this summer, as to the adequacy of present health-related standards and the optional control strategies which might be available to achieve those goals.

It is our intention to continue this review through the fall, as the schedule of congressional activities permits. The committee would hope to have legislative proposals on the Clean Air Act completed by early in the next session of Congress.

Mr. President, another provision in this legislation relates to clarification of the relationship between the National Environmental Policy Act and the Clean Air Act. **[Sec. 6, Sec. 7 ESECA.]** As my colleagues know, at the time the National Environmental Policy Act was enacted in 1969, its principal sponsor, Senator Jackson, agreed with members of the Senate Public Works Committee that the environmental review procedures were intended to apply to mission agencies—agencies whose activities impacted the environment—and not to environmental protection agencies.

The courts have repeatedly upheld the position to which Senator Jackson and I agreed nearly 5 years ago. Unfortunately, the Environmental Protection Agency has chosen, as a result of the pressure from the other body, to ignore that intent, to ignore those court decisions, and to proceed to prepare environmental impact statements as required by section 102(2)(c) of the National Environmental Policy Act.

Mr. President, I am deeply concerned that this policy will result in extensive litigation which will interfere with both the goals and the time schedules of the Clean Air Act.

Let me provide just one example. Under the bill that passed the House and in accordance with the substitute proposed by the Senate, the auto industry could apply to the Administrator of the Environmental Protection Agency for an additional 1 year in which to meet statutory auto emissions standards. **[Sec. 4, Sec. 202(b)(5) CAA.]** Under the law, the Administrator would have 60 days in which to make his findings. Every Senator knows that the National Environmental Policy Act procedure requires much more than 60 days to prepare an impact statement. It would take but one court, holding that the Administrator's finding on this issue was subject to those procedures, to derail the production schedules of the auto industry. Chaos would result. The Congress would be asked to respond in a panic situation.

But it is not just this kind of major chaos which I fear. The Environmental Protection Agency has, under the Clean Air Act, a wide variety of responsibilities, including registration of fuel additives, regulation of toxic emissions, establishmment of test procedures for automobiles and other authorities which are major actions in the context of the proposed voluntary regulations. Should the policy forced on Administrator Train be held mandatory by the courts, the disruption to American business and the adverse impact on the environment could be equally severe.

We cannot afford to take the risk of creating confusion and doubt in the minds of the American people as to issues the magnitude of these. The amendment which is contained in the substitute would make clear, without any doubt, that regardless of Mr. Train's "voluntary" action, there is no legal responsibility on the part of the Agency to comply with the procedures of the National Environmental Policy Act. **[Sec. 6(c), Sec, 7(c)(2) ESECA.]** With the adoption of this amendment, Mr. Train could freely develop a policy examining the environmental and other implications of environmental regulations without sacrificing either environmental goals or regulatory certainty. He could determine the appropriate actions for this kind of review and he could make such review voluntarily. But there would be a statutory bar to any court holding that EPA's voluntary compliance with NEPA could be construed to be mandatory.

Mr. President, as I have indicated, we have tried to narrow these amendments to those which reflect our continuing concern with energy conservation and the critical need to answer pressing questions such as auto emission standards, Clean Air Act authorizations, and the NEPA/EPA controversy.

This is a good bill. It protects public health, but it permits coal conversion. It facilitates energy conservation. And it promotes self-sufficiency. It creates certainty for the auto manufacturers.

The bill provides adequate opportunity to review fully the implications of the 1970 Clean Air Act, taking maximum advantage of the studies of the National Academy of Sciences and others, and it clears up what I believe to be a grave and threatening controversy engendered as a result of the decision of application of NEPA to EPA.

I strongly urge that my colleagues adopt this substitute—and that they do so without amendment so that we may speedily go to conference, consider the other House proposals on which we have held no hearings, and return to this and the other body with a compromise

agreement which can be sent to the President in fulfillment of our responsibilities on this issue.

SECTION 2. SUSPENSION AUTHORITY

This bill adds a new **section 119** to the Clean Air Act which will permit the Administrator of the Environmental Protection Agency to suspend until not later than June 30, 1975—or 1 year after enactment—any stationary source fuel or emission limitation, either upon his own motion or upon the application of a source or a State, if the source cannot comply with such limitations because of the unavailability of fuel. The Administrator of the Environmental Protection Agency is directed to give prior notice to the Governor of the State and the chief executive of the local governmental unit where the source is located. He is also directed to give notice to the public and to allow for the expression of views on the suspension prior to granting it unless he finds that good cause exists for not providing such opportunity. Judicial review of such suspension would be restricted to certain specified grounds.

The Administrator is required to condition the granting of any suspension upon adoption of any requirements that he determines are reasonable and practicable. These interim requirements must include necessary reporting requirements, and a provision that the suspension would be inapplicable during any period when clean fuels were available to such source. The Administrator would be required to determine when such fuels were in fact available. It is the intent of the committee that the Administrator in making such determination take into consideration the costs associated with any changes that would be required to be made by the source to enable it to utilize such fuel. No source which has converted to coal under **section 119**, however, could be required under this provision to return to the use of oil or natural gas.

The suspension would also be conditioned on adoption of such measures as the Administratrator determines are necessary to avoid an imminent and substantial endangerment to the health of persons. This would authorize not only requirements that a facility shutdown during air pollution emergencies, but also—for example—a requirement that it keep a reserve supply of clean fuels on hand to be burned to avoid such emergencies.

In recognition of the need to balance energy needs with environmental requirements and the unique problems facing any source which converts to coal in response to the emergency, the amendment would authorize sources which are either ordered to convert to coal or which began to convert to coal during the 90-day period prior to December 15, 1973, to continue to use coal in compliance with the Clean Air Act as amended by this act, until as late as January 1, 1979. The authorization would only apply if the source were placed, after notice and opportunity for oral presentation of views, on a schedule approved by the Administrator of the Environmental Protection Agency. The schedule must provide a timetable for compliance with the fuel or emission limitations of the applicable implementation plan no later than January 1, 1979.

All compliance schedules under **section 119(b)** must also provide for compliance with interim requirements that will assure that the

source will not cause concentrations of pollutants in excess of primary standards.

The committee emphasizes that the Administrator would not be able to approve a plan under **section 119(b)** for a utility generally. Rather, each plan approval must be for a specific plant.

There are three basic reasons for the decision to encourage continued burning of coal until at least 1979. First, in order to encourage the opening of new coal mines to increase energy supplies, the committee intends to encourage an ongoing substantial demand for such coal. Without reasonable likelihood that new coal mines will be able to market their new production, the opening of new mines and expansion of existing mine capacity may be regarded too risky. Second, to the extent that electric generating powerplants can be encouraged to cease burning oil and natural gas, these fuels would be available to meet other energy needs, such as production of gasoline and home heating oil. Finally, since continuous emission reduction technology is available for sources such as homes, apartment houses, and small businesses, the purposes of the Clean Air Act can be better effectuated by having low pollution oil and natural gas burned to the maximum extent feasible, in sources for which no effective clean up technology is available.

The committee believes that the priority effort of each source which is subject to **section 119(b)** should be to obtain low sulfur coal. If an adequate, long-term supply of low sulfur coal is available to such a source, the Administrator should only approve a plan which requires its use—and thus compliance with air pollution requirements—as expeditiously as practicable. In such a case, the Administrator would have to disapprove a plan which proposed to wait until January 1, 1979, before beginning to burn low sulfur coal. The committee believes that requiring priority consideration of the use of nonmetallurgical low sulfur coal will reduce the likelihood of extended violation of applicable emission standards.

If a source unable to obtain an adequate, long-term supply of low sulfur coal, it may seek to come into compliance by use of a continuous emission reduction system or by use of coal byproducts which would achieve the required degree of emission reduction. In such case, the source would still be required to act expeditiously to obtain an adequate supply of coal. However, compliance with all air pollution requirements would be required not later than January 1, 1979, and by a date established by the Administrator.

It is expected that the Administrator would include, but would not be limited to, the following requirements in any compliance schedule:

First, the dates by which the source will solicit bids and enter into binding contractual agreements—or other equally binding commitment—for the procurement of an adequate fuel supply to permit continued long-term operation of the source;

Second, where the coal obtained by the source has sulfur content which will require installation of continuous emission reduction equipment to enable the source to comply with emission limitations, the dates for soliciting bids for such equipment, contracting for such equipment, and installation and startup of such equipment by a date that will permit a reasonable time for necessary adjustments of the equip-

ment to maximize the reliability and efficiency of the system prior to January 1, 1979; and

Third, reasonable interim measures which the source should employ to minimize the adverse impact on air quality.

In establishing date for contracting for coal, the Administrator should determine the earliest date that is reasonable and which will permit compliance by the time specified in this section. Because the dates for obtaining coal or continuous emission reduction systems may occur at approximately the same time for more than one source which may overburden suppliers, the Administrator is specifically authorized to establish differing dates for obtaining coal or such systems to insure availability of supplies of such coal or equipment. In making such decisions, it is expected that the Administrator will provide the earliest date for those sources in areas with the most serious pollution problems.

It is intended that when the coal available to the source necessitates the use of continuous emission reduction equipment for control of sulfur-related emissions, the source will have as much time as necessary to install the equipment and achieve timely compliance, in order to permit orderly development of technology.

In recognition of the complex factors involved in determining schedules for the various sources, the committee intends that the Administrator have broad discretion in prescribing and approving schedules of compliance to insure that sources meet the requirements of this section without overburdening production capacity for continuous emission reduction systems for sulfur control or causing unacceptable disruption in energy production capacity.

The committee does not intend to permit delay of existing compliance schedules for control of particulate emissions. Some slight delay may be necessary in light of revised compliance schedules for control of sulfur-related emissions. However, only such minor adjustments as the Administrator determines to be unavoidable should be permitted in existing compliance schedules and emission limitations for control of particulates.

SECTION 4: MOTOR VEHICLE EMISSIONS

The committee proposal amends **section 202** of the Clean Air Act to continue the emission standards established by the Administrator for 1975 model year automobiles during the 1976 model year. The effect of this provision is to maintain in the 1976 model year a Federal 49-State standard of 1.5 grams per mile of hydrocarbons, 15 grams per mile of carbon monoxide and 3.1 grams per mile of oxides of nitrogen, and a standard for California of 0.9 gram per mile of hydrocarbons, 9 grams per mile of carbon monoxide, and 2 grams per mile of oxides of nitrogen. These standards apply to automobiles produced by all manufacturers, whether or not any individual manufacturer had applied for or received a suspension under **section 202(b)(5)** previous to the enactment of this act.

The amendment provides that after January 1, 1975, an automobile manufacturer may seek a single 1-year suspension of the statutory standards for hydrocarbons and carbon monoxide applicable to the 1977 model year. The Administrator would be required to estab-

lish interim emission standards for 1977 model automobiles for hydrocarbons and carbon monoxide if he grants the suspension.

The bill amends **section 202(b)(1)(B)** of the Clean Air Act to establish a maximum emission standard for oxides of nitrogen of 2 grams per mile applicable nationwide to 1977 model year automobiles. This defers the previous statutory standard of 0.4 gram per mile of oxides of nitrogen until the 1978 model year. No administrative suspension would be possible from either the 1977 or 1978 standard. While the 1977 model year standard is a maximum of 2 grams per mile nationwide, under the amendment California retains the right under **section 209** of the Clean Air Act to seek a waiver for a more stringent standard.

The committee is concerned with what may be unwarranted or, at least, untimely changes in EPA's certification test procedures for new automobile emissions. It is intended that uncertainty as to requirements for compliance with such standards be minimized. Any changes in test procedures shall be kept to an absolute minimum and should occur only where such changes improve instrumentation, reduce cost of testing or improve the reliability and validity of the test results.

Mr. President, I ask unanimous consent to have printed in the Record from hearings we held on the NEPA–EPA problem, a portion of the opening statement I made undertaking to spell out the legislative history of the environmental impact statement; also portions of an exchange between Senator Baker and former EPA Administrator William Ruckelshaus defining the Agency's view with respect to its obligation under the National Environmental Protection Act; also a summary of excerpts from court decisions bearing on this issue, and a summary of NEPA's legislative history on this point to enlighten the Senate and round out the Record on this point.

There being no objection, the material was ordered to be printed in the Record, as follows:

EXHIBIT 1

At this point I would like to refer to this committee's longstanding interest in the environmental performance of governmental agencies and programs outside the environmental agencies almost from the day that we assumed jurisdiction over air and water pollution.

We were concerned and challenged by the question that at the same time that we were writing tough policy enforcing the environmental performance standards upon the private sector that the Government itself, a major polluter, was not approaching the task with clean hands.

So each time that we undertook the consideration of legislation to toughen our policy with respect to the private sector, there were those in the private sector who said, "Now, when is Uncle Sam going to measure up to what you are asking us to do?"

So we wrote language into the environmental laws, precatory language largely, trying to prod the Department of Defense, the Corps of Engineers, the Atomic Energy Commission and other Federal agencies to develop an environmental conscience. When the National Environmental Policy Act came down the pipe it was decided to use that for this purpose.

The objective language was to stimulate the development of an environmental conscience in what we later came to describe as the environmental impact agencies. That is, those agencies of the Federal Government whose activity is impacted or impacted potentially in an unfavorable way upon the environment.

We decided to use the National Environmental Policy Act for that purpose. At the insistence of the Committee on Public Works a requirement was adopted, that these environmental impact agencies before they adopted any major action, policy

or program that impacted upon the environment to file an environmental impact statement.

It was not considered necessary that that requirement be imposed upon those agencies whose mission it was to protect the environment. So throughout our discussions we carefully distinguished between the environmental impact agencies and the environmental protection agencies.

It was clearly our intention (whether or not we succeeded in making that clear in the legislative history or in the statutes), to impose that requirement only upon the environmental impact agencies and that in all of our discussions, the conference between the Senate and the House, the conferences among Senators, we adopted that phraseology which didn't appear in the legislation.

We were distinguishing between the environmental impact agencies and the environmental protection agencies.

Our whole purpose, I will repeat, was to force the environmental impact agencies to take into account environmental impacts which could result from major actions taken by them. That pure and simple was the purpose.

We did not, deliberately did not want that requirement to be imposed upon the environmental protection agencies. Why not?

Number one, because it was the chief mission of environmental agencies to protect the environment. It wasn't an incidental, peripheral one. It was their chief mission.

Secondly, because it was, environmental standards to be applied were decided by the Congress of the United States and were not to be subjected to dilution by values brought into policy-making decisions by other agencies whose mission was otherwise.

We wanted the Act to impose environmental values upon the AEC, but we didn't want the Act to have the effect of permitting the AEC to impose their mission-oriented values upon EPA. That was our clear distinction.

The third reason was that, as we were writing the environmental laws, we were writing in very specific requirements as to deadlines, compliance schedules, implementation plans and so on, judicial review and all the rest.

Now to subject those very specific requirements that were written into law by the Congress of the United States to another procedure designed to be applied to misssion-oriented or other mission agencies would have the effect of delaying the procedures established in the environmental laws.

This was the rationale and it was one that was developed over a decade, Mr. Train. There is no doubt in the mind of any of us who were involved in shaping NEPA what our intent was. By and large, the courts up to this point have recognized that intent and have supported it. But now having given that brief review of this committee's involvement in that issue may I read the rest of my opening statement?

Those of us who helped to formulate NEPA undertook to structure that statute to avoid the confusion which would result from applying the procedural requirements of NEPA to the environmental agencies.

Subsequently this committee extended NEPA to certain water pollution control actions, construction grants and permits for new water pollution sources.

So this has been a deliberate policy and for three years EPA policy as articulated in regulations and litigations has recognized this intent. The courts have upheld this intent and now, if I understand what has happened on the other side of the Capitol in a change in policy, not preceded by a change in law, EPA proposes to abandon these principles.

What are the implications of this new policy? What would happen to the pace of environmental enhancement if the courts hold that the policy cannot be as selective as the proposed regulations specify?

What would happen to standards already set to actions already in progress?

Will established health-related air quality standards be suspended pending a NEPA review? Will existing implementation plans including compliance schedules, emission limits and transportation controls be suspended pending compliance with NEPA procedure and associated litigation.

What would be the impact on the judicial review procedures specified in the Clean Air Act if a separate, independent NEPA-related judicial review is available?

How will conflicts between statutory deadlines and NEPA's regulatory time constraints be resolved? How could variances such as those required this winter to cope with energy shortages have been approved without unacceptable delay?

These are but a few of the many questions raised by EPA's proposed reversal

of policy. It is because of those doubts that this policy must necessarily be the result of the legislative process. EPA is prohibited from complying with NEPA. To carry out the proposed policy requires a change in the law. The principal sponsor of NEPA in the other body has introduced such legislation.

I would hope that the result of these hearings would be the administrator's agreement that adhere to the legislative process and to abandon his unilateral course and reject this dubious policy.

U.S. SENATE,
COMMITTEE ON PUBLIC WORKS,
Washington, D.C., October 3, 1973.

To Senator EDMUND S. MUSKIE.
From Leon G. Billings.
Subject Additional Issues Regarding NEPA–EPA.

Last Friday afternoon you asked for the basic arguments to justify the position that the application of the National Environmental Policy Act to the regulatory activities of the Environmental Protection Agency would be substantive rather than procedural. This issue was addressed in joint hearings with the Committee on Interior in March of 1972. At that time, Administrator Ruckelshaus testified that EPA did not believe that the procedures of NEPA were applicable to all environmental programs. The following statements from his testimony are relevant;

"Our programs fall into two groups according to the categories set forth in CEQ's guidelines on Federal agency responsibilities under NEPA. Under the guidelines, EPA, as an environmental regulatory Agency, was not responsible for preparing impact statements for its environmental regulatory activities, but was required to prepare them for its other activities.

"We believe that most of our standards setting and enforcement activities, including the pesticides registration, water quality standards approval and enforcement, standards setting implementation plans under the Clean Air Act, and others, fall within the category of environmental regulatory activities. Accordingly, we do not believe that NEPA required impact statements for our actions under these programs. Nor do we believe that this policy should be changed until the full implications and ramifications of such change have been thoroughly examined."

There was considerable discussion of the impact of applying NEPA to EPA in an exchange of correspondence between Senator Baker and the Administrator. In response to the question:

"Assuming for the purposes of this question that all EPA activities are held subject to NEPA by the judiciary, and assuming for the purposes of this question that no legislative or regulatory relief from such a holding is forthcoming, given the Calvert Cliffs doctrine that NEPA requires an overall 'balancing judgment' with respect to each 'major Federal action,' would you interpret NEPA in such a way as to:

"a. alter in any way your mandate under the Clean Air Act to establish ambient air quality standards with an adequate margin of safety at a level necessary to protect public health?

"b. alter in any way the mandate of the Clean Air Act that new source performance standards be established with reference to the best available technology?

"c. permit the EPA to modify any of its basic enabling statutes, on the basis of the 'balancing judgment,' so as to impose a less stringent standard than would otherwise have been imposed?

"d. similarly, permit the EPA to impose more stringent standards than those provided for in the basic enabling Acts; and if so, against what criteria?" . . .

Administrator Ruckelshaus replied:

"In short, EPA's basic enabling statutes specify the levels at which various standards must be set, and specify the factors that must be taken into account in setting the standards. We intend to comply with these Congressional directives, to the best of our ability. We do not think that we can violate these directives by making the standards either more stringent, or less stringent, than our basic enabling statutes.

"The point is that the preparation of environmental impact statements required under NEPA is designed to set forth information concerning the environmental consequences of proposed Federal actions, the alternatives to such actions,

and other related factors. The purpose of gathering this information is to lay a foundation for a balancing by the Agency. This balancing is intended to affect Federal decision-making to assure that environmental considerations be given appropriate weight.

"In other words, environmental impact statements are not merely sterile academic exercises; they are intended to—and they do—have an actual substantive effect on Federal agencies' decisions.

"Where Congress has specifically directed the factors to be considered in establishing environmental protective regulations, the Federal action often will be quite different from a decision which would result from balancing the broader range of values covered by NEPA. For these reasons, application of NEPA to our regulatory programs would pose a difficult dilemma. We cannot speculate what directives might be given to EPA by a court if it concluded that NEPA does apply to our environmental regulatory activities. As indicated above, we believe that the specific statutes governing our environmental regulatory programs are at least to some extent inconsistent with the provisions of NEPA. Therefore, if a court concludes that we are subject to NEPA it quite logically might also go on to direct that we disregard certain limitations imposed by our basic statutes. This in turn might require us to issue standards at levels either more stringent or less stringent than those called for by our basic statutes."

Citations on NEPA–EPA Questions

1. *Getty Oil Company* v. *Ruckelshaus* (3rd Circuit—September 12, 1972).

"It's apparent that the Clean Air Act itself contains sufficient provisions for the achievement of those goals sought to be attained by NEPA."

2. *International Harvester* v. *Ruckelshaus* (D.C. Circuit February 10, 1973).

"Although we do not reach the question whether EPA is automatically and completely exempt from NEPA, we see little need in requiring a NEPA statement from an agency whose raison d'etre is the protection of the environment and whose decision on suspension is necessarily infused with the environmental considerations so pertinent to Congress in designing the statutory framework. To require a "statement" in addition to a decision setting forth the same consideration, would be a legalism carried to the extreme."

3. *Appalachian Power* v. *EPA* (4th Circuit April 11, 1973).

"We are convinced that while NEPA applies to "all agencies of the Federal government" and requires an impact statement for every major Federal action "significantly affecting the quality of the human environment," it is inapplicable to the action of the Administrator in seeking, through the approval of State implementation plans, to improve "the quality of human environment." (The court also cited Getty Oil 467 F.2d 359)

4. *Duquesne Light Co.* v *EPA* (3rd Circuit June 5, 1973).

"Presented with the square holding of the 4th Circuit (Appalachian Power case), and the logically appeal pronouncements of this court, the District of Columbia Circuit Court and the District Court in Delaware, we hold that, in approving the State implementation plans, the Administrator is not required to meet the impact statement requirements of the NEPA—certainly in the context of this case."

5. *Anaconda* v. *Ruckelshaus* (10th Circuit August 8, 1973).

"The important point here is that the EPA's sole mission is to improve the quality of the human environment. To compel the filing of impact statements could only serve to frustrate the accomplishment of the Act's objectives. Moreover the legislative history which is developed in *Portland Cement Association* v. *Ruckelshaus* (D.C. Circuit June 29, 1973), clearly establishes that such a statement was not contemplated by Congress." Furthermore, no Court of Appeals has held that such an impact statement is necessary and the several decisions which have considered it have ruled that it is not. See *Appalachian Power* v. *EPA* 477 F. 2d 495, 4th Circuit April 11, 1973; *Duquesne Light Co.* v. *EPA* 3rd Circuit June 5, 1973; *Buckeye Power, Inc.* v. *EPA* 6th Circuit June 28, 1973; *International Harvester* v. *Ruckelshaus* (D.C. Circuit February 10, 1973).

6. *Essex Chemical Corporation* v. *Ruckelshaus* (D.C. Circuit September 10, 1973).

This case quotes the Portland Cement case and continues the view that the regulatory functions of EPA under the Clean Air Act, in this case the new source

performance standards under section 111, do not require environmental impact statements under NEPA. The court in Essex Chemical quoted the court decision in Portland Cement. "What is decisive, ultimately, is the reality that, section 111 of the Clean Air Act, properly construed, requires the functional equivalent of a NEPA impact statement."

I do not have copies of the Portland Cement case cited above or another case, *Buckeye Power, Inc.* v. *EPA* (6th Circuit, June 28, 1973). Both cases support the same concept.

Legislative History of NEPA

It was clearly intended, at the time Congress enacted NEPA, that environmental regulatory agencies such as those authorized by FWPCA and the Clean Air Act would not be subject to NEPA's provisions.

The debate in the Senate and the House at the time of approval of the Conference Report on NEPA is abundantly clear.

In a summary of major changes adopted by the Conference Committee which Senator Jackson (primary sponsor and floor manager of NEPA) included in the Record, the following statement appears:

"Many existing agencies such as the National Park Service, the Federal Water Pollution Control Administration, and the National Air Pollution Control Administration already have important responsibilities in the area of environmental control. The provisions of section 102 (as well as 103) are not designed to result in any change in the manner in which they carry out their environmental protection authority."

"It is not the intent of the Senate conferees that the review required by section 103 would require existing environmental control agencies such as the Federal Water Pollution Control Administration and National Air Pollution Control Administration to review their statutory authority and regulatory policies which are related to maintaining and enhancing the quality of the environment. This section is aimed at those agencies which have little or no authority to consider environmental values." (S. 17458—12–20–69)

Senator Muskie made the following statement as regards Senator Jackson's explanation:

"It is clear then, and this is the clear understanding of the Senator from Washington and his colleagues, and those of us who serve on the Public Works Committee, that the agencies having authority in the environmental improvement field will continue to operate under their legislative mandate as previously established. and that those legislative mandates are not changed in any way by Section 102–5." (p. 17458—12–20–69)

Also, in a colloquy with Senator Boggs, Senator Muskie extended his comments on the understanding of the Senate as regards the relationship between FWPCA and NEPA:

"Mr. Boggs. Am I correct that the thrust of the direction contained in S. 1075 deals with what we might call the environmental impact agencies rather than the environmental enhancement agencies, such as the Federal Water Pollution Control Administration or National Air Pollution Control Administration.

"Mr. Muskie. Yes. Sections 102 and 103, and I think Section 105, contain language designed by the Senate Committee on Interior and Insular Affairs to apply strong pressures on those agencies that have an impact on the environment—the Bureau of Public Roads, for example, the Atomic Energy Commission, and others. This strong language in that section is intended to bring pressure on those

agencies to become environment conscious, to bring pressure upon them to respond to the needs of environmental quality, to bring pressure upon them to develop legislation to deal with those cases where their legislative authority does not enable them to respond to these values effectively, and to reorient them toward a consciousness of and sensitivity to the environment.

Of course this legislation does not impose a responsibility or an obligation on those environmental-impact agencies to make final decisions with respect to the nature and extent of the environmental impact of their activities. Rather than performing self-policing functions, I understand that the nature and extent of environmental impact will be determined by the environmental control agencies.

With regard to the environmental improvement agencies such as the Federal Water Improvement Administration and the Air Quality Administration, it is clearly understood that those agencies will operate on the basis of the legislative charter that has been created and is not modified in any way by S. 1075." (S. 17460—12-20-69)

Finally during consideration of the NEPA Conference Report in the House of Representatives, the following exchange between Representative George Fallon and House floor manager Representative John Dingell appears:

"What would be the effect of this legislation on the Federal Water Pollution Control Agency?

Answer: Many existing agencies such as the Federal Water Pollution Control Agency already have important responsibilities in the area of environment control. The provisions of Sections 102 and 103 are not designed to result in any change in the manner in which they carry out their environmental protection authority. This provision is primarily designed to assure consideration of environmental matters by agencies in their planning and decision-making—but most especially those agencies who now have little or no legislative authority to take environmental considerations into account. (H. 13093—12-23-69)

SENATOR RANDOLPH ADVOCATES A RECONCILIATION OF ENVIRONMENTAL AND ENERGY POLICIES

Mr. Randolph. Mr. President, I hope that we can have a prompt and a reasoned discussion on the important matters that are contained in this action, finalized by the Public Works Committee yesterday.

Senator Jackson has informed me that there is no problem in the Interior and Insular Affairs Committee in reference to the Public Works Committee's action on this legislation today. There also will be an opportunity, of course, for the Senator from Washington (Mr. Jackson) or others of that committee, to discuss the matters in which they may be concerned.

The proposed committee substitute for the House-passed version of the Energy Supply and Environmental Coordination Act of 1974 is concerned with matters—and I emphasize this—matters that have previously been considered by the Senate.

For the most part, what we are doing here is amending the Clean Air Act to provide that statute with additional flexibility to adjust to the realities of uncertain and inadequate energy supplies and with adjustments in the schedule for meeting Federal automobile emission standards.

All of these items have been carefully considered in the past by the Committee on Public Works. We held extensive hearings last year and participated actively in the conference on the Emergency Energy Act which included the subject matter that will be discussed today.

Mr. President, the measure before us now originally was title II of S. 3267, the Standby Energy Emergency Authorities Act, which has been discussed in recent days in this body. Members of our committee

and others also have discussed the matters as part of the broader proposal presented by the Interior and Insular Affairs Committee.

Title II of that measure was deleted from the bill reported by the Committee on Interior and Insular Affairs. Since most of its provisions fall within the jurisdiction of the Committee on Public Works, we once again reviewed them in the context of the events of recent months.

During this period, members of our committee conferred with our colleagues in the House of Representatives, and it was agreed that the other body would act first on this legislation. The House did act and passed H.R. 14368 on May 1, 1974. The Committee on Public Works then met and approved the substitute version which, as I have indicated, is now before the Senate for consideration.

One of the problems that we have dealt with in this legislation, which is of great importance, is our efforts to be realistic in meeting problems imposed by inadequate and uncertain fuel supplies.

We recall, Mr. President, that last year during the energy crisis, particularly last winter, a number of electric generating plants were permitted to switch temporarily from the use of oil to coal.

The legislation we have in the Senate today clarifies and revises the legal basis for this coal conversion so that the Federal Energy Administrator can mandate this step, in appropriate cases, to provide substantial relief from the unavailability of short supplies of clean fuels. **[Sec. 8, Sec. 2(a) ESECA.]**

I turn aside at this moment to note that one firm, a utility company in New England, had purchased $20 million worth of coal, some 500,000 tons of coal, for use in its reconversion process. Waivers had been granted by the State of Massachusetts to permit this action. Then the Federal Environmental Protection Agency, acting, I am sure, on their interpretation, of the Clean Air Act found that the reconversion could not move forward, even for a temporary period of time.

Therefore, we provide in this legislation, for electric utilities and other major fuel-burning facilities to continue to burn coal after June 1975, when the present regulations, under the Clean Air Act, Mr. President, might prevent the necessary—and I use the word advisedly—burning of coal. My amendment contains language temporarily postponing compliance with certain standards of reduction of automobile emissions. These provisions are identical to those earlier approval—I want to emphasize "those earlier approved"—by the Senate and House conferees, and later ratified by the Senate itself.

This legislation clarifies and revises the legal basis for coal conversion so that the Federal Energy Administrator can mandate this step in appropriate cases to provide substantial relief from short supplies of the clean fuels. It provides authority to continue burning coal after June of 1975, when regulations under the Clean Air Act as it presently stands might prevent the necessary burning of coal.

The amendment also contains language temporarily postponing compliance with certain standards for the reduction of automobile emission standards. These provisions are identical to those earlier approved by a Senate-House conference and ratified by this body. **[Sec. 4, Sec. 202(b) CAA.]**

Mr. President, although the energy crisis has been temporarily alleviated, it is not over. Continuing energy shortages and the real prospect of future crisis are now part of our way of life.

The provisions of the legislation before the Senate are part of an arsenal that is being accumulated to help us react responsibly to present and potential energy supply situations. This measure must be passed so that we can meet without delay in conference with the House of Representatives to bring it to final action.

I hope that the Senate will act promptly and affirmatively so that we can go on to the next step in meeting the challenge imposed by the energy crisis.

Mr. President, since enactment of the Air Quality Act of 1967 and the Clean Air Amendments of 1970, the American people have not done well in finding a suitable, or equitable, balance between energy and the environment. I emphasize, energy and environment. For it seems that the advocates of both energy and the environment have adopted a national posture of one versus the other, to the substantial disadvantage of domestic energy supplies.

At stake now is the adequacy of the commitment by the Congress, by government, by industry, and by the American people toward simultaneous achievement of national environmental and energy goals. For we must assure that both these goals are not jeopardized.

Rather, we must achieve a reconciliation between the extreme positions of environmental advocates and the proponents of unconstrained energy consumption. For an equilibrium must be reached between the three forces of economic, social, and environmental interests.

The challenge is there, Mr. President, the question is one of national acceptance and a solid commitment by the American people toward meeting our country's social and energy policies consistent with a concurrent national commitment to environmental policies. The goal attendent to each of these policies can be achieved if the approachment of our national capability to their solutions is reasonable and not fanatical.

As a result of the recent oil embargo, the Congress and the American people are now faced with the formulation of national energy and environmental policies to insure sufficient domestic energy supplies to meet our country's long-term economic requirement—consistent with Federal and State long-term environmental goals.

Mr. President, the legislation under consideration today represents an initial attempt at a reconciliation between energy and environmental policies. The proposed amendments to the Clean Air Act were originally written last December by Senate and House conferees on S. 2589, the Emergency Energy Act of 1973. The legislation under consideration today, H.R. 14368, the Energy Supply and Environmental Coordination Act of 1974, represents a refinement on the earlier measure. Nevertheless, it must not be viewed as a final answer to our present need for a reconciliation of environmental and energy policies. Rather, H.R. 14368 must be viewed as a first attempt toward finding the equilibrium position between long-term economic, social, and environmental concerns—of which I spoke earlier.

Substantial increases in coal utilization will be required as part of the many faceted solution to our country's energy problem. The challenge will be to carry it out in an environmentally responsible manner at acceptable costs to the producer and consumer.

This legislation reaffirms that compliance with the primary ambient air quality standards advocated in the Clean Air Act is a basic environmental goal. While temporary variances in emissions standards will be necessary in some instances, handling these on a case-by-case basis rather than through blanket exceptions will allow the necessary consideration in arriving at decisions which are fair to the utilities concerned and at the same time provide maximum protection to air quality.

In 1967, when the Committee on Public Works formulated the Air Quality Act, we knew the full implications of the policies we were enacting would be difficult to predict. Later, in 1970 we knew the Clean Air Amendments represented perhaps the most significant economic policy to be enacted in the interest of promoting environmental quality.

The premises on which this legislation was formulated are still valid. And in formulating the Energy Supply and Environmental Coordination Act of 1974 every attention was devoted to assure the basic integrity of present Federal and State programs are not undermined because of an overreaction to the energy crisis facing our country.

It would be a mistake to view these amendments to the Clean Air Act as a retreat from our earlier commitment to clean air. Rather, they are a realistic short-term response to the current energy situation and a need to provide for coal reconversion in this legislation.

The extensions are simply temporary actions to deal with the next 5 years. As such this measure provides Federal and State government with realistic tools to cope with environmental-energy issues attendant to coal conversion.

The legislation authorizes the Federal Energy Administrator to direct the conversion of electric utilities and major industrial facilities with the capability to use coal to discontinue their use of natural gas or oil. **[Sec. 8, Sec. 2 ESECA.]** In order to facilitate these reconversions a 1-year exemption is provided from the requirements of the National Environmental Policy Act for an environmental impact statement. **[Sec. 6, Sec. 7 ESECA.]**

There then remains the need to provide a mechanism for addressing the issues attendant to present Federal and State air pollution control standards.

PRESENT EPA AUTHORITY

An examination of the present authority of the Environmental Protection Agency to resolve energy related problems leads to the following conclusions:

First, presently EPA can grant short-term variances at the request of a State. The legislation would provide the EPA with authority to grant such variances on its own motion. **[Sec. 2, Sec. 119(a)(2) CAA.]**

Second, in the recent Fifth Circuit Court of Appeals decision in Natural Resources Defense Council against EPA, the court held that the only procedure available for granting variances pursuant to the Clean Air Act is section 110(f). This bill would clarify EPA's authority for permitting fuel variances in the fifth circuit.

Third, although this is not necessarily the case, the EPA believes that its authority is largely restricted in granting variances to the terms submitted by a State. The legislation would clarify the EPA's

authority to impose interim requirements that both protect air quality and insure appropriate efforts are taken to secure continuous emission control systems or conforming fuels.

Fourth, although the Administration assumes it has authority to allow coal conversions in the furtherance of Project Independence, EPA cannot permit noncompliance with emission limitations or other terms of State implementation plans beyond statutory deadlines. The legislation would enable the EPA to allow short-term and intermediate-term conversions from oil to coal in many situations which might not qualify under present law.

Fifth, the EPA also is provided with complementary authority to allocate low-sulfur energy supplies to critical areas and sources in order to minimize adverse impacts on public health or welfare. **[Sec. 2, Sec. 119(f) CAA.]**

This legislation would provide a mechanism for providing temporary variances from applicable emission standards on a case-by-case basis rather than through blanket exceptions without provision for maximum protection of ambient air quality.

CLEAN AIR PROVISIONS

The clean air provisions incorporated in this legislation reflect a carefully thought out approach to reconciling the proached and a concomitant need for a greater reliance on coal if energy self-sufficiency is to be successfully approached and a concomitant need for protection of the long-term integrity of environmental protection programs. The measure under debate incorporates several minor modifications in the language of the House passed clean air provisions as well as the coal conversion provisions.

The intent is to provide a mechanism for the reconversion to coal of the few major energy facilities which now have the capability to use coal but are using natural gas and oil. Later, the Congress will examine the issues attendant both to requiring existing energy facilities to possess a dual fuel capability, including a coal burning capability. Now is not an appropriate time.

Mr. President, this legislation concerns itself with variances for the short-term appropriately termed phase 1 for an intermediate period, phase 2, and for a longer term situation, phase 3. The first phase authorizes temporary variances until June 30, 1975, to permit conversions from oil and natural gas to nonconforming coal in the face of immediate and short-term energy supply problems such as occurred both during the winter of 1972 to 1973 and during the OPEC embargo last winter. **[Sec. 2, Sec. 119 CAA.]**

Similar suspensions are available under H.R. 14368 for an intermediate term until January 1, 1979, with a potential additional 1-year extension, for those facilities which convert to coal on modified compliance schedules to achieve applicable clean air standards by 1979. **[Sec. 119(b) CAA.]**

This second phase provides for modification of State air quality implementation plans so that reconversions to coal may continue for a longer time. Under these provisions, a limited number of installations will be able to elect to continue to use noncomplying fuels beyond June 30, 1975. **[Sec. 119(b) CAA.]**

63-518—76—vol. 1——26

In order to be eligible for this extension, emissions from the converted source cannot cause or contribute to ambient air quality levels in excess of national primary—or health related—ambient air quality standards conversions cannot take place in regions where the primary ambient air quality standards are presently being exceeded. **[Sec. 119(b)(2)(A) CAA.]**

Moreover, the new compliance schedule must mandate steady progress toward compliance with present emission limits which must be achieved not later than January 1, 1979. **[Sec. 119(b)(2)(C) CAA.]**

The modified air pollution control schedule must include dates by which the installation's owners must either enter into long-term contracts for low-sulfur coal or the necessary emission reduction systems to achieve compliance with applicable air pollution control standards.

EXTENSION OF MOTOR VEHICLE EMISSION STANDARDS

Transportation is a necessary service, and it is provided under an extensive system of Government regulations, often heavily subsidized by public funds. In many American cities, a pattern of decisions at all levels of Government has shaped a diffuse and auto-dependent transportation network. This network itself is often as much a source of air pollution and energy waste as the emissions from the individual automobiles themselves.

Actions at all levels of government will be required to change this. In the future, State and local governments will have to insure total transportation systems that are developed and operated so as to be consistent with environmental policies.

To date, principal air pollution control strategy has been federally established uniform automobile emission standards. Present emission control requirements stem from the Clean Air Amendments of 1970. In the interim period, however, it has become apparent that additional time is warranted for achievement.

In December 1973, the Senate passed S. 2772, a bill extending for an additional year the emission standards applicable to 1975 model automobiles. This action resulted from extensive study by the Committee on Public Works on the total question of motor vehicle pollution and the requirements for reducing it. The committee felt that this was the only change in the program that was warranted at that time.

On May 1, 1974, the House of Representatives passed H.R. 14368, containing similar provisions modeled on the earlier conference action on S. 2589, which was vetoed by the President.

This legislation provides for a 1-year extension of the 1975 emission standards for hydrocarbons and carbon monoxide and gives the Administrator of the Environmental Protection Agency the authority to grant another 1-year extension. **[Sec. 4, Sec. 202(b)(1)(A) CAA.]**

In addition, H.R. 14368 provides emission standards for oxides of nitrogen at 2 grams per mile in model year 1977, without any further extension of the statutory standards. **[Sec. 4, Sec. 202(b)(1)(B) CAA.]**

This measure does not represent a final decision by the Committee on Public Works on the appropriate standard for oxides of nitrogen or on the technology for control of automobile emissions, and their implication. Rather, the committee is simply taking necessary action to

give certainty to Detroit in its production for model years 1975 and 1976.

Mr. President, I should like to call on the Senator from Tennessee (Mr. Baker), on this particular for an explanation of the legislations as it affects the automobile companies. We are really working, in a sense, after the fact.

Mr. BAKER. The distinguished chairman is entirely correct. As a matter of fact, as he called my attention to this matter, I was in a conversation with the distinguished junior Senator from Michigan (Mr. Griffin), who was pointing out that we are in the untenable position of having forced the automobile industry into a situation where they soon will be technically in violation of the law because of our failure to date to amend the statute.

I think it is absolutely imperative from a moral standpoint, that we have an undoubted responsibility to attend to changes in the requirements of the law on automobile emissions, if for no other reason than to assure that we are being fair and square with the largest industry in the United States, the automobile industry.

We ought to keep in mind that we are not weakening the requirements of the environmental standards. We are maintaining and in some cases stiffening the requirements and are seeing to it that they are steadfastly adhered to in the automobile manufacturing industry.

The law now requires the automobile industry to devise environmental control systems. In effect they are saying to us: "You have made us do this and have caused us to spend upward of $1 billion, according to some estimates, to comply with the requirements, but you are not amending the law to permit us to come into compliance with the statutory requirements. You are requiring us to be in compliance with an extremely, stringent standard, one that we thought would be changed by now, and to go on with this business."

Our distinguished chairman, as usual, is absolutely right. We have not only a legal, but also a moral, obligation to get on with the business of making compliance with the standards a possibility.

It is my personal hope that we will act today and that the Senate will pass this bill today. I hope, then, that some staff lawyer in the automobile industry will report to his superiors that their company is no longer in legal jeopardy with respect to the emission standards.

Mr. RANDOLPH. Mr. President, I appreciate the opportunity to have had this colloquy and of raising this point with the able Senator from Tennessee (Mr. Baker).

OPEC OIL EMBARGO

The United States only option is our long-term interest in energy self-sufficiency. This entails a greater development of nuclear electric power and more importantly a significantly increased reliance on domestic coal resources beyond levels previously considered achievable.

Before the OPEC oil embargo last year our country's ad hoc energy policy was synonymous with an imported oil policy. Despite the effects of the embargo which dramatized the desirability for energy self-sufficiency, we are now returning to the earlier posture of looking to the Middle East for new energy supplies. Under current

projections by 1980 almost 50 percent, one-half of our oil supplies, would be coming from the Middle East.

Yet, recent events have demonstrated the fallacy of this proposed dependence on the Middle East—even from a short-term perspective. Yet, as a Nation, we are not taking the necessary steps to assure alternate domestic supplies. One such possibility is reconversion of electric powerplants and major industrial users of imported oil back to domestic coal supplies.

The primary lesson that is to be learned from the oil embargo is that air pollution control strategies that depend primarily on fuel-switching to foreign sources of low-sulfur oil are—as declared by Senator Baker on February 19, 1974, in this Chamber—"neither environmentally safe nor politically prudent." Quoting further from the remarks of my colleague from Tennessee, who is the ranking minority member from the Committee on Public Works, he observed:

> During the past several years, several air quality regions have depended heavily upon foreign low-sulfur oil to avoid serious air quality problems. It is ironic and tragic that these communities which had most rapidly moved to meet air standards in response to urgent health problems are now confronted by the ineffectiveness of their strategy.

Returning to a greater reliance on the utilization of domestic coal supplies is unlikely to expedite the achievement of environmental goals that go beyond the protection of public health to the protection of broader societal concerns such as welfare. However, as recent events exhibit, the goal of energy self-sufficiency also will lead our country to more reliable clean air programs.

COAL RECONVERSION

In response to the Arab oil embargo, the U.S. utility industries were encouraged by the Federal Government to convert some of their facilities from oil to domestic supplies of coal. As of the end of February, some 22 units at 11 locations on the east coast had responded and made such conversions. The resultant savings in February alone were 53,140 barrels of residual oil per day. And the estimated oil savings for March were slightly higher, 67,980 barrels per day.

These conversions were undertaken by utility executives in response to a special message by President Nixon and encouragement by then Federal Energy Office Administrator William E. Simon when our country was faced with a national energy emergency. Such conversions also were supported by the Congress.

However, there are indications that this program is now jeopardized. On April 24, 1974, Carl E. Bagge, president of the National Coal Association, sent a telegram to President Nixon urging a reaffirmation of the administration's support for coal reconversion, declaring:

> The virtual elimination of this program would also constitute a serious breach of faith with the coal industry. At the request of former FEO Administrator Simon and in agreements signed with the Cost of Living Council earlier this year, major coal producers agreed to invest in equipment needed to expand production so that the fuel requirements of the converted powerplants could be met. Yet now they face the prospect of having the coal but not the markets.

Encouraged by the Federal Government and the promise of appropriate legislation, some 22 units at 11 powerplants on the east coast had converted to coal by the end of February. The resultant savings

in February were 53,140 barrels per day of residual fuel oil or 13,280 tons per day of coal. For March, the estimated savings were slightly higher—67,980 barrels per day of oil or 16,996 tons per day of coal.

Another 15 electric powerplants with a total of 33 units have indicated they can and are willing to convert provided environmental, technical, transportation, and supply problems are solved. This second category represents a further savings of 113,991 barrels per day of oil or 28,498 tons per day of coal.

Yet on April 10, former Federal Energy Office Administrator William Simon testified before the House Government Operations Committee that because the air quality variances for all of these facilities—22 units—would expire by May 15, they would have to be reconverted back to oil.

In summary, the utility industry responded in good faith to the President's encouragement to convert to coal on either a short-term or long-term basis. Now even where a utility desires to remain on coal, reconversion to oil may be required. In short, the domestic coal industry responded to a national energy crisis but now that the crisis is over we are returning to oil ways—imported oil.

This legislation, however, enables those facilities which have access to coal supplies that do not cause or contribute to concentrations of air pollution in excess of national primary ambient air quality standards, to remain on coal subject to a commitment to meet applicable emission standards by January 1, 1979.

FEASIBILITY OF INCREASED COAL PRODUCTION

The National Coal Association estimated that the industry could produce an additional 50 million tons of coal over and above their earlier expectations for coal supply in 1974. The prediction was based on a number of assumptions. Among these were labor stability, effective enforcement of Federal and State mine, health and safety laws "without harassment or unnecessary mine closings" by inspectors, continued surface mining "with effective reclamation," adequate coal transportation, "use of present machinery and manpower without considering costs" and exemption from Federal price controls.

More recent information from the Federal Energy Office indicates that the demand for coal from expected reconversions would be less than the National Coal Association's estimate of 50 million additional tons of production capacity. Nevertheless, the association's statement points up the many problem areas affecting coal supplies which must be considered in evaluating the feasibility for a greater emphasis on coal conversion.

ENVIRONMENTAL IMPLICATIONS OF COAL CONVERSION

At the request of the Federal Energy Office, the Environmental Protection Agency conducted preliminary analyses of 37 identified electric powerplants which might be required to burn coal instead of oil. Although more detailed considerations are needed, as discussed in the March 1, 1974, EPA staff report; I quote:

> In many of the situations studied, the environmental suitability of conversions to coal is heavily time-dependent. It depends on the effectiveness (or existence) of emission control systems at the time of conversion.

In a number of the plants studied, the electrostatic precipitators have been allowed to deteriorate because there was not requirement for good operation once the unit was converted to oil. The collection efficiency for coal can only be approximated. Some utilities guess as low as 50 percent to 70 percent and one assumes nearly 0 percent because of the condition of the equipment. If coal were to be burned in such units before work could be done on the equipment, heavy emissions of particulate matter could be expected.

The time and feasibility of repair become important factors in assessing the environmental aspects of conversion. The units would, in many cases, have to be shut down during repair and maintenances and, since units burning coal are generally planned for base-loading, the shut-downs would have to be carefully scheduled. Estimates of time of repair range from a week or two to as high as 18 months.

Estimates of the feasibility of retrofit and the time required to install flue-gas desulfurization indicate that, in nearly all the plants studied, sulfur dioxide emissions would remain unchecked for much longer periods, and some cases for the life of the unit because of the infeasibility of installing such equipment.

The EPA staff report then adds the comment:

It should be noted that many powerplants would be environmentally suitable for coal-burning if the installation of good emission control systems preceded the use of coal.

Particular note should be made of the fact that reliable estimates of the quality of the coal that would be used in reconverted units was not available. However, as noted in the EPA staff report:

A clearer picture of the available coal and its quality will emerge before decisions are made and assessment of the environmental aspects of these conversions can be developed on more valid bases.

The EPA staff report then recommends:

Before any (final) decisions are reached, the range of possibilities should be discussed and the conversions and fuel qualities most responsive to both the supply of fuels and the environmental considerations selected.

Nevertheless, Mr. President, it was possible for the EPA staff to conduct preliminary analyses on the basis of carefully selected assumptions which are described in this excerpt from its report, that I request appear in the Record at this point in my remarks.

Data used in the modeling effort to define plant characteristics include: stack height, stack diameter, stack temperature and gas volume when the associated boilers are operating at full load, design fuel consumption for each boiler, and the excess air used. In most cases these data are the latest available from the Federal Power Commission Form 67, as reported by the power companies. When available updated are obtained from state and local pollution control agencies or from the plants themselves.

The fuel quality (percent sulfur, percent ash, and heat content) of fuels currently being burned is obtained from the FPC data. These parameters for the coal which the plant might be required to burn are estimated from data on current and projected supplies. For existing pollution control devices within each plant, a control efficiency is assumed considering design and test data, recent history of use and estimations from local agencies and the power companies. It is recognized that an electrostatic precipitator which has not been in use, or has been used in conjunction with an oil-fired boiler, will operate at an efficiency significantly less than the design efficiency. In many cases, two years or more may be required before maximum efficiency can be achieved.

Standard EPA methods are used to relate quantities of fuels burned and the resulting pollutants emitted. (Reference: "Compilation of Air Pollutant Emission Factors," U.S. Environmental Protection Agency publication No. AP–42, revised April, 1973.)

Mr. President, I also ask unanimous consent that there be printed in the Record at this point two tables which summarize the results of

these preliminary evaluations by the Environmental Protection Agency.

There being no objection, the tables were ordered to be printed in the Record, as follows:

CONVERSIONS TO RESPOND TO RESIDUAL OIL SHORTAGES WITHOUT SIGNIFICANT VIOLATIONS OF PRIMARY AMBIENT AIR QUALITY STANDARDS

Plant name, location	Urged to convert to coal in FEO telegram (26 plants)	EPA region	Units for conversion	Estimated oil savings (barrels/day)	Comments
Crystal River, Red Level, Fla.	No	IV	1	9,425	Measured air quality, modelling predictions low population impact and lack of other major sources in the area all make this plant a good candidate for short-term conversion. The particulate matter collection equipment should be put into good operation before conversion if possible.
			2	12,186	
Morgantown, Newburg, Md.	Yes	III	1	11,500	A good candidate for short-term conversion—no known air quality problems in impact area, good dispersion, good particulate matter collection, and no other large sources in area.
			2	11,500	
Chalk Point, Aquasco, Md.	No	III	1	[1] 2,500	A good candidate for short-term conversion—good particulate control, measured air quality acceptable, area thinly populated, no other large sources in area.
			2	[1] 2,500	
Sutton, Wilmington, N.C.	Yes	IV	1, 2	[1] 5,672	A good candidate for short-term conversion—no known air quality problems, dispersion appears good from the tall stacks, the short stacks may cause some problems, but they are not expected to be severe or frequent.
			3	[1] 3,539	
McManus, Brunswick, Ga.	Yes	IV	1, 2	7,890	A good candidate for short-term conversion—low population exposure, modelling predictions; some possible problems with TSP, but should not be severe.
England, Beesleys Point, N.J.	Yes	II	1, 2	[1] 9,920	A good candidate for short-term conversion—low population exposure, good air quality, modelling predictions, and no other major nearby sources.
Mt. Tom, Holyoke, Mass.	Yes	I	1	[1] 4,700	A good candidate for short-term conversion—good air quality, and low population exposure.
Danskammer, Rosetown, N.Y.	No	II	1	1,900	Tentative—A good candidate for short-term conversion—low population exposure, plus reasonably good air quality. No study of this plant has been requested by FEO.
			2	2,000	
			3	4,000	
			4	6,300	
Middletown, Middletown, Conn.	Yes	I	1	[1] 1,750	A good candidate for short-term conversion—low population exposure, and good air quality.
			2	[1] 3,540	
Montville, Montville, Conn.	Yes	I	1	110	A fair candidate for short-term conversion—major impact area has low population exposure and fairly good air quality; some possible problems in pollutant chanelling to nearby towns.
			2	85	
Salem Harbor, Salem, Mass.	No	I	1	[1] 1,200	A fair candidate for short-term conversion—modelling predictions fairly good air quality (AQ impact from plant less severe in winter than remainder of year).
			2	[1] 2,600	
			3	[1] 5,000	
Brayton Point, Fall River, Mass.	No	I	3	22,000	A fair candidate for short-term conversion—good dispersion, good particulate control, and fairly good air quality.
Chesterfield, Chester, Va.	Yes	III	6	12,300	A fair candidate for short-term coal conversion—good dispersion, good particulate control, and low density area.
Deepwater, Pennsgrove, N.J.	Yes	II	1	[1] 2,680	A marginal candidate for short-term conversion—marginal air quality, dense area.
			8	[1] 2,360	
Lovett, Tompkins Cove, N.Y.	Yes	II	4	[1] 3,630	A marginal candidate for short-term conversion—low population exposure; however, poor dispersion.
			5	[1] 4,150	
Schiller, Portsmouth, N.H.	Yes	I	4	1,000	A marginal candidate for short-term conversion—possible TSP problem.
			5	1,000	

CONVERSIONS TO RESPOND TO RESIDUAL OIL SHORTAGES WITHOUT SIGNIFICANT VIOLATIONS OF PRIMARY AMBIENT AIR QUALITY STANDARDS—Continued

Plant name, location	Urged to convert to coal in FEO telegram (26 plants)	EPA region	Units for conversion	Estimated oil savings (barrels/day)	Comments
Burlington, Burlington, N.Y.	Yes	II	5	[1] 2,500	A marginal candidate for short-term conversion—marginal air quality, dense impact area, and multiple industrial sources.
			6	[1] 2,500	
Far Rockaway, Far Rockaway, N.Y.	No	II	1	3,050	A marginal candidate for short-term conversion—marginal air quality, reasonable dispersion.
Bergen	Yes	II	1	[1] 5,000	A marginal candidate for short-term conversion—marginal air quality, dense impact area, fairly good dispersion.
			2	[1] 5,000	
Total				176,987	

PLANTS CONSIDERED TO BE NOT ENVIRONMENTALLY ACCEPTABLE FOR SHORT TERM CONVERSIONS

Arthur Kill, Staten Island, N.Y.	No	II	30	12,400	Poor candidate for short-term conversion—poor air quality area.
Ravenswood, Queens, N.Y.	No	II	3N, 3S	25,600	Do.
Barrett, Island Park, N.Y.	Yes	II	1–2	9,300	Poor candidate for short-term conversion—marginal air quality, poor particulate control.
Albany, Albany, N.Y.	Yes	II	1–2–3–4	11,500	Poor candidate for short-term conversion—modelling predictions, poor particulate collection, terrain problems.
Gilbert, Milford, N.J.	Yes	II	1–2–3	2,610	Poor candidate for short-term conversion—modelling prediction, constrictive terrain.
Sayreville, Sayreville, N.J.	No	II	7–8	8,820	Poor candidate for short-term conversion—poor particulate control, poor air quality air quality area, dense population in impact area.
Barbados, West Morristown, Pa.	Yes	III	31	2,600	Poor candidate for short-term conversion—poor air quality area, industrial location, dense population in impact area, limiting terrain.
			41	2,600	
Cromby, Phoenixville, Pa.	No	III	2	6,800	Poor candidate for short-term conversion—short stacks, very hilly region large contribution to SO_2 concentrations, uncertain precipitator efficiency.
Edge Moore, Wilmington, Del.	No	III	1	1,743	Poor candidate for short-term conversion—poor particulate control, dense impact area, poor air quality.
			2	1,621	
			3	2,113	
			4	3,903	
Possum Point, Dunfries, Va.	Yes	III	1	1,940	Poor candidate for short-term conversion—poor particulate control, modeling predictions, poor disperson.
			2	1,940	
			3	3,200	
			4	6,720	
Vienna, Vienna, Md.	Yes	III	5	800	Poor candidate for short-term conversion—poor particulate control, modeling predictions.
			6	800	
			7	1,700	
Mason, Wiscasset, Maine	Yes	I	3	1,302	Poor candidate for short-term conversion—poor dispersion, modeling predictions of high SO_2 TSP concentrations.
			4	1,285	
Devon, Milford, Conn.	Yes	I	7, 8	7,534	Poor candidate for short-term conversion—poor air quality, probable high SO_2 impact.
Norwalk Harbor, Norwalk, Conn.	Yes	I	1, 2	4,500	Poor candidate for short-term conversion—poor air quality, dense impact area.
West Springfield, Springfield, Mass.	Yes	I	1, 2, 3	1,200	Poor candidate for short-term conversion—marginal air quality, disperson problems.
South Meadow, Hartford, Conn.	Yes	I	6, 7, 8	2,679	Poor candidate for short-term conversion—dense impact area, marginal air quality, poor particulate control equipment.
Somerset, Fall River, Mass.	No	I	1, 2, 3, 4, 5, 6	11,000	Poor candidate for short-term conversion—poor dispersion capability, poor particulate control, proximity to Brayton Point.
South Street St., Providence, R.I.	Yes	I	[1] 121	1,275	Poor candidate for short-term conversion—poor air quality, high density impact area, poor particulate control; since conversion to coal, substantial plume opacity problems and high coal readings of TSP and SO_2.
			[1] 122	774	
Total				146,680	

[1] These units converted to coal.

Mr. RANDOLPH. In summary, of the 37 plants and locations EPA studied, significant violations of the primary standard for either sulfur dioxide or particulates—and in some cases both—are possible in 18 of the situations. The EPA, however, was not able to qualify the degree of health endangerment in relation to the magnitude of the violation.

OTHER CLEAN AIR ENERGY POLICY ISSUES

Nevertheless, Mr. President, a number of other environmentally related energy policy issues remain. Our national objective is successful achievement of equitable energy and environmental goals. This will require the cooperation of and leadership from the electric utility industry.

What is clear, Mr. President, is that a concerted effort by the electric utility industry, by government, and by concerned environmental advocates is essential if we are to solve the complex interrelationships between clean air, available fuel supplies, energy demand and adequate and reliable supplies of electric power.

The overriding concern is how to direct the national capability that exists for air pollution control so that it initially achieves the maximum protection of public health and later is directed toward protection of public welfare.

On April 23, 1974, the Department of the Interior's Bureau of Mines released a report entitled, "Assessment of the Impact of Air Quality Requirements on Coal in 1975, 1977, and 1980."

This report concludes that if present Federal and State air pollution control standards are enforced in mid-1975, roughly one-third of the Nation's coal supply cannot be used without violating applicable standards. By 1977, the "deficit" in conforming coal with acceptable sulfur content could reach 254 million tons and it could grow to 275 million tons in 1980.

The Bureau concluded, however, that this shortfall could be reduced to as little as 199 million tons in 1975—and 190 million tons in 1980—if, first, stack gas "scrubbers" are widely used at new electric utility plants that cannot get conforming coal; second, if variances from clean air standards are provided for some of the facilities where the coal contains too much sulfur; or, third, if coal supplies can be better matched with emission standards by allocating coal supplies among various air quality control regions to reflect environmental factors.

With regard to stack gas cleaning the Environmental Protection Agency has stated that flue gas desulfurization facilities are available. Therefore, there does not appear to be a need for a shutdown of powerplants for nonconformity with air pollution requirements. The Environmental Protection Agency concluded in January 1974, that—

(1) * * * some utilities * * * have applied greater efforts to defending their lack of progress or to attempting to change existing emission requirements than they have in controlling CO_x emission.

(2) * * * Vendors * * * generally offer guarantees for these systems that are comparable to the guarantee provided for other equipment purchased by a utility * * * guarantees now offered by vendors are appropriate; * * * the utility creating the pollution must assume the remaining risks associated with control of that pollution.

(3) * * * these costs, while substantial, are reasonable and will not impose an undue burden on either the electric utility industry or its customers.

The Federal Power Commission disagrees with the Environmental Protection Agency. A February 25, 1974, report of the Federal Power Commission declared that strict adherence to 1975 air pollution control standards on a national basis will endanger the reliability of electric service in seven out of the nine electric reliability regions. The areas most severely affected will be the East Central Area Reliability Council, Southeastern Electric Reliability Council, and Mid-America Interpool Network, which together cover about a third of the country.

The Federal Power Commission concluded that if variances are not granted for this affected capacity, either to burn available fuels or use some form of supplemental controls, a deficient power supply situation would prevail and curtailments of electric service would be necessary. The noncomplying capacity in 1975 would be in Ohio, Indiana, West Virginia, Kentucky, Tennessee, Alabama, Illinois, and Missouri.

In summary, the Federal Power Commission is of the opinion that flue gas desulfurization facilities are neither available in the quantity needed nor do they have a reliability compatible with operating steam electric plants. Even when emission control systems of demonstrated reliability become available, considerable time will be required to retrofit existing generation facilities.

CONCLUSION AND RECOMMENDATION

During my 15½ years in the Senate, I have been deeply involved in energy and environmental questions. Throughout this period there has been an inclination by some people to place the entire blame for the energy crisis on environmental protection programs. I consider this evaluation to be in error.

Both energy and environmental goals can be achieved if there is commitment on the part of all affected parties. As duly elected representatives of the American people, Members of Congress enacted environmental protection laws designed to protect public health. These policies are now the law of the land.

In some instances, earlier established Federal and State compliance schedules now appear unduly optimistic. Nevertheless, the basic goals still are valid.

The provisions of the Energy Supply and Environmental Coordination Act of 1974 are in no way a retreat from the commitment of the Congress to put an end to environmental pollution and enhance the quality of our environment. Rather the legislation simply facilitates short-term and intermediate-term variances from some of the requirements of the Clean Air Act in order to accommodate the more recently adopted national objective to promote greater energy self-sufficiency through coal reconversion.

Therefore, for the reasons I have discussed today I urge enactment of H.R. 14368, the Energy Supply and Environmental Coordination Act of 1974.

Mr. President, I shall close in just 2 or 3 minutes.

I want to emphasize very strongly as my own opinion that the energy crisis may be temporarily set aside also. There may be an easing of the impact of this problem, but I can say that this problem is not over. Let us think for just a moment of the consequence of what is happening as a result of the increased price which American con-

sumers are paying for fuel—fuel of many types. It is a continuation of the energy problem when the price rises, let us say, 10 cents on the gallon, whether it is regular or high test gasoline. From the standpoint of the consumer, the increased price, the inflationary spiral, really skyrockets and is in effect a part of the energy problem, which is a continuing one, regardless of whether there is an embargo.

We do have to consider the conservation of fuel in this country at this time. Yesterday I endorsed and spoke for the continuance of the 55-mile-an-hour speed limitation. I am gratified that the Senate in its reasoned judgment kept the 55-mile-an-hour limit and did not act yesterday to increase the limit by 5 miles an hour.

We must not be complacent. We must not be apathetic. We must be very careful to assess the situation properly. I think that to do it properly we shall have to do what is in the legislation before us. These shortages and the real prospects of future problems will be our way of life. So the provisions before us now are a part of what I like to call an arsenal of techniques that must be accumulated to help the American people react responsibly not only to current conditions, but also to the potential supply situations which could become very, very acute in the coming months.

This measure must be passed so that we can meet, without delay, in conference with the House of Representatives. I believe that we can have a rather quick conference in bringing this matter through the conference process, and placing the legislation on the desk of the President, unimpaired, with the items that have been vetoed, I will say to the able chairman of our subcommittee, Mr. Muskie, by the President of the United States.

We have tried to bring to the Senate this barebones legislation to take care of automobile emissions and the reconversion to coal. I trust that we shall act affirmatively. We will, of course, be challenged to do the job that is necessary to be done. We must move ahead, and we must do so in a knowledgeable way, realizing that we have an opportunity—and the American people want us to embrace it—to act.

I thank my colleagues, especially the chairman of the subcommittee, Mr. Muskie, the ranking minority member of the subcommittee, Mr. Buckley, and the ranking minority member of the committee, Mr. Baker.

Mr. MUSKIE. Mr. President. I thank my good friend, the chairman of the Committee on Public Works, Mr. Randolph, for his statement and for his unfailing cooperation with the members of the committee, so as to reach agreement to move the legislation to the floor. What we have before us today is consistent with that pattern.

Mr. BAKER. Mr. President, the Public Works Committee amendment to H.R. 14368, the Energy Supply and Environmental Coordination Act of 1974, will grant significant new authority to the Environmental Protection Agency and the Federal Energy Administration. While the need for such authority is not as critical to the Nation's energy problems as it appeared last winter when we considered and passed similar legislation, which was later vetoed, it is still necessary and desirable.

The bill will give automobile manufacturers an added year and, if need be, 2 years, to solve any remaining problems which they may have with the new catalyst emission control systems that will be introduced

on the 1975 models. Setting a level of 2 grams per mile for emissions of nitrogen oxides in 1977 will give the manufacturers the incentive to develop and introduce cleaner engines with better fuel economy and drivability such as the stratified charge engine and diesel. **[Sec. 4, Sec. 202(b)(1)(B).]**

More important, the bill will encourage use of our plentiful supplies of domestic coal in preference to foreign oil. It will do this by authorizing the Federal Energy Administration to require that plants capable of burning coal do so and to order that new plants be designed to burn coal in addition to or instead of natural gas or petroleum products. **[Sec. 8, Sec. 2 ESECA.]** The Environmental Protection Agency will be authorized to grant short-term suspensions of clean air requirements with appropriate safeguards until June 1, 1975, or 1 year from enactment, whichever is earlier. EPA also will be permitted to allow plants which convert to coal to have until 1979, or in some cases 1980, to meet the primary, health-related standards in State implementation plans under the Clean Air Act. The action of the Public Works Committee on the coal conversion-related sections of the bill probably reduces the number of plants which may be converted in compliance with Clean Air Act requirements but makes it more certain that such conversions can be continued beyond July 1, 1975, by reducing the possibility that conversions will be tied up in administrative or judicial delays. **[Sec. 2, Sec. 119 CAA.]**

This is accomplished by changing the test which must be met before a plant can be converted from the House bill which requires that the source "will not materially contribute to a significant risk to public health" to a requirement that conversions be allowed where primary ambient air quality standards are not exceeded now and will not be exceeded as a result of the conversion. We understand that enough plants can be converted under this authority to spur significant new coal production at an orderly pace. Another problem in the House bill which the action of the committee has corrected is to remove the prohibition on enforcement of coal conversion orders after June 30, 1975. Therefore, coal conversions can continue in effect under FEA orders.

In order to permit FEA to order coal conversion where a plant has the capability of burning coal, the requirements in the House bill for a plant-by-plant environmental balancing and for prioritization of plants before any are ordered to convert have been removed as a result of our committee's action. This should also reduce the potential for administrative or judicial challenge to coal conversion orders.

The House bill would provide that those who voluntarily converted to the use of coal between September 15, 1973 and the date of enactment could continue to burn coal under certain conditions. In this context, "voluntary conversion" means having applied for a waiver from Clean Air Act requirements or having entered into a contract to purchase coal or having made a substantial investment in necessary plant equipment to burn coal. In many cases, these voluntary converters never in fact burned coal or did so only for several days. Therefore, in order to permit FEA to order those plants to convert where the potential for energy savings is greatest and to authorize EPA to keep air quality at a maximum, the Senate bill cuts down the period for voluntary conversion to the September 30 to December 15, 1973,

period which was contained in S. 2589, the vetoed energy emergency authorities bill.

Section 119, as added by **section 2** of the committee amendment, provides for treatment of sources which voluntarily converted to the use of coal during the period September 15 to December 15, 1973, or which are prohibiting by FEA order from burning petroleum products or natural gas and therefore must burn coal. It provides that those who convert to the use of coal may not be prohibited from burning coal and may receive an extension of clean air requirements to 1979, or in some cases 1980, where such a source "is located in an air quality control region in which applicable national primary ambient air quality standards are not being exceeded." As used here, the word "applicable" is intended to refer to those pollutants which are emitted from a powerplant, such as sulfur dioxide and particulates. This new section, of course, does not affect the other substantive provisions and procedures of the Clean Air Act and the implementation plans developed pursuant to it under which a source may choose to convert to coal so long as emission controls or conforming fuels insure compliance with emission limitations, implementation plans, and other requirements of the act by the applicable deadlines under the act.

The authority **section 8** grants to the Federal Energy Administratrator to require that new fossil fueled electric powerplants be designed and constructed to be able to burn coal instead of or in addition to other fossil fuels has been made discretionary in the committee amendment, rather than mandatory as in the House bill. Some of the factors which must be considered in FEA's determination include the anticipated impact of the new source performance standards and the requirements of State implementation plans which will apply to such plants under the Clean Air Act.

Many of the provisions of H.R. 14368 as passed by the House do not relate directly to the Clean Air Act or to the need to conserve energy resources. Therefore, as Senator Muskie indicated, the committee deleted **section 11** of the House bill on industry data reporting, **section 3(b),** transportation controls; **section 7,** energy conservation study; **section 8,** reports; and **section 9,** fuel economy study.

In view of the National Academy of Sciences clean air study we commissioned and our present hearings which will extend into June, a 1-year extension of Clean Air Act funding authorizations of fiscal year 1974 levels is included in the committee amendment.

Mr. President, the committee amendment probably does not satisfy anyone's wishes completely, but I believe it is a workable and productive compromise. It achieves the immediate adjustments in the Clean Air Act that are required while deferring any more fundamental readjustments that may be needed until after the comprehensive hearings in which we are now engaged.

I commend the distinguished chairman of our committee (Mr. Randolph) and the most able chairman (Mr. Muskie) and ranking minority member (Mr. Buckley) of the Environmental Pollution Subcommittee for this excellent legislation which they have worked so hard to produce, and I urge its prompt passage by the Senate.

Mr. Buckley. Mr. President, I want to express my appreciation as a member of the Public Works Committee for the leadership and

sense of purpose we have seen in the activities of the chairman of the committee, Senator Randolph, the chairman of the subcommittee, Senator Muskie, and the ranking minority member of the full committee, Senator Baker. We have seen responsible legislation and a responsible approach to an enormously important problem.

We have seen, in the atmosphere of the energy crisis, a rare application of intelligence and balance in meeting our energy needs in a responsible manner.

Members of the Public Works Committee and the Subcommittee on Environmental Pollution I believe have distinguished themselves in the manner in which they have approached this problem. We have in the substitute that was introduced by Senator Muskie a more precise attack on the problems that now face us, especially in light of the situation in which the automobile industry finds itself.

The substitute amendment, in other words, has discarded all those extraneous provisions in the House version that could be controversial and that could delay the attempt to provide that degree of certainty with respect to emission standards without which the automobile industry simply cannot proceed with its scheduled production.

So, in the first instance, we are keeping faith, although belatedly, with the largest employer in the United States.

In the second instance, we are doing it in a manner which will not compromise essential environmental goals.

The other aspect of the amendment is that it grants the necessary authority to EPA to suspend sulfur emission limitations where conversions to nonconforming fuels are required to meet energy needs during the period of the coming winter. **[Sec. 2, Sec. 119 CAA.]**

In other words, this authority is extended until July of 1975; but in providing the authority to suspend the sulfur emission standard beyond 1975 we do not in the process threaten health, as in every instance the language of the amendment makes clear that primary standards shall be met, that primary standards shall not be compromised where human health is at stake.

There are those who will say that the language of the amendment is too restrictive, in that it will not permit conversions from oil to coal in sufficient measure to alleviate the drain on oil in the event there should be a recurrence of an oil embargo.

I point out, Mr. President, that our coal-producing capacity is not such at this time as to permit a much larger conversion than is contemplated by the proposed legislation. In other words, we have not yet seen a stimulation of an expansion of coal-producing capacity sufficient for large-scale conversions from oil.

There is another feature of the amendment on which I would like to comment, and that is the encouragement it gives to the States to review the implementation plans that are to go into effect in July 1975. **[Sec. 3, Sec. 110(a)(3)(B) CAA.]**

Before the energy crisis came to national attention, before the prospect of shortages of petroleum was injected into the thinking of our planners, many States adopted plans that would move ahead of the statutory requirements and move toward the meeting of secondary standards. This is all well and good under normal circumstances; but in meeting secondary rather than health-related standards, many State plans would require a shift from coal to residual oil, which is that kind of oil in which we have our largest dependence on foreign sources. I

understand that at the present time we import approximately 90 percent of the residual fuels we consume on the east coast.

Thus, by encouraging the States to review their implementation plans, they can take into consideration the availability of scarce fuels and perhaps slow down the rate at which we advance toward our ultimate need to meet those secondary standards.

As I suggested earlier, Mr. President, in studying the proposed legislation, the Committee on Public Works decided to eliminate those portions of the House bill which were either controversial or which were extraneous to the essential task of finally establishing automobile exhaust standards for the coming production models and the flexibility required by the Administrator of EPA to grant variances. We have eliminated all those areas which could be controversial and which could delay action on this essential legislation.

Therefore, I hope that not only will the Senate adopt the substitute amendment, but also that Members of the Senate will restrain themselves in any efforts to "Christmas tree" this legislation, as it is far too important to the economy to invite delays. If this substitute is adopted, I believe there should be no difficulty in coming to a rapid agreement with the House conferees as to the nature of the legislation that can be enacted in short order for submission to the President.

Mr. JACKSON. Mr. President, I rise in support of amendment No. 1303, an amendment in the nature of a substitute of H.R. 14368, the Energy Supply and Environmental Coordination Act of 1974.

The amendment proposed by the Senate Public Works Committee to the House passed measure makes a number of changes which I believe will substantially improve the bill. While important amendments to the Clean Air Act have been retained and perfected, a number of provisions that are redundant with other legislation have been altered or omitted.

H.R. 14368 contains a number of provisions which were originally in S. 2589, the Energy Emergency Act, which was passed twice by the Senate and vetoed by the President on March 6.

After the Senate failed to override that veto, lengthy negotiations were held between the Congress and the administration to arrive at a substitute energy emergency measure more satisfactory to all parties. In the Senate, this measure was introduced as S. 3267. In the House, the identical provisions were divided into two bills: H.R. 13834 and the present bill H.R. 14368. The bills were moved separately by the House in the interest of expediency and this same procedure is now being followed in the Senate.

Mr. President, I commend both the House and the Senate Public Works Committee for their timely and responsible action in moving this urgently needed legislation.

GRANTS-IN-AID FOR STATE GOVERNMENT

Mr. President, it has become evident that the State governments have been carrying a considerable burden in conducting energy allocations and conservation programs. This has resulted in severe drains on their treasuries. For example, under section 5(b) of the Emergency Petroleum Allocation Act:

> The President may delegate all or any portion of the authority granted to him under this Act to such officers, departments, or agencies of the United States, or to any State (or officers thereof), as he deems appropriate.

The Allocation Act does not authorize grants-in-aid to State government to support the exercise of delegated authorities. During the recently ended embargo the performance of State and local government in meeting the challenge of energy shortages was excellent.

Although the embargo has ended, spot shortages continue and promise to worsen during the summer if energy conservation cannot be made a reality. For so long as this situation continues, the role of the States will continue to be most important. With this will continue the severe strain on State treasuries which has been imposed by the development and implementation of plans to complement and support those of the Federal Government.

In passing the Federal Energy Administration Act the Congress enacted a second statute which has the potential to make financial demands upon the States. For example section 5(a) of that act requires that the Administration shall "develop effective arrangements for the participation of State and local governments in the resolution of energy problems."

Section 7(d) states that:

> The Administrator may utilize, with their consent, the service, personnel, equipment, and facilities of Federal, State, regional, and local public agencies and instrumentation, with or without reimbursement therefor, and may transfer funds made available pursuant to this Act, to Federal, State, regional, and local public agencies and instrumentalities, as reimbursement for utilization of such services, personnel, equipment, and facilities.

Once again however, no provision is made for the appropriation of the funds which, in my view should be granted to the States in payment for that part of the nationwide burden that they have shouldered.

In enacting the Energy Emergency Act Congress provided for the needs of the States. Section 123 authorized funds for the Administrator of the Federal Energy Emergency Administration to make grants to States for the purposes of implementing authority delegated to them, or for the administration of appropriate State or local conservation measures where exempted from Federal conservation regulations under the act.

Section 127 authorized an appropriation to the Federal Energy Emergency Agency to carry out its functions and to make grants to States under **section 123**, of $75 million for each of the fiscal years 1974 and 1975. In addition for the purpose of making payments under grants to States to carry out energy conservation measures, $50 million was authorized to be appropriated for fiscal year 1974 and $75 million authorized to be appropriated for fiscal year 1975. Also, for the purpose of making payments to States for unemployment assistance, $500 million was authorized to be appropriated for fiscal year 1974.

This funding authority was anulled by the President in his veto of the emergency bill.

These same provisions are retained in S. 3267 which I am confident we shall soon pass. However, we are here concerned with ongoing programs, ones which have been in effect for over 5 months; ones that are making a vital contribution, ones which must continue.

As the FTC report notes, by the end of February 40 States were experiencing problems in their energy programs due to funding shortages. There is every indication that the situation has worsened. State budgets cannot stand the strain. We are confronted with a choice

between supporting proven, effective, in place programs and thus insuring their continuance and that of seeing them terminated. If we choose the latter, we are opting for control of local problems by a Washington bureaucracy. I do not believe such to be efficient, effective or desirable.

I had intended to call upon my colleagues to support an amendment, H.R. 14368, to insure the expeditious channeling of funds to where they may be most effectively expended. In the interest of expeditious action on this measure, however, I will not offer the amendment at this time, but will propose language in conference committee to provide grants-in-aid to State government.

ENERGY INFORMATION

Mr. JACKSON. Mr. President, H.R. 14368, as it passed the House, included several provisions dealing with the collection and dissemination of information by the Federal Energy Administrator.

These provisions were intended to supplement the authority conferred on the Administrator by the Federal Energy Administration Act of 1974. However, because the FEA Act was still being considered by Congress while H.R. 14368 was before the House, the energy information provisions of H.R. 14368 could not be properly meshed with the final language of the FEA Act.

In light of the fact that the FEA Act, including substantial energy information provisions, has now become law, enactment of much of the language on this subject in H.R. 14368 is no longer necessary. In fact, adoption of some of the provisions of H.R. 14368—such as those providing subpena powers—would only duplicate authority already conferred by the FEA Act.

There are, however, two provisions of H.R. 14368 relating to energy information which constitute substantive additions to the requirements of the FEA Act. One of these provisions requires the Administrator to prepare quarterly reports providing information on such subjects as imports, reserves, production, inventories, and refinery runs. The other makes clear that there is no legal barrier to access by Congress to the information collected or received by the Administrator.

Because the Public Works Committee did not include the House-passed energy information sections in its substitute, I had considered offering an amendment to the substitute to add these two significant provisions.

In the interest of early action on this measure I will not offer this amendment. The conferees on the bill will have full latitude and authority to insure that there is no duplication between **section 11** of the House-passed bill and the information provisions of the recently enacted Federal Energy Administration Act.

Mr. President, I ask unanimous consent that the text of both amendments be printed in the Record as a part of the legislative history on this measure.

The PRESIDING OFFICER. There being no objection, the amendments were ordered to be printed in the Record, as follows:

On page , line , insert the following: Add a new Section at the end of the bill as follows:

"GRANTS TO STATE GOVERNMENTS

"SEC. (a) There are authorized to be appropriated to the Administrator of the Federal Energy Administration for the purpose of making payments as grants to states, $30,000,000 for the fiscal year 1974 and $60,000,000 for the fiscal year 1975, such sums to remain available until expended.

"(b) Such grants to states shall be made for the exercise of those authorities delegated to any state (or officer thereof) under the Emergency Petroleum Allocation Act of 1973; for the fulfillment of any role which the Administrator delineates that state governments will perform in achieving the purposes of the Federal Energy Administration Act of 1974, or for the administration of state or local energy conservation programs."

Amendment to amend the Amendment in the Nature of a Substitute for H.R. 14368 by adding a new Section 10, as follows:

"Sec. 10—Energy Information Reports".

Section 15 of the Federal Energy Administration Act of 1974 is amended by adding at the end of subsection (e) a new subsection (f), as follows:

(f) In addition to other reports required by this Act, the Administrator shall prepare and publish for each calendar quarter beginning with the first complete calendar quarter following the date of enactment of this section a report containing such statistical and economic analysis, data, information, reports, and summaries of energy information obtained by him, which are necessary to keep the public fully and currently informed as to the nature, extent, and projected duration of shortages of energy supplies, the impact of such shortages, and the steps being taken to minimize such impacts, and such report shall include the following data:

(A) Imports of crude oil, residual fuel oil, refined petroleum products (by product), natural gas, and coal, identifying country of origin, arrival point, quantity received, and, where practicable, the geographic distribution within the United States. (B) Domestic reserves and production of crude oil, natural gas, and coal.

(C) Refinery activities, showing for each refinery within the United States (i) the amounts of crude oil run by such refinery, (ii) amounts of crude oil allocated to such refinery pursuant to regulations and orders of the Federal Energy Administrator or of any other person authorized to issue regulations and orders with respect to the allocation of crude oil, (iii) percentage of refinery capacity utilized, and (iv) products refined from such crude oil.

(D) Inventories on a national, regional, and State-by-State basis, of refined petroleum products by product.

(E) Production of refined petroleum products by product during the preceding calendar quarter preceding such report, anticipated production of refined petroleum products by product during the succeeding calendar quarter following such report, and any anticipated excess or shortfall of refined petroleum products by product during such succeeding calendar quarter."

Section 14 of the Federal Energy Administration Act of 1974 is amended by adding at the end of subsection (c) a new subsection (d), as follows:

"(d) Notwithstanding any other provisions of law, energy information collected and received by the Administrator may be disclosed to the Congress, or any Committee of Congress, upon request of the Chairman."

Mr. MCCLURE. Mr. President, one question has been raised which I think demands a little more analysis than has been given it. I do not intend at this time to do any more than raise the question and point to the fact that there may ultimately be further legislative debate and perhaps legislative resolution of a problem which was first raised by the Senator from Maine (Mr. Muskie) as he dealt with the question of environmental impact statement requirements by the Administrator of the Environmental Protection Agency. **[Sec. 6(c), Sec. 7(c)(2) ESECA.]**

Senator Muskie says that the legislative history is abundantly clear that this is present law. It well may be that the courts would find that to be true, or it may well be that the courts might disagree with that

finding. If the latter be the case, this is not a restatement of the law but a creation of statute.

Rather than simply pass it by at this time without comment, I think some question should be raised as to whether or not the Environmental Protection Agency in every instance should operate outside the law which applies to all other Federal agencies, requiring them to file an impact statement. The National Environmental Policy Act very definitely has a careful balance written into the statute requiring several different factors to be considered in any Federal decision, and the impact statement that is required of other Federal agencies requires a balancing of those factors in the statement and discussion of that balance in the promulgation of the statement.

The Senator from Maine is quite correct that there are times when decisions required of the Administrator by the statute are not sufficiently long to give him the opportunity to develop an environmental impact statement within the time frame required by the statutes. It is very true. It is equally true of all other administrative agencies which must meet the requirements of the impact statement law. It is also suggested that it would subject the Administrator's decisions to prolonged litigation, and this is possibly true. That is equally true of other administrative agencies.

While I do not intend at this time to attempt to change the language that has been inserted in this measure, because I think it needs a more thoughtful and lengthy discussion than we would give it today, I do think the question ultimately will have to be resolved by Congress, after a full debate of the extent to which the Administrator of the Environmental Protection Agency should be exempted from a law which applies to every other Federal Administrator but, under this language, not to him.

I believe that the balancing of public discussion that is required in the development of the impact statement in many, if not most—if not all—of the Administrator's decisions would be in the public interest, even though it might at times make it more difficult for the Administrator to arrive at a decision.

I take this time—and I thank the Senator from New York for yielding this time to me—only to raise the issue as a subject for continuing discussion and perhaps ultimate resolution; because I believe a serious fundamental question which has been raised, which ought to have a full discussion and final decision by Congress.

Mr. Muskie. I understand that we have been making a record on this question.

Let me make the point, as the originator of the environmental impact statement, as the author of it, as the prime force in having the requirement to prepare an environmental impact statement included in the National Environmental Policy Act, as to what its intention was.

It was our intention to inject into the decisionmaking of mission-oriented agencies environmental values that were not previously taken into account. In the discussion of this proposal—which I repeat was mine—we developed phraseology to distinguish between two categories of agencies: We referred to the agencies to be covered as environmental impact agencies and the agencies to be excluded as environmental protection agencies; the courts understood that.

For example, in International Harvester against Ruckelshaus, which was decided in the District of Columbia Circuit, on February 10, 1973, the court said this and it captures the essence of the legislative intent right on the nose:

> Although we do not reach the question whether EPA is automatically and completely exempt from NEPA, we see little need in requiring a NEPA statement from an agency whose raison d'etre is the protection of the environment and whose decision on suspension is necessarily infused with the environmental considerations so pertinent to Congress in designing the statutory framework. To require a "statement" in addition to a decision setting forth the same consideration, would be a legalism carried to the extreme.

I would like to be able to persuade the distinguished Senator from Idaho and the distinguished Senator from New York to my point of view, but I make the limited point on which I hope the Senators would agree. That point is that the environmental laws written since NEPA was written were developed on the basis of an assumption that NEPA did not apply. Thus, we wrote into the laws many specific regulatory requirements and deadlines that did not take into account the potential delay that would be cranked in by a NEPA application or values that might be cranked in that were not reflected in the standard setting procedures of the environmental law.

If we want to undo and crank in NEPA, what we would need is a thorough committee review in both Houses as to the impact, in specific detail, on environmental laws.

When one looks at the list of current and future rulemaking actions possibly affected I think the point is clear.

Mr. President, I ask unanimous consent to have printed in the Record a list of current and future rulemaking actions possibly affected by this decision.

There being no objection, the list was ordered to be printed in the Record, as follows:

CURRENT AND FUTURE RULEMAKING ACTIONS POSSIBLY AFFECTED BY EIS PROVISION

AIR

1. SIP variances from fuel/sulfur regulations.
2. SIP revisions to implement Clean Fuels Policy.
3. Transportation control plans.
4. Complex source review regulations.
5. New source performance standards:

Group II: Asphalt plants, petroleum refineries, petroleum storage tanks, iron and steel (basic oxygen furnaces), sewage sludge incinerators, brass and bronze, and secondary lead smelters.

Group IIA: Primary copper, lead, and zinc smelters.

Group III: Aluminum reduction, ferro-alloy plants, kraft pulp mills, iron and steel (electric furnaces), phosphate fertilizer plants, and stationary gas turbines.

6. Lead additive regulations (to limit lead content of leaded grades).
7. Approval of SIPs to implement secondary standards for particulate matter.
8. Supplementary control systems regulations.
9. Regulations to prevent significant deterioration.

Mr. MUSKIE. I will not give a complete recital of the list at this time, but I have placed it in the Record for the perusal of Senators.

Mr. MCCLURE. Mr. President, will the Senator yield further?

Mr. BUCKLEY. I yield.

Mr. MCCLURE. The thing that concerns me is whether or not the balance that is written into the National Environmental Policy Act is also a balance which is always followed at EPA in their decisions.

Mr. MUSKIE. Mr. President, if the Senator will yield, on one point clearly it is not and that is the underlying basis of the Clean Air Act. We said in the Clean Air Act that health and health alone shall dictate the primary air quality standards; that neither economic nor technological considerations should compromise those standards. How rapidly that should be achieved is a compromisable issue, but on the standards the entire Congress said that the health basis shall be the only basis. If NEPA applies, presumably that basis could be followed.

Mr. MCCLURE. I did not raise the point of whether NEPA had a balancing requirement with respect to the Clean Air Act, but under other acts——

Mr. MUSKIE. I just said with respect to the clean air standards Congress itself did not compromise health considerations by economic or technological considerations, and that was clear. Nobody was fooled by it; that was clear.

Mr. MCCLURE. I do not argue that point with the Senator from Maine. I think that is obvious.

Mr. MUSKIE. That is the heart of my point.

Mr. MCCLURE. The question is whether or not the Environmental Protection Agency should be exempted from filing impact statements in the broad range of the subjects and not just the Clean Air Act.

Mr. MUSKIE. The question is the same. NEPA was designed to insure that mission-oriented decisions like those of the Atomic Energy Commission must take into account environmental considerations. NEPA was not designed in the view of one of its authors, namely, me, to enable the Atomic Energy Commission to compromise environmental standards set by the Environmental Protection Agency. It is that simple. If Congress decides that the Atomic Energy Commission, or the Corps of Engineers, or other mission-oriented agencies should have the right and power to compromise environmental values, that certainly is the prerogative of Congress.

What I object to is to see that result achieved through the back door and nonlegislative means.

Mr. MCCLURE. Let us make a distinction here, and it needs to be made because apparently I have not made myself understood. I do not quarrel with the fact that Congress has set standards in the Air Quality Act. There is no question about that. The question I have is the implication of a statement or a policy that the Environmental Protection Agency does not have to balance factors where they are mandated by Congress, because the National Environmental Policy Act said they must be balanced.

Mr. MUSKIE That question depends on whether NEPA applies to EPA, and on that the Senator and I disagree.

Mr. MCCLURE. That is the point I am trying to make: Not the air quality standards set by Congress, but the balancing requirements of the National Environmental Policy Act which many people feel are not being adequately carried out by the decisions of the Environmental Protection Agency.

The question does not come at this time whether the goals of the Air Quality Act should be compromised. The question is: Absent those goals and standards mandated by Congress, the Environmental Protection Agency should reach a balanced judgment.

Mr. MUSKIE. That is my point. What is the Senator going to balance the health standards against? The Senator is talking about balancing as though those values would be balanced against some unknown.

The people who want to achieve this balancing judgment by imposing NEPA on EPA want to compromise those environmental values by forcing the agency to take into account values Congress has already taken into account and decided in favor of the environmental values.

What is the purpose of the balancing exercise in the name of health standards? What is the purpose? Is it to protect them?

Mr. MCCLURE. I would say that the Senator is focused on the Air Quality Act.

Mr. MUSKIE. It is as good an illustration as any of what I am talking about.

Mr. MCCLURE. It is not because Congress set those standards in that instance. It said, "Do not balance it; apply these standards." But Congress did not in every environmental field say, "Ignore balance." It specifically said to apply balance except where Congress specifically provided otherwise, as we did in the Air Quality Act.

The development of the environmental impact statement is the guarantee of public input and discussion that will bring about the balance Congress required in the Environmental Policy Act.

Mr. MUSKIE. It really is not quite that simple. First, this amendment applies only to the Clean Air Act.

Mr. MCCLURE. That is correct.

Mr. MUSKIE. Second, with respect to the Clean Water Act Congress legislated a clarification of the application of NEPA to the Clean Water Act and the intent is that the regulatory functions of NEPA with regard to water pollution are not covered by NEPA.

With respect to air, the health basis is simply the underlying philosophy, but it is translated across the board—with respect to the automobile stationary forces, implementation plans of the States—and in each case addition of the balancing judgment required by NEPA means other agencies not concerned with the environment should have the opportunity to dilute the philosophy of the Clean Air Act, as reflected in the standards set under that act. I tried to use a simple illustration, which I think is pertinent, but I am happy to get into the more complex standard-setting procedures of EPA; but they are the same as what the courts have held insofar as the courts have spoken on it.

Mr. MCCLURE. Either the Senator misses my point or he does not want to debate my point.

Mr. MUSKIE. I see the Senator's point. The Senator does not see my explanation.

Mr. MCCLURE. The Senator's explanation is tied to the Clean Air Act.

Mr. MUSKIE. Yes.

Mr. MCCLURE. Would the Senator permit me to make my statement? I would appreciate that. I thank him for his courtesy.

The question is not involved with the standards set under the Clean Air Act, because the Congress has mandated them, and I know the amendment we are dealing with here today should deal only with the Clean Air Act. That is why I am not attempting to go into any change in the amendment that is adopted in the bill. But the statement of the

Senator from Maine goes far beyond this amendment and he has said that the Environmental Protection Agency should be exempted from the balancing that is required of all other agencies, and I am saying that the Environmental Policy Act requires that balancing. We start off with a fundamental disagreement or misunderstanding, perhaps, of what the environment is.

We debated this in the Interior and Insular Affairs Committee, of which the Senator from New York and I are both members, for hours on end in trying to adopt a definition of the term "environment," because there are people who have a narrow definition of the term "environment" that excludes all economic, social, and political considerations that go into the entire environment of a person in this country. One cannot ignore part of it without in some way damaging the environment in which people live.

What good does it do for us to have clean air and clean water for people who are starving to death or freezing? There is a balancing that is required in some of these decisions, and what I am suggesting is that Congress recognize that at the time the National Environmental Policy Act was adopted, it inserted into the Environmental Policy Act the consideration of factors broad enough, much broader, I believe, than some people have suggested that the term "environment" embraces.

There are those who believe, apparently, that the only thing in the environment that is worth protecting is what God put in it. I would suggest that there are many things that man put in it that are worthy of protection as well. Man has made it possible for men and women to live better than animals and make them less subject to the forces of nature, and those things are worth while and they are worth protecting, and the National Environment Policy Act recognizes that from that necessity. I do not think the Environmental Protection Agency should be exempted from the principle that applies to every other agency, to determine whether or not they have made a proper evaluation of the tradeoffs, that are required in these decisions.

Again, I would say I know this amendment in the bill applies only so far as the Clean Air Act is concerned. **[Sec. 6(c), Sec. 7(c)(2) ESECA.]** I take this time only so that I do not want this discussion to assume that I accept this rationale as being applicable to every decision made by the Environmental Protection Agency, because I believe we are running into a great deal of trouble because of that very narrow, limited interpretation of the word "environment," and the very narrow and limited interpretation of the responsibility of the Environmental Protection Agency.

I think it is an important fact which the Congress must sometime at least confront—that the Environmental Protection Agency is not God Almighty, that the Environmental Protection Agency has at times put blinders on in ignoring some of the factors which Congress directed it should consider, and I think the environmental impact statement should be directed toward those broad considerations in a manner which would not interfere with the ability to make decisions by the Environmental Protection Agency which would in the long run best be served by that policy, and certainly as the public, the people of the country who live here in this total environment, would best be served by that interpretation of the Act.

I am quite sure, despite statements that have been made that court decisions always find the other way, there are court decisions that have found that the Environmental Protection Agency must make that balanced finding and that the decisions that the Environmental Protection Agency makes are sometimes indeed major Federal decisions which require an impact statement as required by the NEPA act itself.

I thank the Senator again for yielding this time.

Mr. BUCKLEY. Mr. President, I think the colloquy we have just listened to is an enormously useful one. I think it touches a subject that must be studied at great length at an appropriate time.

I must confess that I do not share the distinguished Senator from Maine's apprehensions as to the effect of the House Appropriations Committee action. As I read that statute, it does not in any degree change existing law, though; to the extent that NEPA impacts on EPA, there has been no change whatever; therefore, curative amendments are not required. But I do believe the NEPA procedure requires a checklist, as it were, that is enormously useful, and it is one that I believe from time to time the EPA could have availed itself of with great benefit to all concerned.

But I do agree that what we are discussing here affects only the Clean Air Act, and I do hope that at some later time we might have a change, in a review of the NEPA legislation, to have the opportunity to explore further whether or not environmental needs, broadly defined, would not be better served by bringing EPA under the overall umbrella of requiring impact statements.

Mr. MUSKIE. I would like to make the point which I made in my opening statement, that adoption of this amendment would not prohibit Mr. Train from filing "voluntary" statements which he has announced he will file, but it would prohibit the imposition of mandatory requirements which would have the effect, conceivably, of upsetting statutory EPA procedures.

So, as I understand what the Senator is saying, it seems to me this amendment is consistent with his view of what ought to be done if Mr. Train follows through on the "voluntary" statements.

Mr. BUCKLEY. I thank the Senator from Maine for that clarification. He does, of course, state the intent of his amendment—that it does not preclude voluntary compliance.

I would say that one thing I am a little concerned about with reference to the Senator from Maine's statement: namely, that it was not the intention of the environmental policy legislation to affect environmental protection agencies, and I say that because I believe the debate at the time named the National Park Service as an environmental agency.

Mr. MUSKIE. No. What we had in mind, may I say to the Senator—and I appreciate this opportunity to clarify that—was those environmental protection agencies with regulatory authority, without spelling out the authority in the statute. We wanted to exclude agencies whose legislators responsibility could be offset by that legislation. It is in that limited sense, not in the overall sense, including the Park Service, the Forest Service, and all the rest, that we used the term environmental protection activities.

Mr. McCLURE. Mr. President, will the Senator yield just briefly, because I think it would be instructive if we included in the Record at this point, so that people reading the Record might have it forthwith, without having to go outside the Record to determine what it is I am trying to say, the applicable part of the statute?

The National Environmental Policy Act in title I, section 101, includes in its first subsection the following language:

> To use all practicable means and measures, including financial and technical assistance, in a manner calculated to foster and promote the general welfare, to create and maintain conditions under which man and nature can exist in productive harmony, and fulfill the social, economic, and other requirements of present and future generations of Americans.

I think it is useful to have that language from the Environmental Policy Act included in this act.

Mr. President, I thank the distinguished Senator from Maine for yielding.

Mr. MUSKIE. Mr. President, I subscribe fully to that philosophy. I did so at the time I offered the environmental impact statement amendment to the act.

Mr. MATHIAS. Mr. President, I call up my amendment which is at the desk and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk proceeded to read the amendment.

Mr. MATHIAS. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

> On page 17, after line 2, add a new paragraph (c).
> "(C) No parking surcharge regulation may be required by the Administrator under paragraph (1) of this subsection as a part of an applicable implementation plan. All parking surcharge regulations previously required by the Administrator shall be void upon the date of enactment of this subparagraph. This subparagraph shall not prevent the Administrator from approving parking surcharges if they are adopted and submitted by a State as part of an applicable implementation plan. The Administrator may not condition approval of any implementation plan submitted by a State on such plans including a parking surcharge regulation."

Mr. MATHIAS. Mr. President, I asked that the clerk not read the amendment further because the language is very simple. It eliminates a surcharge on downtown parking. **[Sec. 110(b)(2)(B) CAA.]**

The language is similar to that of the bill as passed by the House of Representatives. It is a part of the bill which has already been passed in the other body. It is language with which we are familiar because the Senate adopted similar language. I feel that it is necessary language, not because I have any lack of concern over the congestion in downtown Washington, which brings about many problems, including the problem of air quality and environmental problems of many sorts. My concern is that because it is a complex problem, a problem with social overtones, a problem with economic overtones, it goes to the heart of every urban concern we have.

This is not a decision which should be made by any single agency. It is a problem of a complex nature. Many countries in the world have attacked the problem of downtown traffic in a variety of ways. I think we ought to have before us some of the alternatives, some of the sev-

eral different kinds of solutions, and not merely be restricted to a single, rather dull, blunt economic club which can be waved over the heads of those who have to commute into urban areas in order to earn a living. We ought to have a full variety of solutions available before we make the decision. I should like to see an economic surcharge provision included in the pending bill as it is included in the House bill.

Mr. MUSKIE. Mr. President, I fully understand the Senator's concern and his point of view.

This provision, which was included in the earlier conference report on this general subject, is not included in the Senate bill at this point because the Senate committee has never held hearings on this subject. The House committee has. It included the provision in the legislation last December and insisted upon it vigorously in conference. We accepted it at that point for the purpose of that legislation.

Mr. MATHIAS. Mr. President, I think the fact that we have not had hearings in the Senate is all the more reason to withhold this particular power at this time.

Mr. MUSKIE. I understand the Senator's point. The other reason why we did not include the provision in the bill at this time is that we thought that in the emergency, favorable terms have appeared during the past few months, and we ought at least to discuss this issue again in conference.

We would not have a meaningful discussion if the issue were not in conference, and we fully expect to have a discussion. We fully expect that the House will be vigorous in its presentation of its point of view. We are conscious of the fact that the Senator from Maryland and others share that point of view. We will fully take that matter into account as we get into the conference.

Mr. MATHIAS. Mr. President, I am reassured by the opinion or view just expressed by the distinguished Senator from Maine. I want to be assured, however, that there is a body of opinion in the Senate which questions whether or not that particular power should be delegated at the expense of those who have to earn their living by driving into metropolitan areas all over the country. We believe that the variety of other solutions should be examined very carefully before we take action.

Mr. MUSKIE. Mr. President, I may say further that it was the purpose of the earlier conference agreement in that the parking surcharge provision should be set aside so that we could have hearings this year. The Senate committee fully expects to have hearings sometime this year on this issue.

Mr. MATHIAS. Mr. President, with that assurance, on which I know I can rely, and know that all Senators can rely, that this problem will get some sympathetic consideration from the conferees, I will not insist on a vote on this amendment at this time.

Mr. President, I withdraw the amendment.

The PRESIDING OFFICER. The amendment is withdrawn.

The question is on agreeing to the amendment offered by the Senator from Maine.

The amendment was agreed to.

The question is on the third reading and passage of the bill.

Mr. MCCLURE. Mr. President, I know that we are fighting a time constraint under the previous unanimous-consent agreement. However, I

think that there is a potential conflict, or a bit of a conflict, between two of the acts we are dealing with. That conflict comes up because of the change that we have made in the coal conversion sections of the bill that did not exist under the previous sections of the bill, when we had agreed that the Federal Administrator could mandate coal conversion.

We can now under this arrangement only suggest it and stimulate it. However, if the State or local regulations are more stringent, we can suggest to them that they change those restrictions, but we cannot mandate them. The result could be that under a strict State statute, some State standards may require the use of low sulfur fuel beyond that necessary to meet primary or secondary standards under the act.

It might be felt that the Federal Administrator must allocate the low sulfur fuel and leave the rest of the country to buy whatever higher sulfur fuel might exist.

There is a section in this act that we are now considering which seeks to say that that result would not necessarily occur, and that whatever changes are necessary in the administration of the Mandatory Allocation Act would occur because of the amendment to this act.

Mr. MUSKIE. The Senator is correct. The Senator raised this point in the executive meeting of the Public Works Committee yesterday, and I think it has been resolved in **section 6(a)**, which reads:

> Any allocation program provided for in **section** 8 of this Act or in the Emergency Petroleum Allocation Act of 1973 shall, to the maximum extent practicable, include measures to assure that available low sulfur fuel will be distributed on a priority basis to those areas of the country designated by the Administrator of the Environmental Protection Agency as requiring low sulfur fuel to avoid or minimize adverse impact on public health.

To give this meaning in my own words, it is the intent of this provision to insure that clean fuels and conforming fuels are used, with the highest priority given to protecting primary ambient air standards, which are the health protection standards, and that beyond that, fuel should be distributed in accordance with the general authority of the administrator.

Mr. MCCLURE. So that it could not, then, result in violation of primary ambient air standards in one area of the country in order to comply with stricter standards in some other State or local area?

Mr. MUSKIE. The Senator is correct.

Mr. RANDOLPH. I wish to reaffirm what the able Senator from Maine (Mr. Muskie) has stated. The Senator from Idaho (Mr. McClure) addressed this subject in a very knowledgeable manner within the committee's executive session on this legislation. I appreciate, as I am sure all of us do within the committee, the opportunity to clarify this point as it has been done by Senator Muskie.

As I noted, I wish to reaffirm what Senator Muskie has said.

I think it is important and necessary to clarify situations of this type. I again commend the Senator from Idaho for bringing this matter to our attention, so that it could be handled and clarified in this manner.

Mr. MCCLURE. I thank both Senators for their information. That is certainly in accord with my understanding.

Mr. President, during consideration of the bill before us, I believe that it is important that we keep in mind another bill—considered and passed last year—the Emergency Petroleum Allocation Act. When

Congress passed that measure, we granted the President of the United States the authority to take fuel from one State, and give it to another. Not only did we grant that authority, we directed him to exercise it.

The changes in the Clean Air Act being considered today are directly related to that allocation authority granted last year. And, one of the key issues involved is the setting of sulfur standards by local or State governments which are far stricter than those required by Federal law. Are we, in effect, to reward cities and States which set unreasonable standards for the sulfur content of fuels, and penalize regions which have not? Are we to see continued use of home heating oil by utilities and industries, who could use coal or residual fuel oil? I believe that it is essential that local and State governments recognize their responsibility to set reasonable standards for fuel composition, and not bow to political pressures with the hope that the Federal Government will bail them out, at the expense of their neighbors.

Obviously, it would be politically advantageous for any locality to demand almost zero sulfur content for any fuel burned within its boundaries, if they could be certain that they would receive adequate fuel supplies at their neighbor's expense. I believe the Congress should be firmly on record as opposed to such actions. During these times of continuing fuel shortages and continuing concern for clean air, every State, county, and city has an obligation to carry its share of the burden, and not to expect to burn all natural gas or home heating oil, while others burn 3 percent sulfur coal.

I am pleased to join with my colleagues on the Public Works Committee in introducing this proposed legislation. It does not represent—as some have charged—a "gutting" of the Clean Air Act—nor does it represent an ideal solution to the critical energy problems facing this country.

The Presiding Officer. The bill is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment of the amendments and the third reading of the bill.

[The amendments were ordered to be engrossed and the bill to be read a third time.]

[The bill (H.R. 14368) was read the third time.]

Mr. Buckley. Mr. President, I yield 1 minute to the Senator from Tennessee.

Mr. Baker. Mr. President, I rise only to make a statement with regard to my personal relationship to this measure. As the senior Republican on the committee, it has been my duty to follow the development of the automobile emissions section and the coal conversion section of the bill.

It is the responsibility of each Member of the Senate, of course, to determine whether or not he has a conflict of interest. It is my judgment that I do not. But so the record will be entirely complete, and everyone will understand what the situation is, I would point out to my colleagues that I am the owner of a partnership interest in a substantial tract of land in Tennessee which I purchased from my father's estate, on which there are known coal reserves and known oil and gas reserves. I am not involved in production of either oil and gas or coal, but lest I be misunderstood, I wanted to make that statement.

The PRESIDING OFFICER. The bill having been read the third time, the question is: Shall it pass?

[The bill (H.R. 14368) was passed.]

Mr. MUSKIE. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. GRIFFIN. I move to lay that motion on the table.

[The motion to lay on the table was agreed to.]

Mr. MUSKIE. Mr. President, I move that the Senate insist on its amendments to H.R. 14368 and request a conference with the House of Representatives on the disagreeing votes of the two Houses thereon, and that the Chair be authorized to appoint the conferees on the part of the Senate.

[The motion was agreed to; and the Presiding Officer appointed Mr. Randolph, Mr. Muskie, Mr. Montoya, Mr. Jackson, Mr. Bible, Mr. Baker, Mr. Buckley, and Mr. Fannin conferees on the part of the Senate.]

CHAPTER 4

S. 3267 and H.R. 13834, Introduction and Reports

93D CONGRESS
2D SESSION

S. 3267

IN THE SENATE OF THE UNITED STATES

MARCH 28, 1974

Mr. JACKSON (for himself, Mr. MAGNUSON, Mr. METZENBAUM, Mr. MUSKIE, and Mr. RANDOLPH) introduced the following bill; which was read twice and referred to the Committee on Interior and Insular Affairs

A BILL

To provide standby emergency authority to assure that the essential energy needs of the United States are met, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act, including the following table of contents, may be cited as the "Standby Energy Emergency Authorities Act".

TABLE OF CONTENTS

63-518 O - 76 - 28 (Vol. 1)

TABLE OF CONTENTS—Continued

TITLE I—STANDBY ENERGY EMERGENCY AUTHORITIES—Continued

TITLE II—COORDINATION WITH ENVIRONMENTAL PROTECTION REQUIREMENTS

TITLE III—STUDIES AND REPORTS

TITLE I—STANDBY ENERGY EMERGENCY AUTHORITIES

SEC. 101. FINDINGS AND PURPOSES.

(a) The Congress hereby determines that—

(1) current energy shortages have the potential to create severe economic dislocations and hardships;

(2) such shortages and dislocations could jeopardize the normal flow of interstate and foreign commerce;

(3) disruptions in the availability of imported energy supplies, particularly petroleum products, pose a serious risk to national security, economic well-being, and health and welfare of the American people;

(4) because of the diversity of conditions, climate, and available fuel mix in different areas of the Nation, governmental responsibility for developing and enforcing energy emergency authorities lies not only with the Federal Government, but with the States and with the local governments;

(5) the protection and fostering of competition and the prevention of anticompetitive practices and effects are vital during periods of energy shortages.

(b) The purposes of this Act are to grant specific temporary standby authority to impose end-use rationing and to reduce demand by regulating public and private consumption of energy, subject to congressional review and

right of approval or disapproval, and to authorize certain other specific temporary emergency actions to be exercised, to assure that the essential needs of the United States for fuels will be met in a manner which, to the fullest extent practicable: (1) is consistent with existing national commitments to protect and improve the environment; (2) minimizes any adverse impact on employment; (3) provides for equitable treatment of all sectors of the economy; (4) maintains vital services necessary to health, safety, and public welfare; and (5) insures against anticompetitive practices and effects and preserves, enhances and facilitates competition in the development, production, transportation, distribution, and marketing of energy resources.

SEC. 102. DEFINITIONS.

For purposes of this Act:

(1) The term "State" means a State, the District of Columbia, Puerto Rico, or any territory or possession of the United States.

(2) The term "petroleum product" means crude oil, residual fuel oil, or any refined petroleum product (as defined in the Emergency Petroleum Allocation Act of 1973).

(3) The term "United States" when used in the geographical sense means the States, the District of Columbia, Puerto Rico, and the territories and possessions of the United States.

(4) The term "Administrator" means the Administrator of the Federal Energy Administration established by H.R. 11793, Ninety-third Congress (popularly known as the Federal Energy Administration Act of 1974) if H.R. 11793 is enacted; except that until such Administrator takes office, such term means any officer of the United States designated by the President.

SEC. 103. END-USE RATIONING.

Section 4 of the Emergency Petroleum Allocation Act of 1973 is amended by adding at the end thereof the following new subsection:

"(h) (1) The President may promulgate a rule which shall be deemed a part of the regulation under subsection (a) and which shall provide, consistent with the objectives of subsection (b), for the establishment of a program for the rationing and ordering of priorities among classes of end-users of crude oil, residual fuel oil, or any refined petroleum product, and for the assignment to end-users of such products of rights, and evidences of such rights, entitling them to obtain such products in precedence to other classes of end-users not similarly entitled.

"(2) The rule under paragraph (1) of this subsection shall take effect only if the President finds that, without such rule, all other practicable and authorized methods to limit energy demand will not achieve the objectives of subsection

(b) of this section and of the Standby Energy Emergency Authorities Act.

"(3) The President shall, by order, in furtherance of the rule authorized pursuant to paragraph (1) of this subsection and consistent with the attainment of the objectives in subsection (b) of this section, cause such adjustments in the allocations made pursuant to the regulation under subsection (a) as may be necessary to carry out the purposes of this subsection.

"(4) The President shall provide for procedures by which any end-user of crude oil, residual fuel oil or refined petroleum products for which priorities and entitlements are established under paragraph (1) of this subsection may petition for review and reclassification or modification of any determination made under such paragraph with respect to his rationing priority or entitlement. Such procedures may include procedures with respect to such local boards as may be authorized to carry out functions under this subsection pursuant to section 120 of the Standby Energy Emergency Authorities Act.

"(5) No rule or order under this section may impose any tax or user fee, or provide for a credit or deduction in computing any tax.

"(6) At such time as he finds that it is necessary to put a rule under paragraph (1) of this subsection into effect, the

President shall transmit such rule to each House of Congress and such rule shall take effect in the same manner as an energy conservation plan prescribed under section 104 of the Standby Energy Emergency Authorities Act and shall be deemed an energy conservation plan for purposes of section 104(c), notwithstanding the provisions of section 104 (a) (1) (B). Such a rule may be amended as provided in section 104(a) (4) of such Act."

SEC. 104. ENERGY CONSERVATION PLANS.

(a) (1) (A) Pursuant to the provisions of this section, the Administrator may promulgate, by regulation, one or more energy conservation plans in accord with this section which shall be designed (together with actions taken and proposed to be taken under other authority of this or other Acts) to result in a reduction of energy consumption to a level which can be supplied by available energy resources. For purposes of this section, the term "energy conservation plan" means a plan for transportation controls (including but not limited to highway speed limits) or such other reasonable restrictions on the public or private use of energy (including limitations on energy consumption of businesses) which are necessary to reduce energy consumption.

(B) No energy conservation plan may impose rationing or any tax or user fee, or provide for a credit or deduction in computing any tax.

(2) An energy conservation plan shall become effective as provided in subsection (b). Such a plan shall apply in each State, except as otherwise provided in an exemption granted pursuant to such plan in cases where a comparable State or local program is in effect, or where the Administrator finds special circumstances exist.

(3) An energy conservation plan may not deal with more than one logically consistent subject matter.

(4) An amendment to an energy conservation plan, unless the Administrator determines such an amendment does not have significant substantive effect, shall be transmitted to Congress and shall be effective only in accordance with subsection (b), except that such an amendment may take effect immediately or on a date stated in such an amendment if the Administrator determines that a delay of 15 calendar days of continuous session of the Congress after the date on which such an amendment is transmitted to the Congress would seriously impair the operation of the plan or be inconsistent with the purposes of this Act, but if either House of the Congress, before the end of the first period of 15 calendar days of continuous session after the date of submission of such an amendment, passes a resolution stating in substance that such House does not favor such an amendment, such amendment shall cease to be effective on the date of passage of such resolution. Any amendment which the

Administrator determines does not have significant substantive effect and any rescission of a plan may be made effective in accordance with section 553 of title 5, United States Code.

(5) Subject to subsection (b) (3), an energy conservation plan shall remain in effect for a period specified in the plan unless earlier rescinded by the Administrator, but shall terminate in any event no later than 6 months after such plan first takes effect or June 30, 1975, whichever first occurs.

(b) (1) For purposes of this subsection, the term "energy conservation plan" includes an amendment to an energy conservation plan which has significant substantive effect.

(2) The Administrator shall transmit any energy conservation plan (bearing an identification number) to each House of Congress on the date on which it is promulgated.

(3) (A) Except as provided in subparagraph (B), if an energy conservation plan is transmitted to the Congress such plan shall take effect at the end of the first period of 15 calendar days of continuous session of Congress after the date on which such plan is transmitted to it unless, between the date of transmittal and the end of the 15-day period, either House passes a resolution stating in substance that such House does not favor such plan.

(ii) An energy conservation plan described in subparagraph (A) may be implemented prior to the expiration of

the 15-calendar-day period after the date on which such plan is transmitted, if each House of Congress approves a resolution affirmatively stating in substance that such House does not object to the implementation of such plan.

(4) For the purpose of paragraph (3) of this subsection—

(A) continuity of session is broken only by an adjournment of Congress sine die; and

(B) the days on which either House is not in session because of an adjournment of more than 3 days to a day certain are excluded in the computation of the 15-day period.

(5) Under provisions contained in an energy conservation plan, a provision of the plan may take effect at a time later than the date on which such plan otherwise takes effect.

(c) (1) This subsection is enacted by Congress—

(A) as an exercise of the rulemaking power of the Senate and the House of Representatives, respectively, and as such it is deemed a part of the rules of each House, respectively, but applicable only with respect to the procedure to be followed in that House in the case of resolutions described by paragraph (2) of this subsection; and it supersedes other rules only to the extent that it is inconsistent therewith; and

(B) with full recognition of the constitutional right

of either House to change the rules (so far as relating to the procedure of that House) at any time, in the same manner and to the same extent as in the case of any other rule of that House.

(2) For purposes of this subsection, the term "resolution" means only a resolution of either House of Congress described in subparagraph (A) or (B).

(A) A resolution the matter after the resolving clause of which is as follows: "That the ———— does not object to the implementation of energy conservation plan numbered ———— submitted to the Congress on ————, 19 .", the first blank space therein being filled with the name of the resolving House and the other blank space being appropriately filled; but does not include a resolution which specified more than one energy conservation plan.

(B) A resolution the matter after the resolving clause of which is as follows: "That the ———— does not favor the energy conservation plan numbered ———— transmitted to Congress on ————, 19 .", the first blank space therein being filled with the name of the resolving House and the other blank spaces therein being appropriately filled; but does not include a resolution which specifies more than one energy conservation plan.

(3) A resolution once introduced with respect to an energy conservation plan shall immediately be referred to a committee (and all resolutions with respect to the same plan shall be referred to the same committee) by the President of the Senate or the Speaker of the House of Representatives, as the case may be.

(4)(B) If the committee to which a resolution with respect to an energy conservation plan has been referred has not reported it at the end of 5 calendar days after its referral, it shall be in order to move either to discharge the committee from further consideration of such resolution or to discharge the committee from further consideration of any other resolution with respect to such energy conservation plan which has been referred to the committee.

(B) A motion to discharge may be made only by an individual favoring the resolution, shall be highly privileged (except that it may not be made after the committee has reported a resolution with respect to the same energy conservation plan), and debate thereon shall be limited to not more than one hour, to be divided equally between those favoring and those opposing the resolution. An amendment to the motion shall not be in order, and it shall not be in order to move to reconsider the vote by which the motion was agreed to or disagreed to.

(C) If the motion to discharge is agreed to or dis-

agreed to, the motion may not be renewed, nor may another motion to discharge the committee be made with respect to any other resolution with respect to the same plan.

(5) (A) When the committee has reported, or has been discharged from further consideration of, a resolution, it shall be at any time thereafter in order (even though a previous motion to the same effect has been disagreed to) to move to proceed to the consideration of the resolution. The motion shall be highly privileged and shall not be debatable. An amendment to the motion shall not be in order, and it shall not be in order to move to reconsider the vote by which the motion was agreed to or disagreed to.

(B) Debate on the resolution shall be limited to not more than ten hours, which shall be divided equally between those favoring and those opposing the resolution. A motion further to limit debate shall not be debatable. An amendment to, or motion to recommit, the resolution shall not be in order, and it shall not be in order to move to reconsider the vote by which the resolution was agreed to or disagreed to; except that it shall be in order to substitute a resolution disapproving a plan for a resolution not to object to such plan, or a resolution not to object to a plan for a resolution disapproving such plan.

(6) (A) Motions to postpone, made with respect to the discharge from committee, or the consideration of a resolu-

tion and motions to proceed to the consideration of other business, shall be decided without debate.

(B) Appeals from the decisions of the Chair relating to the application of the rules of the Senate or the House of Representatives, as the case may be, to the procedure relating to a resolution shall be decided without debate.

(7) Notwithstanding any of the provisions of this subsection, if a House has approved a resolution with respect to an energy conservation plan, then it shall not be in order to consider in that House any other resolution with respect to the same plan.

(d) (1) Any energy conservation plan or rationing rule, which the Administrator submits to the Congress pursuant to subsection (b) of this section shall state any findings of fact on which the action is based, and shall contain a specific statement explaining the rationale for such plan or rule.

(2) To the greatest extent practicable, any energy conservation plan or rationing rule which the Administrator submits to the Congress pursuant to subsection (b) of this section shall also be accompanied by an evaluation prepared by the Administrator of the potential economic impacts, if any, of the proposed plan or rule. Such evaluation shall include an analysis of the effect, if any, of such plan or rule on—

(A) the fiscal integrity of State and local government;

(B) vital industrial sectors of the economy;

(C) employment, by industrial and trade sector, as well as on a national, regional, State, and local basis;

(D) the economic vitality of regional, State, and local areas;

(E) the availability and price of consumer goods and services;

(F) the gross national product;

(G) competition in all sectors of industry;

(H) small business; and

(I) the supply and availability of energy resources for use as fuel or as feedstock for industry.

SEC. 105. COAL CONVERSION AND ALLOCATION.

(a) The Administrator shall, to the extent practicable and consistent with the objectives of this Act, by order, after balancing on a plant-by-plant basis the environmental effects of use of coal against the need to fulfill the purposes of this Act prohibit, as its primary energy source, the burning of natural gas or petroleum products by any major fuel-burning installation (including any existing electric powerplant) which, on the date of enactment of this Act, has the capability and necessary plant equipment to burn coal. Any installation to which such an order applies shall be permitted to continue to use coal or coal byproducts as provided in

section 119(b) of the Clean Air Act. To the extent coal supplies are limited to less than the aggregate amount of coal supplies which may be necessary to satisfy the requirements of those installations which can be expected to use coal (including installations to which orders may apply under this subsection), the Administrator shall prohibit the use of natural gas and petroleum products for those installations where the use of coal will have the least adverse environmental impact. A prohibition on use of natural gas and petroleum products under this subsection shall be contingent upon the availability of coal, coal transportation facilities, and the maintenance of reliability of service in a given service area. The Administrator shall require that fossil-fuel-fired electric powerplants in the early planning process, other than combustion gas turbine and combined cycle units, be designed and constructed so as to be capable of using coal as a primary energy source instead of or in addition to other fossil fuels. No fossil-fuel-fired electric powerplant may be required under this section to be so designed and constructed, if (1) to do so would result in an impairment of reliability or adequacy of service, or (2) if an adequate and reliable supply of coal is not available and is not expected to be available. In considering whether to impose a design and construction requirement under this subsection, the Administrator shall consider the existence and effects of any contractual

commitment for the construction of such facilities and the capability of the owner or operator to recover any capital investment made as a result of the conversion requirements of this section.

(b) The Administrator may, by rule, prescribe a system for allocation of coal to users thereof in order to attain the objectives specified in this section.

SEC. 106. MATERIALS ALLOCATION.

(a) Beginning 60 days after the date of enactment of this Act, the Administrator may, by rule or order, require the allocation of, or the performance under contracts or orders (other than contracts of employment) relating to, supplies of materials and equipment if he makes the findings required by subsection (c) of this section.

(b) Not later than 30 days after the date of enactment of this Act the Administrator shall report to the Congress with respect to the manner in which the authorities contained in subsection (a) will be administered. This report shall include but not be limited to the manner in which allocations will be made, the procedure for requests and appeals, the criteria for determining priorities as between competing requests, and the office or agency which will administer such authorities.

(c) The authority granted in this section may not be used to control the general distribution of any supplies of

materials and equipment in the marketplace unless the Administrator finds that—

(1) such supplies are scarce, critical, and essential to maintain or further exploration, production, refining, and required transportation of energy supplies and for the construction and maintenance of energy facilities, and

(2) maintenance or furtherance of exploration, production, refining, and required transportation of energy supplies and the construction and maintenance of energy facilities during the energy shortage cannot reasonably be accomplished without exercising the authority specified in subsection (a) of this section.

SEC. 107. FEDERAL ACTIONS TO INCREASE AVAILABLE DOMESTIC PETROLEUM SUPPLIES.

(a) The Administrator may, by rule or order, until June 30, 1975, require the following measures to supplement domestic energy supplies:

(1) the production of designated existing domestic oilfields, at their maximum efficient rate of production, which is the maximum rate at which production may be sustained without detriment to the ultimate recovery of oil and gas under sound engineering and economic principles. Such fields are to be designated by the Secretary of the Interior, after consultation with the appropriate

State regulatory agency. Data to determine the maximum efficient rate of production shall be supplied to the Secretary of the Interior by the State regulatory agency which determines the maximum efficient rate of production and by the operators who have drilled wells in, or are producing oil and gas from such fields;

(2) if necessary to meet essential energy needs, production of certain designated existing domestic oilfields at rates in excess of their currently assigned maximum efficient rates. Fields to be so designated, by the Secretary of the Interior or the Secretary of the Navy as to the Federal lands or as to Federal interests in lands under their respective jurisdiction, shall be those fields where the types and quality of reservoirs are such as to permit production at rates in excess of the currently assigned sustainable maximum efficient rate for periods of ninety days or more without excessive risk of losses in recovery; and

(3) the adjustment of processing operations of domestic refineries to produce refined products in proportions commensurate with national needs and consistent with the objectives of section 4(b) of the Emergency Petroleum Allocation Act of 1973.

(b) Nothing in this section shall be construed to authorize the production from any naval petroleum reserve

now subject to the provisions of chapter 641 of title 10, United States Code.

SEC. 108. OTHER AMENDMENTS TO THE EMERGENCY PETROLEUM ALLOCATION ACT OF 1973.

(a) Section 4 of the Emergency Petroleum Allocation Act of 1973 (as amended by section 103 of this Act) is further amended by adding at the end of such section the following new subsection:

"(i) If any provision of the regulation under subsection (a) provides that any allocation of residual fuel oil or refined petroleum products is to be based on use of such a product or amounts of such product supplied during a historical period, the regulation shall contain provisions designed to assure that the historical period can be adjusted (or other adjustments in allocations can be made) in order to reflect regional disparities in use, population growth or unusual factors influencing use (including unusual changes in climatic conditions), of such oil or product in the historical period. This subsection shall take effect 30 days after the date of enactment of the Standby Energy Emergency Authorities Act. Adjustments for such purposes shall take effect no later than 6 months after the date of enactment of this subsection. Adjustments to reflect population growth shall be based upon the most current figures available from the United States Bureau of the Census."

(b) Section 4(g)(1) of the Emergency Petroleum Allocation Act of 1973 is amended by striking out "February 28, 1975" in each case the term appears and inserting in each case "June 30, 1975".

(c) Section 4(b)(1)(G) of the Emergency Petroleum Allocation Act of 1973 is amended to read as follows:

"(G) allocation of residual fuel oil and refined petroleum products in such amounts and in such manner as may be necessary for the maintenance of exploration for, and production or extraction of—

"(i) fuels, and

"(ii) minerals essential to the requirements of the United States,

and for required transportation related thereto,".

(d) The Administrator shall, within 30 days from the date of the enactment of this Act, report to the Congress with respect to shortages of petrochemical feedstocks, of steps taken to alleviate any such shortages, the unemployment impact resulting from such shortages, and any legislative recommendations which he deems necessary to alleviate such shortages.

SEC. 109. PROTECTION OF FRANCHISED DEALERS.

(a) As used in this section:

(1) The term "distributor" means a person engaged in the sale, consignment, or distribution of petro-

leum products to wholesale or retail outlets whether or not it owns, leases, or in any way controls such outlets.

(2) The term "franchise" means any agreement or contract between a refiner or a distributor and a retailer or between a refiner and distributor, under which such retailer or distributor is granted authority to use a trademark, trade name, service mark, or other identifying symbol or name owned by such refiner or distributor, or any agreement or contract between such parties under which such retailer or distributor is granted authority to occupy premises owned, leased, or in any way controlled by a party to such agreement or contract, for the purpose of engaging in the distribution or sale of petroleum products for purposes other than resale.

(3) The term "refiner" means a person engaged in the refining or importing of petroleum products.

(4) The term "retailer" means a person engaged in the sale of any refined petroleum product for purposes other than resale within any State, either under a franchise or independent of any franchise, or who was so engaged at any time after the start of the base period.

(b) (1) A refiner or distributor shall not cancel, fail to renew, or otherwise terminate a franchise unless he furnishes prior notification pursuant to this paragraph to each distributor or retailer affected thereby. Such notification shall be

in writing and sent to such distributor or retailer by certified mail not less than 90 days prior to the date on which such franchise will be canceled, not renewed, or otherwise terminated. Such notification shall contain a statement of intention to cancel, not renew, or to terminate together with the reasons therefor, the date on which such action shall take effect, and a statement of the remedy or remedies available to such distributor or retailer under this section together with a summary of the applicable provisions of this section.

(2) A refiner or distributor shall not cancel, fail to renew, or otherwise terminate a franchise unless the retailer or distributor whose franchise is terminated failed to comply substantially with any essential and reasonable requirement of such franchise or failed to act in good faith in carrying out the terms of such franchise, or unless such refiner or distributor withdraws entirely from the sale of refined petroleum products in commerce for sale other than resale in the United States.

(c) (1) If a refiner or distributor engages in conduct prohibited under subsection (b) of this section, a retailer or a distributor may maintain a suit against such refiner or distributor. A retailer may maintain such suit against a distributor or a refiner whose actions affect commerce and whose products with respect to conduct prohibited under paragraph (1) or (2) of subsection (b) of this section,

he sells or has sold, directly or indirectly, under a franchise. A distributor may maintain such suit against a refiner whose actions affect commerce and whose products he purchases or has purchased or whose products he distributes or has distributed to retailers.

(2) The court shall grant such equitable relief as is necessary to remedy the effects or conduct prohibited under subsection (b) of this section which it finds to exist including declaratory judgment and mandatory or prohibitive injunctive relief. The court may grant interim equitable relief, and actual and punitive damages (except for actions for a failure to renew) where indicated, in suits under this section, and may, unless such suit is frivolous, direct that costs, including reasonable attorney and expert witness fees, be paid by the defendant. In the case of actions for a failure to renew, damages shall be limited to actual damages including the value of the dealer's equity.

(3) A suit under this section may be brought in the district court of the United States for any judicial district in which the distributor or the refiner against whom such suit is maintained resides, is found, or is doing business, without regard to the amount in controversy.

(d) The provisions of this section expire at midnight, June 30, 1975, but such expiration shall not affect any pending action or pending proceeding, civil or criminal, not

finally determined on such date, nor any action or proceeding based upon any act committed prior to midnight, June 30, 1975, except that no suit under this section, which is based upon an act committed prior to midnight, June 30, 1975, shall be maintained unless commenced within 3 years after such act.

SEC. 110. PROHIBITIONS ON UNREASONABLE ACTIONS.

(a) Action taken under authority of this Act, the Emergency Petroleum Allocation Act of 1973, or other Federal law resulting in the allocation of petroleum products and electrical energy among classes of users or resulting in restrictions on use of petroleum products and electrical energy, shall be equitable, shall not be arbitrary or capricious, and shall not unreasonably discriminate among classes of users, unless the Administrator determines such a policy would be inconsistent with the purposes of this Act and publishes his finding in the Federal Register, allocations shall contain provisions designed to foster reciprocal and nondiscriminatory treatment by foreign countries of United States citizens engaged in commerce.

(b) To the maximum extent practicable, any restriction on the use of energy shall be designed to be carried out in such manner so as to be fair and to create a reasonable distribution of the burden of such restriction on all sectors of the economy, without imposing an unreasonably dispro-

portionate share of such burden on any specific industry, business or commercial enterprise, or on any individual segment thereof and shall give due consideration to the needs of commercial, retail, and service establishments whose normal function is to supply goods and services of an essential convenience nature during times of day other than conventional daytime working hours.

SEC. 111. REGULATED CARRIERS.

(a) The Interstate Commerce Commission shall, by expedited proceedings, adopt appropriate rules under the Interstate Commerce Act which eliminate restrictions on the operating authority of any motor common carrier of property which require excessive travel between points with respect to which such motor common carrier has regularly performed service under authority issued by the Commission. Such rules shall assure continuation of essential service to communities served by any such motor common carrier.

(b) Within 45 days after the date of enactment of this Act, the Civil Aeronautics Board, the Federal Maritime Commission, and the Interstate Commerce Commission shall report separately to the appropriate committees of the Congress on the need for additional regulatory authority in order to conserve fuel during the period beginning on the date of enactment of this Act and ending on June 30, 1975, while continuing to provide for the public convenience and necessity. Each such report shall identify with specificity—

(1) the type of regulatory authority needed;

(2) the reasons why such authority is needed;

(3) the probable impact on fuel conservation of such authority;

(4) the probable effect on the public convenience and necessity of such authority; and

(5) the competitive impact, if any, of such authority.

Each such report shall further make recommendations with respect to changes in any existing fuel allocation programs which are deemed necessary to provide for the public convenience and necessity during such period.

SEC. 112. ANTITRUST PROVISIONS.

(a) Except as specifically provided in subsection (i), no provision of this Act shall be deemed to convey to any person subject to this Act any immunity from civil and criminal liability or to create defenses to actions, under the antitrust laws.

(b) As used in this section, the term "antitrust laws" means—

(1) the Act entitled "An Act to protect trade and commerce against unlawful restraints and monopolies", approved July 2, 1890 (15 U.S.C. 1 et seq.), as amended;

(2) the Act entitled "An Act to supplement exist-

ing laws against unlawful restraints and monopolies, and for other purposes", approved October 15, 1914 (15 U.S.C. 12 et seq.), as amended;

(3) the Federal Trade Commission Act (15 U.S.C. 41 et seq.), as amended;

(4) sections 73 and 74 of the Act entitled "An Act to reduce taxation, to provide revenue for the Government, and for other purposes", approved August 27, 1894 (15 U.S.C. 8 and 9), as amended; and

(5) the Act of June 19, 1936, chapter 592 (15 U.S.C. 13, 13a, 13b, and 21a).

(c) (1) To achieve the purposes of this Act, the Administrator may provide for the establishment of such advisory committees as he determines are necessary. Any such advisory committees shall be subject to the provisions of the Federal Advisory Committee Act of 1972 (5 U.S.C. App. I), whether or not such Act or any of its provisions expires or terminates during the term of this Act or of such committees, and in all cases shall be chaired by a regular full-time Federal employee and shall include representatives of the public. The meetings of such committees shall be open to the public.

(2) A representative of the Federal Government shall be in attendance at all meetings of any advisory committee established pursuant to this section. The Attorney General

and the Federal Trade Commission shall have adequate advance notice of any meeting and may have an official representative attend and participate in any such meeting.

(3) A full and complete verbatim transcript shall be kept of all advisory committee meetings, and shall be taken and deposited, together with any agreement resulting therefrom, with the Attorney General and the Federal Trade Commission. Such transcript and agreement shall be made available for public inspection and copying, subject to the provisions of section 552 (b) (1) and (b) (3) of title 5, United States Code.

(d) The Administrator, subject to the approval of the Attorney General and the Federal Trade Commission, shall promulgate, by rule, standards and procedures by which persons engaged in the business of producing, refining, marketing, or distributing crude oil, residual fuel oil or any refined petroleum product may develop and implement voluntary agreements and plans of action to carry out such agreements which the Administrator determines are necessary to accomplish the objectives stated in section 4 (b) of the Emergency Petroleum Allocation Act of 1973.

(e) The standards and procedures under subsection (d) shall be promulgated pursuant to section 553 of title 5, United States Code. They shall provide, among other things, that—

(1) Such agreements and plans of action shall be developed by meetings of committees, councils, or other interested segments of the petroleum industry and of groups which include representatives of the public, of industrial, municipal, and private consumers, and shall in all cases be chaired by a regular full-time Federal employee;

(2) Meetings held to develop a voluntary agreement or a plan of action under this subsection shall permit attendance by interested persons and shall be preceded by timely and adequate notice with identification of the agenda of such meeting to the Attorney General, the Federal Trade Commission and to the public in the affected community;

(3) Interested persons shall be afforded an opportunity to present, in writing and orally, data, views, and arguments at such meetings;

(4) A full and complete verbatim transcript shall be kept of any meeting, conference, or communication held to develop, implement, or carry out a voluntary agreement or a plan of action under this subsection and shall be taken and deposited, together with any agreement resulting therefrom, with the Attorney General and the Federal Trade Commission. Such transcript and agreement shall be available for public inspection and

copying, subject to provisions of sections 552 (b) (1) and (b) (3) of title 5, United States Code.

(f) The Federal Trade Commission may exempt types or classes of meetings, conferences, or communications from the requirements of subsections (c) (3) and (e) (4), provided such meetings, conferences, or communications are ministerial in nature and are for the sole purpose of implementing or carrying out a voluntary agreement or plan of action authorized pursuant to this section. Such ministerial meeting, conference, or communication may take place in accordance with such requirements as the Federal Trade Commission may prescribe by rule. Such persons participating in such meeting, conference, or communication shall cause a record to be made specifying the date such meeting, conference, or communication took place and the persons involved, and summarizing the subject matter discussed. Such record shall be filed with the Federal Trade Commission and the Attorney General, where it shall be made available for public inspection and copying.

(g) (1) The Attorney General and the Federal Trade Commission shall participate from the beginning in the development, implementation, and carrying out of voluntary agreements and plans of action authorized under this section. Each may propose any alternative which would avoid or overcome, to the greatest extent practicable, possible anti-

competitive effects while achieving substantially the purposes of this Act. Each shall have the right to review, amend, modify, disapprove, or prospectively revoke, on its own motion or upon the request of any interested person, any plan of action or voluntary agreement at any time, and, if revoked, thereby withdraw prospectively the immunity which may be conferred by subsection (i) of this section.

(2) Any voluntary agreement or plan of action entered into pursuant to this section shall be submitted in writing to the Attorney General and the Federal Trade Commission twenty days before being implemented, where it shall be made available for public inspection and copying.

(h) (1) The Attorney General and the Federal Trade Commission shall monitor the development, implementation, and carrying out of plans of action and voluntary agreements authorized under this section to assure the protection and fostering of competition and the prevention of anticompetitive practices and effects.

(2) The Attorney General and the Federal Trade Commission shall promulgate joint regulations concerning the maintenance of necessary and appropriate documents, minutes, transcripts, and other records related to the development, implementation, or carrying out of plans of action or voluntary agreements authorized pursuant to this Act.

(3) Persons developing, implementing, or carrying out

plans of action or voluntary agreements authorized pursuant to this Act shall maintain those records required by such joint regulations. The Attorney General and the Federal Trade Commission shall have access to and the right to copy such records at reasonable times and upon reasonable notice.

(4) The Federal Trade Commission and the Attorney General may each prescribe such rules and regulations as may be necessary or appropriate to carry out their responsibilities under this Act. They may both utilize for such purposes and for purposes of enforcement, any and all powers conferred upon the Federal Trade Commission or the Department of Justice, or both, by any other provision of law, including the antitrust laws; and wherever such provision of law refers to "the purposes of this Act" or like terms, the reference shall be understood to be this Act.

(i) There shall be available as a defense to any civil or criminal action brought under the antitrust laws in respect of actions taken in good faith to develop and implement a voluntary agreement or plan of action to carry out a voluntary agreement by persons engaged in the business of producing, refining, marketing, or distributing crude oil, residual fuel oil, for any refined petroleum product that—

(1) such action was—

(A) authorized and approved pursuant to this section, and

(B) undertaken and carried out solely to achieve the purposes of this section and in compliance with the terms and conditions of this section, and the rules promulgated hereunder; and

(2) such persons fully complied with the requirements of this section and the rules and regulations promulgated hereunder.

(j) No provision of this Act shall be construed as granting immunity for, nor as limiting or in any way affecting any remedy or penalty which may result from any legal action or proceeding arising from, any acts or practices which occurred: (1) prior to the enactment of this Act, (2) outside the scope and purpose or not in compliance with the terms and conditions of this Act and this section, or (3) subsequent to its expiration or repeal.

(k) Effective on the date of enactment of this Act, this section shall apply in lieu of section 6(c) of the Emergency Petroleum Allocation Act of 1973. All actions taken and any authority or immunity granted under such section 6(c) shall be hereafter taken or granted, as the case may be, pursuant to this section.

(l) The provisions of section 708 of the Defense Production Act of 1950, as amended, shall not apply to any action authorized to be taken under this Act or the Emergency Petroleum Allocation Act of 1973.

(m) The Attorney General and the Federal Trade Commission shall each submit to the Congress and to the President, at least once very 6 months, a report on the impact on competition and on small business of actions authorized by this section.

(n) The authority granted by this section (including any immunity under subsection (i)) shall terminate on June 30, 1975.

(o) The exercise of authority provided in section 111 shall not have as a principal purpose or effect the substantial lessening of competition among carriers affected. Actions taken pursuant to that subsection shall be taken only after providing from the beginning an adequate opportunity for participation by the Federal Trade Commission and the Assistant Attorney General in charge of the Antitrust Division, who shall propose any alternative which would avoid or overcome, to the greatest extent practicable, any anticompetitive effects while achieving the purposes of this Act.

SEC. 113. EXPORTS.

(a) The Administrator is authorized by rule or order, to restrict exports of coal, natural gas, petroleum products, and petrochemical feedstocks, and of supplies of materials and equipment which he determines to be necessary to maintain or further exploration, production, refining, and

required transportation of domestic energy supplies and for the construction and maintenance of energy facilities within the United States, under such terms and conditions as he determines to be appropriate and necessary to carry out the purpose of this Act.

(b) In the administration of the restrictions under subsection (a) of this section, the Administrator may request and, if so, the Secretary of Commerce shall, pursuant to the procedures established by the Export Administration Act of 1969 (but without regard to the phrase "and to reduce the serious inflationary impact of abnormal foreign demand" in section 3(2)(A) of such Act), impose such restrictions on exports of coal, natural gas, petroleum products, and petrochemical feedstocks, and of supplies of materials and equipment which the Administrator determines to be necessary to maintain or further exploration, production, refining, and required transportation of domestic energy supplies and for the construction and maintenance of energy facilities within the United States, as the Administrator determines to be appropriate and necessary to carry out the purposes of this Act.

(c) Rules or orders of the Administrator under subsection (a) of this section and actions by the Secretary of Commerce pursuant to subsection (b) of this section shall take into account the historical trading relations of the United States with Canada and Mexico.

SEC. 114. EMPLOYMENT IMPACT AND UNEMPLOYMENT ASSISTANCE.

(a) The President shall take into consideration and shall minimize, to the fullest extent practicable, any adverse impact of actions taken pursuant to this Act upon employment. All agencies of Government shall cooperate fully under their existing statutory authority to minimize any such adverse impact.

(b) (1) The Secretary of Labor shall make grants, in accordance with regulations prescribed by him, to States to provide cash benefits to any individual who is unemployed as a result of disruptions, dislocations, or shortages of energy supplies and resources, and who is not eligible for unemployment assistance or who has exhausted his rights to such assistance (within the meaning of paragraph (4) (B)).

(2) Regulations of the Secretary of Labor under paragraph (1) may require that States enter into agreements as a condition of receiving a grant under this subsection, and such regulations—

(A) shall provide that—

(i) a benefit under this subsection shall be available to any individual who is unemployed as a result of disruptions, dislocations, or shortages of energy supplies and resources and who is not

eligible for unemployment assistance (without regard to whether such unemployment commenced before or after the date of enactment of this Act).

(ii) a benefit provided to such an individual shall be available to such individual for any week of unemployment which begins after the date on which this Act is enacted and before July 1, 1975, in which such individual is unemployed;

(iii) the amount of a benefit with respect to a week of unemployment shall be equal to—

(I) in the case of an individual who has exhausted his eligibility for unemployment assistance, the amount of the weekly unemployment compensation payment for which he was most recently eligible; or

(II) in the case of any other individual, an amount which shall be set by the State in which the individual was last employed at a level which shall take into account the benefit levels provided by State law for persons covered by the State's unemployment compensation program, but which shall not be less than the minimum weekly amount, nor more than the maximum weekly amount, under the unemployment compensation law of the State; and

(B) may provide that individuals eligible for a benefit under this subsection have been employed for up to 1 month in the 52-week period preceding the filing of a claim for benefits under this subsection.

(3) Unemployment resulting from disruptions, dislocations, or shortages of energy supplies and resources shall be defined in regulations of the Secretary of Labor. Such regulations shall provide that such unemployment includes unemployment clearly attributable to such disruptions, disclocations or shortages, fuel allocations, fuel pricing, consumer buying decisions influenced by such disruptions, dislocations, or shortages, and governmental action associated with such disruptions, dislocations, or shortages. The determination as to whether an individual is unemployed as a result of such disruptions, dislocations, or shortages (within the meaning of such regulations) shall be made by the State in which the individual was last employed in accordance with such industry, business, or employer certification process or such other determination procedure (or combination thereof) as the Secretary of Labor shall, consistent with the purposes of paragraph (1) of this subsection, determine as most appropriate to minimize administrative costs, appeals, or other delay, in paying to individuals the cash allowances provided under this section.

(4) For purposes of this subsection—

(A) an individual shall be considered unemployed in any week if he is—

(i) not working,

(ii) able to work, and

(iii) available for work,

within the meaning of the State unemployment compensation law in effect in the State in which such individual was last employed, and provided that he would not be subject to disqualification under that law for such week, if he were eligible for benefits under such law;

(B) (1) the phrase "not eligible" for unemployment assistance means not eligible for compensation under any State or Federal unemployment compensation law (including the Railroad Unemployment Insurance Act (45 U.S.C. 351 et seq.)) with respect to such week of unemployment, and is not receiving compensation with respect to such week of unemployment under the unemployment compensation law of Canada; and

(ii) the phrase "exhausted his rights to such assistance" means exhausted all rights to regular, additional, and extended compensation under all State unemployment compensation laws and chapter 85 of title 5, United States Code, and has no further rights to regular, additional, or extended compensation under any

State or Federal unemployment compensation law (including the Railroad Unemployment Insurance Act (45 U.S.C. 351 et seq.)) with respect to such week of unemployment, and is not receiving compensation with respect to such week of unemployment under the unemployment compensation law of Canada.

(c) On or before the sixtieth day following the date of enactment of this Act, the President shall report to the Congress concerning the present and prospective impact of energy shortages upon employment. Such report shall contain an assessment of the adequacy of existing programs in meeting the needs of adversely affected workers and shall include legislative recommendations which the President deems appropriate to meet such needs, including revisions in the unemployment insurance laws.

SEC. 115. USE OF CARPOOLS.

(a) The Secretary of Transportation shall encourage the creation and expansion of the use of carpools as a viable component of our nationwide transportation system. It is the intent of this section to maximize the level of carpool participation in the United States.

(b) The Secretary of Transportation is directed to establish within the Department of Transportation an "Office of Carpool Promotion" whose purpose and responsibilities shall include—

(1) responding to any and all requests for information and technical assistance on carpooling and carpooling systems from units of State and local governments and private groups and employees;

(2) promoting greater participation in carpooling through public information and the preparation of such materials for use by State and local governments;

(3) encouraging and promoting private organizations to organize and operate carpool systems for employees;

(4) promoting the cooperation and sharing of responsibilities between separate, yet proximately close, units of government in coordinating the operations of carpool systems; and

(5) promoting other such measures that the Secretary determines appropriate to achieve the goal of this subsection.

(c) The Secretary of Transportation shall encourage and promote the use of incentives such as special parking privileges, special roadway lanes, toll adjustments, and other incentives as may be found beneficial and administratively feasible to the furtherance of carpool ridership, and consistent with the obligations of the State and local agencies which provide transportation services.

(d) The Secretary of Transportation shall allocate the

funds appropriated pursuant to the authorization of subsection (f) according to the following distribution between the Federal and State or local units of government:

(1) The initial planning process—up to 100 percent Federal.

(2) The systems design process—up to 100 percent Federal.

(3) The initial startup and operation of a given system—60 percent Federal and 40 percent State or local with the Federal portion not to exceed 1 year.

(e) Within 12 months of the date of enactment of this Act, the Secretary of Transportation shall make a report to Congress of all his activities and expenditures pursuant to this section. Such report shall include any recommendations as to future legislation concerning carpooling.

(f) The sum of $5,000,000 is authorized to be appropriated for the conduct of programs designed to achieve the goals of this section, such authorization to remain available for 2 years.

(g) For purposes of this section, the terms "local governments" and "local units of government" include any metropolitan transportation organization designated as being responsible for carrying out section 134 of title 23, United States Code.

(h) As an example to the rest of our Nation's automobile users, the President of the United States shall take

such action as is necessary to require all agencies of Government, where practical, to use economy model motor vehicles.

(i) (1) The President shall take action to require that no Federal official or employee in the executive branch below the level of Cabinet officer be furnished a limousine for individual use. The provisions of this subsection shall not apply to limousines furnished for use by officers or employees of the Federal Bureau of Investigation, or to those persons whose assignments necessitate transportation by limousines because of diplomatic assignment by the Secretary of State.

(2) For purposes of this subsection, the term "limousine" means a type 6 vehicle as defined in the Interim Federal Specifications issued by the General Services Administration, December 1, 1973.

(3) (A) The President shall take action to insure the enforcement of 31 U.S.C. 638a.

(B) No funds shall be expended under authority of this or any other Act for the purpose of furnishing a chauffeur in a vehicle operated in violation of section 638a of title 31, United States Code, or this Act.

SEC. 116. ADMINISTRATIVE PROCEDURE AND JUDICIAL REVIEW.

(a) (1) Subject to paragraphs (2), (3), and (4) of this subsection, the provisions of subchapter II of chapter 5 of title 5, United States Code, shall apply to any rule, regu-

lation, or order under this title or under section 4 (h) of the Emergency Petroleum Allocation Act of 1973; except that this subsection shall not apply to any rule, regulation, or order issued under the Emergency Petroleum Allocation Act of 1973 (as amended by this title) other than section 4 (h) thereof, nor to any rule under section 111 of this title.

(2) Notice of all proposed substantive rules and orders of general applicability described in paragraph (1) shall be given by publication of such proposed rule or order in the Federal Register. In each case, a minimum of 10 days following such publication shall be provided for opportunity to comment; except that the requirements of this paragraph as to time of notice and opportunity to comment may be waived where the President finds that strict compliance would seriously impair the operation of the program to which such rule or order relates and such findings are set out in detail in such rule or order. In addition, public notice of all rules or orders promulgated by officers of a State or political subdivision thereof or to State or local boards pursuant to this Act shall to the maximum extent practicable be achieved by publication of such rules or orders in a sufficient number of newspapers of statewide circulation calculated to receive widest possible notice.

(3) In addition to the requirements of paragraph (2), unless the President determines that a rule or order described

in paragraph (1) is not likely to have a substantial impact on the Nation's economy or upon a significant segment thereof, an opportunity for oral presentation of views, data, and argument shall be afforded. To the maximum extent practicable, such opportunity shall be afforded prior to the implementation of such rule or order, but in all cases such opportunity shall be afforded no later than 45 days after the implementation of any such rule or order. A transcript shall be kept of any oral presentation.

(4) Any officer or agency authorized to issue rules or orders described in paragraph (1) shall provide for the making of such adjustments, consistent with the other purposes of this Act or the Emergency Petroleum Allocation Act of 1973 (as the case may be), as may be necessary to prevent special hardships, inequity, or an unfair distribution of burdens and shall in rules prescribed by it establish procedures which are available to any person for the purpose of seeking an interpretation, modification, or rescission of, or an exception to or exemption from, such rules and orders. If such person is aggrieved or adversely affected by the denial of a request for such action under the preceding sentence, he may request a review of such denial by the officer or agency and may obtain judicial review in accordance with subsection (b) or other applicable law when such denial becomes final. The officer or agency shall, in rules prescribed by it,

establish appropriate procedures, including a hearing where deemed advisable, for considering such requests for action under this paragraph.

(b) (1) Judicial review of administrative rulemaking of general and national applicability done under this title may be obtained only by filing a petition for review in the United States Court of Appeals for the District of Columbia within thirty days from the date of promulgation of any such rule or regulation, and judicial review of administrative rulemaking of general, but less than national applicability done under this title may be obtained only by filing a petition for review in the United States Court of Appeals for the appropriate circuit within thirty days from the date of promulgation of any such rule or regulation, the appropriate circuit being defined as the circuit which contains the area or the greater part of the area within which the rule or regulation is to have effect.

(2) Notwithstanding the amount in controversy, the district courts of the United States shall have exclusive original jurisdiction of all other cases or controversies arising under this title, or under regulations or orders issued thereunder, except any actions taken by the Civil Aeronautics Board, the Interstate Commerce Commission, the Federal Power Commission, or the Federal Maritime Commission, or any actions taken to implement or enforce any rule or order by any officer

of a State or political subdivision thereof or State or local board which has been delegated authority under section 120 of this Act except that nothing in this section affects the power of any court of competent jurisdiction to consider, hear, and determine in any proceeding before it any issue raised by way of defense (other than a defense based on the constitutionality of this title or the validity of action taken by any agency under this title). If in any such proceeding an issue by way of defense is raised based on the constitutionality of this Act or the validity of agency action under this title, the case shall be subject to removal by either party to a district court of the United States in accordance with the applicable provisions of chapter 89 of title 28, United States Code.

(3) This subsection shall not apply to any rule, regulation, or order issued under the Emergency Petroleum Allocation Act of 1973 or to any rule under section 111 of this title.

(4) The finding required by section 4(h)(2) of the Emergency Petroleum Allocation Act of 1973 shall not be judicially reviewable under this subsection or under any other provision of law.

(c) The Administrator may by rule prescribe procedures for State or local boards which carry out functions under this Act or the Emergency Petroleum Allocation Act of 1973. Such procedures shall apply to such boards in lieu

of subsection (a), and shall require that prior to taking any action, such boards shall take steps reasonably calculated to provide notice to persons who may be affected by the action, and shall afford an opportunity for presentation of views (including oral presentation of views where practicable) at least 10 days before taking the action. Such boards shall be of balanced composition reflecting the makeup of the community as a whole.

(d) In addition to the requirements of section 552 of title 5, United States Code, any agency authorized by this title of the Emergency Petroleum Allocation Act of 1973 to issue rules or orders shall make available to the public all internal rules and guidelines which may form the basis, in whole or in part, for any rule or order with such modifications as are necessary to insure confidentiality protected under such section 552. Such agency shall, upon written request of a petitioner filed after any grant or denial of a request for exception or exemption from rules or orders, furnish the petitioner with a written opinion setting forth applicable facts and the legal basis in support of such grant or denial. Such opinions shall be made available to the petitioner and the public within 30 days of such request and with such modifications as are necessary to insure confidentiality of information protected under such section 552.

63-518 O - 76 - 31 (Vol. 1)

SEC. 117. PROHIBITED ACTS.

It shall be unlawful for any person to violate any provision of title I of this Act (other than provisions of this Act which make amendments to the Emergency Petroleum Allocation Act of 1973 and section 111) or to violate any rule, regulation (including an energy conservation plan), or order issued pursuant to any such provision.

SEC. 118. ENFORCEMENT.

(a) Whoever violates any provision of section 117 shall be subject to a civil penalty of not more than $2,500 for each violation.

(b) Whoever willfully violates any provision of section 117 shall be fined not more than $5,000 for each violation.

(c) It shall be unlawful for any person to offer for sale or distribute in commerce any product or commodity in violation of an applicable order or regulation issued pursuant to this Act. Any person who knowingly and willfully violates this subsection after having been subjected to a civil penalty for a prior violation of the same provision of any order or regulation issued pursuant to this Act shall be fined not more than $50,000 or imprisoned not more than 6 months, or both.

(d) Whenever it appears to any person authorized by the Administrator to exercise authority under this Act that any individual or organization has engaged, is engaged, or is about to engage in acts or practices constituting a viola-

tion of section 117, such person may request the Attorney General to bring an action in the appropriate district court of the United States to enjoin such acts or practices, and upon a proper showing a temporary restraining order or a preliminary or permanent injunction shall be granted without bond. Any such court may also issue mandatory injunctions commanding any person to comply with any provision, the violation of which is prohibited by section 117.

(e) Any person suffering legal wrong because of any act or practice arising out of any violation of section 117 may bring an action in a district court of the United States, without regard to the amount in controversy, for appropriate relief, including an action for a declaratory judgment or writ of injunction. Nothing in this subsection shall authorize any person to recover damages.

SEC. 119. SMALL BUSINESS INFORMATION.

In order to achieve the purposes of this Act—

(1) the Small Business Administration (A) shall to the maximum extent possible provide small business enterprises with full information concerning the provisions of the programs provided for in this Act which particularly affect such enterprises, and the activities of the various departments and agencies under such provisions, and (B) shall, as a part of its annual report, provide to the Congress a summary of the actions taken under

programs provided for in this Act which have particularly affected such enterprises;

(2) to the extent feasible, Federal and other governmental bodies shall seek the views of small business in connection with adopting rules and regulations under the programs provided for in this Act and in administering such programs; and

(3) in administering the programs provided for in this Act, special provision shall be made for the expeditious handling of all requests, applications, or appeals from small business enterprises.

SEC. 120. DELEGATION OF AUTHORITY AND EFFECT ON STATE LAW.

(a) The Administrator may delegate any of his functions under the Emergency Petroleum Allocation Act of 1973 or this Act to any officer or employee of the agency which he heads as he deems appropriate. The Administrator may delegate any of his functions relative to implementation and enforcement of the Emergency Petroleum Allocation Act of 1973 or this Act to officers of a State or political subdivision thereof or to State or local boards of balanced composition reflecting the makeup of the community as a whole. Such officers or boards shall be designated and established in accordance with regulations which the Administration shall promulgate under this Act. Section 5(b) of the Emer-

gency Petroleum Allocation Act of 1973 is repealed effective on the effective date of the transfer of functions under such Act to the Administrator pursuant to subsection (c) of this section.

(b) No State law or State program in effect on the date of enactment of this Act, or which may become effective thereafter, shall be superseded by any provision of this Act or any regulation, order, or energy conservation plan issued pursuant to this Act except insofar as such State law or State program is inconsistent with the provisions of this Act, or such a regulation, order, or plan.

(c) Effective on the date on which the Administrator of the Federal Energy Administration (established by H.R. 11793, Ninety-third Congress) first takes office, all functions, powers, and duties of the President under the Emergency Petroleum Allocation Act of 1973 (as amended by this Act), and of any officer, department, agency, or State (or officer thereof) under such Act (other than functions vested by section 6 of such Act in the Federal Trade Commission, the Attorney General, or the Antitrust Division of the Department of Justice), are transferred to the Administrator. All personnel, property, records, obligations, and commitments used primarily with respect to functions transferred under the preceding sentence shall be transferred to the Administrator.

SEC. 121. GRANTS TO STATES.

Any funds authorized to be appropriated under section 125(b) shall be available for the purpose of making grants to States to which the Administrator has delegated authority under section 120 of this Act, or for the administration of appropriate State or local energy conservation programs which are the basis of an exemption made pursuant to section 104(a)(2) of this Act from a Federal energy conservation plan which has taken effect under section 104 of this Act. The Administrator shall make such grants upon such terms and conditions as he may prescribe by rule.

SEC. 122. ENERGY INFORMATION REPORTS.

(a) For the purpose of assuring that the Administrator, the Congress, the States, and the public have access to and are able to obtain reliable energy information throughout the duration of this Act, the Administrator, in addition to and not in limitation of any other authority, is authorized to request, acquire, and collect such energy information as he determines to be necessary to assist in the formulation of energy policy or to carry out the purposes of this Act or the Emergency Petroleum Allocation Act of 1973.

(b) In carrying out the provisions of subsection (a) the Administrator shall have the power to—

(1) require, by rule, any person who is engaged in the production, processing, refining, transportation by

pipeline or distribution (other than at the retail level) of energy resources to submit reports;

(2) sign and issue subpenas for the attendance and testimony of witnesses and the production of relevant books, records, papers, and other documents;

(3) require of any person, by general or special order, answers in writing to interrogatories, requests for report, or other information; and such answers or submissions shall be made within such reasonable period and under oath or otherwise as the Administrator may determine; and

(4) to administer oaths.

(c) For the purpose of verifying the accuracy of any energy information requested, acquired, or collected by the Administrator, officers or employees duly designated by him upon presenting appropriate credentials and a written notice to the owner, operator, or at reasonable times and in a reasonable manner, any facility or business premises, to inventory and sample any stock of energy resources therein, and to examine and copy records, reports, and documents relating to energy information.

(d) (1) The Administrator shall exercise the authorities granted to him under subsection (b) to develop within 30 days after the date of enactment of this Act, as full and accurate a measure as is reasonably practicable of—

(A) domestic reserves and production;

(B) imports; and

(C) inventories;

of petroleum products, natural gas, and coal.

(2) for Each calendar quarter beginning with the first complete calendar quarter following the date of enactment of this Act, the Administrator shall develop and publish quarterly reports containing the following:

(A) Report of petroleum product, natural gas, and coal imports; relating to country of origin, arrival point, quantity received, geographic distribution within the United States.

(B) Report of crude oil activity; relating capacity of producers' allocations to refiners, and fuels to be made.

(C) Report of inventories, nationally, and by region and State—

(i) for various refined petroleum products, relating refiners, refineries, suppliers to refiners, share of market, and allocation fractions;

(ii) for various refined petroleum products, previous quarter deliveries and anticipated 3-month available supplies;

(iii) for refinery yields of the various refined petroleum products, percent of activity, and type of refinery;

(iv) with respect to the summary of anticipated monthly supply of refined petroleum products, amount of set aside for assignment by the State, anticipated State requirements, excess or shortfall of supply, and allocation fraction of base year; and

(v) with respect to liquefied petroleum gas by State and owner: quantities stored, and existing capacities, and previous priorities on types, inventories of suppliers, and changes in supplier inventories.

(3) In developing the energy information called for in this section, the Administrator may, if he determines that it would not be practicable to do otherwise, use the statistical method of "sampling".

(e) In order to avoid or minimize duplicative reporting, the Administrator may request and acquire energy information from any other department or agency of Federal Government, except that any such department or agency shall refuse to supply such information if its disclosure to the Administrator would otherwise be prohibited by law.

(f) Any person required to submit energy information to the Administrator under this section may at the time he submits such information request the Administrator to declare such information, in whole or in part, to be con-

fidential and to not disclose such information except as permitted under subsection (d) (2). The Administrator shall, within 10 days after receipt of such request, initiate and (except where good cause is stated) complete within 30 days thereafter, an administrative proceeding affording an opportunity for hearing under sections 556 and 557 of title 5, United States Code, to determine whether such information concerns or relates to trade secrets or other matter referred to in section 1905 of title 18, United States Code, within the meaning of such section 1905.

(g) (1) Information determined by the Administrator to concern or relate to trade secrets or other matter referred to in section 1905 of title 18, United States Code, shall be kept confidential and not be disclosed except that disclosure may be made (A) to other officers or employees concerned with carrying out this Act and the Emergency Petroleum Allocation Act of 1973 concerned with the formulation of energy policy, (B) when relevant, in any proceeding under this Act or the Emergency Petroleum Allocation Act of 1973, or (C) to the committees of Congress upon request of the chairman of any such committee.

(2) Such information when disclosed in a proceeding under this Act or the Emergency Petroleum Allocation Act of 1973 shall be disclosed by the Administrator in a manner which preserves confidentiality to the extent practicable

without impairing the proceeding and such information when submitted to the committees of Congress upon request shall not be disclosed except by authority of the committee.

(3) Paragraph (2) of this subsection shall govern disclosure of such information by committees of the Congress and is enacted by the Congress—

(A) as an exercise of the rulemaking power of the Senate and House of Representatives, respectively, and as such shall be considered as a part of the rules of each House, respectively, or of that House to which it specifically applies, and such rule shall supersede other rules only to the extent that they are inconsistent therewith, and

(B) with full recognition of the constitutional right of either House to change such rule (so far as it relates to the procedure in such House) at any time, in the same manner, and to the same extent as in the case of any other rule of such House.

(h) As used in this section—

(1) the term "Federal agency" shall have the meaning of the term "executive agency" as defined in section 105 of title 5, United States Code;

(2) the term "energy information" includes all information in whatever form on mineral fuel reserves, exploration, extraction, and natural energy resources (to

include petrochemical feedstocks) wherever located; production, distribution, and consumption wherever carried on; and includes matters such as corporate structure and proprietary relationships, costs, prices, capital investment and assets and other matters directly related thereto, wherever they exist; and

(3) the term "person" means any natural person, corporation, partnership, association, consortium, or any entity organized for a common business purpose; wherever situated, domiciled or doing business, who directly or through other persons subject to their control do business in any part of the United States, its territories and possessions, or the District of Columbia.

(i) Information obtained by the Administrator under authority of this Act shall be available to the public in accordance with the provisions of section 552 of title 5, United States Code.

SEC. 123. INTRASTATE GAS.

Nothing in this Act shall expand the authority of the Federal Power Commission with respect to sales of nonjurisdictional natural gas.

SEC. 124. EXPIRATION.

The authority under this title to prescribe any rule or order to take other action under this title, or to enforce any such rule or order, shall expire at midnight, June 30, 1975,

but such expiration shall not affect any action or pending proceedings, civil or criminal, not finally determined on such date, nor any action or proceeding based upon any act committed prior to midnight, June 30, 1975.

SEC. 125. AUTHORIZATIONS OF APPROPRIATIONS.

(a) There are authorized to be appropriated to the Administrator to carry out his functions under this Act and under other laws, and to make grants to States under section 121, $75,000,000 for the fiscal year ending June 30, 1974, $75,000,000 for the fiscal year ending June 30, 1975.

(b) For the purpose of making payments under grants to States under section 121, there are authorized to be appropriated $50,000,000 for the fiscal year ending June 30, 1974, and $75,000,000 for the fiscal year ending June 30, 1975.

(c) For the purpose of making payments under grants to States under section 114, there is authorized to be appropriated $500,000,000 for the fiscal year ending June 30, 1974.

SEC. 126. SEVERABILITY.

If any provision of this Act, or the application of any such provision to any person or circumstance, shall be held invalid, the remainder of this Act, or the application of such provision to persons or circumstances other than those as to which it is held invalid, shall not be affected thereby.

SEC. 127. CONTINGENCY PLANS.

(a) In order to fully inform the Congress and the public with respect to the exercise of authorities under sections 103 and 104 of this Act, the Administration shall, to the maximum extent practical, develop contingency plans in the nature of descriptive analyses of:

(1) the manner of implementation and operation of any such authority;

(2) the anticipated benefits and impacts of the provision of any plan;

(3) the role of State and local government;

(4) the procedures for appeal and review; and

(5) the Federal officers or employees who will administer any plan.

(b) Any contingency plans which describe the exercise of any authority under section 103 or 104 of this Act shall be transmitted to the Congress not later than the date on which any plan or rule relating to such contingency plan is transmitted to the Congress pursuant to the provisions of such sections.

SEC. 128. PETROLEUM PRICE CONTROL AUTHORITY.

(a) Section 4 of the Emergency Petroleum Allocation Act of 1973 is further amended by adding at the end of such section the following new subsection:

"(j) (1) No later than 30 days after the date of enact-

ment of this subsection, the President shall exercise his authority under this Act and the Economic Stabilization Act of 1970, as amended, so as to specify (or prescribe a manner for determining) equitable ceiling prices for all first sales or exchanges of crude oil, natural gas liquids, and condensate (or classifications thereof) produced in or imported into the United States.

"(2) The regulation under subsection (a) of this section shall be amended so as to provide, with respect to the prices of imported crude oil, natural gas liquids, condensate, residual fuel oil, or refined petroleum products, produced or refined by the person importing such product into the United States, or purchased or exchanged by him (directly or indirectly) from an affiliate, no more than a dollar-for-dollar passthrough of net increases in foreign taxes and in royalties paid to nonaffiliates for crude oil, natural gas liquids, or condensate, or in the actual price paid at the first purchase from a nonaffiliate of such crude oil, natural gas liquids, condensate, residual fuel oil, or refined petroleum products. The calculation of any net increase in taxes, royalties, or prices at first purchase under this paragraph shall take into consideration any reduction, by virtue of increases in foreign taxes, royalties, or prices, upon the liability of the importer or his affiliates for United States income taxes.

"(3) The regulation under subsection (a) of this section shall be amended so as to provide that any increase or re-

duction, relative to prices prevailing on May 15, 1973, in the price of crude oil, natural gas liquids, and condensates (or any classification thereof) produced in or imported into the United States, resulting from the provisions of this subsection, is passed through so as to cause a dollar-for-dollar increase or reduction in the price of any residual fuel oil or refined petroleum product (including propane) derived from such crude oil, natural gas liquids, or condensate. Such pass-through of price increases or reductions shall, to the extent practicable and consistent with the objectives of subsection (b) of this section, be allocated among products refined from such crude oil, natural gas liquids, or condensate on a proportional basis, taking into consideration historical price relationships among such products.

"(4) Every establishment of or change in a ceiling price (or manner of determining the ceiling price) specified pursuant to this subsection, and every ceiling price (or manner of determining a ceiling price) or exemption from ceiling prices that is in effect on the date of enactment of this subsection, shall be transmitted to Congress no later than the effective date of such change, or in the case of every such ceiling price (or manner for specifying such a ceiling price) or exemption from ceiling prices in effect on the date of enactment of this subsection, no later than 30 days after that date. Every such transmittal shall be accompanied and supported by a detailed statement setting forth—

"(i) the additional qualities of crude oil, natural gas liquids, or condensate, residual fuel oil, or refined petroleum products, if any, that can reasonably be expected to be produced;

"(ii) the expected effect, if any, upon the demand for crude oil, natural gas liquids, or condensate, residual fuel oil, or refined petroleum products, or

"(iii) the expected impact upon the economy as a whole, including the impact upon consumers, the general price level, and the profitability of and employment in industry and business;

"(iv) any expected significant problems of enforcement or administration; and

"(v) the expected impact on the preservation of existing competition within the petroleum industry resulting from said ceiling price, manner for specifying a ceiling price, or (in the case of the regulation in effect upon the date of this subsection) exemption from ceiling prices.

"(5) For the purpose of this subsection, the term 'equitable ceiling price' means a price which is reasonable, taking into consideration the need to obtain sufficient supplies of crude oil, residual fuel oil, and refined petroleum products, and to permit the attainment of the objectives of subsection (b) of this section, balanced against the need to

63-518 O - 76 - 32 (Vol. 1)

control inflation of basic and essential goods and services and hold down costs to industrial and individual consumers.

"(6) Section 4(c)(2) of the Emergency Petroleum Allocation Act of 1973 and section 406 of Public Law 93–153 are repealed."

TITLE II—COORDINATION WITH ENVIRONMENTAL PROTECTION REQUIREMENTS

SEC. 201. SUSPENSION AUTHORITY.

Title I of the Clean Air Act (42 U.S.C. 1857 et seq.) is amended by adding at the end thereof the following new section:

"ENERGY EMERGENCY AUTHORITY

"SEC. 119. (a)(1)(A) The Administrator may, for any period beginning on or after the date of enactment of this section and ending on or before November 1, 1974, temporarily suspend any stationary source fuel or emission limitation as it applies to any person, if the Administrator finds that such person will be unable to comply with such limitation during such period solely because of unavailability of types or amounts of fuels. Any suspension under this paragraph and any interim requirement on which such suspension is conditioned under paragraph (3) shall be exempted from any procedural requirements set forth in this Act or in any other provision of local, State, or Federal law, except as provided in subparagraph (B).

"(B) The Administrator shall give notice to the public of a suspension and afford the public an opportunity for written and oral presentation of views prior to granting such suspension unless otherwise provided by the Administrator for good cause found and published in the Federal Register. In any case, before granting such a suspension he shall give actual notice to the Governor of the State, and to the chief executive officer of the local government entity in which the affected source or sources are located. The granting or denial of such suspension and the imposition of an interim requirement shall be subject to judicial review only on the grounds specified in paragraphs (2) (B) and (2) (C) of section 706 of title 5, United States Code, and shall not be subject to any proceeding under section 304 (a) (2) or 307 (b) and (c) of this Act.

"(2) In issuing any suspension under paragraph (1) the Administrator is authorized to act on his own motion without application by any source or State.

"(3) Any suspension under paragraph (1) shall be conditioned upon compliance with such interim requirements as the Administrator determines are reasonable and practicable. Such interim requirements shall include, but need not be limited to, (A) a requirement that the source receiving the suspension comply with such reporting requirements as the Administrator determines may be necessary, (B) such

measures as the Administrator determines are necessary to avoid an imminent and substantial endangerment to health of persons, and (C) requirements that the suspension shall be inapplicable during any period during which fuels which would enable compliance with the suspended stationary source fuel or emission limitations are, in fact, reasonably available to that person (as determined by the Administrator). For purposes of clause (C) of this paragraph, availability of natural gas or petroleum products which enable compliance shall not make a suspension inapplicable to a source described in subsection (b) (1) of this section.

"(4) For purposes of this section:

"(A) The term 'stationary source fuel or emission limitation' means any emission limitation, schedule, or timetable for compliance, or other requirement, which is prescribed under this Act (other than section 303, 111(b), or 112) or contained in an applicable implementation plan, and which is designed to limit stationary source emissions resulting from combustion of fuels, including a prohibition on, or specification of, the use of any fuel of any type or grade or pollution characteristic thereof.

"(B) The term 'stationary source' has the same meaning as such term has under section 111(a) (3).

"(b) (1) Except as provided in paragraph (2) of this subsection, any fuel-burning stationary source—

"(A) which is prohibited from using petroleum products or natural gas as fuel by reason of an order issued under section 105(a) of the Standby Energy Emergency Authorities Act, or

"(B) which (i) the Administrator of the Environmental Protection Agency determines began conversion to the use of coal as fuel during the 90-day period ending on December 15, 1973, and (ii) the Administrator of the Federal Energy Administration determines should use coal after November 1, 1974, after balancing on a plant-by-plant basis the environmental effects of such conversion against the need to fulfill the purposes of the Standby Energy Emergency Authorities Act,

and which converts to the use of coal as fuel, shall not, until January 1, 1979, be prohibited, by reason of the application of any air pollution requirement, from burning coal which is available to such source. For purposes of this paragraph, the term 'began conversion' means action by the owner or operator of a source during the 90-day period ending December 15, 1973 (such as entering into a contract binding on the operator of the source for obtaining coal, or equipment or facilities to burn coal; expending substantial sums to permit such source to burn coal; or applying for an air pollution variance to enable the source to burn coal) which the Administrator finds evidences a decision (made prior to Decem-

ber 15, 1973) to convert to burning coal as a result of the unavailability of an adequate supply of fuels required for compliance with the applicable implementation plan, and a good faith effort to expeditiously carry out such decision.

"(2) (A) Paragraph (1) of this subsection shall apply to a source only if the Administrator finds that emissions from the source will not materially contribute to a significant risk to public health and if the source has submitted to the Administrator a plan for compliance for such source which the Administrator has approved, after notice to interested persons and opportunity for presentation of views (including oral presentation of views). A plan submitted under the preceding sentence shall be approved only if it provides (i) for compliance by the means specified in subparagraph (B), and in accordance with a schedule which meets the requirements of such subparagraph; and (ii) that such source will comply with requirements which the Administrator shall prescribe to assure that emissions from such source will not materially contribute to a significant risk to public health. The Administrator shall approve or disapprove any such plan within 60 days after such plan is submitted.

"(B) The Administrator shall prescribe regulations requiring that any source to which this subsection applies submit and obtain approval of its means for and schedule of compliance. Such regulations shall include requirements that

such schedules shall include dates by which such source must—

"(i) enter into contracts (or other enforceable obligations) which have received prior approval of the Administrator as being adequate to effectuate the purposes of this section and which provide for obtaining a long-term supply of coal which enables such source to achieve the emission reduction required by subparagraph (C), or

"(ii) if coal which enables such source to achieve such emission reduction is not available to such source, (I) enter into contracts (or other enforceable obligations) which have received prior approval of the Administrator as being adequate to effectuate the purposes of this section and which provide for obtaining a long-term supply of other coal or coal by-products, and (II) take steps to obtain continuous emission reduction systems necessary to permit such source to burn such coal or coal by-products and to achieve the degree of emission reduction required by subparagraph (C) (which steps and systems must have received prior approval of the Administrator as being adequate to effectuate the purposes of this section).

"(C) Regulations under subparagraph (B) shall require that the source achieve the most stringent degree of

emission reduction that such source would have been required to achieve under the applicable implementation plan which was in effect on the date of enactment of this section (or if no applicable implementation plan was in effect on such date, under the applicable implementation plan which takes effect after such date). Such degree of emission reduction shall be achieved as soon as practicable, but not later than January 1, 1979; except that, in the case a source for which a continuous emission reduction system is required for sulfur-related emission, reduction of such emissions shall be achieved on a date designated by the Administrator (but not later than January 1, 1979). Such regulations shall also include such interim requirements as the Administrator determines are reasonable and practicable including requirements described in clauses (A) and (B) of subsection (a) (3).

"(D) The Administrator (after notice to interested persons and opportunity for presentation of views, including oral presentations of views, to the extent practicable) (i) may, prior to November 1, 1974, and shall thereafter prohibit the use of coal by a source to which paragraph (1) applies if he determines that the use of coal by such source is likely to materially contribute to a significant risk to public health; and (ii) may require such source to use coal of any particular type, grade, or pollution characteristic if such

coal is available to such source. Nothing in this subsection (b) shall prohibit a State or local agency from taking action which the Administrator is authorized to take under this subparagraph.

"(3) For purposes of this subsection, the term 'air pollution requirement' means any emission limitation, schedule, or timetable for compliance, or other requirement, which is prescribed under any Federal, State, or local law or regulation, including this Act (except for any requirement prescribed under this subsection or section 303), and which is designed to limit stationary source emissions resulting from combustion of fuels (including a restriction on the use or content of fuels). A conversion to coal to which this subsection applies shall not be deemed to be a modification for purposes of section 111(a) (2) and (4) of this Act.

"(4) A source to which this subsection applies may, upon the expiration of the exemption under paragraph (1), obtain a one-year postponement of the application of any requirement of an applicable implementation plan under the conditions and in the manner provided in section 110(f).

"(c) The Administrator may by rule establish priorities under which manufacturers of continuous emission reduction systems shall provide such systems to users thereof, if he finds that priorities must be imposed in order to assure that such systems are first provided to users in air quality control

regions with the most severe air pollution. No rule under this subsection may impair the obligation of any contract entered into before enactment of this section. No State or political subdivision may require any person to use a continuous emission reduction system for which priorities have been established under this subsection except in accordance with such priorities.

"(d) The Administrator shall study, and report to Congress not later than 6 months after the date of enactment of this subsection with respect to—

"(1) the present and projected impact on the program under this Act of fuel shortages and of allocation and end-use allocation programs;

"(2) availability of continuous emission reduction technology (including projections respecting the time, cost, and number of units available) and the effects that continuous emission reduction systems would have on the total environment and on supplies of fuel and electricity;

"(3) the number of sources and locations which must use such technology based on projected fuel availability data;

"(4) priority schedule for implementation of continuous emission reduction technology, based on public health or air quality;

"(5) evaluation of availability of technology to burn municipal solid waste in these sources; including time schedules, priorities analysis of unregulated pollutants which will be emitted and balancing of health benefits and detriments from burning solid waste and of economic costs;

"(6) projections of air quality impact of fuel shortages and allocations;

"(7) evaluation of alternative control strategies for the attainment and maintenance of national ambient air quality standards for sulfur oxides within the time frames prescribed in the Act, including associated considerations of cost, time frames, feasibility, and effectiveness of such alternative control strategies as compared to stationary source fuel and emission regulations;

"(8) proposed allocations of continuous emission reduction technology for nonsolid waste producing systems to sources which are least able to handle solid waste byproduct, technologically, economically, and without hazard to public health, safety, and welfare; and

"(9) plans for monitoring or requiring sources to which this section applies to monitor the impact of actions under this section on concentration of sulfur dioxide in the ambient air.

"(e) No State or political subdivision may require any person to whom a suspension has been granted under sub-

section (a) to use any fuel the unavailability of which is the basis of such person's suspension (except that this preemption shall not apply to requirements identical to Federal interim requirements under subsection (a) (1)).

"(f) (1) It shall be unlawful for any person to whom a suspension has been granted under subsection (a) (1) to violate any requirement on which the suspension is conditioned pursuant to subsection (a) (3).

"(2) It shall be unlawful for any person to violate any rule under subsection (c).

"(3) It shall be unlawful for the owner or operator of any source to fail to comply with any requirement under subsection (b) or any regulation, plan, or schedule thereunder.

"(4) It shall be unlawful for any person to fail to comply with an interim requirement under subsection (i) (3).

"(g) Beginning January 1, 1975, the Administrator shall publish at no less than 180-day intervals in the Federal Register the following:

"(1) A concise summary of progress reports which are required to be filed by any person or source owner or operator to which subsection (b) applies. Such progress reports shall report on the status of compliance with all requirements which have been imposed by the Administrator under such subsections.

"(2) Up-to-date findings on the impact of this section upon—

"(A) applicable implementation plans, and

"(B) ambient air quality.

"(h) Nothing in this section shall affect the power of the Administrator to deal with air pollution presenting an imminent and substantial endangerment to the health of persons under section 303 of this Act.

"(i) (1) In order to reduce the likelihood of early phaseout of existing electric generating facilities during the energy emergency, any electric generating powerplant (A) which, because of the age and condition of the plant, is to be taken out of service permanently no later than January 1, 1980, according to the power supply plan (in existence on the date of enactment of the Standby Energy Emergency Authorities Act) of the operator of such plant, (B) for which a certification to that effect has been filed by the operator of the plant with the Environmental Protection Agency and the Federal Power Commission, and (C) for which the Commission has determined that the certification has been made in good faith and that the plan to cease operations no later than January 1, 1980, will be carried out as planned in light of existing and prospective power supply requirements, shall be eligible for a single 1-year postponement as provided in paragraph (2).

"(2) Prior to the date on which any plant eligible under paragraph (1) is required to comply with any requirement of an applicable implementation plan, such source may apply (with the concurrence of the Governor of the State in which the plant is located) to the Administrator to postpone the applicability of such requirement to such source for not more than 1 year. If the Administrator determines, after balancing the risk to public health and welfare which may be associated with a posptonement, that compliance with any such requirement is not reasonable in light of the projected useful life of the plant, the availability of rate base increases to pay for such costs, and other appropriate factors, then the Administrator shall grant a postponement of any such requirement.

"(3) The Administrator shall, as a condition of any postponement under paragraph (2), prescribe such interim requirements as are practicable and reasonable in light of the criteria in paragraph (2).

"(j) (1) The Administrator may, after public notice and opportunity for presentation of views in accordance with section 553 of title 5, United States Code, and after consultation with the Federal Energy Administration, designate persons to whom fuel exchange orders should be issued. The purpose of such designation shall be to avoid or minimize the adverse impact on public health and welfare of any

suspension under subsection (a) of this section or conversion to coal to which subsection (b) applies or of any allocation under the Standby Energy Emergency Authorities Act or the Emergency Petroleum Allocation Act of 1973.

"(2) The Administrator of the Federal Energy Administration shall issue exchange orders to such persons as are designated by the Administrator under paragraph (1) requiring the exchange of any fuel subject to allocation under the preceding Acts effective no later than 45 days after the date of the designation under paragraph (1), unless the Administrator of the Federal Energy Administration determines, after consultation with the Administrator, that the costs or consumption of fuel, resulting from such exchange order, will be excessive.

"(3) Violation of any exchange order issued under paragraph (2) shall be a prohibited act and shall be subject to enforcement action and sanctions in the same manner and to the same extent as a violation of any requirement of the regulation under section 4 of the Emergency Petroleum Allocation Act of 1973."

SEC. 202. IMPLEMENTATION PLAN REVISIONS.

(a) Section 110(a) of the Clean Air Act is amended in paragraph (3) by inserting "(A)" after "(3)" and by adding at the end thereof the following new subparagraph:

"(B) (1) For any air quality control region in which there has been a conversion to coal under section 119(b),

the Administrator shall review the applicable implementation plan and no later than 1 year after the date of such conversion determine whether such plan must be revised in order to achieve the national primary standard which the plan implements. If the Administrator determines that any such plan is inadequate, he shall require that a plan revision be submitted by the State within 3 months after the date of notice to the State of such determination. Any plan revision which is submitted by the State after notice and public hearing shall be approved or disapproved by the Administrator, after public notice and opportunity for public hearing, but no later than 3 months after the date required for submission of the revised plan. If a plan provision (or portion thereof) is disapproved (or if a State fails to submit a plan revision), the Administrator shall, after public notice and opportunity for a public hearing, promulgate a revised plan (or portion thereof) not later than 3 months after the date required for approval or disapproval.

"(2) Any requirement for a plan revision under paragraph (1) and any plan requirement promulgated by the Administrator under such paragraph shall include reasonable and practicable measures to minimize the effect on the public health of any conversion to which section 119(b) applies."

(b) Subsection (c) of section 110 of the Clean Air Act (42 U.S.C. 1857 C-5) is amended by inserting "(1)"

after "(c)"; by redesignating paragraphs (1), (2), and (3) as subparagraphs (A), (B), and (C), respectively; and by adding the following new paragraph:

"(2) (A) The Administrator shall conduct a study and shall submit a report to the Committee on Interstate and Foreign Commerce of the United States House of Representatives and the Committee on Public Works of the United States Senate not later than 6 months after the date of enactment of this paragraph, on the necessity of parking surcharge, management of parking supply, and preferential bus/carpool lane regulations as part of the applicable implementation plans required under this section to achieve and maintain national primary ambient air quality standards. The study shall include an assessment of the economic impact of such regulations, consideration of alternative means of reducing total vehicle miles traveled, and an assessment of the impact of such regulations on other Federal and State programs dealing with energy or transportation. In the course of such study, the Administrator shall consult with other Federal officials including, but not limited to, the Secretary of Transportation, the Administrator of the Federal Energy Administration, and the Chairman of the Council on Environmental Quality.

"(B) No parking surcharge regulation may be required by the Administrator under paragraph (1) of this sub-

section as a part of an applicable implementation plan. All parking surcharge regulations previously required by the Administrator shall be void upon the date of enactment of this subparagraph. This subparagraph shall not prevent the Administrator from approving parking surcharges if they are adopted and submitted by a State as part of an applicable implementation plan. The Administrator may not condition approval of any applicable implementation plan submitted by a State on such plan's including a parking surcharge regulation.

"(C) The Administrator is authorized to suspend until January 1, 1975, the effective date or applicability of any regulations for the management of parking supply or any requirement that such regulations be a part of an applicable implementation plan approved or promulgated under this section. The exercise of the authority under this subparagraph shall not prevent the Administrator from approving such regulations if they are adopted and submitted by a State as part of an applicable implementation plan. If the Administrator exercises the authority under this subparagraph, regulations requiring a review or analysis of the impact of proposed parking facilities before construction which take effect on or after January 1, 1975, shall not apply to parking facilities on which construction has been initiated before January 1, 1975.

"(D) For purposes of this paragraph, the term 'parking surcharge regulation' means a regulation imposing or requiring the imposition of any tax, surcharge, fee, or other surcharge on parking spaces, or any other area used for the temporary storage of motor vehicles. The term 'management of parking supply' shall include any requirement providing that any new facility containing a given number of parking spaces shall receive a permit or other prior approval, issuance of which is to be conditioned on air quality considerations. The term 'preferential bus/carpool lane' shall include any requirement for the setting aside of one or more lanes of a street or highway on a permanent or temporary basis for the exclusive use of buses and/or carpools."

SEC. 203. MOTOR VEHICLE EMISSIONS.

(a) Section 202(b)(1)(A) of the Clean Air Act is amended by striking out "1975" and inserting in lieu thereof "1977"; and by inserting after "(A)" the following: "The regulations under subsection (a) applicable to emissions of carbon monoxide and hydrocarbons from light-duty vehicles and engines manufactured during model years 1975 and 1976 shall contain standards which are identical to the interim standards which were prescribed (as of December 1, 1973) under paragraph (5)(A) of this subsection for light-duty vehicles and engines manufactured during model year 1975."

(b) Section 202(b)(1)(B) of such Act is amended by striking out "1976" and inserting in lieu thereof "1978"; and by inserting after "(B)" the following: "The regulations under subsection (a) applicable to emissions of oxides of nitrogen from light-duty vehicles and engines manufactured during model years 1975 and 1976 shall contain standards which are identical to the standards which were prescribed (as of December 1, 1973) under subsection (a) for light-duty vehicles and engines manufactured during model year 1975. The regulations under subsection (a) applicable to emissions of oxides of nitrogen from light-duty vehicles and engines manufactured during model year 1977 shall contain standards which provide that emissions of such vehicles and engines may not exceed 2.0 grams per vehicle mile."

(c) Section 202(b)(5)(A) of such Act is amended to read as follows:

"(5)(A) At any time after January 1, 1975, any manufacturer may file with the Administrator an application requesting the suspension for 1 year only of the effective date of any emission standard required by paragraph (1)(A) with respect to such manufacturer for light-duty vehicles and engines manufactured in model year 1977. The Administrator shall make his determination with respect to any such application within 60 days. If he determines, in accordance with the provisions of this subsection, that such

suspension should be granted, he shall simultaneously with such determination prescribe by regulation interim emission standards which shall apply (in lieu of the standards required to be prescribed by paragraph (1) (A) of this subsection) to emissions of carbon monoxide or hydrocarbons (or both) from such vehicles and engines manufactured during model year 1977."

(d) Section 202 (b) (5) (B) of the Clean Air Act is repealed and the following subparagraphs redesignated accordingly.

SEC. 204. CONFORMING AMENDMENTS.

(a) (1) Section 113 (a) (3) of the Clean Air Act is amended by striking out "or" before "112 (c)", by inserting a comma in lieu thereof, and by inserting after "hazardous emissions)" the following: ", or 119 (f) (relating to priorities and certain other requirements)".

(2) Section 113 (b) (3) of such Act is amended by striking out "or 112 (c)" and inserting in lieu thereof ", 112 (c), or 119 (f)".

(3) Section 113 (c) (1) (C) of such Act is amended by striking out "or section 112 (c)" and inserting in lieu thereof ", section 112 (c), or section 119 (f)".

(4) Section 114 (a) of such Act is amended by inserting "119 or" before "303".

(b) Section 116 of the Clean Air Act is amended by inserting "119 (b), (c), and (e)," before "209".

SEC. 205. PROTECTION OF PUBLIC HEALTH AND ENVIRONMENT.

(a) Any allocation program provided for in title I of this Act or in the Emergency Petroleum Allocation Act of 1973, shall, to the maximum extent practicable, include measures to assure that available low sulfur fuel will be distributed on a priority basis to those areas of the country designated by the Administrator of the Environmental Protection Agency as requiring low sulfur to avoid or minimize adverse impact on public health.

(b) In order to determine the health effects of emissions of sulfur oxides to the air resulting from any conversions to burning coal to which section 119 of the Clean Air Act applies, the Department of Health, Education, and Welfare shall, through the National Institute of Environmental Health Sciences and in cooperation with the Environmental Protection Agency, conduct a study of chronic effects among exposed populations. The sum of $3,500,000 is authorized to be appropriated for such a study. In order to assure that long-term studies can be conducted without interruption, such sums as are appropriated shall be available until expended.

(c) No action taken under this Act shall, for a period of 1 year after initiation of such action, be deemed a major Federal action significantly affecting the quality of the hu-

man environment within the meaning of the National Environmental Policy Act of 1969 (83 Stat. 856). However, before any action under this Act that has a significant impact on the environment is taken, if practicable, or in any event within 60 days after such action is taken, an environmental evaluation with analysis equivalent to that required under section 102 (2) (C) of the National Environmental Policy Act, to the greatest extent practicable within this time constraint, shall be prepared and circulated to appropriate Federal, State, and local government agencies and to the public for a 30-day comment period after which a public hearing shall be held upon request to review outstanding environmental issues. Such an evaluation shall not be required where the action in question has been preceded by compliance with the National Environmental Policy Act by the appropriate Federal agency. Any action taken under this Act which will be in effect for more than a 1-year period (other than action taken pursuant to subsection (d) of this section) or any action to extend an action taken under this Act to a total period of more than 1 year shall be subject to the full provisions of the National Environmental Policy Act of 1969 notwithstanding any other provision of this Act.

(d) Notwithstanding subsection (c) of this section, in order to expedite the prompt construction of facilities for the importation of hydroelectric energy thereby helping

to reduce the shortage of petroleum products in the United States, the Federal Power Commission is hereby authorized and directed to issue a Presidential permit pursuant to Executive Order 10485 of September 3, 1953, for the construction, operation, maintenance, and connection of facilities for the transmission of electric energy at the borders of the United States without preparing an environmental impact statement pursuant to section 102 of the National Environmental Policy Act of 1969 (83 Stat. 856) for facilities for the transmission of electric energy between Canada and the United States in the vicinity of Fort Covington, New York.

SEC. 206. ENERGY CONSERVATION STUDY.

(a) The Administrator of the Federal Energy Administration shall conduct a study on potential methods of energy conservation and, not later than 6 months after the date of enactment of this Act, shall submit to Congress a report on the results of such study. The study shall include, but not be limited to, the following:

(1) the energy conservation potential of restricting exports of fuels or energy-intensive products or goods, including an analysis of balance of payments and foreign relations implications of any such restrictions;

(2) federally sponsored incentives for the use of public transit, including the need for authority to require

additional production of buses or other means of public transit and Federal subsidies for the duration of the energy emergency for reduced fares and additional expenses incurred because of increased service;

(3) alternative requirements, incentives, or disincentives for increasing industrial recycling and resource recovery in order to reduce energy demand including the economic costs and fuel consumption tradeoff which may be associated with such recycling and resource recovery in lieu of transportation and use of virgin materials;

(4) the costs and benefits of electrifying rail lines in the United States with a high density of traffic, including (A) the capital costs of such electrification, the oil fuel economies derived from such electrification, the ability of existing power facilities to supply the additional powerload, and the amount of coal or other fossil fuels required to generate the power required for railroad electrification, and (B) the advantages to the environment of electrification of railroads in terms of reduced fuel consumption and air pollution and disadvantages to the environment from increased use of fossil fuel such as coal; and

(5) means for incentives or disincentives to increase efficiency of industrial use of energy.

(b) Within 90 days of the date of enactment of this Act, the Secretary of Transportation, after consultation with the Federal Energy Administrator, shall submit to the Congress for appropriate action an "Emergency Mass Transportation Assistance Plan" for the purpose of conserving energy by expanding and improving public mass transportation systems and encouraging increased ridership as alternatives to automobile travel.

(c) Such plan shall include, but shall not be limited to—

(1) recommendations for emergency temporary grants to assist States and local public bodies and agencies thereof in the payment of operating expenses incurred in connection with the provision of expanded mass transportation service in urban areas;

(2) recommendations for additional emergency assistance for the purchase of buses and rolling stock for fixed rail, including the feasibility of accelerating the timetable for such assistance under section 142(a)(2) of title 23, United States Code (the "Federal Aid Highway Act of 1973"), for the purpose of providing additional capacity for and encouraging increased use of public mass transportation systems;

(3) recommendations for a program of demonstration projects to determine the feasibility of fare-free and low-fare urban mass transportation systems, including

reduced rates for elderly and handicapped persons during nonpeak hours of transportation;

(4) recommendations for additional emergency assistance for the construction of fringe and transportation corridor parking facilities to serve bus and other mass transportation passengers;

(5) recommendations on the feasibility of providing tax incentives for persons who use public mass transportation systems.

(d) In consultation with the Federal Energy Administrator, the Secretary of Transportation shall make an investigation and study for the purpose of conserving energy and assuring that the essential fuel needs of the United States will be met by developing a high-speed ground transportation system between the cities of Tijuana in the State of Baja California, Mexico, and Vancouver in the Province of British Columbia, Canada, by way of the cities of Seattle in the State of Washington, Portland in the State of Oregon, and Sacramento, San Francisco, Fresno, Los Angeles, and San Diego in the State of California. In carrying out such investigation and study the Secretary shall consider, but shall not be limited to—

(1) the efficiency of energy utilization and impact on energy resources of such a system, including the future impact of existing transportation systems on energy resources if such a system is not established;

(2) coordination with other studies undertaken on the State and local levels; and

(3) such other matters as he deems appropriate. The Secretary of Transportation shall report the results of the study and investigation pursuant to this Act, together with his recommendations, to the Congress and the President no later than December 31, 1974.

SEC. 207. REPORTS.

The Administrator of the Environmental Protection Agency shall report to Congress not later than January 31, 1975, on the implementation of sections 201 through 205 of this title.

SEC. 208. FUEL ECONOMY STUDY.

Title II of the Clean Air Act is amended by redesignating section 213 as section 214 and by adding the following new section:

"FUEL ECONOMY IMPROVEMENT FROM NEW MOTOR VEHICLES

"SEC. 213. (a) (1) The Administrator and the Secretary of Transportation shall conduct a joint study, and shall report to the Committee on Interstate and Foreign Commerce of the United States House of Representatives and the Committees on Public Works and Commerce of the United States Senate within 120 days following the date of enactment of this section, concerning the practicability of estab-

lishing a fuel economy improvement standard of 20 percent for new motor vehicles manufactured during and after model year 1980. Such study and report shall include, but not be limited to, the technological problems of meeting any such standard, including the leadtime involved; the test procedures required to determine compliance; the economic costs associated with such standards, including any beneficial economic impact; the various means of enforcing such standard; the effect on consumption of natural resources, including energy consumed; and the impact of applicable safety and emission standards. In the course of performing such study, the Administrator and the Secretary of Transportation shall utilize the research previously performed in the Department of Transportation, and the Administrator and the Secretary shall consult with the Administrator of the Federal Energy Administration, the Chairman of the Council on Environmental Quality, and the Secretary of the Treasury. The Office of Management and Budget may review such report before its submission to Congress but the Office may not revise the report or delay its submission beyond the date prescribed for its submission and may submit to Congress its comments respecting such report. In connection with such study, the Administrator may utilize the authority provided in section 307 (a) of this Act to obtain necessary information.

"(2) For the purpose of this section, the term 'fuel economy improvement standard' means a requirement of a

percentage increase in the number of miles of transportation provided by a manufacturer's entire annual production of new motor vehicles per unit of fuel consumed, as determined for each manufacturer in accordance with test procedures established by the Administrator pursuant to this Act. Such term shall not include any requirement for any design standard or any other requirement specifying or otherwise limiting the manufacturer's discretion in deciding how to comply with the fuel economy improvement standard by any lawful means."

TITLE III—STUDIES AND REPORTS

SEC. 301. AGENCY STUDIES.

The following studies shall be conducted, with reports on their results submitted to the Congress:

(1) Within 60 days after the date of enactment of this Act:

(A) The Administrator shall conduct a review of all rulings and regulations issued pursuant to the Economic Stabilization Act to determine if such rulings and regulations contributed to or are contributing to the shortage of fuels and of materials associated with the production of energy supplies.

(B) The President shall undertake a comprehensive survey of all Federal departments and agencies to identify and recommend to the Congress specific proposals

to significantly increase energy supply or to reduce energy demand through conservation programs.

(C) All independent regulatory commissions shall undertake a survey of all activities over which they have jurisdiction to identify and recommend to the Congress and to the President specific proposals to significantly increase energy supply or to reduce energy demand through conservation programs.

(D) The Secretary of the Treasury and the Director of the Cost of Living Council shall recommend to the Congress specific incentives to increase energy supply, reduce demand, to encourage private industry and individual persons to subscribe to the goals of this Act. This study shall also include an analysis of the price-elasticity of demand for gasoline.

(E) The Administrator shall report to the Congress concerning the present and prospective impact of energy shortages upon employment. Such report shall contain an assessment of the adequacy of existing programs in meeting the needs of adversely affected workers, together with legislative recommendations appropriate to meet such needs, including revisions in the unemployment insurance laws.

(F) The Secretary of the Interior and the Secretary of Commerce are directed to prepare a comprehen-

sive report of (1) United States exports of petroleum products and other energy sources, and (2) foreign investment in production of petroleum products and other energy sources to determine the consistency or lack thereof of the Nation's trade policy and foreign investment policy with domestic energy conservation efforts. Such report shall include recommendations for legislation.

(2) Within 6 months after the date of enactment of this Act:

(A) The Administrator shall develop and submit to the Congress a plan for providing incentives for the increased use of public transportation and Federal subsidies for maintained or reduced fares and additional expenses incurred because of increased service for the duration of the Act.

(B) The Administrator shall recommend to the Congress actions to be taken regarding the problem of the siting of energy producing facilities.

(C) The Administrator shall conduct a study of the further development of the hydroelectric power resources of the Nation, including an assessment of present and proposed projects already authorized by Congress and the potential of other hydroelectric power resources, including tidal power and geothermal steam.

(D) The Administrator shall prepare and submit to Congress a plan for encouraging the conversion of coal to crude oil and other liquid and gaseous hydrocarbons.

(E) The Secretary of the Interior shall study methods for accelerating leases of energy resources on public lands including oil and gas leasing onshore and offshore, and geothermal energy leasing.

SEC. 302. REPORTS OF THE PRESIDENT TO CONGRESS.

The President shall report to the Congress every sixty days beginning June 1, 1974, on the implementation and administration of this Act and the Emergency Petroleum Allocation Act of 1973, together with an assessment of the results attained thereby. Each report shall include specific information, nationally and by region and State, concerning staffing and other administrative arrangements taken to carry out programs under these Acts and may include such recommendations as he deems necessary for amending or extending the authorities granted in this Act or in the Emergency Petroleum Allocation Act of 1973.

63-518 O - 76 - 34 (Vol. 1)

INTRODUCTORY STATEMENT, MARCH 28, 1974

Mr. Jackson. Mr. President, I introduce for appropriate reference the "Standby Energy Emergency Authority and Contingency Planning Act."

On March 6, the President vetoed the Energy Emergency Act which among many other things, would have required a rollback in oil prices. The President based his veto message primarily on the oil price rollback.

The Senate failed to override the President's veto by a vote of 58 in favor to 40 against on March 6.

Following the veto, Congressman Staggers, chairman of the House Interstate and Foreign Commerce Committee, and I undertook a series of discussions with the administration to ascertain whether agreement could be reached with the administration on the provisions of an Energy Emergency Act the President would support. These negotiations have sought to develop an agreed-upon bill to provide most of the authority contained in the Energy Emergency Act which the President vetoed on March 6.

Discussions were concluded yesterday without a final and comprehensive agreement having been reached. These discussions did, however, demonstrate that there is a consensus within the administration that the executive branch requires standby emergency authority to deal with the prospect of recurring energy shortages.

While concurrence was reached on most aspects of the bill, fundamental differences on a number of major issues of public policy—unemployment compensation, restraints on oil prices, loans to homeowners, disclosure of confidential oil industry data, and protection of distributors and service station dealers—made full agreement with the administration impossible.

The bill passed by the Congress and vetoed by the President had important provisions on each of these subjects, and I could not agree to any bill which deleted or rendered these provisions meaningless.

NEED FOR EMERGENCY AUTHORITIES AND CONTINGENCY PLANNING

Mr. President, expeditious passage of a new bill is necessary because of the major risks the Nation faces in relying upon oil imported from nations whose leaders view and use oil as a political weapon. There are no grounds for confidence that the Arab oil embargo will not be reimposed in the weeks and months ahead as swiftly and with as little notice as it was imposed last fall. We must be prepared for such an eventuality. Indeed, our visible preparedness for and reduced vulnerability to the threat of embargo reduces the probability of imposition of an embargo.

The critical shortages the American people experienced this past winter could well be with us again later this spring and this summer.

The essential social and economic interests of the Nation are dependent upon an assured supply of equitably priced oil. These interests must not be placed in uncertain and unpredictable foreign hands. Reliance and overdependence on insecure sources of high-priced supply is a policy which can only be followed if we are fully prepared to reduce consumption and get by with less petroleum during periods of short supply which others may impose upon us.

Contingency plans and standby authority to deal fairly and equitably with shortages and in a manner which will maintain employment and the economy are essential.

At the present time, there is no authority in Federal law for the implementation in peacetime of programs necessary to deal with acute energy shortages. During this winter's embargo, Federal policy was dependent upon requests for voluntary public action and a very broad interpretation of the Petroleum Allocation Act which, in some respects far exceeded the scope and purpose of that act.

Mr. President, in the future we cannot continue to rely on voluntary exhortations for sacrifice as our only means to deal with shortages. We must act to increase supply. We must have a policy of energy conservation. We must also have at hand contingency plans which can be rapidly and effectively implemented if we are to retain economic and political independence. Standby authority and contingency planning to deal with critical shortages will continue to be essential to maintaining our national security and our freedom of action until we attain the capability for energy self-sufficiency.

The bill I am introducing today accommodates the administration's requests to the fullest extent possible within the context of our negotiations. It is patterned after the bill previously vetoed by the President. Changes in the bill include incorporation of a number of technical changes, deletion of the price rollback provisions contained in the conference report, and conversion of the major provisions of the bill into standby authorities which may be exercised only in periods of critical shortages.

PRICING OF PETROLEUM PRODUCTS

Mr. President, the adverse impact of acute fuel shortages arising from the Arab embargo has been a highly visible national problem which has touched nearly every citizen. The lifting of the embargo offers a tenuous and uncertain prospect of reducing the shortfall between supply and demand. What will not be reduced, however, are the extraordinary price levels attained by petroleum and petroleum products. What is not affected is the potential for comparable increases in the near future. Less apparent than a line at a gas station, but equally damaging to the Nation's well being, is the erosion of the family budget and the stimulus to accelerated nationwide inflation which will result from the unchecked upward movement of petroleum prices. For that reason, responsible legislation which authorizes responses to critical energy shortages must also authorize responses to equally critical energy price increases.

In the past 6 months, the Wholesale Price Index for crude oil and refined petroleum products has risen by over 50 percent. Fuel price increases represented 27 percent of the total increase in the cost of living during the past year. As startling as these figures may be, they

nonetheless are considerably lower than those increases which would have occurred had price controls been nonexistent.

Now, however, the Senate Banking and Currency Committee has found it inadvisable to extend these price controls on the grounds that a free market can more efficiently set prices. It is an appealing argument, particularly in view of our experience with most price controls as employed by this administration.

However, for so long as the international oil market remains a politicized cartel there is no free market. For so long as the policy of the OPEC cartel is a world price determinant, there is no free market. For so long as the volume of oil available to U.S. oil companies is dependent upon the policy of the internationals, there is no free market. For so long as domestic production is restrained by shortages of drilling rigs, pipe, and pumps, there is no free market.

Consequently, until such time as domestic self-sufficiency is attained through increased production and a reduction in demand growth, we cannot rely upon the market place to function effectively to regulate supply, demand, and prices. For that reason, it is imperative that public policy provide for: First, an accelerated effort to increase domestic energy supplies; second, a continuing program to further energy conservation; third, the employment of price regulation when necessary to prevent unacceptable inflationary pressures on the national economy and intolerable energy prices for the consumer.

Already, Mr. Simon is predicting gasoline prices as high as 80 cents per gallon in the next few months. Thus, in less than a year, consumers face a doubling of petroleum costs; yet, they can still expect to experience inadequate supplies.

Clearly, this is an outrageous situation. It is one thing to pay high prices in return for unlimited energy. It is another to pay the same exorbitant prices and to remain energy deficient.

Within the past year, gasoline costs to consumers have risen three times, and fuel oil six times as fast as the costs of all other goods and services. It is imperative, therefore, that some kind of price control authority for petroleum be continued for the near future. It is particularly necessary in the light of current administration policy which has effectively nullified past conservation efforts and increased supplies of gasoline at the service station only by dipping into inventories. Such a policy will inevitably increase consumption while supplies are still limited, and thus unnecessarily drive up prices.

The rationale announced by the administration for their policies is that exorbitant prices will reduce demand. We have recently seen the cruel results of such policies in the case of propane, when rural low-income and retired persons were forced to spend as much as 75 percent of their incomes on propane fuel and were consequently faced with a choice between hunger and cold. We cannot tolerate the extension of this experience throughout the industrial and consumer sectors of our economy, which are so dependent on petroleum.

It is absolutely necessary, therefore, that the President's existing authority for petroleum price controls be exercised by the President as soon as possible and that he employ that authority when the public welfare requires it. For this reason, such a provision is included in the bill I introduce today. **[Sec. 128.]**

The President, in his veto message, asserted that the price rollback required in the conference report would undermine incentives to develop new domestic energy resources. For reasons I set out at length during the Senate's debate on this legislation, I do not accept the administration argument.

The new bill, however, does go a long way toward accommodation with the administration. It does not require a rollback of prices to any specified level, but it does reiterate the intention of Congress, stated unambiguously in the Emergency Petroleum Allocation Act, that the President control the prices of crude oil and petroleum products. This legislation allows the President broad latitude in determining specific ceilings but it requires him to support any price ceiling or change in a price ceiling with a detailed analysis of the impact of prices upon supply and demand, upon consumers and upon employment.

The legislation I am introducing also ends the exemption from regulation of that 14 percent of domestic oil which is produced from stripper wells. This exemption was twice voted by Congress in the mistaken anticipation that it would provide a price incentive for stripper wells of perhaps 50 cents or a dollar per barrel. Since the exemption was enacted last fall, the average price of such crude oil has, however, risen from $4.25 to $10.35 per barrel. Spokesmen for the administration have repeatedly requested an end to the stripper well exemption, and I am happy to accommodate them on this matter.

The bill also provides specific relief for consumers who have been victimized by increases in propane prices, wholly out of proportion to the increase in raw-material costs. It makes absolutely clear the intention of Congress that all raw materials for propane, whether produced from oil wells, gas wells, or refineries, be price controlled, and that price passthroughs be allocated among the various products of petroleum according to their historical price relationships.

Mr. President, testimony before the Subcommittee on Multinational Corporations of the Foreign Relations Committee has revealed that the multinational oil companies are making unbelievable windfall profits on their overseas producing operations. Aramco, a wholly owned affiliate of four U.S. majors, is now recording net profits of $4.50 per barrel. These incredible profits are not only passed on to American consumers in the form of price increases for imported oil, which the administration has exempted from price controls, but, through the depletion allowance and the foreign tax credit, they produce an additional tax windfall for the companies at the expense of the U.S. Treasury.

The bill I am introducing today will limit domestic price passthroughs on oil imported by the multinationals to the increases resulting directly from higher taxes and royalties paid to foreigners, less whatever reduction in U.S. tax liabilities might result from the higher base for depletion and foreign tax credits. No such passthrough limitation, however, is imposed on imports of oil from nonaffiliates, so that this requirement will not undermine the competitive position of independent refiners and marketers who must obtain their oil in world markets at arms-length.

ADMINISTRATION TESTIMONY, HOUSE HEARINGS

STANDBY ENERGY EMERGENCY AUTHORITIES ACT

TUESDAY, APRIL 2, 1974

HOUSE OF REPRESENTATIVES,
COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE,
Washington, D.C.

The committee met at 10 a.m., pursuant to notice, in room 2123, Rayburn House Office Building, Hon. Harley O. Staggers (chairman) presiding.

The CHAIRMAN. The committee will come to order.

Today we begin again consideration of legislation designed to equip the Executive with emergency powers to deal more effectively with critical shortages in energy supplies. I was, of course, disappointed that the President vetoed the Energy Emergency Act upon which the Congress had labored so hard. I found it difficult to understand why the President would voluntarily deny himself the tools contained in that legislation needed to respond to the American people's call for action simply because he disagreed with some parts of the bill.

The legislative process necessitates compromise. We in the Congress had endeavored to work with the President and his advisers to find a middle ground. And I firmly believe that the legislation which the Congress had sent to the President for his signature was fundamentally sound.

Nevertheless over the last several weeks I have renewed efforts to refine the legislation and to modify its terms so as to avoid yet a second Presidential veto—a result which would surely further erode confidence in our governmental institutions.

There are many who have urged me to abandon this effort, arguing that the crisis is over and that legislative action of this scope is not called for. I disagree. Embargos once lifted can be reimposed. Gas lines can reappear this summer as suddenly as they did last fall. I am convinced that there remains a real need to provide the President with standby authority to respond positively to any developing crisis.

The bill before us today, H.R. 13834, represents a change from the vetoed bill in several respects. Most significantly, the highly controversial price rollback provisions have been eliminated, and it is my intention to bring before this committee separate legislation addressing this problem.

Title II of the bill containing proposed amendments to the Clean Air Act is identical to that which emerged from conference and was contained in the vetoed bill. This morning's testimony will be

directed primarily to its terms and to the provisions of title I providing for the conversion of major fuel-burning installations to the use of coal.

* * * * * * *

We are pleased to welcome the Hon. Russell E. Train, Administrator of the Environmental Protection Agency.

Mr. Train, we are glad to have you with us. If you would identify those who are with you for the record we would begin.

STATEMENT OF HON. RUSSELL E. TRAIN, ADMINISTRATOR, ENVIRONMENTAL PROTECTION AGENCY, ACCOMPANIED BY ROGER STRELOW, ACTING ASSISTANT ADMINISTRATOR FOR AIR AND WATER PROGRAMS; ERIC STORK, DEPUTY ASSISTANT ADMINISTRATOR FOR MOBILE SOURCE AIR POLLUTION CONTROL; AND MICHAEL LERNER, DIRECTOR OF THE OFFICE OF POLICY ANALYSIS, OFFICE OF AIR AND WATER PROGRAMS

Mr. TRAIN. Thank you, Mr. Chairman.

Mr. Roger Strelow, on my right, who is the Acting Assistant Administrator for air and water programs. On my life, Mr. Eric Stork, who is the Deputy Assistant Administrator for Mobile Source Pollution. On my far right, Mr. Michael Lerner, Director of the Office of Policy Analysis in the office of air and water programs.

I think that we have here at the table expertise that can address the coal conversion problems and answer any questions which the committee may have to ask.

I do not have, Mr. Chairman, a prepared statement as I mentioned to you. I do appreciate this opportunity to appear and make some brief opening remarks and be available to assist the committee in any way that it wishes.

Your invitation, as you know, only arrived yesterday, so I do not have as I said a prepared statement. I do have some notes which I will refer to.

Of course, I am generally familiar with the provisions of H.R. 13834 at least in terms of the Clean Air Act, and I think that I

better address myself to those aspects of the bill as the rest are outside of my own particular areas of responsibility.

I think I could mentioned just by way of context a fact which the committee is well aware of, and that is that on March 22 I transmitted from EPA to both the House and the Senate a group of amendments to the Clean Air Act. Now at least two of those, as I will mention a little later, do cover essentially the same ground as provisions in H.R. 13834, specifically the coal conversion provision, and the auto emission provisions.

The other amendments contained in the Clean Air Act proposals of March 22 do not relate specifically to the energy emergency legislation, either that previously considered or this bill now before the committee. If I may respectfully suggest, these other amendments dealing with such matters as the need for greater flexibility under transportation control plans are all matters which we hope this committee, through its subcommittee, will address at an early date, but we do feel that they would best be handled outside of the context of the energy emergency legislation.

With respect to the coal conversion provision, H.R. 13834, under the bill sources would be permitted to convert and to increase emissions as a result up to January 1, 1975, to a point where they would not materially contribute to a significant risk to public health. That was the language in the previous bill.

I would like to call the attention of the committee to the fact that the amendment on this subject which the administration through EPA transmitted on March 22 makes a change in that respect and inserts primary standards to that in the case of a converted plant there could not be in any event a violation of primary standards, and those of course are the health related standards. This is an agreed position within the administration, obviously one which EPA urged upon the administration.

I would not say that the language "significant risk to public health" opens any wide door in the act. I think our problem is we don't quite know what standard that is. It is a new concept. It is neither a primary standard nor a secondary standard and does inject an ambiguity and an uncertainty.

I think we would have to assume that it is a somewhat more lenient provision than what we are suggesting in terms of no violation of primary standard. So we would urge upon the committee, recognizing its desire, of course, to move as rapidly as it can with this legislation, that it consider seriously this proposed change that the administration has transmitted.

I might also point out that there in the coal conversion provision some other mostly quite minor differences in the administration language which we recently transmitted as compared to H.R. 13834. One of these, for example, is to use the date January 1, 1980, instead of 1979 as the date by which a converted source must reach full compliance with State emission limitations. That is one difference.

I simply would at this point on behalf of the administration urge the committee to give careful consideration to these differences which again I would say, although relatively minor in most cases, are important.

In one other area with respect to auto emission standards, the committee I think is well aware of the fact that the proposals in this regard made by the President first in his energy message of some weeks ago which we transmitted again on March 22 to the Congress does involve some differences with the provisions of the pending bill. Again on behalf of the administration I would urge the committee to give careful and thorough consideration to the administration's proposals in this regard.

Mr. Chairman, I think it might be best to get to questions. That would conclude my unprepared opening remarks. I think that covers essentially the significant title II provisions as they related to the Clean Air Act.

The CHAIRMAN. Mr. Train, we do appreciate your coming and bringing with you your advisors. The differences are very minor between this bill and the bill proposed by the President. We have very few changes in the bill itself from what it was originally, and this section was not changed after considerable hearings by the two committees in the Senate and by our committee here. So we will take under consideration those changes which you have suggested.

Any questions on this side?

Anyone over here?

Mr. NELSEN. Mr. Chairman.

The CHAIRMAN. Yes.

Mr. NELSEN. I would just like to comment relative to the appearance of our witness today that I think none of the members of this committee want to delay attention to the environmental problem and many of us have been involved in this field for years. But I think there needs to be some more cooperation between various interests to try to achieve some of these things that we know we must achieve. For example, in the power field, I ran the rural electrification program under the Eisenhower administration, and we now find that some of our powerplants out there in the wide open spaces, far away from population centers, have been forced to move to install scrubbing equipment where the ambient air quality is very good and the cost has been so excessive. For example, Colorado used about $16 million for stack emission control for a $26 million plant. Really, I believe that at this time, where the ambient air quality remains good, there can be some relaxation until we are able to find better answers.

Now I wondered, is there any area that you would suggest? I think there might be areas in research and better uses of coal. I think that the methods of cleaning up the use of coal for stack emissions has not been properly researched. There might be some areas where we as the Congress could spend more money to make it possible for us to get our coal supply and do a better job of research to get better stack emissions. Do you have any view on that?

Mr. TRAIN. I fully agree with your belief in the importance of this area, Mr. Nelson. I have testified on many occasions over the years as a matter of fact, but I suppose very often most recently to the need for more R. & D. effort on the part of Government as well

as industry to enable us to more effectively use our abundant coal resources.

Now in EPA, of course, we have had an on-going responsibility and program with respect to flue gas desulfurization technology development and stack scrubbers and related technologies. We have, I think, successfully demonstrated as many as six or more different technologies in this area. I think here is a field in which we should continue to press technological development.

We believe that the technology today is sufficiently reliable and available to warrant installation in a great many cases, and certainly to warrant far more commitment on the part of industry, the power industry particularly, than it has given to date with some notable exceptions.

But having said that, I do think that it would be appropriate to continue a high level—in fact increase the level of Federal effort in this regard. The EPA budget for fiscal year 1975 does contain an additional $165 million approximately for more energy R. & D. as it relates to environmental matters. About $105 million of that is for control technology, and much of that will relate to coal emissions, so that I feel that there is a very important effort, and I think that it certainly deserves the full support of this committee, which I know it will have.

Mr. Nelsen. The other point is that all of us have worried over the energy crisis that we have gone through, and if the United States is ever going to be independent of the Middle East supply, or the world supply, we are going to have to develop our own resources or we are going to have an economic problem that is going to be disastrous. So we have the largest coal supply in the world, and we have done very little in my judgment to do a better job of land fill and restoring areas where strip mining has been used. We have done too little in the area of researching how we could better use coal.

At the same time, all of us must admit now that we are going to have to do it, and to find better ways of plant location away from population centers and all of this. I want to compliment you, Mr. Train, on the fine job that you have done, because we pass laws, and we ask administrators to enforce them and handle them as we pass them, and then sometimes criticise them for doing the job that we have asked them to do in the act itself.

I want to say that we are in agreement that our goal is the same and that if we can get various groups together to communicate and realize the problems we face and eliminate the possibility of issues being built rather than answers found, I think we can work it out. I intend to introduce the administration bill. That does not mean I would not change some parts of it, and we will counsel with your Agency. I just want to pledge my support to our good chairman who is also interested in this particular phase of the bill.

Thank you, Mr. Chairman.

The Chairman. Any questions on this side?

Mr. Moss. Yes.

The Chairman. The gentleman from California.

Mr. Moss. First I want to express my apologies for being late and missing the initial testimony before the committee. I might ex-

plain that I was late because I was in discussion with the representative of the California Air Resources Board in my office, having followed by a day discussions with the representative of the Air Pollution Control Region in Los Angeles County, which is rather far removed from my own district, mine being the Sacramento area.

The State indicated that you feel that in some of the plans that we now have that there should be extended time periods in achieving certain of the standards, is that correct?

Mr. Train. Yes, sir, that is correct. We need more flexibility is the way we express it.

Mr. Moss. More flexibility.

Now we do have in this legislation two items, one dealing with the transportation controls and the surcharges which reflect again I suppose to a large extent the concern of California because of the imposition of standards which would reduce the total number of vehicle miles traveled to levels which are generally felt to be unattainable. Would you concur that that is indeed the case?

Mr. Train. Yes, at least within any kind of realistic time frame or without unreasonable social and economic disruption.

Mr. Moss. It would indeed require in some instances substantial restructuring of freeway systems, and I am told from an engineering standpoint that it presents almost insurmountable problems.

Mr. Train. Well, I am speaking now from memory, Mr. Moss, but it seems to me that in the Los Angeles Basin we estimate at least the reduction of vehicle miles traveled something in the neighborhood of 85 percent would be required over and above every other kind of control effort that you would make, and this is obviously an unrealistic and unattainable goal within any kind of time frame that I can see before us at the moment.

The only alternative to private transportation, automobile transportation, is mass transit, and there is no way to install a basin-wide mass transit system fully operated by 1975 or indeed 1977. So I think we are simply facing a confrontation when both sides agree that the requirement is substantially impractical as it now stands, and I think that the sooner we face this fact directly and honestly and get on with getting some more flexibility to the statute in this respect which can be applied on a case-by-case basis, not across the board—I think some people have read the administration's proposal as an invitation to towns and communities all across the country to give way on their air pollution control efforts, and this is absolutely not intended and would be a great mistake. We are only talking about a relatively few cities such as Los Angeles and only with respect to their transportation.

Mr. Moss. I believe that in my own city the required reduction or the target reduction is about 80 percent.

Mr. Train. It is of that magnitude. It is very high.

Mr. Moss. Would you concur in the view that if we had immediately available adequate funds for a mass transit system that we could not, if orders were placed yesterday, achieve that level of reduction?

Mr. Train. If I understand your question correctly, that is right.

Mr. Moss. Now let me understand. I believe that I am correct

that there is a different standard being imposed for the next few years upon the State of California and the Nation as a whole.

Mr. TRAIN. California has a separate State set of standards which the Federal law recognizes.

Mr. MOSS. Yes. I believe that I on this side, and former Senator Murphy on the other side, were the sponsors of those which permitted California in effect to adopt a State standard which exceeded the Federal standard.

Mr. TRAIN. That is correct, sir.

Mr. MOSS. What we are talking about though here is a required Federal standard which appears to excede the national standard. Am I correct on that?

Mr. TRAIN. I don't think I really understand your question, Mr. Moss.

Mr. MOSS. Well, you are requiring that for the next model year that equipment be required on automobiles in California different than that required nationally, am I correct?

Mr. TRAIN. No, I don't believe that is correct.

Mr. MOSS. You do not believe that is correct?

Mr. TRAIN. No, sir. We do have a nationwide interim standard set which will go into effect for the 1975 model year, but that does not affect the State of California's own emission system.

Mr. MOSS. I raise the question because in the rather hurried conference this morning that was a point that was raised and I wanted to have clarification on it.

Do you have any kind of additional proposal which would in this pending piece of legislation more adequately deal with the need for flexibility than the language now in the legislation?

Mr. TRAIN. I did not address these points in my brief opening remarks.

The only language in the pending bill which is carried over from the previous energy emergency legislation dealing with the transportation control plans—speaking again from memory—is the prohibition of a parking surcharge without expressed congressional approval, deferral of parking management plans generally until January 1, 1975, and a study to be undertaken by the Environmental Protection Agency by—it was May 1 in the previous bill—I am not sure. Six months from the date of enactment in this bill.

I think as you know, following the passage of the prior legislation containing these provisions and subsequent to the veto I took the necessary regulatory steps to put those provisions into effect, and I canceled out the parking surcharge provisions in promulgated plans and I deferred all parking management control items in those plans as well until next January. We do have the study underway, and I think it will be ready by the 1st of June, so that we have made a full effort to carry out the very clear intent of Congress as I saw it even though the legislation did not become law.

So at this point actually I don't know that it is moot insofar as we are concerned. We have already carried out these provisions. These are the only elements of the bill that touch on the transportation control plans. As I said, at the beginning of my opening remarks, the elements of the recent Clean Air Act amendments which

have not related directly to the emergency legislation such as the need for greater flexibility and the transportation plans generally I feel quite strongly could best be addressed by the committee outside of the context of the energy emergency legislation.

Mr. Moss. Then for the purpose of this legislation you feel the need for language now in the draft bill is ended?

Mr. Train. Yes, sir.

Mr. Moss. Thank you.

Mr. Train. I would suppose in the first instance I would have opposed including these provisions in the bill if I had been asked last fall on the parking surcharge just simply to protect EPA's regulatory authority. I have already taken these steps, so I don't think it is an issue between us.

Mr. Moss. I want to compliment you as the culprit proposing the amendment in the language. I did not intend to do anything which does not meet the needs of the people I represent, the public in California.

The Chairman. The gentleman from Kentucky.

Mr. Carter. Mr. Chairman, I just wanted to transfer the word which the mayor of the city of Miami gave the subcommittee the other day. It was extremely complimentary of Judge Train's assistance to and his cooperation with the city of Atlanta. I thought he might like to know that.

Thank you, Mr. Chairman.

The Chairman. Any further comments?

Mr. Rogers. Mr. Train, I think it might be well to have on record your thinking on an amendment that was proposed in the previous legislation and may again be proposed. It is known as the Wyman Amendment, with which I think you are probably familiar. I wonder if you would give us any comments on that?

Mr. Train. I am glad you have asked that question, Mr. Rogers, because the Agency does have in fact, and I have very strong views on the Wyman Amendment. I think that speaking very broadly the effect of the amendment would really be disastrous for the whole order of emissions control programs. Now let me be a little more specific in stating why I feel that strongly.

The bill—and I have a copy of it with me—would designate by statute some 13 metropolitan areas which would be regulated so to speak and persons residing outside of those designated areas would have automobiles without emission control. So we are talking about a two car system as far as the manufacturers and dealers are concerned.

Our own data show that if we did not have auto emission controls some 66 cities in the country would violate the health standards—not 13, 66.

So taking the proposal as it is written in the bill—and I am referring to H.R. 12687—and accepting the list, which by the way EPA would not be allowed to vary except with the consent of Congress—but accepting that list would obviously mean that the great many metropolitan areas of the country which would be unregulated under the bill would be violating health standards. Texas, for example, is included—Fairbanks, Alaska is not included in the

list—as the city I believe as I recall that has the highest levels of carbon monoxide in any State of the United States.

Mr. Rogers. May I ask that you place in the record a list of those cities?

Mr. Train. I would be very happy to do so.

[See letter dated April 3, 1974, p. 125, this hearing.]

Mr. Train. Let me also point out that those 66 cities that would be violating health standards comprise some 85 percent of the population of the United States.

I might also point out, Mr. Moss, particularly because of your concern for California, that the bill has a preemption provision in it and would prohibit any State from establishing an emission control system outside of the specified regulated areas. At the present time California has a single set of standards that apply statewide, not just to Los Angeles or Sacramento or San Francisco or San Diego and so forth, but the whole State because of their recognition of the impracticality of enforcing any system which has different rules as you moved geographically.

The 85 percent of the Nation's population that would be involved here I think conveys very dramatically the basic error in the bill. The bill is presented as only requiring auto emission controls for the relatively few parts of the country where the air is dirty. The fact is that the air is dirty very widely across the United States, so there is that health aspect.

We would be really doing a very major disservice in terms of public health to adopt the bill.

With respect to fuel economy, the bill is also proposed in part as a step toward improving auto gas mileage. We all recognize that emission controls at the present time do adversely affect gasoline mileage. Let me adjust parenthetically that we have every reason to believe that this picture will improve with respect to the 1975 models, but aside from that the bill would authorize or at least prevent us from imposing any penalty for the decontrol of existing generations of cars, a two-tier system for new cars and authorized decontrol for old cars.

The 1972 and back cars have a relatively small gas penalty at the present time from emission control because of the fairly low level of control. I think that the mileage penalties are around 5 percent for those earlier cars. As I have testified previously before this committee, the 1973–74 generation of cars do represent a fuel penalty on a sales weighted average of somewhere about 10 percent. This actually goes up considerably higher to around 18 percent with the bigger cars, and actually goes the other way and there is a fuel benefit probably for other reasons in the smaller cars.

Our experience with decontrol of emission devices utilizing commercially advertising decontrol shops has produced on the average a 3.5 percent penalty. Even when the people in the shops knew they were working on an EPA car, though they were trying to do the best they could.

I point this out because I think it is really a delusion for the American people to think that there is a way to suddenly remove all of the fuel inefficiency in the existing generation of automobiles.

The only thing that they are bound to get is a 100 percent increase or drastic increase in emissions. It is highly unlikely that they will get any improvement in mileage performance.

It is possible with expert technicians to get on the average around a 7 percent improvement. This is with the automobile manufacturers turning out what they call a cookbook, very carefully designed set of instructions that mechanics can follow. To do that, that would obviously be available everywhere in the country, and you can bet your bottom dollar that people living in the regulated cities where they are supposed to maintain emission controls would also retire to their garage and use the cookbook and in many cases remove the controls and probably begin getting worse mileage, but in any event having the satisfaction of getting around the law in that respect, and we all enjoy doing that.

So I think from the health standpoint this is going to be very adverse for the country. From the standpoint of fuel economy it is entirely illusory. There are many other problems I think for manufacturers who maintain this dual market system. It is going to be exceedingly difficult. Our indication is from some of the manufacturers it may even be impossible without enormous additional costs.

The same kind of even better energy savings on automobiles and greater efficiency can be attained by simple tune-up of the car, and we can encourage everybody in the country to try to have their cars tuned up periodically, and they would achieve about a 6 percent gas mileage improvement on the average.

With the movement to smaller cars that is already underway, and as far as the market preference in the country is concerned, we are going to be seeing a far greater improvement generally in gas mileage and fuel economy than anything that could be achieved by this proposal which again I assign if enacted would substantially undo everything we are trying to do by way of the Clean Air Act in regard to auto emissions.

Mr. Rogers. Mr. Chairman.

Mr. Train. I add one more point. It is not temporary. It is described as a temporary suspension but it would continue so long as the President, I believe, determines that there is a significant shortage of petroleum fuels. I think undoubtedly we are going to have the chronic problem for this country for the foreseeable future.

Mr. Rogers. Mr. Chairman, there are some questions that Mr. Symington would like to have answered for the record if this is psrmissible.

The Chairman. Do you want to present them?

Mr. Rogers. Just give them to Mr. Train.

[The answers to Mr. Symington's questions were not available to the committee at the time of printing—July 1974.]

Mr. Rogers. I think Mr. Carney was concerned with whether you could explain why, if the devices are taken off, there still would not be any great savings.

Mr. Train. I think at this point that I better turn the question over to someone who really knows something about this subject. Mr. Eric Stork.

Mr. STORK. Mr. Rogers, first of all it is very common that everybody talks about emission control devices but in many, many cases it is not a question of devices. Emission control is designed right into most modern cars and although there are a few devices involved in some cases it is not just a simple question of taking such devices off. It is a question of in part changing the calibration of the vehicle. Some of those calibrations can't be changed, some can be. It is also theoretically a question of redesigning the engine or the carburetor which is simply impractical in the field.

The real problem that people face in trying to take emission controls out of cars is that it is a very, very difficult thing to do. All of us have had problems I am sure in getting our car fixed even in dealerships where the mechanics use the cookbook that Mr. Train referred to. To hope that people will do this successfully is illusory.

Mr. Train mentioned an outfit that advertises that it specializes in taking off emission controls. This was the Wrench Pit in Detroit. We gave them two cars in our test program. They knew that they were working on EPA cars. They should not have known that. It was an error on the part of our technician. I was pretty mad when I found out about it. But even this outfit that knew it was working on an EPA car does not know how to take the emission controls off so as to improve even fuel economy. Really these are hot rodders.

When I was young I knew how to get more power out. But that takes more fuel. So it is a very, very difficult thing to redesign a car, Mr. Rogers.

The CHAIRMAN. Any questions on this side?

Mr. Shoup.

Mr. SHOUP. Thank you, Mr. Chairman.

Mr. Administrator, did I understand you correctly to say that in speaking to section 201 of the bill before us on suspension authority that you are recommending that there be a limit to your authority to suspend stationary emission standards to primary standards?

Mr. TRAIN. Yes, sir, That language should be before the committee because of the earlier transmittal on March 22 of the administration's proposal.

Mr. SHOUP. Thank you.

Now last fall, I believe you indicated there were about 26 powerplants in the Nation that could convert from petroleum to coal. Now do I understand that you are basing that statement on authority granted under the energy bill which was vetoed.

Mr. TRAIN. Let me expand upon that a bit. We estimated last fall that there were about 46 plants which had the capability of converting to coal and that of that number some 6 could be converted without significant environmental harm. We have——

Mr. SHOUP. May I interrupt just a moment?

Mr. TRAIN. Yes, sir.

Mr. SHOUP. They would not violate the primary standards.

Mr. TRAIN. I believe that is right.

Mr. SHOUP. Thank you.

Mr. TRAIN. That was rather a rough estimate at that time. We have been actually modeling these plants since then in a much

more refined way. I think we feel that the list of 46 should be a fairly considerably larger list—60–some probably. Some of the plants we felt that could convert we have since discovered really should not on the basis of more carefully remodeling, so with more refined efforts we are improving that list. I would say probably something more than 26 could convert, and I believe without interfering with primary standards.

Mr. Shoup. Do you have any figures on that? You say more than 26. That could be 27 or many more.

Mr. Train. I think it best to say that I cannot give you a figure. Now the analyses are still under way. It is probably something greater than 26, but how much greater I am just not sure.

Mr. Shoup. Do you consider that the 26 that could convert, would that make a significant impact on the conservation of fuel oil?

Mr. Train. Mr. Lerner will address that question.

Mr. Lerner. The 26 original plants would have saved if they all converted about 200,000 barrels of heavy fuel oil per day, which is a very large number. Consumption this winter was about 3 million barrels a day. Actually 11 units on that list of 26 were converted during the winter and were burning coal and saving about 50 to 60 thousand barrels of oil a day during the winter period.

Mr. Shoup. Mr. Administrator, those 11 were allowed to convert through your ability to grant exemptions?

Mr. Train. Yes, sir.

Mr. Shoup. But they did not violate the primary standards?

Mr. Train. I think most of them did not. Primary standards don't have to be met as you know until 1975 or 1977, depending upon the State implementation plan, so there was no prohibition against granting a variance that might lead to emissions in violation of a later primary standard.

Mr. Shoup. But if this bill were enacted with your suggested amendment they would be prohibited?

Mr. Train. Not up to the date set by existing law for the 1975 and with the extensions 1977. During that period even under the proposals which I have mentioned we would still be able to grant variances under the existing Clean Air Act provisions which conceivably might violate primary standards.

Mr. Shoup. Moving from the powerplant consideration to other industries converting from the use of petroleum to coal, have you a study on that? Do you know what effect this would have? Would it be significant?

Mr. Lerner. We are working with the Federal Energy Office now to look at some industrial units in the Middle West which have in the past converted from coal to oil, but we are just in the process of identifying how many units there are and whether they can convert at all.

Mr. Shoup. Did you have any applications for conversion from petroleum to coal?

Mr. Lerner. I think we have just had one on the east coast which I think is a steel plant or something like that, but it was very recent.

Mr. Shoup. There has been no action?

Mr. LERNER. No. I don't believe the State has acted as yet, but there were none during the winter, only the electric utilities.

Mr. SHOUP. Thank you, Mr. Chairman.

The CHAIRMAN. Any further questions on this side?

The gentleman from California.

Mr. VAN DEERLIN. Mr. Train, in response to questions by Mr. Moss I believe you said that Californians were not going to be treated any differently from the rest of the country under present plans having to do with control of auto emissions. Well, let me—the shaking of the head does not show on the record.

Mr. TRAIN. I was waiting for you to finish.

Mr. VAN DEERLIN. I would like to have some discussion of plans for requiring the so-called catalyst converter on automobiles sold in California. The feeling of the Los Angeles County Air Pollution District—which I do not represent directly, being from San Diego—is that they will result in a cost of about $300 per car in California—and that 20 million Californians are becoming 20 million guinea pigs for the auto industry.

Now, having made such an outrageous statement as that, I will pause for comment.

Mr. TRAIN. Let me ask Mr. Stork to comment on that.

Mr. STORK. Mr. Van Deerlin, there is no requirement as such either in Federal law or in the regulations imposed by the California Air Resources Board to put any particular device on a car. In both cases the Federal Government and CARB established performance standards.

Now it is true that California under authority of section 209 of the Clean Air Act has requested and has received waiver of Federal preemption.

Mr. VAN DEERLIN. Very properly so.

Mr. STORK. The more stringent standards that California will impose for the 1975 model year will probably increase somewhat the percentage of vehicles equipped with catalysts from the percentage of cars equipped with catalysts nationwide. However, even under the Federal interim standards which could probably be met for most cars without the use of catalysts, the automakers are planning to use catalysts on a very large fraction of their cars sold in the other 49 States, substantially larger than 50 percent. The current estimate is around 70 percent. Therefore, the cost of cars should not be materially different in California than it would be from the United States, only in those few cases where a manufacturer may use a catalyst on a given model car in California and not in the other 49 States is there any reason for there to be a different cost, and there will not be very many cases of that type, sir.

Mr. VAN DEERLIN. Would you agree that the solution of the emissions problem eventually depends on technological improvements that will involve other than treating the emissions as they come out of the exhaust, and must go deeper into engine design?

Mr. STORK. Well, I would agree, sir; that further technological development may indeed show techniques, different kinds of engines that are more effective than today's so-called conventional internal combustion engine controlled with the catalyst.

But, sir, it takes a long, long time to develop and prove out a new engine. The so-called internal combustion engine has a 60–, 70–year history; it is a very good engine and controlled with a catalyst it is going to be able to provide about as good fuel economy as it can without a catalyst. So while we ourselves are doing a good deal of work to explore other engines and are doing all that we can to encourage the automobile industry to continue their work in looking at other engines, we are in no sense saying that catalyst conventional equipment will not be very good.

To sum this up, sir, what will happen over the long term will really depend on whether the auto industry can come up with something better, and it is not yet clear that they can come up with something better, but we think they should keep trying, and we also are trying.

Mr. STUCKEY. Would the gentleman yield for a short question?

Mr. VAN DEERLIN. Of course.

Mr. STUCKEY. Are you saying that you favor emission standards provided here, that they be extended for a year with the possibility of a second year? Is that correct?

Mr. TRAIN. We certainly favor the 1975 interim standards going into effect which have been set by EPA, actually by regulatory action last spring, a year ago. The issue is what to do with 1976 and 1977. The administration has proposed a 2–year freeze essentially of the 1975 interim standards into 1976 and 1977. The committee in this bill previously had approved in the energy emergency legislation essentially the same except in the second year it left the discretion in the Administrator to grant the extension or set an interim standard. This was the major difference.

Mr. STUCKEY. Mr. Train, I understand what that does. The question is do you favor this.

Mr. TRAIN. Yes, sir; we have supported the administration proposal. As this committee knows, at an earlier date I had proposed and suppported simply going to the 1975 interim standard and then taking a look somewhat later on when we had more information before us, but the President has proposed the 2–year freeze in his energy legislation, and we have transmitted that in the EPA package as a result.

Mr. STUCKEY. And you do support it as it is through 1976–77?

Mr. TRAIN. I do support it.

Mr. VAN DEERLIN. Mr. Train, I have a question that calls for a subjective answer.

What kind of grade would you give the auto industry for effort in this whole field? Not over the last 60 years, or 70 years to which your associate has referred, but say, since the passage of the Clean Air Act amendments of 1967. Would you give them E for effort, or——

Mr. TRAIN. I don't know if I know how to answer that question, Congressman. I am not normally bashful about answering difficult questions, but if that is a very subjective thing I certainly think they could have done more. I assume they could have done more. I know very little about technology so it is hard for me to be a judge. They obviously have stepped up their efforts since the pas-

sage of the Clean Air Act. I think that the deadlines contained in the act and the statutory standards have been forcing the state of the art, and I think this has been excellent. I think it has put real pressure on the indutry. I think the industry has responded to that pressure, and there has been a considerable technological progress made in the control of auto emissions as a result of the requirements of the Clean Air Act which I am quite satisfied would not otherwise have come about.

Mr. VAN DEERLIN. And you would favor keeping their feet to the fire, would you not?

Mr. TRAIN. Absolutely. I think in fact it is desirable to have a little warming up permissibly.

The CHAIRMAN. The gentleman on this side, Mr. Goldwater from California.

Mr. GOLDWATER. Mr. Train, in response to a question you said the provisions in this bill that we are considering dealing with parking surcharge and working management is moot. I wonder if you could elaborate more on that statement?

Mr. TRAIN. Well, moot may not be technically the right phrase. What I was trying to say is that EPA has carried out just as if the bill had become law those particular provisions and we have intension of reversing our administrative position on this, so that I think the committee can feel secure that that is the policy that we are implementing.

This does not provide an answer as to any possible concerns that members may have over parking management plans beyond January 1, 1975. We are working and thinking increasingly closely with communities and particularly in California to develop with communities alternative strategies. This has been underway now this spring and I am hopeful that alternative strategies can be developed with the full support and indeed the initiative of the communities themselves that will obviate parking controls where these seem to be highly unpopular, but I think we will have to wait a bit and see. I think there may be cases where parking controls to some extent are desirable.

Mr. GOLDWATER. You also said that you are conducting a study on this issue?

Mr. TRAIN. On the parking surcharges. I believe it is limited to that.

Mr. GOLDWATER. Why would you not be interested in the effect of parking management?

Mr. TRAIN. I may have misspoke. We may be covering this. I ask Mr. Strelow to comment.

Mr. STRELOW. Calling for a report to Congress to this committee I specifically and in the Senate Public Works Committee on parking surcharges and I believe on exclusive bus lanes.

Mr. GOLDWATER. Let me read the passage in the bill. It mentions bus, car——

Mr. STRELOW. I think it mentions those three. We have already set in motion a report that would cover not only those three topics on the whole range of transportation control measures because we think it is only in that full context that there can be a complete

evaluation and understanding of these measures among others so that we can lay out for the committee the range of alternatives that are available to the States, to local communities, in trying to achieve these further reductions in emissions beyond what you can achieve from the new car controls.

Mr. Goldwater. Mr. Train, just in summary, did I understand that you have in essence suspended or completely eliminated any surcharge, you have suspended parking management to January, 1975, and you are initiating a study in these three areas. I would like to request, and I will certainly not limit it to these two items in your study, you address yourself to the authority that you have to implement these types of controls or regulations because I think that in itself is a question that has been raised by outside people. Second of all, that you address yourself to the economic impact that surcharges, bus lanes, carpools, and especially parking management would have on a particular locale. I am particularly interested in southern California, but parking management, of course, affects many other areas.

Mr. Strelow. Might I mention that we have a special contract study that has been done relating to San Diego, and we anticipate that the results of this will be available in time to be included in the study so that we can give some specific examples of what a particular community has been able to achieve of the economic and social ramifications of those actions.

Mr. Goldwater. Thank you, Mr. Chairman.

The Chairman. The gentleman from Michigan, I believe, has been seeking recognition.

Mr. Dingell. Mr. Chairman, I am very pleased to see my good friend the Administrator here. He is a fine public servant and I am very pleased that he would be here with us this morning.

I was wondering first if we could have any additional comments as to the Wyman amendment? I have had great reservations as to the prudence of this, and the comments that have been elicited in response to questions asked by Mr. Rogers.

Mr. Train. I thought perhaps I had addressed myself more extensively than what the committee really wanted to hear. There are other problems with it. I mentioned the health effects and I also mentioned the auto economy effects, both being quite adverse. I touched on the marketing problem. I think that while this proposal has been widely supported by automobile dealers, I would think that particularly for city delearships this could create various problems of maintaniing a double inventory, and I would think that city dealers would be losing sales to country competitors to whom people would go to buy the high emission and cheaper automobiles.

There are also problems of part supply, where you have to have the availability of different kinds of parts all across the country. Automobiles that require emission controls in regulated areas, certainly you would have to be free to move to other areas, they would have to have available to them no lead gasoline. You can't restrict cross-country mobility of people in their automobiles and catalyst equipped cars designed to meet the higher emission standards of the so-called regulated areas would have to have no-lead gasoline

available to them even when driving across what the bill would consider clean areas, so that filling station operators all across the country would have to have no-lead gas available even though the local market would have no demand for no-lead gas. I think this would be a substantial economic burden.

Mr. DINGELL. Would this have an effect on fuel costs?

Mr. TRAIN. Certainly distribution costs within the industry I think would be—I have no estimate of the amounts but I think that this would be a substantial economic burden. Insofar as fuel economy on the part of the automobiles themselves are concerned, as I indicated earlier, the whole business of disconnecting emission controls is going to produce on the average worse fuel economy.

Mr. DINGELL. Now, Mr. Train, I am troubled about some other matters, and I would like to address your attention to two different points, if I could.

First, we heard a lot about how much fuel use has been increased by air pollution devices. We have heard not a word about how much fuel use has been increased by the additional weight which has been caused by the safety devices. Has your Agency made any study about that?

Mr. TRAIN. Yes, sir, we have complete data on this.

Mr. DINGEL. I would like to have that submitted for the record.

[The information requested was not available to the committee at the time of printing—July 1974.]

Mr. DINGELL. I would like to have you summarize it briefiy at this time: I am satisfied that the automobile has gone up about 500 to 1,000 pounds as a result of safety requirements and that this has had a significant increase on fuel consumption. Would you address yourself to what the additional weight and what the additional fuel consumption is from the so-called safety devices that have been imposd upon the motoring public?

Mr. TRAIN. There are varying factors which of course have increased fuel diseconomy, to put it backward, over recent years. The air-conditioner is a very substantial item, I think around 10- to 15-percent fuel penalty. Automatic transmission, 2 to 15 percent. Automobile weight is by all odds the largest single determinant of fuel economy at the present time.

Now emission controls I assume do add something to weight. I would think it would be quite negligible. Safety devices I would agree, particularly structural requirements, probably would be a good deal more significant but then just simply the fact that American cars have tended to get bigger and bigger over the years is probably the largest single factor.

Mr. FREY. Would the gentleman yield?

Mr. DINGELL. I am about out of time.

Mr. FREY. I just came from a meeting, Mr. Dingell, where the other cost factor was an average of $750 a year per car on the additional equipment, safety devices, and emission controls. That was the overall figure.

Mr. DINGELL. That is the cash price, but I am interested in weight and so forth.

Will you make some submission to us, Mr. Train, so that the

committee can have that before us because I intend to offer an amendment to consider fuel considerations that I think is good sense.

Now what about scrubbers and so-called periodic controls? Is there any reason why these companies cannot be compelled to go to scrubbers? Do we have a technological feasible scrubber which will work to remove pollutants from stacks where coal is burned?

Mr. TRAIN. The EPA believes quite firmly that we have succeeded in demonstrating a number of different technologies that are reasonably reliable and which do do the job in terms of substantial reductions in emissions, particulraly sulfur oxides.

Mr. DINGELL. I am particularly concerned about sulfur oxide. You are making the flat bald statement to this committee that there is an adequate technology to provide adequate air pollution controls with the use of scrubber devices where high sulfur coal is burned, is that correct?

Mr. TRAIN. Yes, with some qualifications. First, there is not an adequate supply available to equip all plants that would need it all at once, for example. In other words, this would have to be installed. These would have to be installed over a period of time.

Mr. DINGELL. What is the statutory deadline then on that time exemption which we could give?

Mr. TRAIN. Well, the deadlines in the statute really are not in terms of the installation of the particular technology but that standards and State implementation plans with respect to emission limitations must be met by a certain statutory date, 1975, and with the extensions up to 1977.

Mr. DINGELL. Are those rates adequate for the installation of scrubbers?

Mr. TRAIN. Not really at the present time. This opens up one of the issues which I have addressed recently in the Clean Air Act amendments which we have sent to the Congress. I think it is apparent that even if all power companies proceeded forthwith to acquire and install scrubbing devices they could not do so in time to meet those statutory deadlines. It is just a physical impossibility. It takes anywhere from 18 months to 3 years to purchase and install a scrubber. As you know, they are very large, very complex mechanisms, and we feel that we do need additional flexibility under the Clean Air Act under enforcement orders where the deadline cannot be met because of either fuel availability or technology unavailability.

Mr. DINGELL. You are asking for that authority at this time?

Mr. TRAIN. No, sir. I honestly believe this would not be the best legislation to deal with those basic considerations of the Clean Air Act.

Mr. DINGELL. I would reiterate, Mr. Chairman, I have requested certain information from Mr. Train, and we would appreciate receiving it for the record, and ask that the record do remain open and that it be received.

Of course, Mr. Train, I know we will have your cooperation.

Mr. TRAIN. And also on the whole issue of stack scrubbers because by answer was a little bit brief.

Mr. DINGELL. Because of time.

The CHAIRMAN. Any further questions on this side?

The gentleman from Florida.

Mr. FREY. Thank you, Mr. Chairman.

Mr. Train, one area that we had testimony on the last time this bill was before the Congress was the question of the companies that convert to the use of coal and the amount of time that they would need—time in terms of finding the coal, entering into long-term contracts, and the economic problems of it. Under this act as I understand it it would be in essence a 5-year exemption that we would have. That is correct, isn't it?

Mr. TRAIN. They would not be required to come into full compliance with State emission limitations until the statutory date which under the bill is January 1, 1979. They would have to meet primary standards under the existing implementation plans though in the meantime.

Mr. FREY. This may not be your concern, but in the studies you have looked at, is the 5 years enough? We have heard in essence that if somebody is going to convert and do this that they have to look economically at about a 10-year problem. Is that true?

Mr. TRAIN. Well, I am not sure that I am the best one qualified to address that, Mr. Frey. I think we feel that there is no reason why any plant converting cannot come into by the 1979 or 1980 date as under the administration proposal, and that is our concern. Once they are in full compliance, there is no constraint on their ability to use the coal, so I don't see that there is any interference with the market situation.

Mr. FREY. Thank you very much.

I have no further questions.

The CHAIRMAN. Any further questions?

The gentleman from New York, Mr. Murphy.

Mr. MURPHY. We certainly appreciate your coming here this morning.

In the legislation vetoed by the President, the language was pretty clear. There would be no relaxation of the ambient air quality in the air sheds. We also understand that many of the air sheds have a much higher stack proliferation than other air sheds. Now is there sufficient low sulfur oil available for the powerplants and other generating sources in the air sheds that have the high stack proliferation, such as the New York-New Jersey air shed and others?

Mr. TRAIN. I am going to turn that question over to Mr. Lerner, if I may, Mr. Murphy.

Mr. LERNER. Congressman, you are asking if there is enough low sulfur oil available right now?

Mr. MURPHY. Well, through a heating season or a long-range basis.

Mr. LERNER. There was during the winter when we could not get any oil at all, the problem of getting the low sulfur oil. Low sulfur oil is now available as far as heavy fuel oil is concerned. The longer run outlook is no longer clear until we know what the production levels the Arabs will be willing to undertake, and that is not clear yet. We do know that the technology is certainly available to de-

sulfurize the oil if the oil is going to be available. There is no reason to expect the same kind of problem that we have had in coal. Technology has been available.

Mr. MURPHY. Mr. Train, have you recommended to the Federal Energy Office that the low sulfur oils go to the air sheds that have the high stack proliferation, and has the Federal Energy Office taken your recommendation?

Mr. TRAIN. We did recommend that in really the earliest discussions back in last September of the impending fuel problems and that, of course, was before the embargo hit. I was suggesting a mandatory allocation authority which could also take into account the need for low sulfur fuels in given areas. I don't think this has actually been a problem during this current winter.

I am going to ask Mr. Lerner again who has also been working with FEO to comment further on this.

Mr. LERNER. Congressman, there are only a few cases where oil that could not meet the sulfur regulations was not available. The EPA and the States have granted something like 10 to 15 variances over the course of the winter, not the hundreds that were expected back in the fall.

Mr. MURPHY. Were any of those variances in New York?

Mr. LERNER. Yes. There was a variance on oil granted to Con Ed that applied to all of its suppliers. All of its suppliers with one exception were able to provide the 3 percent sulfur fuel during the winter. That one exception was the supplier who got its fuel from Libya and they provided mostly conforming fuel but some high price sulfur fuel. With the embargo lifted——

Mr. MURPHY. Was this done on your recommendation?

Mr. LERNER. The variance, you mean?

Mr. MURPHY. That is right.

Mr. LERNER. Well, the variance was done on the recommendation of the State and city officials initially.

Mr. TRAIN. Application by the public hearings held by the city and then by the State, and then recommendations by them to our regional office and to Washington. We had two applications as I recall from Consolidated Edison to convert to coal during this past winter, one for the Arthur Kill and Ravenswood plants. I know the latter better by the name of Big Alice. We turned down, as I recall, the Ravenswood request and granted the application for the conversion for the winter only up through I think the end of March for Arthur Kill because of the long lead time required for that plant to convert if it was going to. It never did during the winter, and I believe Con Ed has requested a longer time variance, and the city has turned that down, so that is not an issue that is before EPA.

Mr. MURPHY. Would your decision to permit the conversion of the Arthur Kill plant affect the ambient air quality of the region?

Mr. TRAIN. I would think necessarily it would unless conceivably low sulfur coal of the same sulfur content was avaialble.

Mr. MURPHY. Thank you. Mr. Chairman.

The CHAIRMAN. Any further questions on this side?

The gentleman from Illinois.

Mr. YOUNG. Mr. Train, did I understand that you said earlier in the hearings on this bill that you would oppose any extension of the standard which this bill provides to maintain the 1975 standards through 1976? It was my understanding, and I saw in the newspaper report that you oppose further extending that through 1977. Is that correct?

Mr. TRAIN. It was not a matter of opposing, I said that as I recall I have to think back to some months ago that EPA at that time recommended going forward with the 1975 interim standard. There had been considerable discussion of the posibility of freezing the current 1974 standard, and I think that was the issue mostly on our minds, and we had stated that we could address the 1976 and 1977 question more effectively once we had the certification test results on the 1975 model cars, which would be somewhat later this spring, perhaps this summer.

Mr. YOUNG. You would support then the provision of this bill which gives the EPA the authority to extend the 1975 standards through 1977 if you felt it was necessary for a significant fuel economy, is that correct?

Mr. TRAIN. We stated that when at the time of the bill's passage previously it seemed like a reasonable solution given all of the barriers, pros and cons of emission standards and so forth that are involved. As I pointed out earlier, the President has gone one step further in his proposal sent up at the time of his energy message some weeks ago to actually suspend or to continue the 1975 standards not only for 1976 but also for 1977. As I said, I am transmitting that proposal to the Congress, and——

Mr. YOUNG. Engineers in my district, and particularly those with Universal Oil Processes claim that we can have both a clean environment and better fuel economy through the catalytic converter in 1975. Would you agree with that statement?

Mr. TRAIN. I certainly do, very strongly.

Mr. YOUNG. The other point they make is that even though you have to go to nonlead gasolines with the catalytic converter that there is a net overall energy savings by using the nonlead gasoline. Do you agree with that?

Mr. TRAIN. Those are estimates, and the data provided us by outside contractors very knowledgeable in the oil industry would confirm this. Taking into account both the increased gasoline efficiency in the automobile and some additional crude costs at the refinery, these net out either to a small penalty or pretty much in balance as I recall, so that the no-lead requirements don't involve any significant energy penalty.

Mr. YOUNG. General Motors I understand claims that if you do go to the higher 1976 standards that even though they can have significant fuel economy through the 1975 models using catalytic converters that if you have to go to the 1976 standards you are going to reduce the fuel economy. Why is that? What would be the basis of such a claim that the 1976 standard would reduce the fuel economy?

Mr. TRAIN. That is a little out of my particular field, but I would say that the probable reason for that increased fuel penalty would be the more stringent nitrogen oxide standard. It is 3.1 under exist-

ing law, and it would go to 0.4 as I recall under the actual statutory standard in 1976. Carbon monoxide and hydrocarbons, somewhat stricter standards, also would require some additional fuel penalty.

So these are the tradeoffs that you have to consider.

The CHAIRMAN. I am going to go out of order for just 1 minute if the gentleman from Washington would permit the gentleman from Minnesota, because his wife and daughter and grandchildren are waiting for him.

Mr. NELSEN. I have only this question. Dealing with the scrubbers on stack emissions I saw a picture of an area where the residue had been deposited in a vast area. My feeling is that there could very well be, by leaching and rainfall and sunshine and weather change, some danger to the underground water supply. Now has there been any research as to that, and is it very extensive in the other effects of the product that comes from the scrubbers?

Mr. TRAIN. First, not all technologies produce this kind of residue. That is the throwaway technology. Other technologies can produce an actual useable product such as sulfuric acid.

With respect to the throwaway technologies which can involve the very substantial sludge residues there are uses for these sludges in terms of road construction for example, construction building boards and things of this sort. I suspect, however, that the amount available would probably far exceed the demand for those kinds of uses. So I would be the last to suggest there is not a problem that has not been fully dealt with in terms of these sludges. In some areas they are being disposed of in old strip mining areas. There are possibilities of that sort.

We have under way in the EPA a coordinated research program which I am pushing personally very hard on dealing with these residues. The whole problem of sludge residue from sewage treatment plants, from stack emission controls is the growing problem in this country, and I think that we really have not addressed them as adequately as we should. The problem cuts across all the areas of responsibility in EPA, solid waste, and air, and water programs and so forth.

I have just established a coordinated program to see to it that we move ahead aggressively in this area.

Mr. NELSEN. Thank you very much.

Thank you, Mr. Chairman.

The CHAIRMAN. The gentleman from Washington, Mr. Adams.

Mr. ADAMS. Thank you, Mr. Chairman.

Mr. Train, is it true that removal of the emission controls can void the auto warranties?

Mr. TRAIN. I will ask Mr. Stork to answer.

Mr. STORK. Mr. Adams, it is a technical question, a legal question. This would have to be taken up with each individual company, but typically the companies take the position that unauthorized tampering with their vehicles could be used as a basis for avoiding liability under warranty.

Mr. ADAMS. Thank you.

Mr. Train, the fundamental question before this committee which concerns some of us and about which we had terrible arguments when we were marking up the prior bill, is that the energy crisis

or lack of supply of fuel is the basis by which we are going to do away with many things that are good in this country and have been achieved at great cost and that really are small in point of fuel saving as compared to the other factors. You testified earlier, and I will try to paraphrase it because it was close to what I believe is the situation, and that is that the bigger the automobile the less efficient it is on fuel per mile of passengers carried. First, is that correct?

Mr. TRAIN. Absolutely.

Mr. ADAMS. Second, that with the use of emission controls that smaller cars benefit more than bigger cars.

Mr. TRAIN. Let me ask Mr. Stork to address that because that is a technical question that I may misspeak on.

Mr. ADAMS. You said 10 percent was lost with emission controls as an average, but it could go 18 percent on bigger, and might produce a fuel benefit on smaller.

Mr. TRAIN. I will stand by what I said on the upper range, but I think he better explain what we mean at the lower end of the scale.

Mr. STORK. Mr. Adams, the 10 percent figure is a sales weighted average.

Mr. ADAMS. What do you mean by sales weighted?

Mr. STORK. What we mean by that, sir, is that if we, for example, see on the roads today 10 Buicks that might get 10 miles a gallon and a Volkswagen that might get 20 miles a gallon we do not add 20 plus 10 and divide by 2 to come up with 15 miles a gallon average. Rather we take 10 Buicks at 10 miles, that is 100 miles, plus 20 miles for the Volkswagon, and divide by 11 to come up with the average mileage for all cars.

Mr. ADAMS. Now answer my second part about the smaller car.

Mr. STORK. Yes, sir. The sales weighted average for all cars is 10 percent. Larger cars as Mr. Train pointed out have shown losses up to about 18 percent. When you look at the fuel economy of smaller cars, 3,500 pounds or less today and compare that to the fuel economy of similar weight cars with similar air conditioning, et cetera, before emission control was imposed you will find that they have about the same fuel economy today that they used to have; in fact, better. We are not saying, sir, that a smaller car today could not have even better fuel economy if you took the emission controls off.

Mr. ADAMS. All right. That is why I want to go to Mr. Train or to either one of you, because this is the argument that we have. The basic fuel mileage loss, because that is what this bill is about, is saving of fuel, that has occurred since 1967, and an order of importance has been causd by these factors. If you will list them for me because you testified to them very briefly. Air conditioning, 10 to 15 percent as compared to maybe a 10 percent loss; automatic transmission, 2 to 15 percent; weight you didn't give me a percentage.

Mr. TRAIN. Well, I don't know that I can.

Mr. ADAMS. But the testimony will stand that on the cars below 3,500 pounds they are performing with emission controls approxi-

mately at the same place that they were prior to the emission control being put on them.

Mr. TRAIN. Yes, sir.

Mr. ADAMS. We don't say there could not be perhaps an improvement.

All right. Finally, isn't it true that the major factor in fuel consumption going up in the United States is not emission control standards but size, weight, and extra items placed on automobiles in the last 7 years?

Mr. TRAIN. Absolutely. There is no question about that.

Mr. ADAMS. Thank you.

Thank you, Mr. Chairman.

The CHAIRMAN. The gentleman from Nebraska.

Mr. MCCOLLISTER. Thank you, Mr. Chairman.

Mr. Train, I am referring to section 205 of the bill where it gives you the right to the maximum extent practicable measures to assure that available low sulfur fuel will be distributed on a priority basis to those sections designated by the administrator of the Environmental Protection Agency as requiring low sulfur fuel to avoid or minimize adverse impact on public health.

Because I am from the Midwest, and because our Midwestern midcontinent sweet crude is essentially low sulfur crude, and because Midwestern refineries don't have the capacity to use high sulfur fuel, what has happened in the past is that the exportation of low sulfur crude from the Midwest to other areas of the country has meant that Midwestern refineries operate at something considerably less than capacity, 75 or 80 percent, which seems hardly the thing to do in a period of time when we are straining for fuel production refinery capacity all over the country.

Now my question to you is, how will it be reconciled in your duty here to consider the public health in assigning low sulfur crude about the country together with the need to produce as much fuel as possible and to use the refining capacity of the Midwest as efficiently as possible? How do you reconcile those two which seem to be opposing requirements?

Mr. TRAIN. Mr. McCollister, first let me say that the authority to which you are referring under section 205, the allocation authority, would be administered by the Federal Energy Office.

Mr. MCCOLLISTER. Yes, but you designate the areas.

Mr. TRAIN. I mean I don't intend that to be my full answer to your question.

The provisions I think obviously does require a balancing of environmental needs and other factors. It says, "To the maximum extent practicable." And I would assume that the Administrator of the Federal Energy Office would take into account refining capacity needs, the economic needs of diffrent areas of the country, in making his allocations in addition to the environmental needs which the administrator of the EPA would have responsibility for bringing to his attention.

Mr. MCCOLLISTER. Well, let us say that you in surveying the situation decide that 800,000 barrels a day of low sulfur Midcontinent crude be diverted to Eastern or Western refineries, and let's say that the Administrator of the Federal Energy Office or admin-

istration says, "No, that is going to leave us short on refining capacity and Midwestern refineries, because they cannot use high sulfur crude, are going to end up operating at 85 percent." Now who has the final word on it?

Mr. TRAIN. It is my understanding that that is the responsibility of the FEO. That is where the final allocation authority would be.

Mr. MCCOLLISTER. Thank you.

One other question raised by the gentleman from Washington was comment on various things which affect fuel economy in our hearings relating to automobile safety in the Commerce and Finance Subcommittee. It seems pretty clear from those hearings that automobile safety decreases rather markedly as you decrease the size and weight of the automobile. So here again it would seem we have to balance conflicting requirements of fuel economy on the one hand and automobile safety on the other hand. Do you have any comment on that?

Mr. TRAIN. Well, not directly on point. I think that very likely is the case. Smaller cars definitely have perhaps less structural strength.

I hear a no from the expert on my left, so I will ask him if he has something to add to my comment.

I would note that the greatest step forward on automotive safety at least in my memory has been the slower driving speeds of the last few weeks and months. I think it has seen a very remarkable drop in accident rates all across the country, and we have accomplished far more by cutting driving speeds 10, 15 miles per hour than by all of the safety devices that have been mandated by law over the years.

Mr. STORK. Congressman, we have had extensive discussions of this issue with NHTSA and certainly what Mr. Train said is entirely correct, all other things being equal. The point is that in the design and configuration of automobiles not all other things are equal and it is NHTSA's position as I understand it that a great deal can be done that has not yet been done to improve the safety of smaller cars to a point where some smaller cars may be safer than some larger cars are today. It is again a question of balancing and of doing everything than can reasonably be done in view of all the objectives that the Nation must have.

Mr. MCCOLLISTER. Even so, however, testimony before the subcommittee chaired by the gentleman from California, Mr. Moss, showed that if all cars were small cars, then you would not have the mix of small and big, that it would still be less safe than having all cars be big cars, or all cars be a mixture of small and large, that there is some added hazard from a small car, though I grant the accuracy of your statement that small cars like big cars can be made a great deal more safe.

The CHAIRMAN. The gentleman from Maine.

Mr. KYROS. Mr. Chairman, I have two short questions which can be answered categorically.

Mr. Train, you recall this committee and the Congress passed a mandatory allocation program, and yet the FEO in its existing regulation and proposed regulation seems to be severely restricting the growth of gas service to residential consumers for space heating

and other similar essential uses that we need in the Northeast and other parts of the country.

I would like to ask you for the record whether the burning of natural or synthetic gas or a mixture of both is not immensely more desirable from the standpoint of air pollution than the burning of coal or fuel oil to generate the same amount of heat?

Mr. TRAIN. Yes.

Mr. KYROS. The second question, is there any difference at all between burning natural gas or the burning of synthetic gas of pipeline quality?

Mr. TRAIN. I don't believe there is.

Mr. KYROS. Thank you very much, Mr. Train.

Thank you, Mr. Chairman.

The CHAIRMAN. The gentleman from Texas.

Mr. COLLINS. Mr. Train, did I understand you to say that you do not favor sectional flexibility but you would rather set up the standards? Is that what you advocate?

Mr. TRAIN. With respect to auto emission I believe we need a national standard with the single exception of California where we have maintained, historically, a different State level and I think that is acceptable and it can be administered, but I think a dual system nationwide would be a disaster for the air quality program.

Mr. COLLINS. Now this is very important because as I understand it 50 percent of petroleum is used in the automobile, isn't that right?

Mr. TRAIN. That is right, sir.

Mr. COLLINS. So we are really talking about something most important as to how we could improve oil supplies by lowering standards. Now what I don't quite understand myself is why we need the same requirements on auto emissions in small towns in Louisiana, Arkansas, or Kansas—let me put it this way. I was just sitting here thinking, and we found at home you need to put diapers on an 8-month-old, but a college sophomore that is 19 would be very reluctant to wear diapers. Now I can't see why these little towns all around should be under exactly the same requirements as those major cities. The situation is completely different, and there is a complete reluctance in our area to put diapers over everybody in America.

Mr. TRAIN. I don't think your figure of speech is exactly accurate, because as we move along in life we do develop self-control obviating the need for diapers, but I don't think that automobiles demonstrate the same characteristic.

Mr. Collins, let me say I addressed this quite extensively I think before you came in. This is by my life a very seriously adverse proposal with all due respect to Mr. Wyman for whom I do have very great respect. The Wyman bill would designate some 13 areas in the country, none of which included Texas I gather, although I do believe there are some substantial auto emission problems in the State of Texas. It designates some 13 areas in the country which would be regulated from the standpoint of auto emission and cars registered in those areas would have to have emission controls and those outside not.

Mr. COLLINS. That is right.

Mr. TRAIN. It is our estimate that were it not for auto emission

controls there are some 66 metropolitan areas, not 13—some 66 metropolitan areas in the United States all across the country which would be violating primary health standards in the absence of these controls, and that in those areas about 85 percent of the American people live. So the tradeoff that this bill is proposing in order to achieve very speculative increases in fuel economy is a reduction in public health for about 85 percent of the public with respect to the fuel economy aspects of the bill.

It is our very serious considered conclusion that they are almost completely illusory. They involve with respect to existing cars the deactivation of emission control devices, and it is our best technical judgment that on the across-the-board basis this is not going to be achieved with any increased fuel economy across the country. It is on the average, we are quite satisfied, probably going to result in worsened fuel economy because this has been our experience in trying to deactivate emission control devices, and it has been our experience in taking automobiles to commercial garages which advertise deactivation on the average they have produced a 3.5-percent worsened fuel economy with the existing cars.

Mr. Collins. Mr. Train, could you furnish our committee that figure you gave of 85 percent of the population lives in cities that have this intense problem due to auto emissions?

Mr. Train. Yes, sir.

Mr. Collins. Do you have figures that show that 85 percent of America is in auto emission condensed negative impact areas?

Mr. Train. Yes, sir. Be glad to provide that for the record.

[The following letter was received for the record:]

U.S. Environmental Protection Agency,
Office of the Administrator,
Washington, D.C., April 3, 1974.

Hon. Harley O. Staggers,
Chairman,
Committee on Interstate and Foreign Commerce,
House of Representatives,
Washington, D.C.

Dear Mr. Chairman: During Mr. Train's appearance before your Committee on Tuesday, April 2, we agreed to supply a number of items for the record. Because of the particular interest expressed by a number of Committee members concerning the Wyman Amendment, we are supplying a fact sheet outlining our reservations, including the list of 66 cities requested by Mr. Rogers.

To avoid possible misunderstanding, I would draw your attention to the discussion in the fact sheet of the proportion of the population which is found in the areas that would require cars with emission controls in order to attain and maintain health standards. The 85 percent figure given during the testimony is based on the assumption that in order to make a two-car strategy feasible and enforceable, cars with emission controls would have to be sold throughout any State in which one or more of the 66 air quality problem cities are located. The fact sheet explains the basis for this assumption. If it were possible to focus precisely on the 66 cities alone, the affected portion of the population would be about two-thirds rather than the 85 percent, as the fact sheet explains.

We hope that this clarification and the fact sheet will be useful to you in your consideration of this important issue.

Sincerely yours,

Robert G. Ryan,
Director, Office of Legislation.

Enclosure.

Wyman Amendment

Passage of this measure would not result in significant energy savings, but would have serious environmental implications.

ENERGY IMPACTS

Supporters of the bill state it would result in fuel savings of 17–20%. This claim is inconsistent with fuel economy facts.

1975 catalyst equipped cars (60–70% of 1975 new car sales) will have approximately the same fuel economy with or without catalysts, GM and EPA estimate potential fuel economy increases from decontrol of 1973–74 model year cars in the range of 5–7%.

However, to check feasibility of decontrol, EPA asked 8 garages to remove emission controls from a group of tuned-up cars and a 3.5% *loss* in fuel economy resulted. Automobile manufacturers also stress the importance of proper performance of decontrol.

Average fuel economy penalty of control devices on 1968–72 cars is much less than current models—approximately 5%; of this penalty it is estimated that at most 2–3% is recoverable by decontrol.

Assuming that 100% of the vehicles are successfully decontrolled, a fuel economy savings of about 3% might be obtained, rather than the 20% savings claimed by some supporters of the bill.

AIR QUALITY IMPACTS

The bill limits designation of regulated areas to 13 cities. EPA data show that 66 cities will experience violations of health standards for carbon monoxide or oxidant without emission controls. These cities contain roughly 2/3's of the automobiles and population in the nation (see attached list of cities). The only effective enforcement system would have to be Statewide, for each State containing one or more of the 66 cities. This would then cover 85–90% of the U.S. population. (see next page)

In "clean" cities, pollutant concentrations of both CO and oxidants would *double* by 1977 under Wyman bill proviisons.

There would be a strong incentive to buy dirty cars, even in heavily polluated areas. Ambient air concentrations of CO and oxidants would rise 10–15% from normal household relocation movements and even more due to imperfect enforcement.

The bill would greatly expand the need for transportation control measures and restrictions on new emission sources to counteract decontrol of auto emission devices.

While fuel savings from this measure are minor or non-existent it is clear that the air quality impact is significant.

ENFORCEMENT PROBLEMS

The Wyman amendment as presently structured is unenforceable. This problem is heightened by the incentive for urban residents to buy dirty cars that are cheaper.

The bill requires States to develop an enforcement program in 60 days. From previous experience, EPA projects a minimum of 15 months is needed to adopt new registration procedures and laws for implementing, enforcing and administering these procedures.

Since a State enforcement effort could not be put in place until the effective expiration date of the bill in 1977, Federal enforcement would be necessary.

Even under Federal enforcement, every controlled area would have to establish a mandatory vehicle inspection program and meet other requirements which could not be put in place within 60 days.

It would be necessary to prohibit new car dealers in polluted regions from stocking or selling the exempt "dirty" cars, rather than expect dealers to enforce. Such a prohibition would lead people to travel a few miles to buy the cheaper car—with possibly disastrous impacts on the city dealer's business.

The only feasible enforcement strategy which could be implemented quickly is on a uniform statewide basis, using Statewide auto registration systems.

States with problem cities would have clean cars throughout the States—as California does now. States without areas violating health standards would be decontrolled. Under this system 85-90% of the vehicle population would have to be fully controlled. Thus, the only quick enforcement mechanism of Statewide uniformity would allow decontrol on only 10-15% of the nation's automobiles.

AUTOMOBILE MANUFACTURER RESPONSE

The feasibility of a two car strategy has been studied by EPA and it was found that the complexity of manufacturing, marketing and distribution of automobiles increased significantly with more than two control areas.

Manufacturer production plans and EPA certification of 1975 models is well under way. No significant decontrol of these models could be expected until February of 1975.

This strategy causes special problems for small manufacturers—American Motors stated that it could not accommodate more than 10 control areas.

Ford maintains there is a 10 to 20 fold increase in marketing complexity when controlled areas are extended outside California. The probable marketing cost increases have not yet been estimated.

Manufacturers expressed doubts as to the adequacy of service and availability of parts for controlled cars outside the designated areas.

It seems unreasonable to require nationwide distribution of unleaded gasoline under a 2-car strategy, yet without nationwide availability, the mobility of the clear car driver is severely restricted.

[1] Transportation controls required.

Mr. COLLINS. Fine. Thank you.

The CHAIRMAN. What was the question of the gentleman from Texas?

Mr. COLLINS. I would like to yield to the gentleman from Florida just a minute.

Mr. Frey. I have just one question regarding the high sulfur fuel. It obviously takes energy to change from high sulfur to low sulfur fuel. Assuming we could even get the high sulfur fuel, do we have enough capacity to change from the high sulfur to the low sulfur fuel?

Mr. Train. We have places you can.

Mr. Frey. It was my understanding that the projections we have, looking down the line, we don't have the capacity, but I just——

Mr. Train. What is the refinery capacity you are talking about?

Mr. Frey. Desulfurization, I guess, is a technical term. Do we have enough capacity to do this?

Mr. Train. We do not at the present time, no. We have had very little new refinery capacity added in this country for some years for a whole complex set of reasons as you know, and it would be the newer capacity which typically would include desulfurization technology.

Mr. Frey. I would like for the record, if you could, to provide how many more of these types of plants we need on a projected basis and the cost of that so we can get some idea of what we are talking about.

Mr. Train. I will try to provide that.

[The information requested was not available to the committee at the time of printing—July 1974.]

The Chairman. The gentleman from Texas.

Mr. Eckhardt. Mr. Train, I am concerned about the provision of the bill dealing with the question of companies that are required to change to coal or which during the 90-day period ending on December 15, 1973, have commenced to change to coal. Incidentally, in the latter category their activities may be somewhat small in order to classify them because they may have made certain applications that they have added in certain contracts and they may be classified as having changed during that period. But in the bill, which is incidentally, I think, in this respect the same as the Conference Report, it is said that when they do so convert to the use of coal they shall not until January 1, 1979, be prohibited by reason of the application of any air pollution requirement from burning coal which is available from such source.

Do I understand that that is qualified by the provision of the next section 2(A) in which it said that, "The Administrator"—that is, the Administrator of EPA—is still in the position to determine "if the source has submitted to the Administrator a plan for compliance for such source which the Administrator has approved, after notice to interested persons", et cetera?

In other words, would they not be prohibited from burning coal unless they had a plan of compliance which, for instance, provided for what were considered to be reasonable scrubbing devices?

Mr. Train. Yes, I think that is generally true. Let me expand on that, Mr. Eckhardt, for a moment. The bill is complicated to follow this through. On page 64 down from line 14 it sets out the conditions which the Administrator must require in the case of a conversion, and among others it has under B:

> Such measures as the Administrator determines are necessary to avoid an imminent and substantial endangerment to health of persons.

We have recommended that that be changed to avoid any violation of primary standards.

I am in the wrong place. I beg your pardon.

Mr. ECKHARDT. Are you talking about on page 67(2)(A)?

Mr. TRAIN. Yes. I am sorry.

Mr. ECKHARDT. Page 67(2)(A).

Mr. TRAIN. I appreciate the correction.

Mr. ECKHARDT. And also on page 68 in (C) it is provided that:

> Regulations under subparagraph (B) shall require that the source achieve the most stringent degree of emission reduction that such source would have been required to achieve under the applicable implementation plan which was in effect on a date of the enactment of this section.

Now I assume that would mean, for instance, if it became available to obtain the type of scrubbing equipment that is described in the Report of the Hearing Panel, National Public Hearings on Powerplant Compliance.. I think that your Agency has published—if it became possible to apply those kinds of a supply as described on page 5 like the chemical Mitsui Miike Lime scrubber or the Louisville Gas and Electric Paddy's Run Lime Scrubber, and then I think on the next page another type scrubber—if these became available and practical to apply, notwithstanding the language that says that a converted plant could continue to January 1, 1979, could not be prohibited from using coal, nevertheless its continuance of operation on coal could be subject, could it not, to the requirement that these technological devices available at that time be put into use?

Mr. TRAIN. That is correct, and that also is true of the language although it is a little bit different under the administration's new version of the coal conversion provision which we recently transmitted.

Mr. ECKHARDT. I ask you these questions really as a matter of legislative history because the language that the plant may not be prohibited from using coal up until January 1, 1979. I think you suggest that be extended to 1980.

Mr. TRAIN. That is correct.

Mr. ECKHARDT. It says it, "shall not be prohibited from using coal by reason of application of any air pollution requirement", but nevertheless that is conditioned on the later provision that I have read to you, is that not true?

Mr. TRAIN. That is correct, sir.

Mr. ECKHARDT. Thank you very much, sir.

The CHAIRMAN. The gentleman from Maryland.

Mr. BYRON. Mr. Train, I just wanted to ask one question in connection with the stationary emission.

Over on page 63 dealing with the question of the Administrator, that is obviously by definition the Federal Energy Administrator?

Mr. TRAIN. No, this is the EPA Administrator. This is an amendment to the Clean Air Act on page 63.

Mr. BYRON. Maybe you could clear me up on this. I read definitions under section 102 as being—the term Administrator means the Federal Administrator.

Mr. STRELOW. Congressman, I believe that applies to title II.

Mr. BYRON. Now if this does apply to you, would you take it to

mean the unavailability of types of amounts of fuels? Would this be price or physical unavailability?

Mr. TRAIN. I think that what was in mind largely was physical unavailability. I suppose at some point price reaches a level which it so affects availability so that it should be taken into account. I think there is largely physical unavailability that was intended here.

Mr. BYRON. I just wanted to clear that up.

Mr. TRAIN. Thank you.

The CHAIRMAN. Is that all?

I want to thank the gentleman.

Mr. VAN DEERLIN. Mr. Chairman, there are no questions to be answered, but some information sought for the record.

The CHAIRMAN. All right.

Mr. VAN DEERLIN. Mr. Moss had to leave. He was concerned with getting some comment from the Agency on a complaint by a representative of the Los Angeles County Air Pollution Control District that the Southern California Edison Co. has been required to allocate some of its reserve of low-sulfur, low-pollution fuel to other localities and to burn instead high-sulfur, high-pollution fuel. I think that is something that we could get a report on for the record. If possible, Mr. Chairman, I would also appreciate an analysis by the Agency on the verities of a dispute that is underway in San Diego County over a vapor control program at the gas pump level. There is considerable feeling on both sides here, and it seems to me that from a distance of 3,000 miles we might obtain a little more light than is available even in San Diego.

Mr. TRAIN. We will be glad to respond to both of those for the record. The first one we will have to contact the Federal Energy Office. I believe they would have primary responsibility.

With respect to the vapor recovery systems, I am aware of the problem. I am not sure what the vagaries are at the moment, but we will be glad to throw as much light on the issue for you as we can.

Mr. VAN DEERLIN. Thank you, sir.

[The information requested was not available to the committee at the time of printing—July 1974.]

The CHAIRMAN. Thank you very kindly for coming and being with us, Mr. Train. You have been very enlightening and it will be helpful to those in writing the bill.

Mr. TRAIN. Thank you.

The CHAIRMAN. I would like to announce at this time that the committee will adjourn until tomorrow morning at 10 o'clock and we will hear Mr. Simon.

I would say that Mr. Herbert Misch and Dr. Frederick Bowditch, Mr. William Lalor, Mr. Robert V. Price, Dr. Lorin E. Kerr and Mr. Richard Ayres will be heard tomorrow afternoon or Thursday. The committee counsel will keep in touch with the clerk and if it is possible that will be heard tomorrow afternoon: if not, it will be Thursday morning. We will try to get to it tomorrow afternoon if possible.

STATEMENT BY SENATOR JACKSON, APRIL 11, 1974

S. 3267, Standby Energy Emergency Authorities Act Reported by Interior Committee

Mr. Jackson. Mr. President, yesterday the Senate Interior and Insular Affairs Committee ordered S. 3267, the Standby Energy Emergency Authorities Act, favorably reported to the Senate. This measure is a modification of S. 2589, the Energy Emergency Act, which the President vetoed on March 6.

1. BACKGROUND OF S. 3267

Following President Nixon's veto and the Senate's failure to override the veto, a series of discussions and negotiations on the substance of the bill were undertaken with the White House and administration representatives to see if agreement could be reached on the provisions of the bill.

These discussions continued for approximately 2 weeks and led to agreement on the substance of an emergency authorities bill, with the following exceptions: first, unemployment benefits; second, repeal of the stripper well exemption from price control authority; third, petroleum price controls; fourth, protection of franchised dealers and distributors; and fifth, delegation of authority to the President rather than the Administrator of FEO.

The discussions were terminated when it became apparent that fundamental policy differences on these issues could not be resolved.

On March 28, 1974, companion bills were introduced (S. 3267 and H.R. 13834) which incorporated a number of the changes discussed with the administration as well as provisions on the subjects in disagreement.

2. RELATIONSHIP OF S. 3267 TO AUTHORIZATIONS REQUESTED BY THE ADMINISTRATION

In recent weeks, the President has accused the Congress of inaction on his "energy program." This accusation is patently ridiculous and apparently motivated by partisan considerations. The majority leader answered this charge on March 21 and it warrants no further comment except to say that the authorities the President has requested in four different bills were contained in S. 2589, which the President vetoed on March 6.

As reported, S. 3267 contains all of these authorizations. They include: authorization for rationing, conservation plans and funding for States; energy data and information gathering authority; special unemployment assistance programs; and authorization for conversion from oil and gas to coal by powerplants and heavy industrial users.

3. RELATIONSHIP OF S. 3267 TO THE CONFERENCE REPORT ON S. 2589

S. 3267 is, in many respects, identical to the conference report on S. 2589. The major changes are as follows:

First, the title and other changes have been made to convert the bill from an "emergency" bill into a "standby emergency authorities and contingency planning" bill;

Second, the authorization for the Federal Energy Administration has been deleted in recognition of conference committee action on the FEA bill;

Third, the rationing authority is made subject to congressional review and right of veto;

Fourth, the price rollback provision has been deleted;

Fifth, the unemployment assistance section has been modified to deal with technical and definitional questions;

Sixth, the provision providing for loans to homeowners and small businesses has been deleted;

Seventh, the authorization for the private use of Federal facilities has been deleted.

Eighth, the energy data and information section has been modified; and

Ninth, a requirement for contingency plans to deal with future shortages has been added.

4. COMMITTEE AMENDMENTS PRIOR TO REPORTING S. 3267

Yesterday, in executive session, the committee made the following changes in the bill:

Section 128, the pricing authority provision, was deleted.

Title II, which amended the Clean Air Act, was deleted at the request of the Public Works Committee. A new **title II** will be offered when the Senate considers the bill.

A clarifying amendment was made to **section 107(a)(1)** to emphasize that the provisions of that subsection apply only to Federal lands.

With these changes, the committee favorably reported the bill. The report will be filed during the recess, and I would hope that the Senate will act expeditiously on this bill when we return.

5. OIL PRICE CONTROLS

Mr. President, the committee's action to delete **section 128**, the oil pricing authority provisions, was taken without prejudice to the need for new authority. The section was deleted to enable the bill to be reported.

Together with other members of the committee, I have reserved my right to offer floor amendments dealing with oil prices. I intend to offer an amendment to bring all oil prices under mandatory Federal price control authority when the Senate returns from the Easter recess.

The amendment will cover all categories of oil—new oil, released oil and stripper well oil—which are now exempted from price control authority. At the present time, 40 percent of the oil produced in the United States is exempt from price controls. This figure is up from 29 percent only a few months ago.

If action is not taken to impose some realistic restraints on oil prices, the cartel of producing countries will unilaterally be establishing the price which American consumers will pay for 50 percent of our domestic oil production by the end of the year.

I am appalled that the administration has brazenly—and in my view, unlawfully—adopted a policy of hands off on oil prices. The impact of this policy is both cruel in its impact on consumers and blatantly contrary to the national interest.

Nine weeks ago—on February 2—I wrote to Mr. Simon requesting an explanation of the administration's decision to place vital U.S. consumer interests in foreign hands by decontrolling domestic oil prices. In that letter, I stated that this action is contrary to the clear and plain meaning of the Petroleum Allocation Act. That act requires that equitable prices be established for all crude oil, residual fuel oil and refined petroleum products.

I have yet to receive an answer to that letter. I have yet to receive the memorandum of law I requested on the legality of the administration's actions in removing price controls.

6. NEED FOR EMERGENCY AUTHORITIES AND CONTINGENCY PLANNING

Mr. President, expeditious passage of S. 3267 is necessary because of the major risks the Nation faces in relying upon oil imported from nations whose leaders view and use oil as a political weapon. There are no grounds for confidence that the Arab oil embargo will not be reimposed in the weeks and months ahead as swiftly and with as little notice as it was imposed last fall. We must be prepared for such an eventuality. Indeed, our visible preparedness for and reduced vulnerability to the threat of embargo greatly reduces the probability of imposition of an embargo.

The critical shortages the American people experienced this past winter could well be with us again later this spring and this summer. The essential social and economic interests of the Nation are dependent upon an assured supply of equitably priced oil. These interests must not be placed in uncertain and unpredictable foreign hands. Reliance on insecure sources of high-priced supply is a policy which can only be followed if we are fully prepared to reduced consumption and get by with less petroleum during periods of short supply which others may impose upon us.

It is essential that we have contingency plans and standby authority to deal fairly and equitably with shortages and the risk of shortages in a manner which will maintain employment and a healthy economy.

At the present time, there is no authority in Federal law for the peacetime implementation of programs necessary to deal with acute energy shortages. During the recent embargo, Federal policy was dependent upon requests for voluntary public action and a very broad interpretation of the Emergency Petroleum Allocation Act which, in some respects, far exceeded the scope and purpose of that act.

Mr. President, in the future we cannot continue to rely on voluntary exhortations for sacrifice as our only means to deal with shortages. We must act to increase supply. We must have a policy of energy conservation. We must also have at hand contingency plans which can be

rapidly and effectively implemented if we are to retain economic and political independence. Standby authority and contingency planning to deal with critical shortages will continue to be essential to maintaining our national security and our freedom of action until we attain the capability for energy self-sufficiency.

The bill reported by the committee will provide the authority we need.

S. 3267

APRIL 19, 1974.—Ordered to be printed
Filed, under authority of the order of the Senate of April 10, 1974

U.S. GOVERNMENT PRINTING OFFICE
31-669 O WASHINGTON : 1974

V. LEGISLATIVE HISTORY

Background: S. 2589

S. 2589, the predecessor to S. 3267, was introduced on October 18, 1973, as a measure to prepare the Nation to deal with impending fuel shortages. The Senate began consideration of S. 2589 on November 14, 1973. Debate and consideration was continued on November 15 and 16 and the bill was passed by rollcall vote (78–6) on November 19, 1973. On December 14, 1973 the House passed a companion bill, H.R. 11882.

A House-Senate committee of conference met December 17, 18, 19 and 21. The Conference Report was taken in the Senate on December 21, 1973, but adoption of the Conference report was delayed by extended debate on the provisions of the bill. Discussions on the bill focussed on provisions prohibiting windfall profits and price gouging, and requiring Congressional oversight of executive actions taken under the Act.

Compromise Attempt

In an attempt to move the urgently needed measure before the Christmas recess, a modified version of S. 2589, was added as an amendment to S. 921, the Wild and Scenic Rivers bill, previously passed by the House. That amendment was passed by a vote of 52–8 and S. 921, as amended, was sent to the House. Three separate House Resolutions which would have suspended the rules and allowed House consideration of S. 921 as amended failed to pass the evening of December 21, 1973. The first session of the 93d Congress adjourned on December 22 without acting on the substance of S. 2589.

The Senate resumed consideration of the Conference Report on January 24, 1974. On January 29, by a vote of 57–37, the Senate recommitted the Conference Report to the Conference Committee. Conferees met on February 4, 5 and 6, 1974 and on February 6 agreed to file a modified conference report. The significant modification in this second Conference Report was the replacement of the provision to prohibit windfall profits with one which required a "rollback" in domestic crude oil prices. The modified conference report was filed in the Senate February 6, 1974, and considered February 17 and 18, 1974 and adopted on February 19, 1974 by a vote of 67–32. On February 27, 1974 it was adopted by the House by a vote of 258–151 and sent to the President. On March 6, 1974 the bill was vetoed by the President.

The veto message cited objections to provisions of the bill which provided for reducing crude oil prices, providing federal aid to those unemployed by the energy crisis, and the granting of loans to homeowners and small businesses for energy conservation purposes. The Senate failed to override the veto, by a vote of 58–40 on March 6, 1974.

Negotiations with Administration

Following President Nixon's veto on March 6 of S. 2589, the Energy Emergency Act, and the Senate's failure to override the veto, a series of discussions and negotiations on the substance of the bill were undertaken with the White House and Administration representatives at the request of Representative Staggers. Senator Jackson and Senator Fannin represented the Committee at these negotiations.

These discussions continued for approximately two weeks and led to agreement on the substance of an emergency authorities bill, with the following exceptions: (1) unemployment benefits, (2) repeal of the stripper well exemption from price control authority, (3) petroleum price controls, (4) protection of franchised dealers and distributors, and (5) delegation of authority to the President rather than the Administrator of FEO.

The discussions were terminated when it became apparent that fundamental policy differences on these five issues would make full agreement impossible.

Introduction of S. 3267

On March 28, 1974, Senator Jackson and Representative Staggers introduced companion bills (S. 3267 and H.R. 13834) which incorporated the changes discussed in negotiations with the Administration as well as the provisions on the subjects still in disagreement. The bills were identical except that H.R. 13834 did not contain petroleum price control authority (Section 128 of S. 3267).

As introduced, S. 3267 contained a number of authorizations similar to those which the President had requested in other Administration bills. These included authorization for rationing, conservation plans and funding for grants to States; energy data and information authority; special unemployment assistance programs; authorization for conversion from oil and gas to coal by power plants and heavy industrial users; and amendments to the Clean Air Act.

Differences between S. 3267 and S. 2589

S. 3267 as introduced was essentially identical to the conference report on S. 2589, except for the following changes:

The title and other changes were made to modify the bill from an "emergency" bill into a "standby emergency authorities and contingency planning" bill.

Authorization for FEA was deleted in view of the imminent passage of separate legislation to create that agency.

Rationing authority was made subject to Congressional review and right of veto.

The price rollback provision was deleted and instead, the President was required to set and justify price ceilings.

The unemployment assistance section was modified to deal with technical and definitional questions.

Loans to homeowners and small businesses were deleted.

Section on authorization for use of Federal facilities was deleted.

Energy data and information section was modified.

A requirement for contingency plans to deal with energy shortages was added.

Many of these changes represented efforts to deal with problems raised by Administration representatives in the course of the discussions described above.

The Committee met in executive session on April 1 and reviewed the differences between S. 3267 and the conference report on S. 2589.

Hearings were held on April 4, 1974 at which time testimony was received from Mr. William N. Walker, General Counsel, Federal Energy Office and Mr. Charles Owens, Deputy Assistant Administration for Policy, Planning and Regulation, Federal Energy Office. In addition, a statement of Mr. William E. Simon, Administrator,

Federal Energy Office, was accepted for incorporation in the hearing record. Other statements for the record were received from Mr. Robert M. Barsky, Deputy Air Pollution Control Officer, Los Angeles County Air Pollution Control District and from Mr. Albert A. Walsh, President National Realty Committee. In all, a cumulative total of five days of hearings were help on the provisions of S. 2589 and S. 3267.

Committee Amendments

An Executive mark-up session of the Committee was held on April 4, 1974 and on the conclusion thereof the Bill was ordered reported with an amendment in the nature of a substitute. Changes in the bill as introduced were as follows: Section 128, providing for petroleum pricing authority, and Title II, which amended the Clean Air Act were deleted without prejudice; a new subsection 101(c) was added requiring a presidential finding to be made before certain authorities granted under the Act could be exercised; technical and clarifying amendments.

* * * * * * *

ADDITIONAL VIEWS OF SENATORS FANNIN, HANSEN, McCLURE, AND BARTLETT

The Standby Energy Emergency Authorities bill (S. 3267) as ordered reported by the Interior Committee, simply fails to respond in a meaningful and constructive way to the Nation's energy problem. The bill does not contain authorities in a reasonable form that are needed on a standby basis to deal with the energy problem.

It contains virtually all of the infirmities of its predecessor, S. 2589, and none of its few redeeming features such as the air quality amendments. Thus, we here repeat the portions of the precise text of our additional views which appeared in the report on S. 2589.

> "During the year 1973 the Senate Interior Committee has reported six major bills affecting energy. These are: (1) S. 268, the Land Use Policy and Planning Assistance Act; (2) S. 425, the Surface Mining Reclamation Act; (3) S. 1570, the Emergency Petroleum Allocation Act; (4) S. 1081, the Federal Lands Right-of-Way Act; (5) S. 2176, the National Fuels and Energy Conservation Act; and (6) S. 2589, the National Energy Emergency Act.
>
> Two of these, the Federal Lands Right-of-Way Act and the National Energy Emergency Act, are related in part to increasing energy supplies. What we very much regret is that neither instance are the workings of the marketplace utilized to stimulate an increase in energy supplies.
>
> Only by facing the hard necessity of freeing up the price structure can we stimulate the new high-risk investment and encourage the conservation of energy that together are required to narrow the gap between supply and demand.
>
> What all of these bills do have in common is a philosophical bent toward the increase of Federal regulation, whether in the area of energy-producing or energy-consuming activities. Such regulation takes the form of elaborate formulas and procedures spelled out in legislative language. These provisions are likely to repeat the mistakes made in Federal regulation of natural gas production and in oil import quotas."

Notwithstanding its repetitive inadequacies, we voted to report it because we believe our colleagues should once again be given the opportunity to vote against it.

The Senate has a continuing opportunity to take legislative steps that will contribute to a constructive, meaningful solution to the Nation's energy problem. A number of Administration-supported bills including deepwater ports, natural gas deregulation, and others need to be acted on in a timely, responsible way. These are the legislative authorities that are now needed; not those contained in this warmed over standby energy emergency authorities bill.

63-518 O - 76 - 37 (Vol. 1)

The following is an analysis of those provisions of the bill that are extraordinarily objectionable. It should be recognized as well that provisions of the bill not specifically addressed as objectionable are either duplicative of existing statutes (e.g., Section 113 Exports, Section 115, Carpools) or of questionable need on a standby or current basis.

* * * * * * *

Section 105

Provides authority to direct the conversion of power plants using natural gas and petroleum products to use coal if such plants have the capability and necessary equipment to burn coal.

This authority, if exercised by the Administrator, would place the operators of power plants in violation of clean air quality requirements making them subject to legal action. Without a provision that authorizes suspension of air quality requirements when conversion to coal is required, this authority conflicts with other law and places the Administrator in the position of requiring an action that is in violation of requirements under the Clean Air Act.

Some companies have already voluntarily responded, where they were physically able to do so, in undertaking conversions of this kind. This provision as written would have so little practical effect that it can be shown eventually to have been meaningless. The case could be made that the Congress thus had an opportunity to do something meaningful, was urged by the Administration to do it and failed to produce results.

This section limits the authority to order conversion of plants to those where "necessary equipment is available" on the date of enactment of the Act. This is too restrictive since some plants which could reasonably be converted to coal would not have *all* the necessary equipment available on the date of enactment of the bill.

MINORITY VIEWS OF SENATOR BUCKLEY

I support the additional views of my colleagues Senators Fannin, Hansen, McClure and Bartlett with the exception of their comments on the coal conversion and related amendments to the Clean Air Act. It was for the same criticisms expressed above by my colleagues that I voted against reporting the bill.

James L. Buckley.

STANDBY ENERGY EMERGENCY AUTHORITIES ACT

APRIL 29, 1974.—Committed to the Committee of the Whole House on the State of the Union and ordered to be printed

Mr. STAGGERS, from the Committee on Interstate and Foreign Commerce, submitted the following

REPORT

together with

MINORITY VIEWS

[To accompany H.R. 13834]

The Committee on Interstate and Foreign Commerce, to whom was referred the bill (H.R. 13834) to provide standby emergency authority to assure that the essential energy needs of the United States are met, and for other purposes, having considered the same, report favorably thereon with an amendment and recommend that the bill as amended do pass.

The amendment strikes out all after the enacting clause and inserts a substitute text which appears in italic type in the reported bill.

Background of Committee Consideration

This legislation finds its beginnings in the effort to devise a legislative response to the energy emergency which confronted this nation in the beginning months of this last winter. At that time, this nation was confronted with an energy supply problem of unprecedented scope.

On October 17, 1973, Arab oil producing nations, then engaged in armed conflict with Israel, initiated a program to curtail their collective crude oil production in an attempt to influence U.S. policy in the Middle East. Shortly thereafter a total embargo was imposed on shipments to the United States and steps were taken to prevent this nation from indirectly acquiring Arab produced crude oil or refined products derived from such production. Even before this, our nation had drawn down its primary inventories of gasoline, distillates and heavy fuel oil to a point which, on October 26, 1973, was reported to be 71 million barrels below normal. Also, crude oil stocks were 14 million barrels below normal levels for that date. In further exacerbation of the problem, the Arab countries reduced total production by five to six barrels per day, resulting in world shortages of petroleum supplies, thus intensifying competition for non-Arab production in the international market.

The Arab nation oil embargo brought to crisis proportions a situation already grave for individual and industrial consumers in the United States. In the past two decades, our energy demand had virtually exploded. Total energy consumption more than doubled from 37,000 trillion BTU's in 1950 to 76,000 trillion BTU's in 1973. Of this latter amount, only 62,000 trillion BTU's were produced domestically. U.S. consumption of energy was far outstripping domestic production. As a consequence the Department of Interior had—prior to the Arab embargo—predicted that this nation would have to dramatically increase imports of distillates by 250,000 barrels per day in order to get through a normal winter and by 400,000 barrels a day should we experience colder weather or a breakdown in refinery capacity.

The Committee believed that this situation clearly established a need to take emergency actions. Legislation was readied and reported to the Floor of the House on December 10, 1973. This bill, H.R. 11450, (later to become S. 2589—the Energy Emergency Act) contained a comprehensive package of emergency powers to cope with the then impending crisis situation. House passage was secured on December 14, 1973 and an initial conference with the Senate concluded on December 21; but the Senate failed to act on the terms of the conference agreement prior to recessing on the 22nd. On January 29, 1974, the Senate recommitted the conference report. Conferees resumed discussions and reached a new agreement which was accepted by both Houses of Congress and sent to the President. On March 6, 1974, the President vetoed the bill and the Senate failed in its effort to override the veto.[1]

[1] The veto message cited objections to provisions of the bill which provided for reducing crude oil prices, providing Federal aid to those unemployed as a result of the energy crisis, and the granting of loans to homeowners and small businesses for energy conservation purposes.

Convinced that the need for the legislation remained, discussions were initiated with the Administration and the leadership of both House and Senate Committees. These discusssions continued for approximately two weeks but concluded without resolution. Fundamental policy differences continue to divide the Administration and the jurisdictional committees of the Congress.

On March 28, 1974, Chairman Staggers introduced H.R. 13834 which represented the final product of the negotiations with the Administrgtion. This bill, while containing a number of proposals with which the Administration continued to disagree, incorporated several powers and changes in existing law which the President had requested in a series of Administration bills. These included the authority to ration petroleum products; to implement mandatory conservation programs; to provide grants to states to carry out delegated functions under the Petroleum Allocation Act; to obtain energy data and information; and, to order certain major fuel burning installations to convert to coal. Also included were amendments to the Clean Air Act of a similar but more limited scope then requested by the Administration.

Hearings were held on the introduced bill on April 2, 3, and 4th before the Full Committee. On April 25, 1974, after six days in markup an amended form of H.R. 13834 was ordered to be reported by voice vote of the Committee. Deleted from the bill were those sections pertaining to energy information reports, mandatory coal conversion of major fuel burning installations, and those parts of the bill which proposed amendments in the Clean Air Act. These provisions were combined in a separate bill also reported by the Committee, H.R. 14368. In splitting the legislation in this manner, the Committee proposes to expedite consideration of these proposals in the House.

* * * * * * *

STATEMENT OF WILLIAM E. SIMON, ADMINISTRATOR, FEDERAL ENERGY OFFICE, BEFORE THE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE, HOUSE OF REPRESENTATIVES, APRIL 3, 1974

Mr. Chairman, members of the Committee. We thank you for this opportunity to appear before the Committee and to offer our comments on the proposed "Standby Energy Emergency Authorities Act". We are very appreciative of the considerable time and effort which Congress, and particularly this Committee has invested in this particular piece of legislation as well as its predecessor, the Energy Emergency Act.

In November when this Committee began formal hearings on the energy emergency bill, this country was faced with a set of external circumstances—the most important of which was the Arab oil embargo—that required immediate legislative action. Throughout November and December 1973 the Administration and Congress worked feverishly to work out a compromise energy emergency bill which would give the President the authority he needed to deal with the then burgeoning energy crisis. As we all know these efforts met with little success.

In his January 23, 1974 energy message to Congress the President warned that he would have difficulty signing the version of the energy emergency bill then pending before the House and Senate Conference Committee. In that message the President emphasized that the omnibus bill being proposed by Congress contained many extraneous and unnecessary provisions which the Administration found unacceptable. The President urged Congress to enact a direct and straightforward bill which would make necessary changes in the Clean Air Act and give the President the authority to impose energy conservation measures, to require selected industrial plants to utilize coal as their primary fuel, and to institute a rationing program if all other attempts to restrain the demand for petroleum failed. At the same time, the President urged Congress to give immediate but separate consideration to bills designed to prevent windfall profits from the energy crisis, to authorize the acquisition and mandatory reporting of energy information, to strengthen our unemployment compensation program to provide adequate coverage to those in need, including those unemployed as a result of the energy crisis, and to establish a Federal Energy Administration to coordinate and administer various energy initiatives.

As you are well aware, the President concluded that the Energy Emergency Act would have been counterproductive and he returned it to the Congress without his signature on March 6, 1974. Among the specific provisions of the Act cited by the President in his veto message as being particularly objectionable were the roll-back of domestic crude oil prices, the unworkable provision dealing with energy-related unemployment, and the unnecessary and costly Federal loans to householders and small businesses to install insulation or storm windows and to purchase heating units.

All of this is now past history—water over the dam.

The circumstances that were present in November and which demanded legislation on a crash basis are no longer so acute. The Arab oil embargo has been relaxed, and with the cooperation of the American people and a certain amount of luck the Nation survived the crisis.

Conditions having now eased we believe that the type of legislative response needed today is far different from that which was needed last November. We feel very strongly that an omnibus energy emergency bill is no longer required. Rather we believe that what is now needed is prompt attention, by appropriate committees of Congress, to a number of individual legislative proposals focusing on specifically identified problems associated with both our near term problems and our longer term goal of energy self-sufficiency.

The Administration has transmitted to Congress a comprehensive package of 18 separate legislative proposals designed to provide a legislative basis under which this Nation can begin to solve its energy problems. While we are happy to offer comments on various provisions of the Standby Energy Authorities bill we would prefer and strongly urge Congress to give careful and detailed consideration to the individual measures which have been proposed by the Administration.

This is not to suggest that standby authority to impose rationing and other mandatory conservation measures is no longer required. Such authority is needed if we are to be adequately prepared to deal with any future crisis situation which may confront us. Indeed the Administration has submitted a bill—the Special Energy Act—which would authorize these specific actions. Nor do we mean to suggest that legislation is no longer needed to require plants to convert to coal or to amend the Clean Air Act. Rather we are merely suggesting that such measures are more properly considered and examined on their individual merits rather than as part of any omnibus energy bill.

Having said all this we now turn our comments to the Standby Energy Authorities bill. At the outset we would like to express our appreciation for the opportunity which was afforded us during the past two weeks to meet with members of the Committee and its staff to attempt to work out a compromise energy bill. We believe that these meetings were worthwhile and that they have yielded positive results. While the bill in its present form still contains a number of provisions which are seriously objectionable to FEO and to the Administration, we are pleased that several of the provisions which prompted the President's veto of the Energy Emergency Act have now been deleted.

Since early November the Administration has consistently urged Congress to enact a straightforward energy emergency bill devoid of unnecessary provisions and designed to give the President four primary tools with which to attack the energy crisis. First, the authority to impose mandatory energy conservation measures. Second, standby authority to institute a rationing program in the event it became necessary. Third, authorization to require selected industrial plants to convert to coal as their primary fuel. Fourth, amendments to the Clean Air Act which would provide the necessary authority to relax environmental regulations on a temporary basis, thus permitting an appropriate balancing of environmental interests and energy requirements. The first two would clearly be provided by the present bill. The third and fourth would provide part of the authority needed but not all, and they would not obviate the broader treatment of the Clean Air Act that is now necessary. Furthermore, several extraneous provisions, some of which are particularly objectionable to the Administration, remain in the bill. Before commenting on these troublesome provisions, however, we would like to address briefly what we believe are the positive aspects of the bill.

Section 103 of the bill would give the President standby authority to institute a rationing program should he determine that all other methods of limiting energy demand have failed and that rationing has therefore become necessary. Let me stress that we do not believe that rationing will have to be imposed—certainly there is no likelihood of rationing in the forseeable future. Nevertheless, we strongly support this provision for the reasons indicated earlier.

One aspect of Section 103 however is troublesome—the requirement that congressional approval be given before any rationing plan can take effect. It seems to us that once a determination has been made by the President that the drastic step of rationing must be undertaken, it would be very unwise to delay the actual implementation of any such plan until Congress has time to deliberate. Although the bill specifically provides that a rationing plan can be put into effect if Congress has not acted on a proposed plan within 15 days, we believe that even a 15 day delay could have disastrous consequences. Conditions would continue to deteriorate while two weeks of debate raged and hoarders would have an additional 15 day grace period to stock up on scarce supplies.

Section 104 of the bill would authorize the Administrator of FEA to institute other mandatory conservation measures. While we support this section we must again object to the necessity of submitting individual conservation proposals to Congress for approval. The same reasoning as to why rationing plans should not be subject to congressional veto applies here with equal force. Another provision of Section 104 would limit the life of any conservation measure to six months. This limitation, when coupled with the possibility of a congressional veto, would make each conservation measure a "lame duck" before it is ever implemented.

Section 105 of the bill would grant authority to the Administrator of FEA to require selected plants to use coal as their primary source of energy. We support the objectives of this provision, but believe it should be amended to conform with the Administration's generally similar proposal. Specifically, the authority to require conversion should not be limited to those plants that have all necessary equipment available on date of enactment. This is unduly restrictive.

Title II of the bill would make certain desirable changes in the Clean Air Act. While we support what Title II seeks to accomplish, we believe that it does not go far enough and should be amended to conform to the Administration's recently proposed amendments to the Clean Air Act, or that Title II should be deleted from the bill entirely and immediate consideration given to enacting a separate bill along the lines which have now been proposed by the Administration. The latter course is preferable since the scope of Title II is not adequate to deal with the problems stemming from the Clean Air Act that must be addressed.

Section 122 is another one of the provisions of the Standby Energy Authorities Bill which we feel has merit. That section would authorize the Administrator of FEA to request, acquire, and collect—on a mandatory basis—energy information needed to assist him in the formulation of energy policy. As you know, the Administration has submitted to Congress a separate Energy Information Disclosure Bill designed to satisfy our long term and continuing need to be able to acquire and disseminate accurate energy information. We still

believe that the approach outlined in that bill is appropriate for our long-term data needs. However, since Section 122 is sufficiently similar to the Information Disclosure bill in most major respects—including the type of information to be gathered, the methods to be used and the sources to be tapped in acquiring information, and the proper protection and dissemination of energy information once it has been collected—we believe that Section 122 is acceptable in the context of the present legislation.

We turn now to those aspects of the bill that we consider seriously objectionable. At the outset, we note that the bill would vest authority for imposing mandatory conservation measures, for requiring certain plants to burn coal, for evaluating and adjusting domestic fuel supplies, as well as other provisions of the bill, in the Administrator of the FEA rather than in the President. Even the authority to develop and administer a rationing program which would be vested in the President pursuant to Section 103, would be taken from him and given to the Administrator once a Federal Energy Administration has been established. We are strongly opposed to this approach. Vesting such emergency authority in the Administrator of a single agency rather than in the President would serve not only to undercut the responsibility given the President by the Emergency Petroleum Allocation Act, the Economic Stabilization Act of 1970 and the Defense Production Act of 1950, but would also severely restrict the President's ability to deal with energy related problems in a flexible, deliberate, comprehensive, and effective manner. In addition Section 302 of the bill, which requires the President to submit to Congress a comprehensive report on the implementation of the Act and the Emergency Petroleum Allocation Act, is inconsistent with the other sections of the bill which require the Administrator rather than the President to submit numerous other reports. We strongly urge that the bill be amended so that all authority to deal wih energy related problems is vested directly in the President.

Section 114 of the bill would provide additional unemployment assistance to workers whose unemployment is the direct result of energy shortages. We believe it is desirable to provide temporary federally financed programs of special unemployment compensation during the energy shortage. However, we strongly oppose the approach taken by section 114 and by its predecessor, the vetoed Energy Emergency Act, which conditions a claimant's eligibility on a finding that his unemployment was actually caused by the energy shortage. The almost impossible administrative judgments which this approach would entail would inevitably lead to serious inequities in administration and disproportionately high administrative expenses. In short, the system would be both unfair and administratively unworkable.

The Administration has proposed an alternative approach which we believe will produce far more desirable results, in the form of Title II of the Job Security Assistance Act of 1974 (S. 3257). The Administration bill would provide for designation of areas of high unemployment and areas where unemployment has increased significantly. Extra benefits would be available to *all* eligible unemployed workers in these areas, regardless of whether their unemployment was directly attributable to energy shortages. This approach would at the same time provide greater direct aid to areas most affected by energy shortages, and be fair and administratively workable.

Section 109 of the proposed bill would forbid petroleum refiners and distributors from cancelling, refusing to renew, or otherwise terminating franchise agreements with retailers unless such retailers have failed to comply with an "essential and reasonable" requirement of their franchise and then only upon 90 days notice. Any retailer who has had his or her franchise terminated would be authorized to bring suit in a federal district court for damages or injunctive relief.

We sympathize with the position occupied by small retailers in their dealings with large refiners or distributors and would support the 90 day notice of termination requirement. We believe, however, that the nontermination provision itself goes overboard in trying to protect the interests of retailers and at considerable expense to the consumer. By freezing all franchise agreements indefinitely, section 109 would significantly reduce competition at the local retail level. Prospective applicants for franchises, willing to sell at lower prices or to provide better or more services, would be frozen out of the neighborhood market. In addition, there would be little incentive for those service stations already holding franchises to improve their level of services or to lower their prices. No outsider could challenge their position. Over the long run, we believe the consumer would suffer significantly were the status quo "locked in" as would be the case under section 109.

We are also concerned that a very large burden would be placed on federal courts if retailers were permitted to sue refiners or distributors in federal court. If section 109 in its present form is enacted, every contractural dispute between a local service station and its distributor could end up in the federal court. In addition courts would be saddled with the difficult task of determining in each instance whether an "essential and reasonable" term in the franchise has been breached by the service station.

This concludes our statement.

CHAPTER 5

S. 3287, Administration's Proposal

NOTE

The Administration's letter transmitting to Congress the Clean Air Act Amendments of 1974 can be found on page 30 of House Report No. 93–1013 to accompany H.R. 14368. (See p. 272.)

93D CONGRESS
2D SESSION

S. 3287

IN THE SENATE OF THE UNITED STATES

APRIL 2, 1974

Mr. BAKER (for himself and Mr. BUCKLEY) (by request) introduced the following bill; which was read twice and referred to the Committee on Public Works

A BILL

To amend the Clean Air Act as amended, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Clean Air Amendments of 1974".

EXTENSION OF ACT

SEC. 2. Section 104 of the Clean Air Act is amended by striking "and $150,000,000 for the fiscal year ending June 30, 1974" and inserting in lieu thereof ", $150,000,000 for the fiscal year ending June 30, 1974, $150,000,000 for the fiscal year ending June 30, 1975, and $150,000,000 for the fiscal year ending June 30, 1976".

Section 212 of such Act is amended by striking "three succeeding fiscal years." and inserting in lieu thereof "five succeeding fiscal years.".

Section 316 of such Act is amended by striking "and $300,000,000 for the fiscal year ending June 30, 1974" and inserting in lieu thereof ", $300,000,000 for the fiscal year ending June 30, 1974, $300,000,000 for the fiscal year ending June 30, 1975, and $300,000,000 for the fiscal year ending June 30, 1976".

EXTENSIONS FOR TRANSPORTATION CONTROL PLANS

SEC. 3. Section 110 of the Clean Air Act is amended by adding subsection (g) as follows:

"(g) (1) Upon application by the Governor of a State on or after June 1, 1976, the Administrator may extend for not more than five years the deadline for attainment of national primary ambient air quality standards where transportation control measures are necessary for the attainment of such standards, and where the implementation of such control measures would have serious adverse social or economic effects.

"(2) The Administrator may consider extension applications for only those air quality control regions in which the State has—

"(A) implemented or will have begun implementing by June 1, 1977, the requirements of the applicable

plan with respect to stationary source emissions of transportation-related pollutants and all reasonably available measures of the applicable transportation control plan;

"(B) completed a detailed planning study that evidences public and local governmental involvement and includes examination of alternative measures and combinations of measures which could be used to attain and maintain the standards after June 1, 1977, a description of projects to be undertaken together with timetables and resource requirements, and identification and analysis of social, economic, and environmental effects including public health effects of such measures and projects.

"(3) Each extension application shall be accompanied by adequate documentation of compliance with the requirements of paragraph (2) above, and shall include an implementation plan for the extension period requested. The plan shall—

"(A) identify the remaining emission reductions necessary for attainment of the national primary ambient air quality standards and the reasonably available measures to be implemented to accomplish these reductions;

"(B) provide for the implementation of all reasonably available control measures as expeditiously as practicable;

"(C) identify the financial and manpower resources to be committed to carrying out the plan;

"(D) demonstrate (i) attainment of the national primary ambient air quality standards as expeditiously as practicable but no later than May 31, 1982, or (ii) that such attainment is not possible within the extension period despite implementation of all reasonable available and achievable control measures.

"(4) (A) Within one hundred and twenty days following the submission of an application and all supporting materials, and after providing an opportunity for public comment, the Administrator shall grant an extension, if he determines that the requirements of this subsection have been met.

"(B) If the Administrator determines that the requirements of this subsection have not been met, including findings relating to the impacts of the transportation control measures upon the social, economic, and environmental welfare of the air quality control region, he shall notify the Governor of deficiencies in the application, including his judgment as to acceptable dates for implementing measures included in the plan and as to the appropriate duration of an extension. The notification shall also specify a date for the submission of a revised application.

"(5) Where the Administrator grants an extension based on an application meeting the requirements of sub-

paragraph (g) (3) (D) (ii), the Governor of the State may, on or after June 1, 1981, apply for a further extension in accordance with and subject to the requirements of this subsection. No extension under this paragraph may extend beyond May 31, 1987.

"(6) Where the Administrator denies an extension application or where the Governor of a State in which the national primary ambient air quality standards are not being met does not submit an application under this subsection, the Administrator may, after consultation with appropriate State and local elected officials, propose and promulgate an implementation plan (or portion thereof) meeting the requirements of this subsection.

"(7) No transportation control measures which would have serious adverse social or economic effects shall be considered 'reasonably available'.".

NEW SOURCE AND HAZARDOUS EMISSION EQUIPMENT STANDARDS

SEC. 4. Section 111(a)(1) of the Clean Air Act is amended to read as follows: "The term 'standard of performance' means a standard for emissions of air pollutants which reflects the degree of emission limitation achievable through the application of the best system of emission reduction which (taking into consideration the cost of achieving such emission limitation, and any nonair quality

environmental impact and energy requirements) the Administrator determines has been adequately demonstrated. If the Administrator determines that technological or economic limitations on the application of measurement methodology to a particular class of sources would make the imposition of an emission standard infeasible, he may instead prescribe a design or equipment standard meeting the requirements of this paragraph. Such standard shall to the degree possible set forth the emission reductions achievable by implementation of such design or equipment, and shall provide for compliance by means which achieve equivalent results.".

Section 111(b)(5) is added as follows:

"(b)(5) The Administrator shall, upon petition by the owner or operator of any source subject to a design or equipment standard under this section, restate such standard as an emission standard requiring the equivalent control if he determines that the requirements of the second sentence of paragraph (a)(1) are no longer satisfied with respect to that class of sources. The owner or operator of any source which commenced construction while the design or equipment standard was applicable may elect to comply with this section by means of such design or equipment or by meeting such emission standard."

Section 111(d) of such Act is amended by deleting the

term "emission standards" where it appears and inserting in lieu thereof the phrase "emission, design, or equipment standards.".

Section 112 (a) (2) of such Act is amended by deleting the term "an emission" and inserting in lieu thereof the word "a".

Section 112 (b) (1) (A) of such Act is amended by deleting the term "an emission" and inserting in lieu thereof the word "a".

Section 112 (b) (1) (B) of such Act is amended by inserting in the first sentence after the phrase "for such pollutant" the phrase "or standards regarding the composition of materials which emit such pollutant" and by deleting in the second sentence the term "an emission" and inserting in lieu thereof the word "a".

Section 112 (b) (1) (B) of such Act is further amended by adding a fourth sentence as follows: "If the Administrator determines that technological or economic limitations on the application of measurement methodology to a particular class of sources would make the imposition of an emission standard infeasible, he may instead prescribe a design or equipment standard meeting the requirements of this paragraph. Such standard shall to the degree possible set forth the emission reductions achievable by implementation of such

design or equipment, and shall provide for compliance by means which achieve equivalent results.".

Section 112 (b) (3) is added as follows:

"(b) (3) The Administrator shall, upon petition by the owner or operator of any source subject to a design or equipment standard under this section, restate such standard as an emission standard requiring the equivalent control if he determines that the requirements of the fourth sentence of paragraph (b) (1) (B) are no longer satisfied with respect to that class of sources. The owner or operator of any source which commenced construction while the design or equipment standard was applicable may elect to comply with this section by means of such design or equipment or by meeting such emission standard."

Section 112 (c) (1) (A) of such Act is amended by deleting the phrase "cause emissions in violation of" and inserting in lieu thereof the word "violate".

Section 112 (c) (1) (B) of such Act is amended by deleting the phrase "no air pollutant to which such standard applies may be emitted from any stationary source" and inserting in lieu thereof the phrase "no stationary source to which such standard applies shall operate".

Section 112 (d) (1) of such Act is amended by deleting the word "emission".

Section 112 (d) (2) of such Act is amended by deleting the word "emission".

Section 114 (a) of such Act is amended by deleting the word "emission".

WAIVERS FOR TECHNOLOGY INNOVATIONS

SEC. 5. Section 111 of the Clean Air Act is amended by adding subsection (f) as follows:

"(f) (1) The owner or operator of a new source may request the Administrator for authorization to attempt to meet applicable performance standards under this section by means of a system or systems of emission reduction which have not been determined by the Administrator to be adequately demonstrated. After consulting with appropriate State and local officials, the Administrator may grant such authorization if he determines, based upon an evaluation of designs, specifications, plans, emission calculations, and other relevant factors that—

"(A) there is substantial likelihood that the proposed system or systems will enable the source to comply with the applicable standard, and

"(B) the proposed system has substantial potential for achieving significantly greater emission reduction than that required by the applicable standard, or achieving the required reduction at significantly lower cost, in

terms of economic or environmental impact, than the systems which have been determined by the Administrator to be adequately demonstrated.

"(2) An authorization under this subsection shall extend to a date determined by the Administrator, after consultation with the source owner or operator, taking into consideration design, installation and capital costs of the systems being evaluated.

"(3) The granting of an authorization under this section shall preempt Federal, State, and local regulation of air pollutant emissions of the source, with respect to the affected facility and air pollutants covered by the authorization, except that the Administrator shall impose such requirements as necessary for the attainment or maintenance of a national primary ambient air quality standard. Any such preemption shall not extend beyond any period specified under paragraph (2)."

ASSESSMENT OF CIVIL PENALTIES

SEC. 6. Section 113(b) of the Clean Air Act is amended as follows:

"(b) The Administrator may request the Attorney General to commence a civil action for a permanent or temporary injunction or to assess and recover a civil penalty of not more than $25,000 per day of violation, or both, whenever any person—

"(1) violates or fails or refuses to comply with an order issued under subsection (a); or

"(2) violates any requirement of an applicable implementation plan during any period of federally assumed enforcement or more than thirty days after having been notified by the Administrator under subsection (a)(1) of a finding that such person is violating such requirement; or

"(3) violates section 111(e) or 112(c); or

"(4) fails or refuses to comply with any requirement of section 114.

Any action under this subsection may be brought in the district court of the United States for the district in which the defendant is located or resides or is doing business, and such court shall have jurisdiction to restrain such violation, require such compliance, and assess such penalty. Notice of the commencement of such action shall be given to the appropriate State air pollution control agency."

ENFORCEMENT ORDERS EXTENDING PAST ATTAINMENT DATES

SEC. 7. Section 113(a)(4) of the Clean Air Act is amended by deleting the third sentence and inserting the following in lieu thereof: "Any order issued under this subsection shall state with reasonable specificity the nature of the violation, specify a time for compliance (which may

be subsequent to the date for attainment of a national ambient air quality standard under section 110) which the Administrator determines is as expeditious as practicable, taking into account the seriousness of the violation and the status of efforts to comply with applicable requirements. Any order specifying a compliance date later than such national standard attainment date shall require the source to employ any interim measures of control which the Administrator determines are reasonably available. In cases where the Administrator determines that the need for a compliance date beyond such national standard attainment date results in whole or in part from the lack of good-faith efforts to comply with the applicable requirements, he shall initiate action to impose civil and/or criminal penalties.".

Section 113 of such Act is amended by adding subsection (d) as follows:

"(d) An enforcement order or variance submitted by a State which specifies a date for compliance later than the date for attainment of national ambient air quality standards under section 110 may be approved by the Administrator if the Administrator determines that (1) such compliance date is as expeditious as practicable, and (2) the order or variance requires the source to employ interim measures of control which are reasonably available.".

Section 113(b)(1) of such Act is amended to read as follows:

"(1) violates or fails or refuses to comply with any order issued under subsection (a) or any order or variance approved under subsection (d); or".

Section 113(c)(1)(B) of such Act is amended to read as follows:

"(B) violates or fails or refuses to comply with any order issued by the Administrator under subsection (a) or any order or variance approved by the Administrator under subsection (d), or".

Section 304(b)(1) of such Act is amended by adding a new subparagraph (C) as follows:

"(C) Where the Administrator has issued an order pursuant to section 113(a) or approved an order or other action pursuant to section 113(d).".

TEMPORARY SUSPENSIONS OF STATIONARY SOURCE EMISSION AND FUEL LIMITATIONS

SEC. 8. The Clean Air Act is amended by adding section 119 as follows:

"SEC. 119. (a)(1) The Administrator may, for any period beginning on or after the date of enactment of this section and ending on or before November 1, 1974, temporarily suspend any stationary source fuel or emission

limitation as it applies to any person, if the Administrator finds that such person will be unable to comply with such limitation during such period solely because of unavailability of types or amounts of fuels. Any suspension under this paragraph and any interim requirement on which such suspension is conditioned under paragraph (2) below shall be exempted from any procedural requirements set forth in this Act or in any other provision of local, State, or Federal law. The granting or denial of such suspension and the imposition of an interim requirement shall be subject to judicial review only on the grounds specified in paragraphs (2) (B) and (2) (C) of section 706 of title 5, United States Code, and shall not be subject to any proceeding under section 304 (a) (2) of this Act.

"(2) Any suspension under paragraph (1) above shall be conditioned upon compliance with such interim requirements as the Administrator determines are reasonable and practicable. Such interim requirements shall not be construed to preclude use of alternative or intermittent control measures which the Administrator determines are reliable and enforceable. Such interim requirements shall include, but need not be limited to, (A) a requirement that the source receiving the suspension comply with such reporting requirements as the Administrator determines may be necessary; (B) such measures as the Administrator de-

termines are necessary to avoid an imminent and substantial endangerment to health of persons; and (C) requirements that the suspension shall be inapplicable during any period during which fuels which would enable compliance with the suspended stationary source fuel or emission limitations are in fact reasonably available to that person (as determined by the Administrator): *Provided*, That such fuel shall not be required to be used if the Administrator determines that the cost of changes necessary to use such fuel during such period is unreasonable.

"(b) (1) After public notice and public hearing, the Administrator may, for any period beginning after November 1, 1974, and ending not later than January 1, 1980, temporarily suspend any stationary source fuel or emission limitation as it applies to any fuel burning stationary source if the Administrator finds—

"(A) that such source is prohibited from using petroleum products or natural gas as fuel by reason of an order issued under section 120 of this Act,

"(B) that such suspension (in conjunction with interim requirements under paragraph (4) below) will not, after the applicable implementation plan deadline, result in or contribute to a level of air pollutants which is greater than that specified in a national primary ambient air quality standard, and

"(C) that such source has been placed on a schedule which provides for the use of methods which the Administrator determines will assure continuing compliance with the stationary source fuel or emission limitation as soon as practicable (but no later than January 1, 1980).

"(2) (A) Any schedule under subparagraph (b) (1) (C) shall include increments of progress toward compliance with such limitation by such date including but not limited to a date by which a contractual obligation shall be entered into for an emission control system which has been determined by the Administrator to be adequately demonstrated. In the case of a person wishing to construct and install such system himself, the Administrator may approve detailed plans and specifications and increments of progress for construction and installation of such a system. Before the earliest date on which a source is required to take any action under the preceding sentences (but not later than May 15, 1977) any source may elect to have the preceding sentences not apply to it; but if such election is made, no suspension under this section may apply to such source after May 15, 1977.

"(B) For purposes of subparagraph (b) (1) (B) and of paragraph (b) (4), the term 'applicable implementation plan deadline' means the date on which (as of the date of enactment of this Act) a national primary ambient air qual-

ity standard is required by an applicable implementation plan to be attained in an air quality control region.

"(3) Any person may obtain judicial review of a grant or denial of a suspension grant under this paragraph and of any interim requirement on which such suspension is conditioned under subsection (b) (4) by filing a petition with the United States district court for any judicial district in which is located any stationary source to which the action of the Administrator applies. The second sentence of clause (ii), and clauses (iii) and (iv) of section 206 (b) (2) (B) of this Act shall apply to judicial review under this paragraph. No proceeding under section 304 (a) (2) may be commenced with respect to any action under this paragraph.

"(4) Any suspension under paragraph (1) above shall be conditioned upon compliance with such interim requirements as the Administrator determines are reasonable and practicable. Such interim requirements shall not be construed to preclude use of alternative or intermittent control measures which the Administrator determines are reliable and enforceable. Such interim requirements shall include, but need not be limited to, (A) a requirement that the source receiving the suspension comply with such reporting requirements as the Administrator determines may be necessary; (B) such measures as the Administrator

determines are necessary (i) to minimize emissions which materially contribute to a significant risk to the health of persons prior to the applicable implementation plan deadline, or (ii) to assure maintenance of the national primary ambient air quality standards during any portion of any such suspension which may extend beyond such deadline; and (C) requirements that the suspension shall be inapplicable during any period during which fuels which would enable compliance with the suspended stationary source fuel or emission limitations are in fact reasonably available to that source (as determined by the Administrator): *Provided*, That such fuel shall not be required to be used if the Administrator determines that the cost of changes necessary to use such fuel during such period is unreasonable.

"(c) No State or political subdivision may require any person to whom a suspension has been granted under subsection (a) or (b) to use any fuel the unavailability of which is the basis of such person's suspension (except that this preemption shall not apply to requirements identical to Federal interim requirements under subsection (a) or (b) or a compliance schedule under subparagraph (b) (1) (C) (including any requirement under subparagraph (b) (2) (A)).

"(d) (1) It shall be unlawful for any person to whom a suspension has been granted under subsection (a) or (b)

to violate any requirement on which the suspension is conditioned.

"(2) It shall be unlawful for any person to fail to comply with a schedule of compliance under subparagraph (b) (1) (C) (including any requirement under subparagraph (b) (2) (A)).

"(e) For purposes of this section:

"(1) The term 'stationary source fuel or emission limitation' means any emission limitation, schedule, or timetable for compliance, or other requirement, which is prescribed under this Act (other than section 303, 111 (b), or 112) or contained in an applicable implementation plan and which is designed to limit stationary source emissions resulting from combustion of fuels, including a prohibition on or specification of the use of any fuel of any type or grade or pollution characteristic.

"(2) The term 'stationary source' has the same meaning as such term has under section 111 (a) (3).

"(f) Nothing in this section shall affect the power of the Administrator to deal with air pollution presenting an imminent and substantial endangerment to the health of persons under section 303 of this Act.

COAL CONVERSION AND ALLOCATION

SEC. 9. The Clean Air Act is amended by adding section 120 as follows:

"(a) The President may, to the extent practicable and consistent with the objectives of this Act and any legislation relating to the production, conservation, distribution, or allocation of energy or energy resources by order, after balancing on a plant-by-plant basis the environmental effects of use of coal against the need to fulfill the purposes of such legislation relating to energy or energy resources, prohibit, as its primary energy source, the burning of natural gas or petroleum products by any major fuel-burning installation (including any existing electric powerplant) which, on the date of enactment of this section, has the capability and reasonably available necessary plant equipment to burn coal. Any installation to which such an order applies shall be permitted to use coal or coal byproducts to the extent consistent with the provisions of section 119 of this Act, and, if such installation converts to the use of coal as fuel, it shall not until January 1, 1980, be prohibited by reason of the application of any air pollution requirement from burning coal which is available to such installation to the extent consistent with the provisions of section 119 of this Act. To the extent coal supplies are limited to less than the aggregate amount of coal supplies which may be necessary to satisfy the requirements of those installations which can be expected to use coal (including installations to which orders may apply under this subsection), the President shall prohibit the use of natural

gas and petroleum products for those installations where the use of coal will have the least adverse environmental impact in comparison with other uses of coal. A prohibition on use of natural gas and petroleum products under this subsection shall be contingent upon the availability of coal, coal transportation facilities, and the maintenance of reliability of service in a given service area. The President may require that fossil fuel-fired electric powerplants in the early planning process, other than combustion gas turbine and combined cycle units, be designed and constructed so as to be capable of using coal as a primary energy source instead of or in addition to other fossil fuels. No fossil fuel-fired electric powerplant may be required under this section to be designed and constructed, if (1) to do so would result in an impairment of reliability or adequacy of service, or (2) if an adequate and reliable supply of coal is not available and is not expected to be available. In considering whether to impose a design and construction requirement under this subsection, the President shall consider the existence and effects of any contractual commitment for the construction of such facilities and the capability of the owner or operator to recover any capital investment made as a result of the conversion requirements of this section.

"(b) The President may by rule prescribe a system

for allocation of coal to users thereof in order to attain the objectives specified in this section."

REVIEW OF STATE IMPLEMENTATION PLANS

SEC. 10. The Clean Air Act is amended by adding section 121 as follows:

"(a) The Administrator shall promptly review all State implementation plans and revisions thereof and shall determine whether in the aggregate (1) available domestic supplies of fossil fuels, or (2) supplies of control systems, are adequate to enable applicable emission requirements, standards, or limitations to be met within the date set for attainment of a national ambient air quality standard under this Act.

"(b) If the Administrator determines pursuant to subsection (a) that such supplies are not adequate, he shall, in accordance with the procedural requirements of section 113(a)(4), extend or suspend deadlines for meeting State or local emission requirements or limitations, as he determines may be appropriate, on a source-by-source basis for any specific category or categories of sources. Any such extension shall be conditioned upon such interim requirements as the Administrator determines are necessary (1) to minimize emissions which materially contribute to a significant risk to the health of persons prior to the applicable implementation plan deadline, and (2) to assure

maintenance of the national primary ambient air quality standards during any portion of such extension which may extend past such deadline. Such interim requirements shall not be construed to preclude use of alternative or intermittent control measures which the Administrator determines are reliable and enforceable.

"(c) In determining which sources or classes of sources will be granted an extension, the Administrator shall consider (1) the ambient air quality of the region affected by the emissions of the individual source, (2) the availability of domestic low sulfur fossil fuel to the individual source, and (3) the effectiveness of individual extensions in reducing inadequacies determined to exist under subsection (2) of this section.

"(d) The extensions given under this section shall be designed to achieve national primary ambient air quality standards and, taken in the aggregate, to eliminate the deficit in domestic fossil fuels and compensate for shortages of control systems determined to exist under the provisions of subsection (a) of this section.

"(e) The term 'applicable implementation plan deadline' has the same meaning as such term has under section 119(b)(2)(B)."

APPLICABILITY OF THE NATIONAL ENVIRONMENTAL POLICY ACT

SEC. 11. The Clean Air Act is amended by adding section 122 as follows: "No action taken under section 120 of this Act shall, for a period of one year after initiation of such action, be deemed a major Federal action significantly affecting the quality of the human environment within the meaning of the National Environmental Policy Act of 1969 (83 Stat. 856). However, before any such action that has a significant impact on the environment is taken, if practicable, or in any event within sixty days after such action is taken, an environmental evaluation with analysis equivalent to that required under section 102(2)(C) of the National Environmental Policy Act, to the greatest extent practicable within this time constraint, shall be prepared and circulated to appropriate Federal, State, and local government agencies and to the public for a thirty-day comment period after which a public hearing shall be held upon request to review outstanding environmental issues. Such an evaluation shall not be required where the action in question has been preceded by compliance with the National Environmental Policy Act. Any such action which will be in effect for more than a one-year period or any action to extend an action taken under section 120 to a total period of more than one year shall be subject to the full provisions of the National Environmental

Policy Act notwithstanding any other provisions of this Act."

AUTOMOBILE EMISSION STANDARDS

SEC. 12. Section 202 of the Clean Air Act is amended as follows:

Subsections (b) (1) (A) and (b) (1) (B) are amended to read as follows:

"(b) (1) (A) The regulations under subsection (a) applicable to emissions of carbon monoxide, hydrocarbons, and oxides of nitrogen from light duty vehicles in model years 1975, 1976, and 1977 shall be the standards established in the Administrator's decision of April 11, 1973, under authority of this section and section 209. This shall include a nitrogen oxides emission standard of 3.1 grams per mile.

"(B) The regulations under subsection (a) applicable to emissions of carbon monoxide and hydrocarbons from light duty vehicles and engines manufactured during or after model year 1978 shall contain standards which require a reduction of at least 90 per centum from emissions of carbon monoxide and hydrocarbons allowable under the standards under this section applicable to light duty vehicles and engines manufactured in model year 1970.".

Subsection (b) (1) of section 202 is further amended by adding the following subparagraph (C):

"(C) The regulations under subsection (a) applicable to emissions of oxides of nitrogen from light duty vehicles and engines manufactured during or after model year 1978 shall be set at such level as the Administrator may determine appropriate after taking into account air quality, energy efficiency, availability of technology, cost, and other pertinent considerations. The Administrator shall publish for public comment no later than January 1, 1976, proposed standards and his tentative conclusions with respect to the matters he is required to consider under this subparagraph and shall publish final standards and his findings regarding such matters no later than November 30, 1976.".

Subsection (b) (5) is repealed.

INTRODUCTION AND STATEMENT ON S. 3287

By Mr. Baker (for himself and Mr. Buckley) (by request):

S. 3287. A bill to amend the Clean Air Act as amended and for other purposes. Referred to the Committee on Public Works.

Mr. Baker. Mr. President, I introduce the proposed Clean Air Act Amendments of 1974, which have been transmitted to the Congress by the Environmental Protection Agency on behalf of the administration. Without attempting to prejudge the course of action on these or other pending amendments to the Clean Air Act, I believe that they represent a reasonable effort by EPA to reconcile the conflicts which may arise between the very stringent requirements in the Clean Air Amendments of 1970 and a number of other economic and social factors. More significantly, the presentation of these proposed amendments by EPA indicates the successful reconciliation of a number of conflicting interests within the administration.

I shall not try to characterize these amendments. One of the amendments, for example, would give EPA authority to impose civil penalties of up to $25,000 per day for violation of any air quality requirements. Another would grant authority for a temporary suspension of emission limitation and for coal conversion, with appropriate safeguards. This would parallel our efforts in title II of the vetoed energy emergency bill to use domestic fuels that are plentiful, while avoiding or minimizing air pollution. Still others, like the authority in this bill for EPA to set design or equipment standards, and to provide a waiver of new source standards to encourage adoption of experimental control technology, may provide a more flexible and workable method for achieving clean air requirements.

One indication of the constructive and open dialog within the administration and with some of us in the Congress is shown by the fact that EPA has forwarded, without endorsement, two proposals other agencies wish to have considered. These relate to the possible use of intermittent control systems, and to the requirement for no significant deterioration of our Nation's air resources. While these two amendments are not contained within the package of amendments I am introducing today, I am confident that other Members may wish to consider them. I know they will be among items considered in the course of hearings by the Environmental Pollution Subcommittee of the Public Works Committee.

A central issue which must be addressed in the near furture is whether we will deal first with those amendments that relate to our energy needs, and then confront the longer-term issues, or consider all of the needed changes in one package later in the session.

The following is a list of the principal changes which would be accomplished by the amendments which EPA has submitted:

1. TEMPORARY SUSPENSIONS AND COAL CONVERSION

[Sec. 119 CAA and Sec. 2 ESECA]

EPA would have authority to grant temporary suspension of emission limits up to November 1974 and to order plants which are capable of burning coal to switch from oil or gas to coal and to continue to burn coal until 1980, with appropriate environmental safeguards.

2. REVIEW OF STATE IMPLEMENTATION PLANS

[Sec. 110(a)(3) CAA]

EPA would review State plans to see whether enough domestic fuel and control systems are available to meet emission limits by the present 1975 and 1977 statutory deadlines, and, if not, could issue enforcement orders to extend deadlines that are more stringent than would be needed to meet primary air quality standards. Interim safeguards would be used to protect primary standards during the extensions.

3. EXTENSION OF TRANSPORTATION CONTROL PLAN

[Sec. 3]

Areas that could not meet ambient standards for auto-related pollutants by the 1975–77 deadlines with reasonably available measures, would be able to win extensions of up to 5 years and, in extreme cases, an additional 5 years in order to achieve the national ambient standard.

4. NEW SOURCE AND HAZARDOUS EMISSION STANDARDS

[Sec. 4]

EPA would obtain explicit new authority to establish design or equipment standards where emission or performance standards do not prove to be feasible. This would clarify matters by setting simple uniform standards for all sources in a class.

5. WAIVER FOR EXPERIMENTAL CONTROL TECHNOLOGY

[Sec. 5]

EPA would have authority to waive compliance with new source performance standards where necessary to encourage sources to install control technology that requires additional research and demonstration.

6. CIVIL PENALTIES

[Sec. 110(C) CAA]

EPA could impose civil penalties of up to $25,000 per day for violations of air quality control requirements. This provides a sanction

when violations do not warrant criminal proceedings or when criminal prosecution would involve too many resources.

7. ENFORCEMENT ORDERS BEYOND STATUTORY DEADLINES

[Sec. 119 CAA]

EPA would acquire express authority to extend compliance schedules beyond the 1975–77 statutory dates, when a source agrees to install control equipment and to operate under interim control measures.

8. NATIONAL ENVIRONMENTAL POLICY ACT PROVISIONS

[Sec. 7(C) ESECA]

This would require the Federal Energy Office to file environmental impact statements on coal conversions or coal allocations which will extend for more than 1 year but exempt such filing for actions of less than a year's duration.

9. AUTO EMISSION STANDARDS

[Sec. 202(b) CAA]

This would extend the Federal model year 1975 interim emission standards through 1976 and 1977 model years, and permit EPA to set nitrogen oxide levels for subsequent years based on various specified criteria.

I am certain that the Environmental Pollution Subcommittee, under the able leadership of its chairman, (Mr. Muskie) and ranking minority member, (Mr. Buckley) will give careful and thorough consideration to these proposals, as they have to other environmental matters.

U.S. ENVIRONMENTAL
PROTECTION AGENCY,
Washington, D.C. March 22, 1974.

HON. GERALD R. FORD,
President of the Senate,
Washington, D.C.

DEAR MR. PRESIDENT: I am pleased to forward to you a proposed bill, "The Clean Air Act Amendments of 1974", which is designed to improve the Federal-State program to achieve clean air.

Air pollution directly affects all of our citizens because of the adverse effects on their health and welfare and because of the increased costs they pay for goods and services. The Clean Air Act Amendments of 1970 have established a strong and effective program to protect the American public from the adverse health effects as well as other effects of air pollution. Under the 1970 law EPA has established air quality standards to protect health and welfare. The States have adopted and are implementing detailed programs to ensure compliance with the standards. The automobile industry has made significant progress in reducing motor vehicle emissions. States and localities are developing transportation control strategies that will not only help achieve higher air quality, but also reduce congestion and provide a more balanced transportation system. These are only illustrative of the major progress that the law has stimulated.

Now, with more than three years of experience, we are in a position to suggest some specific areas in which the law needs to be strengthened or made more workable. The amendments which we are suggesting are intended to improve upon the basic thrust of the Act and and to take into account new realities, particularly the energy problems which the Nation faces. They are also intended to deal realistically, but with continued firm commitment, with specific problems of inability to achieve the statutory deadlines for the ambient air quality standards in severe problem areas such as Los Angeles.

The cornerstone of the Clean Air Act is the establishment of Air Quality Standards designed to protect the Nation's health and welfare and development by the States of implementation plans to insure attainment of those standards by designated statutory deadlines.

We are suggesting three changes dealing with the statutory deadlines for air quality standards; first, to provide greater flexibility in dealing with transportation controls for those areas heavily impacted by motor vehicle pollution; second, to provide for EPA review of State implementation plans in order to encourage the use of clean fuels in geographic areas of most need; and third, when necessary, to temporarily extend compliance dates for certain stationary source fuel limitations.

To date, transportation controls have been proposed for 38 metropolitan areas. Many of these communities can achieve the national photochemical oxidant and carbon monoxide ambient air quality standards by mid-1977 through the application of new motor vehicle emission standards, stringent stationary source standards and in some cases, additional control efforts, such as institution of inspection and maintenance programs and greater use of mass transit and car pools. A number of communities, however, are so heavily impacted by motor vehicle-related pollutants that severe gasoline rationing would be necessary to achieve air quality standards within the statutory deadline, even after all other control measures were instituted.

We are proposing that for those communities where attainment of standards by 1977 would cause serious economic and social disruption, EPA be authorized to allow up to five additional years for compliance with the air quality standards. EPA would grant this extra time only if all reasonable control measures under existing plans have been or will be instituted. EPA would be authorized to provide a further five-year extension in those cases where it would not be possible to achieve compliance within the first five years. Providing additional time in appropriate cases will enable communities to attain the flexibility they need to develop the long-term transportation system solutions necessary to help meet air quality standards.

In developing implementation plans for sulfur oxides control, many States did not assess the aggregate impact of their regulatory requirements on available fuel supplies nationwide. Our projections indicate that there will be a shortage of low-sulfur content fuels as well as stack gas scrubbing technology, to meet the deadline in the Clean Air Act as required in State implementation plans.

In addition, we are proposing authority to permit EPA to issue enforcement orders beyond the statutory deadlines in the Act. In cases where the extension must be given to sources that have failed to make good faith efforts, EPA would be required to seek criminal or civil sanctions.

We are proposing a review of State implementaton plans to identify State emission regulations that require the use of lower sulfur fuel than is needed to meet the primary air quality standards. Based on this review, EPA could issue enforcement orders through the amendment discussed above, to the extent necessary to eliminate the anticipated clean fuels deficit. This would complement EPA's current voluntary program of encouraging revisions of State implementation plans to ensure that limited clean fuel supplies are available where needed to meet health-related primary standards. Neither the current program nor the proposed amendment woud infringe on the important principle that States have the prerogative to adopt and enforce more stringent controls if they choose to do so. Such revised schedules would ensure that the primary air quality standards would not be violated and that attainment of State and local standards will be achieved as soon as possible.

Enactment of this proposal would have the benefit of making scarce low-sulfur fuels and control hardware available first in urban areas where they are most needed, allowing for the allocation of low sulfur fuels and new technology in the most logical time sequence to meet our air quality objectives.

The Nation's energy supply problems have been exacerbated by greatly increasing demand which has resulted in dependence on foreign sources of crude oil. To reverse such dependence, it will be necessary for some oil burning power plants to convert to coal.

We are proposing both a short and long-term solution to deal with this problem. These proposals are similar to provisions contained in the recently vetoed Energy Emergency Act. One provision, virtually identical to that in the Energy Emergency Act, would provide authority for the President—through the Federal Energy Office—to mandate coal conversion. Accompanying this provision would be a limited exemption to the National Environmental Policy Act for such actions, which was also covered by the Energy Emergency Act. The exemptions would be for only one year and would require environmental analyses. The thrust of NEPA is protected since any long-term conversion would have to meet all the requirements of NEPA.

In cases where the Federal Energy Office has mandated coal conversion, the Administrator of EPA would have authority to temporarily suspend any emission standard or limitation in violation of primary air quality standards. Once the applicable deadline under the Clean Air Act is reached—either 1975 or 1977—the source would be required to achieve primary standards until June 20, 1980. At that time, the source would have to move beyond primary standards to the extent needed to achieve emission limitations in the original State implementation plan. The interim requirement to achieve primary standards is a departure from the provision in the Energy Emergency Act, which apparently would have allowed limited violations of the primary standard during the period between the implementation plan deadline and the final deadline for this authority.

Although EPA can establish Federal emission standards for new sources and also for sources emitting hazardous pollutants, there are occasions where emission limitations are not the most practical method of control. For example, emission standards are not appropriate in cases where emissions from a source are difficult to measure, such as hydrocarbon emissions from gasoline storage tanks, or in cases where application of a particular product may cause the problem, such as spraying asbestos. EPA is requesting authority to set design or equipment standards for new sources and hazardous pollutants whenever the limitations of measurement technology make emission limitations impracticable. Hence, the use of this new authority would be the exception.

Because the entire risk of innovative technology is borne by the owner of a source, there is a tendency in new source performance standards to freeze current technology. In order to encourage development of new technology by the private sector, we are proposing in certain exceptional cases to waive Federal, State, and local emission requirements where a source would use a new control technology which we believe will either offer significantly greater control of emissions or the same level of emissions as the new source performance standards at substantially reduced cost. Demonstration projects of this type would only be allowed where maintenance of the health-related air quality standards would not be jeopardized.

Currently, EPA is constrained to the use of criminal penalties to enforce stationary source standards and limitations. We are proposing to expand our enforcement authorities to include civil penalties—up to $25,000 for each day of violation. Because a very vigorous enforcement program will likely be required to achieve the objectives of the Clean Air Act, it is important that we have flexibility in the application of sanctions. In many cases, the greater flexibility of civil penalties will be a much more effective mechanism to encourage compliance than criminal penalties; in other cases, criminal penalties will be more appropriate.

In his January 23, 1974, message to the Congress on measures to deal with the energy crisis, the President made his recommendations for extending auto emission standards. He stated this proposal would "permit auto manufacturers to concentrate greater attention on improving fuel economy while retaining a fixed target for lower emissions. These changes can be made without significant effect on our progress in improving air quality." The attached language would extend HC and CO standards at the 1975 interim level for 1976 and 1977 NO_2 standards at 3.1 grams per mile for the same two years.

The final item of our proposed legislation would extend the authorizing authorities of the Clean Air Act for two additional years. Last year, the Congress extended the Act's authorizations to June 30, 1974, at the Fiscal Year 1973 levels of $475 million. We are proposing extending the Act for the next two fiscal years at

the $475 million level. This amount should be sufficient to carry forward the Nation's air pollution control program.

These above amendments have been discussed intensively throughout the Executive Branch and I support their enactment. There are, however, two proposals set forth in Attachments B and C which I do not support. Nonetheless, other Executive Branch agencies believe they are needed and I am therefore forwarding them for consideration by the Congress. These proposals concern "intermittent control systems" and "significant deterioration."

In support of the proposal permitting indefinite use of intermittent or alternative control systems, other agencies state that: (1) such systems will allow some utilities and industrial sources to meet ambient air quality standards at a cost significantly lower than the cost of continuous emission control systems and with a smaller energy penalty; (2) such systems involve less solid waste than some of the scrubber technologies; and (3) that use of such systems could encourage the coal industry to make greater investments in new mines. This proposal would permit the use of alternative or intermittent control measures indefinitely as long as they would meet national ambient air quality standards.

EPA's concern with intermittent control systems as a permanent control strategy rests heavily on information becoming increasingly available as to the effects on public health of the sulfates that are formed in the ambient air as a product of the sulfur oxide gaseous emissions. EPA studies indicate that measurable adverse health effects are present at ambient sulfate levels of 8–10 micrograms per cubic meter. These levels are exceeded in large parts of the country, particularly in the Midwest and Northeast. The permitting of uncontrolled emissions of sulfur dioxide except during periods of adverse meteorological conditions would be expected to contribute in a major way in ambient air sulfate loadings. In my opinion, therefore, amending the Act to encourage indefinite or intermittent control systems would be highly inappropriate, and could be more costly in the long run should new requirements to deal with sulfates force expensive retrofits.

Recent court interpretation of the Clean Air Act requires the Administrator of EPA to establish standards to prevent "significant deterioration" of air already cleaner than required by national ambient air quality standards designed to protect public health and welfare. In support of this proposal other agencies state that the effect of this interpretation is to extend the Federal regulatory authority beyond standards set to protect the public health and welfare and to establish a new criterion, namely the quality in a given area at the time the Act was passed. They feel that this extension of the Federal regulatory authority will limit the range of choice of State and local governments in economic development and land use matters to a degree deemed unnecessary and unwarranted. This proposal would remove the authority of the Federal government to promulgate standards more stringent than those set to protect public health or welfare, but would not remove the authority of State and local governments to establish and maintain air quality standards cleaner than required by the Federal government should they choose to do so.

As a result of extensive written comments, public hearings and interagency discussions, EPA believes that meaningful steps can be taken to protect areas with already high air quality through classification by the States of geographic areas into one of three general classes:

(1) Air quality area better than secondary standards in which only restricted growth would take place;

(2) Air quality area better than secondary standard but in which moderate growth would be permitted.

(3) Air quality level to be determined by secondary standards.

The final classification of areas into these categories would take place after public hearings. No hard emission or air quality increments would be promulgated by EPA as limiting factors. Since the EPA regulation would not provide for firm maximum increments of pollution, it is expected that court challenges as to the adequacy of the EPA promulgation would take place.

Because of the potential for further litigation, the importance of this issue to our environmental and energy problems and the potential impact of EPA's regulations on State and local land use responsibilities, EPA believes that Congress should explore all alternatives for dealing with the significant deterioration issue in testimony and debate.

In closing, I would like to reiterate that significant progress has been made under the Clean Air Act. We look forward to early hearings and full Congressional debate on these proposals.

Sincerely yours,

RUSSELL E. TRAIN,
Administrator.

ATTACHMENT B. LEGISLATIVE LANGUAGE THAT WOULD IMPLEMENT THE VIEWS OF OTHER AGENCIES ON THE ISSUE OF SIGNIFICANT DETERIORATION

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SIGNIFICANT DETERIORATION

Section 101(b)(1) of the Clean Air Act is amended to read as follows:

"(1) to protect and enhance the quality of the Nation's air resources by establishing, achieving, and maintaining national ambient air quality standards, standards of performance of new stationary sources, and national emission standards for hazardous air pollutants so as to promote the public health and welfare and the productive capacity of the Nation, but nothing in this Act is intended to require or authorize the establishment by the Administrator of standards more stringent than primary and secondary ambient air quality standards;".

ATTACHMENT C. LEGISLATIVE LANGUAGE THAT WOULD IMPLEMENT THE VIEWS OF OTHER AGENCIES ON THE ISSUE OF INTERMITTENT CONTROLS

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

INTERMITTENT OR ALTERNATIVE CONTROL MEASURES

Section 110 of the Clean Air Act is amended by adding **subsection (h)** which reads as follows:

"(h) Nothing in this section shall be construed to preclude use of alternative or intermittent control measures which the Administrator determines are reliable and enforceable and which he determines will permit attainment and maintenance of the national ambient air quality standards."

SENATOR MUSKIE'S STATEMENT ON S. 3287

Clean Air Act Amendments Proposed by Administration

Mr. Muskie. Mr. President, on Friday of last week, Environmental Protection Agency Administrator Russell Train transmitted to the Congress a series of proposed amendments to the Clean Air Act. At the time of transmittal, I indicated that my reaction was negative to those proposals which expanded the scope of pending energy emergency legislation. I also indicated I would carefully consider the other proposals out of respect for Administrator Train and the battle he had waged within the executive on behalf of clean air.

Subsequent to transmittal of these proposals, questions have been raised regarding their future. I understand that some officials in major metropolitan areas with serious air quality problems are considering relaxing present pollution control efforts on the sole basis that these amendments have been proposed. Also, I understand there is a great deal of general public concern as to the potential environmental impact for what appears to be wholesale retreat on clean air efforts.

Because Administrator Train has not yet sent to the Congress any more than the brief statement of purpose included in his transmittal letter, I have not been able to determine the specific purpose of each of the administration's proposed amendments.

There are several, however, which are sufficiently clear to be discussed at this point. These amendments, which appear to be the products of the Federal Energy Office rather than the Environmental Protection Agency, need to be placed in the perspective of the legislative process to assist those who are in doubt as to the future of the clean air program.

It is important to know that the Subcommittee on Environmental Pollution, which has legislative responsibility for consideration of these amendments, has scheduled no hearings on them nor will specific legislative hearings be scheduled in the near future.

For the past 2 years the subcommittee has been evaluating the implications of the 1970 Clean Air Act. The first result of that evaluation was S. 2772, the auto emission standards extension legislation which passed the Senate last December.

In addition, on November 15 we began our detailed evaluation of the transportation-control requirements of the law. The subcommittee has a schedule which calls for hearings in April and May to review and evaluate other issues raised by the Clean Air Act. Following conclusion of those oversight hearings, we will determine the need for and the timing of any legislation.

As to the amendments themselves, it can be said generally that they depart from the spirit of the 1970 Clean Air Act in that they substitute doubt for certainty and delay for deadlines. For example, the proposed

flexibility to establish new timetables for transportation-control plans, eliminates, for all practical purposes, the usefulness and value of deadlines. By proposing two potential 5-year extensions from the 1977 deadlines for clean, healthful air and by proposing that only control measures which do not result in unreasonable social and economic change can be taken, there appears to be little possibility that major metropolitan areas with difficult problems would ever have clean air.

The need to keep tight timetables was recognized by the mayor of the Nation's most seriously polluted city when he recently called for no more than a 2-year delay in the deadlines for implementation of transportation-control plans in his area.

Mr. President, inasmuch as there is no record to justify the 10-year extension proposed by the administration's bill, I would caution State and local air pollution control officials not to assume that the administration proposal is in any way a fait accompli.

Mr. President, while I have questions regarding other aspects of the Environmental Protection Agency proposal for general Clean Air Act amendments, I will withhold them until a later date when I have had an opportunity to evaluate their implications in more detail.

I would like to comment specifically on aspects of the administration's transmittal which I consider to be a gross breach of faith and which I understand were initiated in the Federal Energy Office. The provisions which relate specifically to energy emergency authority, coal conversions and auto emission extensions represent significant departures from our prior agreements. And, there is no reason whatsoever for inclusion of these proposals in this legislation at this time.

In the first place, representatives of the House and the Senate and the administration have been negotiating on a redraft of legislation to provide the administration with the necessary authority to deal with present and near term energy shortages. All parties agreed, albeit some reluctantly, that the clean air aspects of that legislation would be identical to title II of the energy emergency legislation which the President vetoed earlier this year.

Now in the midst of those negotiations the administration has chosen to transmit a series of amendments to the Clean Air Act which change radically the thrust and impact of the energy emergency—clean air provisions. And I know of no reason why the administration should choose to transmit these amendments to those provisions at this time unless it is their intent to violate the agreement previously reached and attempt to change in major ways the provision of **title II** of that bill when it reaches the floor of the House or the Senate.

I would like to discuss the administration's proposed changes in those provisions in order that my colleagues can see the extent to which this administration intends to use the Nation's deep distress with energy shortages to gut the clean air effort. The redrafted clean air features of the energy emergency bill would do the following:

First, Companies choosing to convert to coal would have until January 1, 1980, rather than January 1, 1979, to meet applicable emission control requirements. **[Sec. 9.]**

Second, All requirements to agree to achieve "continuous" emission reductions at the end of the suspension period have been dropped and socalled intermittent control strategies—the rhythm method of pollution control—have been substituted. **[Sec. 8.]**

Third. Any source ordered to convert would have until May 15, 1977, [Sec. 8], rather than November 1, 1974, to make a decision whether or not to convert back to oil, thus reducing the lead-time for the installation of control technology and increasing the doubt within the coal industry as to the certainty of their markets.

Fourth. The authority of the Administrator to require interim use of reasonably available clean fuels during any variance period has been modified to give the cost of use of such fuels priority over air quality requirements. [Sec. 8.]

Fifth. All procedural protections relating to hearings and notification of affected State and local officials have been deleted—apparently more evidence of the administration's commitment to the concept of "new federalism." [Sec. 8.]

Sixth. The new administration bill would require suspension of Clean Air Act emission control deadline—and thus air quality protective of public health—solely on the basis of the unavailability of "domestic" supplies of fossil fuels. Even as the administration is announcing success in lifting the Arab oil embargo, they would propose to make short-term environmental policy wholly dependent on the availability of domestic fossil fuel supplies. [Sec. 8.]

Seventh. Coal conversions could be ordered for virtually every fossil fuel-fired electric powerplant in the country rather than the very limited few anticipated by the Energy Emergency Act. Under the Energy Emergency Act only a minimal number of facilities with existing coal use capability could have been mandated to switch to coal. Thus only a few facilities could take advantage of Clean Air Act deadline extensions. By definition the Administrator's authority was limited to those facilities which have the "capability and the necessary plant equipment" to burn coal. Under the new proposal the Administrator has to find if the necessary plant equipment to burn coal is "reasonably available" to the facility which is ordered to convert. [Sec. 9.] This provision would expand the scope of the act far beyond anything anticipated. Not only would the potential havoc to the environment be enormous but the public could be ripped off for millions of dollars from crisis conversions for coal supplies or pollution control equipment.

Eighth. In addition to those aspects of the proposal which relate to coal conversion and energy shortages, the administration has also transmitted a series of amendments to the auto emission standards requirements of the 1970 act. These proposals were considered and rejected by the Congress last winter. They include a provision to extend for 3 rather than 2 years the 1975 interim standards for hydrocarbons and carbon monoxide. The amendment also includes a provision to abandon entirely the efforts to reduce oxides of nitrogen emission from new cars. [Sec. 12.]

The administration bill proposes that the statutory standards and deadlines for cleanup of oxides of nitrogen be eliminated and that the Administrator set a standard based on technology, cost and energy efficiency and air quality—the same basis for determining emission control levels which existed prior to 1970 and which resulted in an increase rather than a decrease in the emission of oxides of nitrogen from automobiles. [Sec. 12.]

Mr. President, I think America needs to have the capability to utilize domestic fossil fuels. I think our utilities should have the capability to burn our coal as well as oil. And I think over the next 5 to 10 years we ought to require that major electric generating plants have the capability to burn both. But this policy need not require the sacrifice of clean air. In fact, our policy can and should require the installation of air pollution controls on all facilities which have such dual capability to insure against any reduction in air quality as a result of fuel switches. It is preposterous to suggest that the decisions of the electric utilities to utilize solely foreign oil for price and pollution control reasons in the 1960's should now be a justification for abandonment of clean air efforts. Their responsibility is to provide both electricity and clean air. This can be done with an orderly policy of coal conversion and emission control installation. And this is the kind of policy which apparently this administration is not prepared to consider.

Mr. President, as I have said before, there are matters included in this package which merit the consideration of the Congress and they will be considered at the appropriate time. In the interim, I would only caution those affected by these amendments not to assume their enactment on the basis of their transmittal or their introduction.

CHAPTER 6

The Veto: Message and Debate, S. 2589

THE ENERGY EMERGENCY ACT—VETO MESSAGE

Energy Emergency Act—Veto Message From the President (S. Doc. No. 93–61)

The Acting President pro tempore (Mr. Nunn). The Chair lays before the Senate a veto message from the President of the United States on S. 2589, the Energy Emergency Act, which will be spread upon the Journal and will be considered by the Senate at 3 p.m. today pursuant to the previous unanimous-consent agreement.

The text of the President's message is as follows:

To the Senate of the United States:

It is with a deep sense of disappointment that I return the Energy Emergency Act to the Congress without my approval.

For almost four months the Congress has considered urgently needed legislation to deal with the Nation's energy problem. After all the hearings and speeches, all the investigations, accusations and recriminations, the Congress has succeeded only in producing legislation which solves none of the problems, threatens to undo the progress we have already made, and creates a host of new problems.

I share the sense of frustration and discouragement which must be felt by the many conscientious legislators who spent so many laborious hours trying to draft a responsible bill, only to see their efforts wasted.

ROLLING BACK GAS SUPPLIES [Sec. 110]

The Energy Emergency Act would set domestic crude oil prices at such low levels that the oil industry would be unable to sustain its present production of petroleum products, including gasoline. It would result in reduced energy supplies, longer lines at the gas pump, minimal, if any, reduction in gasoline prices, and worst of all serious damage to jobs in America. Unemployment would go up, and incomes would go down.

Certainly everyone shares the goal of increasing energy supplies, and our present policies are directed toward this end.

We now have a system for controlling crude oil prices at a level consistent with maintaining and increasing production. To do this, we are permitting higher prices for "new" crude oil in order to encourage greater domestic production.

Our experience in administering the crude oil allocation program passed by the Congress last fall has shown how difficult it can be if enough flexibility is not provided by statute. It is our hope that we can work with the Congress in the coming weeks to develop a more flexible allocation program.

The net effect of the price provision of the Energy Emergency Act would be to cut the supply of gasoline and other oil products, and make compulsory rationing of gasoline much more likely. I am sure the vast majority of Americans want to avoid an expensive gasoline rationing program which would do nothing to increase the supply, would cost $1.5 billion a year to manage, would require a bureaucracy of as many as 17,000 people, and would create problems of fairness and enforcement.

The rolback would not only cut domestic oil production, but would also retard imports since in the present environment oil companies are reluctant to import oil and gasoline that would have to be sold at prices far above the domestic prices.

Further, the effects of the price rollback would not be confined to the immediate situation. The longer-run consequences could be even more serious. If we are to achieve energy independence, hundreds of billions of private dollars will have to be invested in the development of energy from U.S. sources. This money will not be invested if investors do not have reasonable assurance of be-

ing able to earn a return in the marketplace. To make the price of oil a political football, as this act does, would be a serious setback for Project Independence.

As we call upon industry to provide these supplies, I feel very strongly that we must also insure that oil companies do not benefit excessively from the energy problem. I continue to believe that the most effective remedy for unreasonably high profits is the windfall profits tax which I have proposed. That tax would eliminate unjust profits for the oil companies, but instead of reducing supplies, it would encourage expanded research, exploration and production of new energy resources. The Congress is holding hearings on this proposal, and I hope it will move —rapidly toward passage. I urge the Congress to enact this windfall profits tax as quickly as possible.

OBJECTIONABLE PROGRAM FOR UNEMPLOYMENT [Sec. 116]

Beyond the rollback provision, the Energy Emergency Act is also objectionable because it would establish an unworkable and inequitable program of unemployment payments. Under it, the Government would be saddled with the impossible task of determining whether the unemployment of each of the Nation's jobless workers is "energy related." In addition, eligibility for these benefits would not take into account the availability of jobs in the area. There is no excuse for shoveling out the taxpayer's money under a standard so vague and in a fashion so arbitrary.

The correct answer to the problem of those who become temporarily unemployed for any reason, energy or otherwise, is to strengthen our regular unemployment insurance program, extend it to workers not now covered, and provide additional benefits to those who lose jobs in areas where high unemployment rates show that other jobs will be hard to find. I asked the Congress to strengthen and extend the unemployment insurance system last year. I recently expanded this request to provide additional benefits in areas of high unemployment.

I urge the Congress to enact this latest, expanded proposal.

LOW INTEREST LOANS [Sec. 130]

In addition, this legislation contains authority for the Department of Housing and Urban Development and the Small Business Administration to make low interest loans to homeowners and small businesses to finance insulation, storm windows and heating units. If every eligible homeowner and small businessman took advantage of this section, the result could be an outlay for federally-guaranteed, low interest loans of many billions of dollars. The actual energy savings produced by these vast expenditures would not justify such an enormous loan program.

FACING UP TO OUR NEEDS

The energy shortage has been a pressing problem for the American people for several months now. We have made every effort to soften the impact of this problem. We have come through this winter without serious hardship due to heating oil shortages. We have tried to distribute gasoline shortages equally. Many are concerned about rising costs of such energy supplies as propane, and we have taken action to reduce these prices while continuing to increase supplies. Above all, we have tried to insure that basic industries would not be severely affected and that unemployment due to the energy shortage would be kept to a minimum. We have been largely successful in these endeavors. But we must be able to approach this situation in a systematic fashion that aims not at symptoms, but at solutions to the problem itself.

The time has passed for political debate and posturing that raise false hopes. It's time for all of us to face up to this problem with a greater sense of realism and responsibility.

Unfortunately, there are some who have chosen to capitalize on the Nation's energy problems in an effort to obtain purely political benefits. Regrettably, the few who are so motivated have managed to produce the delays, confusion, and finally the tangled and ineffective result which is before me today. The amendments, counter-amendments, and parliamentary puzzles which have marked the stumbling route of this bill through the Congress must well make Americans wonder what has been going on in Washington while they confront their own very real problems. We must now join together to show the country what good government means.

We need the authority to require energy conservation measures. We need the direct authority to ration gasoline if, and only if, rationing becomes necessary, which it has not. We need the authority to require conversion of power plants, where possible, to permit the use of our abundant coal reserves. We need a well-conceived Federal Energy Administration capable of managing national energy programs and not the woefully inadequate Federal Energy Emergency Administration mandated in S. 2589.

We must, above all else, act to increase our supplies of energy. To meet this important goal, I have submitted to the Congress a comprehensive package of legislative initiatives which I have repeatedly urged the Congress to pass. I have offered every possible kind of cooperation with the Congress in shaping this vital legislation.

In addition to my requests for a windfall profits tax and unemployment insurance plan, the Congress has many other Administration proposals before it, including:

—Mandatory reporting of energy information, a proposal which requires energy companies to report on inventories, production, cost, and reserves with information to be made public in most cases.

—The Natural Gas Supply Act to allow competitive pricing of new gas supplies and encourage exploration.

—A resolution permitting limited production if oil from Naval Petroleum Reserve #1 (Elk Hills) and providing funds for further exploration and development of Reserve #1 and exploration of Reserve #4 (Alaska).

—The Mined Area Protection Act, establishing standards that would permit mining of coal to go forward while minimizing environmental impact.

—The Deepwater Port Facilities Act, authorizing the Secretary of the Interior to grant permits for the construction and operation of ports beyond the three-mile limit.

—The Minerals Leasing Act, placing all mineral exploration and mining activities on Federal lands under a modernized leasing system.

—A drilling investment tax credit to provide an incentive for exploratory drilling for new oil and gas fields.

—Creation of a Federal Energy Administration to deal with the current energy problem and to carry out major new activities, in energy resource development, energy information and energy conservation.

—Creation of an Energy Research and Development Administration to provide a central agency for Federal energy research and development programs.

—Creation of a Department of Energy and Natural Resources to provide a new Cabinet department for the comprehensive management of energy and natural resource programs.

Further key measures will be proposed to the Congress in the very near future, including a set of amendments to your environmental legislation that would provide the flexibility necessary to acquire and use our fuel resources most efficiently in times of shortage. I will continue to propose legislative initiatives in order to respond to the changing needs and priorities generated by the energy problem.

In enacting this Energy Emergency Act after long months of waiting by the American people, the Congress has sadly failed in its responsibility. I believe the Nation expects better. It deserves better.

In returning this bill, I pledge once again the full cooperation of my Administration in the effort to provide energy legislation which is responsive to the problems we face and responsible in its impact on the economy and on the American people.

RICHARD NIXON.

THE WHITE HOUSE, *March 6, 1974.*

SENATE DEBATE ON OVERRIDING THE PRESIDENT'S VETO OF S. 2589, MARCH 6, 1974

Energy Emergency Act—Veto

The Senate continued with the reconsideration of the bill (S. 2589), the Energy Emergency Act.

Mr. Jackson. Mr. President, I wonder if the time could be equally divided.

The Presiding Officer. Is there objection?

Mr. Fannin. I have no objection.

The Presiding Officer. Without objection, the time will be equally divided.

Mr. Jackson. Mr. President, I will proceed now with an opening statement and then yield to my colleague, if that is all right.

The Presiding Officer. The Senator may proceed.

Mr. Jackson. Mr. President, the President's veto of the Energy Emergency Act is a flagrant show of contempt for the impact of fuel shortages and soaring fuel prices on the American people.

The President's veto message contains nothing new.

He defends and advocates higher oil prices. **[Sec. 110.]**

He opposes unemployment compensation for the thousands of Americans who have lost their jobs. **[Sec. 116.]**

He opposes low-interest loans to homeowners and to small businesses. **[Sec. 130.]**

He ignores the fact that the energy emergency bill contains every reasonable authority to deal with the shortage that the administration has requested, and much essential authority which was not requested.

Over a period of 4 months, the Congress has worked diligently to provide the executive branch with adequate authority to manage energy shortages and control soaring fuel prices.

Congress has acted on its own initiative from the outset. While the executive branch agreed in principle with the need for such action, it has never submitted specific legislation and provided little, if any, serious assistance to the Congress in developing an effective Energy Emergency Act.

Earlier this year, the Energy Emergency Act passed both the House and Senate by overwhelming majorities. As it was sent to the President, the act gave him essential authority to promulgate energy conservation plans, institute rationing if necessary, convert powerplants to coal and thereby conserve petroleum supplies, and provide additional unemployment assistance benefits to those unemployed because of the energy shortage.

But what the administration could not stand, above all, in the Emergency Act, was the congressional determination that crude oil and petroleum prices be held at reasonable levels. **[Sec. 110.]**

The President asserts that the price rollback in the Energy Emergency Act would "result in reduced energy supplies," that "the industry would be unable to sustain its present production."

That assertion is preposterous. In February 1973, the domestic oil industry was producing 9.4 million barrels of crude oil per day at an average price of $3.40. In February 1974, it produced 9.2 million barrels a day at an average price of $6.95. So it is obvious that production was 200,000 barrels a day less than a year ago.

Mr. President, crude oil prices have doubled, and crude oil production has not increased one whit. It is down.

Let us look at the largest exempt category of crude oil. In February 1973, production from stripper wells in the United States was 1.17 million barrels per day, at an average price of $3.40. In February 1974, stripper well production was 1.15 million barrels, at an average price of $10.35. Prices have nearly tripled, and production is no higher than it was 1 year ago.

Mr. President, the price rollback provision of the Energy Emergency Act is very moderate. Many Members feel that even $5.25 per barrel is not justified—either by increased costs or by the need for incentives. But the Congress has been exceedingly cautious in this legislation, lest there be any chance that a price rollback might reduce future production. We have provided a general price ceiling 54 percent higher than the average price of 1 year ago, and have permitted the administration to increase this ceiling for reasonable categories of production—like stripper wells—to an average of $7.09—more than twice the price of 1 year ago.

Mr. President, the failure to override this veto will cost the American consumer—and I think of all those propane users in particular—$20 million per day, $600 million per month, and $7.3 billion this year. These excess prices are not an incentive to increase exploration and development, which are today at the highest levels we can reasonably expect, given the acreage under lease, the supply of drilling rigs, materials, and skilled personnel. These excess prices are pure windfalls; they are both a stimulus to cost inflation and a drag on the economy. With inflation raging at record rates and the Nation on the brink of a recession, this veto is the height of economic irresponsibility.

Mr. President, I reserve the remainder of my time.

Mr. FANNIN. Mr. President, we have reached the final round on the Energy Emergency Act after struggling with this bill for more than 4 months.

Many of us have spoken at length on the infirmities of this legislation, particularly the price rollback provision. **[Sec. 110.]** It is regrettable that the chairman of the Interior Committee insisted that this section remain in the bill.

Basic economics dictates that the supply of energy is significantly elastic to price. Higher prices stimulate greater production efforts, and consequently increased supply. FPC regulation of natural gas prices—which resulted in artificially inflated demand and depressed the supply of natural gas—is a good example of what can be expected from Government control of petroleum prices. In light of current shortages, how can Senators responsibly support a measure which will almost certainly inhibit development of energy supply?

By the same token, how can Senators support a measure which undoubtedly will resut in higher prices to the consumer over the long run? Let me assure you that every barrel of domestic oil that the industry cannot afford to produce at $5.25 or even $7.09 or $9 or $10 a barrel will be imported—and we are all too familiar with the stratospheric prices of foreign oil today. Consumers will end up paying more, not less, for fuel. Our balance of payments will deteriorate rapidly.

If we reject this bill and let our domestic oil industry work, it will be in the interest of the consumer and our international economic position. It will mean more jobs and more tax revenue.

To avoid short-term windfalls, it would be wise to adopt proposals of the type recently proposed by the administration. This should include a provision for crediting against the tax the reinvestment of additional revenues in domestic energy producing projects. A measure such as that would not only avoid excess profits, but also encourage development of increased supplies.

On the other hand, rolling back prices as provided for in the Energy Emergency Act will lead to longer lines at the gasoline pumps. Consumer prices will rise as the higher cost of importing petroleum to replace the domestic production lost due to reduced prices is passed through to the consumer. It is the independent producer, rather than the major oil companies, who will suffer because marginal wells are the ones most vulnerable to the effects of lower prices. Our economy will experience an unnecessary drain of billions of dollars annually for foreign oil. How can Senators responsibly support a measure which will produce such potentially disastrous results?

Mr. President, when we took that rollback proposal up at the beginning of this session there were hearings which were called hastily and which were held in an atmosphere of near hysteria. When this bill came to the floor, the Senate did not have the facts necessary to deal with this provision. During debate on the bill, the distinguished chairman of the Senate Committee on Interior and Insular Affairs made a great number of claims as to what the rollback provision **[Sec. 110]** would do. It is my belief that the chairman's arguments were not and are not based on facts. I think he was receiving information that was not factual. I would like to go over some of the points of the previous debate, recalling what Senator Jackson said.

Senator Jackson said:

> The unregulated and artificially high price of domestic crude oil is counterproductive. It is retarding exploration for a development of new oil discoveries. Instead of encouraging the development of new wildcat acreage, the present price structure does the opposite. It encourages the drilling of new wells on old reservoirs that are already in production.

That is absolutely wrong.

The facts are that higher prices are stimulating production. New oil is either production from wells drilled since 1972, or incremental production—over and above—the level of product in the comparable month of 1972—the base year. If a new well were drilled next to an old well, production from the old well would decline and offset the credit for the new production, unless the total amount produced from the lease increased over the level of 1972. Only the cumulative increase counts as "new" oil, and that is the whole idea—to increase total U.S.

crude oil production. To qualify as a totally "new" well, it must be in another lease, not just next to an old well.

Senator Jackson said that "Respected oil analysts . . . say that these (current) price levels will not buy increased supply."

The facts are that, due to existing prices, the U.S. petroleum industry plans to invest over $191/2 billion in 1974— $19,531,000,000—of which $12,134,000,000 is for exploration and production of petroleum. Funds budgeted for drilling and exploration—$7,669,000,000—represent a 16-percent increase over 1973. These investments would not be made unless the industry expected to be able to increase supply. A price rollback would result in investment cutbacks and thereby decreases in production.

Senator Jackson said that "Doubling of prices has failed to elicit any new supply."

The facts are that Senator Jackson went on to admit that a small increase—34,000 barrels per day—had taken place. What he failed to admit is that for several years the trend of crude oil production has been downward. What these higher prices have done is to stem that downtrend and turn the corner toward increased production.

That is what we are talking about. That is what we want.

In addition, the $1 extra incentive was only granted in December 1973, and has had little time to have an impact yet. There is some timelag between increased recovery efforts and the oil reaching markets. It is also true that congressional threats of a price rollback have served to scare off investors and make expensive well workovers more risky. The investment climate is very uncertain, and few operators or drillers are willing to gamble that oil which is economically producible at $8 per barrel, might end up in the "red" because of a price cut.

Senator Jackson said:

> These artificial cartel price levels serve no economic purpose. They are, in fact, counter-productive. They reduce longer term supply. They compel cynical and foolish distortions in the allocation of capital, machinery, and labor.

The facts are that Senator Jackson in his own hearings in January admitted that he could find no evidence of collusion or price fixing. There are over 6,000 independent crude oil producers in 39 States. The 16 largest U.S. producers accounted only for two-thirds of 1972 production, considerably less concentrated than autos, or steel, for example. As for allocations of capital, material, and labor, it is these things which are needed to increase domestic production. If producers get higher prices, they can bid labor, materials, and capital away from other sectors of the economy, to ease the shortages on these things which Senator Jackson charged earlier were the cause of the shortage. In fact it is just this "economic purpose" which higher prices serve.

I am not talking about the higher prices of the end product at the service stations. In fact, we are talking about lower prices there.

Senator Jackson said:

> This administration is still committed to the nineteenth century notion that the way to deal with the energy shortage is to limit demand by raising consumer prices.

The facts are that this country's economic strength is based upon a recognition that the profit motive is what makes the marketplace work.

Higher crude prices stimulate greater production as well as tend to curb demand. Lower prices or rationing will not stimulate supply, and will encourage waste of energy. In addition, gasoline is only a portion of the cost of operating an automobile. For example, a car which gets 15 miles per gallon, and uses gasoline which costs 50 cents a gallon, has a cost per mile of gasoline of 3.33 cents per mile. Many studies done by the Department of Transportation suggest that the total cost of operating a car are in the range of 10 cents per mile to 15 cents per mile, including gasoline. Thus a 1-cent-per-gallon change in price of gasoline has almost no effect on the total cost per mile of operating a motor vehicle.

Senator Jackson said:

> The real constraint on supply today is not price. The constraints today are shortages: manpower, tubular goods, drilling rigs, et cetera.

The facts are that higher selling prices for crude enable oil producers to "bid" steel, manpower, and other materials away from other sectors of the economy. This price mechanism is the most efficient allocator of resources of any kind.

On February 26, 1974 the Cost of Living Council removed oil field machinery from price controls, which should permit higher prices for such equipment. The result is that manufacturers of such equipment can now make a profit on the manufacture of that equipment, which should help ease the material shortages Senator Jackson alluded to.

On the need to tighten price loopholes, Senator Jackson said:

> Loopholes enable the unscrupulous to take advantage to double the value of their "old" oil—their presently producing fields—by simply drilling and pumping the oil through new wells.

The facts are that this is not true. "New" production must be from a new or different lease, not only from a new well, unless the total production from the lease is greater than the rate of production in 1972, month for month. Only the excess of current production over the base period is "new" oil, from any given lease. Furthermore, excess or incremental production credits not used in any given lease may not be credited to another lease. The incentive to produce new crude is not a loophole. Before any benefit can be derived, new oil must in fact be produced.

Senator Jackson said: "Pursuit of this loophole enriches owners of producing fields. It does not produce more oil."

The facts are that if no more oil is produced than during the base year, it is still price-controlled at a ceiling of $1.35 above the posted price on May 15, 1973, so no "enrichment" can occur. The production of additional oil proves the allegation to be false.

Senator Jackson said that the administration has exempted—"Three major categories of crude from price controls."

The facts are that at least 70 percent of domestic crude is still under price controls. Stripper wells account for about 12 percent of domestic crude and were exempted by an act of Congress. New and released crude account for about 7 percent each, so that the total for that which is not under price controls is about 26 percent.

Concerning the cost to consumers, Senator Jakson said that—

> An increase of 34,000 barrels per day . . . is what the American consumer is getting in the way of new supply at a cost of $20 million a day.

The facts are that about 30 percent of total production is free of price controls. If it all were selling at $10.35 per barrel, which it is not, and were rolled back to $5.25 per barrel, or cut $5.10, the so-called saving would be $16.6 million. This might reduce pump prices by 1 cent per gallon, but would have considerable negative impact on future supply expectations. The American consumer already spends over $140 million every day on gasoline alone, of which State and Federal taxes amount to over $33 million per day.

Regarding stripper well production, Senator Randolph said:

In the State of West Virginia, when we talk about the maximum for stripper production it would come to approximately $8 a barrel rather than $7.09 that is frequently referred to (by Senator Jackson) . . . There is flexibility in this provision, section 110, to deal with the special situation regarding stripper wells and secondary and tertiary recovery.

Senator Jackson said: "The Senator (Mr. Randolph) is correct."

The facts are that the price of stripper well crude under S. 2589 would be limited to $5.25 per barrel unless raised to $7.09, except for Pennsylvania grade crude such as is produced in West Virginia. Thus, the "flexibility" referred to by Senator Randolph and agreed to by Senator Jackson is limited to Pennsylvania grade crude production. In November of 1973 Pennsylvania grade production was only 36,200 barrels a day, as contrasted to the total of 9,144,000 barrels a day produced within the United States. The crude to which the "flexibility" in price was referred to by Senator Randolph applies to only .04 percent of total national production. Thus, for all practical purposes the price ceiling on U.S. crude production established by S. 2589 would be $5.25 per barrel with a possible upward adjustment to $7.09—not $8 per barrel as otherwise alleged.

Concerning propane, Senator Jackson said:

I had the words "including propane" added to the provision so as to remove any question about having it covered. Specifically, we estimate a rollback of about 50 percent in the price of propane if this conference report is adopted. Where the average national price is now 42 cents, it would go back to about 22 cents.

The facts are that Secretary William Simon stated that:

Section 110 of the Conference Report . . . which calls for a rollback of crude prices to $5.25 per barrel with a ceiling of $7.09 per barrel would have little impact if any in further reducing the price of propane. We feel the action we have already taken should be sufficient to protect American consumers who are dependent upon propane.

The House has now acted on propane prices, but I did want the Senate to realize that only about one-third or less of the total amount of propane comes from crude oil.

What Senator Jackson failed to state is that 68 percent of the propane produced in the United States comes from natural gas wells, all of which are not covered by S. 2589. The act accordingly applies to only 32 percent of U.S. propane supplies. Most of this 32 percent is used as refinery fuel and therefore never reaches the consumer. Thus, if crude prices were set at $7.09 per barrel the decrease in propane prices would be only a fraction of a cent, not 20 cents.

Mr. President, I cannot believe that if the Senate knew and understood all the facts last February 19 this body would have voted for the rollback in the first place. Now we have a chance to undo this damaging legislation.

The price rollback [Sec. 110] is not the only provision of this bill which would exacerbate the fuel shortage rather than relieve it. Mr. Simon—who would administer this legislation should it be enacted—has termed "unworkable" both the employment assistance provision and the section creating a Federal Energy Administration. The provision for low-interest loans to small businesses and homeowners has been predicted to cost the Government up to $75 billion while yielding proportionally small energy savings.

As Mr. Simon pointed out before the Senate approved the conference report on February 19th, this legislation contains very few needed authorities. It imposes costly requirements that hinder rather than help Government efforts to deal effectively with the energy shortages. Every important provision is addressed in separate and more reasonable legislation already in the congressional process.

Mr. Simon has made it clear that in order to deal successfully with the shortages we face today, he must have greater flexibility than is provided in this legislation. The provisions of this bill—particularly the price rollback—are dangerous enough to necessitate a Presidential veto. Senators voting to override that veto will help to guarantee for their constituents and for all other Americans, continued shortages, higher prices, and unemployment. I urge my colleagues to consider carefully the long range implications of their vote on this legislation.

Mr. President, there are other problems in the bill that I will not cover this time. I reserve the remainder of my time.

Mr. Haskell. Mr. President, I thank the distinguished Senator from Washington for yielding to me.

Mr. President, on November 8, 1973, the President of the United States addressed the Nation on the effect of the energy crisis. At that time he announced that he would request the Congress to act to give him the necessary emergency authority so that the effects of the crisis could be softened wherever possible.

Due to the foresightedness of the chairman of the Interior Committee (Mr. Jackson), legislation which would give the President the authority he requested had been introduced 3 weeks before—October 18, 1973.

The Congress has been struggling with the energy emergency situation for some 4 months now trying to work out an equitable solution which would meet the needs of the country in these difficult times.

As my colleagues know, we finally worked out a compromise which was satisfactory to more than two-thirds of the Members of Congress and sent it to the President for his approval.

He has now sent that bill back to us saying—

> The Congress has succeeded only in producing legislation which solves none of the problems, threatens to undo the progress we have already made, and creates a host of new problems.

He went on further to accuse—

> Unfortunately, there are some who have chosen to capitalize on the Nation's energy problems in an effort to obtain purely political benefits. Regrettably, the few who are so motivated have managed to produce the delays, confusion, and finally the tangled and ineffective result which is before me today.

Mr. President I resent both of those statements. As a member of the Committee on Interior and Insular Affairs I personally have labored hard and long over this piece of legislation. My colleagues who were

conferees have spent countless hours and often worked far into the night to try to work out an equitable compromise we could all live with. Now the President of the United States is calling this compromise politically motivated to obtain purely political benefits. That statement could not be further from the truth.

Let us examine his first accusation—that this legislation solves none of the problems and, in fact, creates new ones.

A simple look at the table of contents of the bill disproves that statement. Title I provides authority to establish the Federal Energy Emergency Administration; to implement rationing of gasoline if necessary; to establish new energy conservation measures; to provide for conversion to coal facilities where necessary; to allocate scarce materials—just to name a few. Title II sets up the necesary machinery to suspend certain provisions of the Clear Air Act if necessary to meet the needs of the Nation in the crisis situation. Title III requires the various Federal agencies and departments affected by the legislation to report back to us on problems they have with the actions required by the legislation.

I cannot see how one can possibly justify that this legislation "solves none of the problems" facing the Nation in this period of energy shortages.

The second accusation made against the bill is that our motivation for passing it has been "purely political" and that those who are so motivated "have managed to produce the delays, confusion, and finally the tangled and ineffective result which is before me—the President—today."

Once again the case as stated is inaccurate. The administration has to be the single most important factor in contributing to the delay of enacting the legislation. Had the administration spokesmen been more willing to work with us in a spirit of compromise, had they been able to agree among themselves about the key provisions of the legislation, and had they not urged their friends on the Hill to work to kill the bill we would have been able to act months ago.

Lest I be accused of being inaccurate in my assertion let me cite one example of the inability of the administration spokesman to agree or to have a solution.

The Senate Interior Committee members joined with the conferees on the Energy Emergency Act in holding hearings on price rollback legislation.

Two representatives from the Federal Energy Office appeared before us. The Assistant Secretary of Treasury for Economic Policy, Mr. Fiedler, appeared, along with Mr. Gerald Parsky, Executive Assistant to the Administrator of the Federal Energy Office.

I asked Mr. Fiedler:

How far would you roll back the present price that I gather today is $10.25 on New oil?

He replied:

My concern is primarily with the price of all oil because this is a function of conservation that depends on the price consumers are paying and they are paying a price of imported and domestic, not only new, but the old as well and stripper.

I don't have a specific number in mind, but I think that the $5.25 price that Senator Jackson mentioned earlier, rolling all oil prices back to that level, would be disastrous.

I then asked Mr. Fiedler:

Sen. HASKELL. To what level?

Mr. Fiedler replied:

To the $5.25 Senator Jackson mentioned earlier.

I then asked Mr. Fiedler:

Do you have any opinion at all as to where it should be rolled back to?

Mr. Fiedler replied:

Not any specific number.

I interpret that as an indication that Mr. Fiedler—one of those responsibile for determining the Administration's policy with respect to oil prices—has no opinion whatsoever as to what those oil prices should be.

Let me contrast his statement of no question with the statement made by Mr. Parsky:

Mr. PARSKY. "We would agree that the average price of $9.50 or so is too much too fast, no question about that. We are now in the process of studying the pricing situation and trying to carefully assess the economics of secondary and tertiary recovery as well as the economics of operating stripper wells in order to come up with an accurate level that can continue to increase supply."

Later on in the same hearing he stated:

The intention at this point would be or at least all indication that we have are the $5.25 on old oil is sufficient.

I cannot stress too strongly that the Administration's designated spokesman, in an appearance before the Interior and Insular Affairs Committee, testified that a price of $5.25 on old oil—the price contained in the Conference Report—is sufficient.

Now the bill has been sent back to us with a complaint that—

The price roll back provision . . . would set domestic crude oil prices at such low levels that the oil industry would be unable to sustain its present production of petroleum products, including gasoline.

Section 110 of the conference report version of the legislation provides for an average ceiling price of $5.25 per barrel on crude oil supplies. The President is empowered to recommend to the Congress that where necessary crude oil prices be raised to an average price of $7.09 per barrel.

It is clearly the intent of the Congress that there would be a two-tiered pricing system. I discussed this very matter with the distinguished chairman of the Interior Committee during debate on adoption of the conference report. I believe in the necessity of encouraging new oil supplies. I would support a two-tier pricing system if recommended by the President. But the ceiling price of $7.09 per barrel is sufficient to insure those new supplies. A study by the National Petroleum Council on oil and gas availability, prepared in December 1973, indicated that for maximum attainable self-sufficiency by 1980 the average revenue per barrel of crude would have to be $3.65 per barrel assuming a 15-percent rate of return or $4.32 per barrel assuming a 20-percent rate of return in 1975. Those prices increase to $6.69 per barrel and $7.87 per barrel respectively by 1985.

As the Petroleum Independent put it in November 1973:

There's no doubt that prospects are for increased drilling. Everybody I know is planning on it. With new oil prices from $5.30 to $6.00 per barrel, there's incentive now to go looking for oil.

Either the President of the United States has been misinformed about the true situation with respect to oil prices, or he is deliberately misleading the American people.

It is simply impossible to substantiate his statement that:

The Energy Emergency Act would set domestic crude oil prices at such low levels that the oil industry would be unable to sustain its present production of petroleum products.

Once again I intend to vote in favor of S. 2589, the Energy Emergency Act. It is sound legislation. It is necessary legislation. We simply cannot afford to bow to those who want to let oil prices skyrocket for the benefit of the oil industry and to the lasting detriment of the American consumer.

I thank the Senator from Washington.

Mr. JACKSON. Mr. President, I commend the distinguished Senator from Colorado for an excellent statement. I think he has analyzed the problem from every angle, especially as it pertains to the economics of the industry.

I would point out to Senators that he has been conducting an in-depth study of the industry, both from the standpoint of its structural implications and the standpoint of its impact on the marketplace and on our economy as a whole. I commend him for the ongoing effort he is making. His statement here today obviously reflects that in-depth study, which he has had underway now for several months.

Mr. MCCLURE. I wanted to make sure I understood one of the statements made by the Senator from Colorado. I understood him to say that under the conference report, if the President felt there was a price increase justified, that would be reported to Congress; is that correct? Is that what the Senator said?

Mr. HASKELL. I do not know what I said, but I will answer the Senator's question. My understanding is that under the conference report, the price was set at $5.25, but under special categories of oil, at the recommendation of the President, it can go up to an average of as high as but no higher than $7.09. It was the intent of Congress, as developed on the floor when the conference report was before us, that for certain categories of stripper wells the price would go higher, and for certain categories of new oil it would go higher.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. JACKSON. I yield 1 additional minute. Let me supplement that comment by referring to page 11 of the conference report, under **section 110:**

(B) Every price proposed to be specified pursuant to this subsection which specifies a different price or manner for determining the price for domestic crude oil provided for in paragraph (3) of this subsection, and every price specified for (or every prescribed manner for determining the ceiling price of) residual fuel oil and refined petroleum products, shall be transmitted to the Congress and shall be accompanied by a detailed analysis.

Setting forth the various required findings that appear on page 12.

Mr. MCCLURE. I do not want any misapprehension as to the procedures required under the conference report in regard to pricing changes.

I had understood the Senator from Colorado to say that it had to be sent to Congress, and the Senator from Washington (Mr. Jackson) indicated that that was true. But is it not a fact that it is subject to the

Administrative Procedure Act with respect to heating pricing changes and not subject to congressional action?

Mr. JACKSON. The President has to make findings pursuant to the Administrative Procedure Act.

Mr. MCCLURE. That is correct.

Mr. JACKSON. And he must submit them to Congress, as set forth in the conference report, **section 110(b)**; and they must be supported by a preponderance of the evidence.

Mr. MCCLURE. By substantial evidence.

Mr. JACKSON. A preponderance of the evidence.

Mr. MCCLURE. That is correct. A court proceeding is necessary to change the price in accordance with the course of events.

Mr. JACKSON. A court challenge is possible, yes, if the findings have no basis in fact or are arbitrary and capricious.

Mr. GRAVEL. I wonder if the Senator from Washington would be willing to answer some questions for me, since he has been generous in responding to the questions of others.

I did not quite get the figures for 1973.

Mr. JACKSON. It is $3.40, and it rose in 1973.

Mr. GRAVEL. It is $3.40, and it rose to——

Mr. JACKSON. To $6.94, the national average.

Mr. GRAVEL. That means that anybody who had a pool of oil that had a substantial accretion of value, without any additional cost—and that is included in the reasoning for the rollback——

Mr. JACKSON. That is correct.

Mr. GRAVEL. What would be the other part?

Mr. JACKSON. We have not reached the bottom price. The 29 percent of the domestic crude oil being produced today is no longer regulated, as I pointed out under the law, as we have interpreted it under the Mandatory Allocation Act. I think it is illegal. I think there is a requirement that the President put a ceiling on everything except stripper wells.

But the point is that the word we had from the administration was that by the end of this year the total amount decontrolled would run about 42 percent of domestic production. So the price has been and is going up every week.

Mr. GRAVEL. I do not choose to quarrel with the Senator on that matter. I would like to get to the fundamentals, because we can become lost in numbers.

When we get down to numbers, I think that what the Senator objects to is that if somebody owns a pool of oil, and then the Arabs increase their price of oil, which raises the umbrella anew, he enjoys that economic benefit.

Mr. JACKSON. The Senator seems to agree with my position.

Mr. GRAVEL. I just pointed out——

Mr. JACKSON. I want to understand what we are talking about. Under my rationale, it is very simple. Prices have gone way up, but production has not moved.

Mr. GRAVEL. Let us talk about values. Suppose I own a pool of oil. I have not done one thing to it. But because the Arabs have raised the price of oil, it is worth twice as much as it was before. The Senator now wants to——

Mr. JACKSON. I just want to object to a windfall profit.

Mr. GRAVEL. I am not quarreling about that. I want to be sure of what the Senator is talking about. If I have a million barrels of oil, and they are worth $5.50 a barrel, and the price goes to $6.50, the Senator is arguing that I should not enjoy the $6.50.

Mr. JACKSON. Obviously, the whole thrust of the price increase argument is to bring in the new production.

Mr. GRAVEL. That is another argument.

Mr. JACKSON. What argument is the Senator making?

Mr. GRAVEL. Suppose the Senator from Washington owns a duplex, and real estate values go up, but he has not done a thing to the duplex. Suppose he rents the duplex. Under the same philosophical approach, would he not be amenable to passing a law so that the increased value could be added to what an individual would have to pay?

Mr. JACKSON. Now look, let us not compare duplex apartments with the oil industry. The oil industry is a business affecting the public interest.

Mr. GRAVEL. My colleague says that land is the most vital part of the economic system. He implies that we can turn around and destroy the economic values in oil, but that it is different in regard to land.

Mr. JACKSON. We argued that the last time, with wheat and meat in February. My wife and I stopped eating meat, but can we stop using gas? We are talking about two totally different things.

Mr. GRAVEL. We can sooner live with less gasoline than we can with less meat, because we need a certain amount of meat in order just to be able to walk around. So what comes first is food. Now I want to get the record clear——

Mr. JACKSON. Is there a substitute for gasoline?

Mr. GRAVEL. I want to get the record clear that philosophically it is OK to roll back economic gains in the oil industry, but it is not OK to do it with land; is that correct?

Mr. JACKSON. The Senator knows it is absurd to try to compare two different situations. The point is that the oil industry is a business affecting the public interest. It goes to the very lifeblood of the economy of the country. The public has learned to get by without meat. We have had our meatless days, as the Senator knows. But can we, in this country, go for long without petroleum? To do so would bring the economy to a grinding halt. But we could go without meat, or change to eating fish or other proteins, but we cannot go from oil to something comparable to oil and still get the energy we need. It is that simple.

Mr. GRAVEL. The point I have made with the Senator from Washington is the crux of this entire matter; and that is, for some unknown reason we throw away the economics book with respect to oil. But when it comes to food and other areas we use a different standard.

I submit that if we really want to stop inflation—and I hope that is the motivation of my colleagues—the way to do it is not by government edict. If we could do it in oil, if we could pass a law to rollback prices on oil, then why not do it in other areas. Let us roll back this ungodly inflation that afflicts us all. Why not do it?

Mr. JACKSON. Did the Senator not vote for the Economic Stabilization Act?

Mr. GRAVEL. Yes; and I made a mistake. I hope that we have the opportunity to repeal that act. You know something, Senator, I not only made that mistake, but I voted for your Allocations Act, and that was an even bigger mistake. [Laughter.] Because if there is anything that has fouled up this country since——

Mr. JACKSON. Well now, if the Senator will yield—

Mr. GRAVEL. Let me finish. We have a beautiful example here. We in the United States have the opportunity to let the market clear itself and, thereby, provide people with energy. But what did we do? We turned around and jumped into the marketplace and established these allocations.

In Germany, they did not do that, and today there are no lines in Germany waiting for gasoline. The price is up there, as it is here. So if that does not prove one thing about the idiocy of the Government's going into the marketplace and destroying the semblance of sanity we have left, I do not know what does.

So what have we done here in this country? We have put the lines in. It was the Government that created the lines waiting at the gas stations. We talk about the cost. What does it cost the average taxpayer to wait in line, spending an hour or 2 hours or 3 hours a week? Figure that out. Say they work for $5 or $10 an hour—compute that—that is about three times what his gasoline is costing him. So I think it would be cheaper to double the price of the gasoline. He would still be better off.

So we put him in the lines. The price of gasoline still goes up. But if we could pass a law to stop inflation, we would have done that a long time ago.

What the President is referring to—and I find myself very few times in agreement with President Nixon—unfortunately, his travail these days will prevent him from really stating the point strongly, but he stated it correctly when he said: "This will cause inflation."

I should therefore like to ask my colleague from Washington, why would he, or why would I, as an investor, turn around and invest any money to find oil in this country when we can find oil abroad and then sell it back to ourselves at twice the price? I ask my colleague, would he invest his money that way?

Mr. JACKSON. I have no interest in oil or indeed in any stocks. Let me point out to my good friend that when the country sees the first quarter earnings reports of the oil companies for 1974, they will get the shock of their lives. The profits in this industry are so scandalous that the word is around in Wall Street that the industry is looking for all sorts of diversification. The industry wants to buy up non-oil industries. They are going into real estate—anything to get depreciation, or write-offs, or artificial losses, to shelter their huge earnings from oil.

Mr. GRAVEL. Well, I ask my colleague, why would they do that if oil is so good? They would keep their money there. But they are going into real estate because it is no good.

Mr. JACKSON. The Gulf Oil Co. wants to buy the Ringling Brothers Circus.

Mr. GRAVEL. Right, because it is no good in oil. They might as well run a circus, particularly when we are managing it. [Laughter.]

The PRESIDING OFFICER (Mr. Helms). The Senator from Washington (Mr. Jackson) has the floor.

EXEMPTION OF MAJOR CATEGORIES OF CRUDE OIL FROM PRICE CEILINGS UNDER THE ALLOCATION ACT IS CONTRARY TO LAW

Mr. JACKSON. Mr. President, on February 2, 1974, I wrote to Mr. Simon, the Administrator of the Federal Energy Office, concerning the President's authority to decontrol oil prices.

The purpose of that letter was to point out that section 4 of the Emergency Petroleum Allocation Act which was signed into law on November 27, 1973, requires that the President promulgate a regulation providing for the allocation of crude oil at equitable prices. In effect, the Allocation Act mandates that all crude oil be placed under some form of reasonable and equitable price ceilings.

I have yet to receive an answer to my letter. The administration has yet to cite any legal authority which authorizes the exceptions of new oil, released oil or State royalty oil from the price ceiling requirement of the Allocation Act. Yet, this is what the administration has done.

Instead, the President purports to justify his disregard of the pricing provisions of the Allocation Act by vetoing the Energy Emergency Act because it imposes reasonable price ceilings.

Mr. President, the administration's failure to impose price ceilings in accord with the Allocation Act is irresponsible. They have had 1 month in which to present any justification for this action. None has been presented.

Today's veto of the Emergency Act does not and cannot undo the price ceiling requirements of the Petroleum Allocation Act.

Mr. President, the administration's action in exempting major categories of crude oil from all price ceilings is, in my view, illegal. It violates the clear and plain meaning of the law.

It is apparent that if the law is to be enforced, Congress will have to take specific action to set and establish reasonable price ceilings.

This is what the Congress did in adopting section 110 of the Emergency Energy Act.

The issue now before the Senate is whether the Congress is going to roll over and play dead.

Are we going to permit actions which are in clear violation of the law to take place?

Are we going to allow the Arab cartel to set domestic oil prices?

Are we going to ignore the needs of the American consumer?

In short, is Congress going to exercise independent judgment in making national energy policy?

Mr. President, I ask unanimous consent that a letter and a statement discussing the President's authority to exempt categories of crude oil from price ceilings under the Allocation Act appear in the Record.

Mr. President, I further ask that the Record include the communication Senator Fannin sent the Members yesterday commenting upon my statements on the floor debate February 18 and 19, together with my point-by-point reply to his comments.

There being no objection, the material was ordered to be printed in the Record, as follows:

FEBRUARY 2, 1974.

Hon. WILLIAM E. SIMON,
Administrator, Federal Energy Office,
Washington, D.C.

DEAR MR. SIMON: At the conclusion of the testimony of Administration witnesses at the Committee's hearings on Friday, February 1, 1974, on S. 2885, a bill I introduced to roll back and establish price ceilings for crude oil and refined petroleum products, questions were raised concerning the Administrator's authority to exempt new oil, released oil, and State royalty oil from the regulations implementing the price ceiling provisions of the Emergency Petroleum Allocation Act.

Legal Counsel to the Committee has advised me that the Administration is in apparent violation of the pricing requirements of Section 4 of the Allocation Act. Section 4(a) of the Act provides that "the President *shall* promulgate a regulation providing for the mandatory allocation" of crude oil and petroleum products "in amounts . . . and at prices specified in (or determined in a manner prescribed by) such regulation" (emphasis added).

Section 4(b)(1)(F) provides that the regulation "*shall* provide for" . . . "equitable distribution of crude oil, residual fuel oil, and refined petroleum products at *equitable prices* among all regions and areas of the United States and sectors of the petroleum industry . . ." (emphasis added).

Section 4(e) provides one exception to this requirement that all oil prices be placed under price ceilings. Section 4(e)(2) provides that the regulation promulgated under Section 4(a) on allocations and on prices "shall not apply to the first sale of crude oil . . ." from stripper wells.

Section 4(e)(1) provides a procedure for suspending allocation authority *if* the President makes and transmits to the Congress a finding that mandatory allocation is no longer needed to achieve the purposes of the Act. This procedure *does not* permit suspension of the Act's requirement that oil prices be "specified in (or determined in a manner prescribed by)" the regulation required under section 4(a) of the Act.

I would appreciate it if you would furnish me with a report and a legal memorandum on this matter. I am specifically interested in your views as to the legal authority for exempting new oil, released oil, and State royalty oil from the price requirements of the Emergency Petroleum Allocation Act.

As I understand it, the Administration's position on allowing major exemptions to price ceilings may be based in part upon an interpretation of the Conference Report on the Allocation Act which was contained in a letter of November 13, 1973, to me from Dr. John T. Dunlop, Director of the Cost of Living Council. Dr. Dunlop's letter dealt with his understanding of provisions of the Report dealing with stripper wells, pricing and personnel. In connection with the adoption of the Conference Report, I had Dr. Dunlop's letter together with other materials printed in the Congressional Record and indicated general concurrence in Dr. Dunlop's interpretation.

On further review of the clear meaning of the Act and Dr. Dunlop's November 13 interpretation it is my view that the Act does not permit these exceptions to the price requirements of the Act. To the extent I expressed concurrence in Dr. Dunlop's interpretation of the pricing authority and directive in the Act I was in error. In any event, the concurrence of any single member of Congress in an interpretation of the law does not change the meaning or requirements of the law.

I do concur in Dr. Dunlop's statement in his letter that ". . . the administering agency which has been delegated price control authority under both statutes would be obligated to comply with the provisions of both."

I appreciate your assistance in this matter and I assure you of my cooperation and assistance in achieving a new level of stability and reasonableness in petroleum prices. As you know, the Conference Committee will meet on Monday on S. 2589, the Energy Emergency Act, to work out a resolution of the controversy over the windfall profit provisions of the Conference Report. As you know, I and other members of the Conference Committee will be proposing language to mandate a price ceiling for oil which has been exempted from price controls. I have directed the Committee staff to meet with representatives of your office to discuss

how this can best be achieved. Meetings were held last night and a further meeting is scheduled at noon today.

With best regards,

Sincerely yours,

HENRY M. JACKSON, *Chairman.*

SENATOR JACKSON'S REPLY TO SENATOR FANNIN'S MARCH 5 LETTER

THE RELATIONSHIP OF PRICES AND PRODUCTION

Senator Jackson said that:

Respected oil analysts . . . say that these [current] price levels will not buy increased supply.

Senator Fannin says that:

Due to existing prices the U.S. petroleum industry plans to invest over 19.5 billion dollars in 1974 (19,531,000,000), of which $12,134,000,000 is for exploration and production of petroleum. Funds budgeted for drilling and exploration ($7,669,000,000) represent a 16 percent increase over 1973. These investments would not be made unless the industry expected to be able to increase supply. A price rollback would result in investment cutbacks and thereby decreases in production.

The fact is that:

Neither Senator Fannin nor anyone else has presented any evidence or analysis to show that 1974 investment in domestic oil exploration would be greater with crude oil prices at $10 per barrel than they would at $7.09 or even $5.25. Mr. Simon has repeatedly said that a price of about $7 will bring forth as much effort "as we reasonably can expect to get."

CONSTRAINTS ON SUPPLY

Senator Jackson said:

The real constraint on supply today is not price . . . the constraints today are shortages . . . manpower, tubular goods, drilling rigs . . .

Senator Fannin says that:

Higher selling prices for crude enable oil producers to "bid" steel, manpower, and other materials away from other sectors of the economy. This price mechanism is the most efficient allocator of resources of any kind. On February 26, 1974, the Cost of Living Council removed oil field machinery from price controls, which should permit higher prices for such equipment. The result is that manufacturers of such equipment can now make a profit on the manufacture of that equipment, which should help ease the material shortages Senator Jackson alluded to.

The facts are that:

Supplies of certain critical equipment and materials for drilling are in absolutely short supply that no price increases can remedy. Order backlogs for tubular drilling goods average at least one year. Neither Mr. Fannin nor anyone else has offered any evidence or analysis showing that the supply of these inputs would be greater with $10 crude oil than at $7.09 or $5.25.

THE NEED TO TIGHTEN PRICE "LOOPHOLES"

Senator Jackson said:

. . . loopholes enable the unscrupulous to take advantage to double the value of their "old" oil—their presently producing fields—by simply drilling and pumping the oil through new wells.

Senator Fannin says that:

This is not true. "New" production must be from a new or different lease, not only from a new well, unless the total production from the lease is greater than the rate of production in 1972 (month-for-month). Only the excess of current production over the base period is "new" oil, from any given lease. Furthermore, excess or incremental production credits not used in any given lease may not be credited to another lease. The incentive to produce new crude is not a loophole. Before any benefit can be derived new oil must in fact be produced."

The facts are that:

The same producing field often lies under more than one "property" or lease. It is indeed possible to produce "new" oil from such fields at the expense of "old"

oil, either by draining them from neighboring previously undrilled leases, or by increasing production from wells on some leases on the field at the expense of others.

More importantly, Professors Franklin Fisher and Edward Erickson have shown that even small increases in field prices reduce success rates in exploratory drilling by shifting drilling effort from the risky search for large reservoirs in new areas to the more certain development of small reservoirs in old fields. Where the inputs to drilling are in limited supply, very large price increases can be expected to result in small short term production gains from more intensive drilling of old fields, but at a substantial cost in new discoveries. It is not obvious whether that large price increase for crude oil (such as the doubling and tripling that has taken place in the last year) would actually increase rather than decrease production one year from now.

THE ENERGY EMERGENCY ACT AND THE U.S. CONSUMER

Senator Jackson said that:

An increase of 34,000 barrels per day . . . is what the American consumer is getting in the way of new supply at a cost of $20 million a day.

Senator Fannin says that:

About 30% of total production is free of price controls. If it all were selling at $10.35 per barrel, which it is not, and were rolled back to $5.25 per barrel, or cut $5.10, the so-called saving would be $16.6 million. This might reduce pump prices by one cent per gallon, but would have considerable negative impact on future supply expectations. The American consumer already spends over $140 million every day on gasoline alone, of which State and Federal taxes amount to over $33 million per day.

The facts are that:

The savings from rolling back all domestic oil to $5.25 would be:

February 1974, $16.3 million per day; December 1974, $24.5 million per day.

February 1974, $2.4 cents per gallon; December 1974, $3.0 cents per gallon.

The savings from rolling back "new" and stripper well oil to $7.09, released oil to $5.25 would be:

February 1974, $11.5 million per day; December 1974, $21.4 million per day.

February 1974, $1.7 cents per gallon; December 1974, $2.6 cents per gallon.

The basis of the foregoing calculations is as follows:

	1974 (million barrels per day)		
	February	December	Price
Imports	5.1	8.0	$10.35
Stripper oil	1.4	1.4	10.35
New oil	1.2	2.0	10.35
Released oil	.6	1.4	10.35
Controlled oil	7.7	6.1	5.25

THE PRICES TO BE PAID FOR STRIPPER WELL PRODUCTION UNDER S. 2589

Senator Randolph said:

. . . in the State of West Virginia, when we talk about the maximum for stripper production it would come to approximately $8.00 a barrel rather than $7.09 that is frequently referred to [by Senator Jackson]. . . . There is flexibility in this provision, **Section 110,** to deal with the special situation regarding stripper wells and secondary and tertiary recovery . . .

Senator Jackson said:

The Senator (Mr. Raldolph) is correct.

Senator Fannin says that:

The price of stripper well crude under S. 2589 would be limited to $5.25 per barrel unless raised to $7.09, except for Pennsylvania grade crude such as is produced in West Virginia. Thus, the "flexibility" referred to by Senator Randolph and agreed to be Senator Jackson is limited to Pennsylvania grade crude production. In November of 1973, Pennsylvania grade crude production was only 36,200 barrels a day as contrasted to the total of 9,144,000 barrels a day

produced within the United States. The crude to which the "flexibility" in price referred to by Senator Randolph applies to only .04 percent of total national production. Thus, for all practical purposes, the price ceiling on U.S. crude production established by S. 2589 would be $5.25 per barrel, with a possible upward adjustment to $7.09—not $8.00 per barrel as otherwise alleged.

The fact is that:

Both the $5.25 and $7.09 figures are *average* price ceilings, not absolute ceilings. The ceiling provided by paragraph (3) of the rollback provision is "the sum of—

"(A) the highest posted price at 6:00 a.m. local time, May 15, 1973, for that grade of crude oil at that field, or if there are not posted prices in that field, the related price for that grade of crude oil which is most similar in kind and quality at the nearest field for which prices are posted; and

"(B) a maximum of $1.35 per barrel."

This provision results in an average price of $5.25, but it provides prices across the nation ranging from about $3.30 to $6.50, depending upon the grade and location of the crude oil.

Paragraph (5)(A) provides that no ceiling price "shall exceed the ceiling price provided in paragraph (3) . . . by more than 35 percent."

This provision would permit an average price no higher than $7.90, but the ceiling for individual grades of crude oil in certain fields might be as high as $8.50.

PROPANE PRICES

Senator Jackson said:

I had the words "including propane" added to the provision so as to remove any question about having it covered. Specifically, we estimate a rollback of about 50 percent in the price of propane if this Conference report is adopted. Where the average national price is now about 42 cents, it would go back to about 22 cents.

Senator Fannin says that:

Secretary William Simon stated that "Section 110 of the conference report . . . which calls for a rollback of crude prices to $5.25 per barrel with a ceiling of $7.00 per barrel would have little impact if any in further reducing the price of propane. We feel the action we have already taken should be sufficient to protect American consumers who are dependent upon propane."

What Senator Jackson failed to state is that 68 percent of the propane produced in the United States comes from natural gas wells, all of which are not covered by S. 2589. The Act, accordingly, applies to only 32 percent of U.S. propane supplies. Most of this 32 percent issued as refinery fuel and therefore never reaches the consumer. Thus, if crude prices were set at $7.09 per barrel, the decrease in propane prices would be only a fraction of a cent, not 20 cents.

The facts are:

The principal reason for high propane prices is that the Cost of Living Council and the Federal Energy Office have not attempted to control the price of propane produced from natural gas liquids. They have authority to do so under the Economic Stabilization Act and are directed to do so under the Emergency Petroleum Allocation Act. One of the purposes of Senator Jackson's colloquy quoted by Senator Fannin was to call the attention of FEO to Congress' intention that the price of natural gas liquids, lease condensate, and propane derived from them be covered by price regulations.

Mr. BARTLETT. Mr. President, I should like to point out that the conference committee report, if it is adopted into final law and the veto is overridden, will result in a reduced amount of money for the exploration of oil and gas. A number of companies have testified that they would reduce their efforts this year by one-third.

Commenting on the statement by the distinguished chairman that production has continued to drop, I have here the quarter production for February 1, 1974, which shows 9,179,000 barrels, which represents an increase of 26,000 barrels a day. There has been a bottoming out and a slight turnaround. We have the possibility of continuing this momentum that now exists to increase our supplies, or we have the opportunity to stop it and to stop it in its tracks.

It makes no sense to me to become more dependent on unrealiable foreign oil.

Mr. JACKSON. I think the Senator might be interested in the Oil and Gas Journal for March 4, which is a pretty good source, where it says that the 4-week average of domestic production ending February 22, the latest week, was 9,195 million barrels, 13,000 less than the week before, and 183,000 less than a year ago. The change from a year earlier is a fall of 1.96 percent.

Mr. BARTLETT. I agree with the distinguished chairman that the comparison with a year ago is down. I know that he agrees with me that the comparison of the last week is up. I was refuting his statement saying that progress at the present time is decreasing rather than increasing in production.

But the important thing is that today we are 22 percent—1973—ahead of 1971 in the number of wells being drilled. The distinguished chairman knows that the results of drilling are in direct relationship to the amount of drilling done. He knows that the amount of drilling planned for 1974 is large and a significant increase over that of 1973, but that these plans will not be consummated if he is successful today and the House is successful in overriding the presidential veto. The same thing will happen again as has happened before, that by controlling prices we will reduce the supplies available domestically. We will increase reliance on foreign oil and we will be that much more subject to harassment by them, either with high prices or embargoes or both. So I think that a vote with the distinguished chairman is a vote for continued long lines at the filling stations. It will be a vote for more unemployment. It is a vote for less productivity in this country, less opportunity for this country to be competitive with foreign countries, and less opportunity for us to increase our gross national product, to increase the standard of living, and to remain the No. 1 power.

I think it is vital that we realize that we are at the crossroads, that we do have the opportunity now to bring on additional resources. With the prices that now exist, we can have an opportunity to develop the liquefaction and gasification of coal.

Mr. BARTLETT. We have an opportunity to have extraction of oil from shale and tar sands. But this will go out the window if the veto by the President is overridden today.

It seems strange to me that there seems to be a preference by many people to buy oil and gas from foreigners rather than to buy it from domestic producers and to pay a higher price to foreigners than to domestic producers. As a matter of fact, they are dissatisfied at the present time with paying American producers 61 percent of what they are willing to pay foreign producers, and they want to reduce that to the neighborhood of 50 percent.

I should like to point out to the distinguished chairman that the exploratory locations compared to a year ago are up 33 percent, and the development locations are up 25 percent.

Mr. President, the conference report on Senate bill 2589 contains provisions which continue the policies that the majority of Congress has advocated for the past 20 years. Those policies, more than anything else, have gotten us into the critical situation in which we find ourselves today.

If this bill becomes law, rationing of gasoline and higher and higher prices will most likely be inevitable, for we will be discouraging the

production of relatively cheap domestic crude oil and encouraging more imports of higher priced foreign oil—if available at all.

The majority of Congress has long favored policies of Government controls that have led to the current energy crisis. It may be good politics—but it is not good economics for the benefit of the consumer.

The direct and indirect regulation of the price of natural gas at the wellhead and oil has caused dwindling supplies of refined products; and more recently, the policy of allocating the shortages and trying to force rationing upon the public have done nothing to increase supplies of energy for the consumer.

Now, the same congressional leaders seem to advocate paying foreigners for their natural gas and crude oil rather than buying from domestic producers.

The leadership of Congress has been "investigating to death" the petroleum industry. Almost every committee of Congress has a subcommittee on energy. Almost daily some form of harassment of the industry, either by innuendo or inaccurate or misleading facts, comes out of the Congress.

Congress is not facing up to the problem of shortages. Congress, seemingly, is not concerned about how to get from here to there—to get from a condition of shortages to a condition of sufficient energy.

During the late fifties and early sixties shortfall profits, domestically, drove the multinational companies overseas—in search for cheaper and more profitable oil. Congressional leaders, ignoring the high prices and the embrago of foreign oil resulting from overdependence on foreign sources of supply, are favoring once again controlled and reduced domestic prices of oil which will once again drive multinational companies overseas—in search for more profitable oil.

By overriding the President's veto, these same people are assuring the need for more imports of foreign crude oil and products. The Congress is again encouraging the development of foreign resources rather than our own domestic resources. On the average, Congress is not willing to continue to pay an American oil producer 61 percent of the price of oil that they are willing to pay a foreign producer. They only want to pay the American producer 50 percent of what they are willing to pay a foreign producer on the average. Why?

During the 1960's there were many advocates for opening up the gates to cheap imports. The Government, during the 1960's followed a policy of controlled prices for natural gas and depressed prices for crude oil because of threats by various administrations to import more cheap foreign oil.

So far, Congress continues to follow the same policies, except in an even more restrictive manner, that have gotten us into this energy mess. Congress continues to advocate controlling the wellhead price of natural gas, and even rolling back in the law the price for domestic crude oil, plus the importation of larger amounts of expensive and unreliable foreign oil.

Congressional policies continue to exacerbate the domestic energy supply situation by holding down prices while advocating paying higher prices for foreign crude oil.

Congress is advocating less productivity and less ability for the Nation to compete with foreign countries at a time of domestic and worldwide shortages.

We may as well ask the Arabs to run our domestic oil industry, too. It seems the leadership of Congress has more faith in the foreign oil producing countries than it does in our own domestic oil industry.

Mr. President, these are the same policies that got us where we are today, and they are the same policies that will lead us to long lines at the service stations, more unemployment, higher inflation, rationing, and greater dependence upon unreliable sources of crude oil to the extent that we will become a second-rate world power.

In my opinion, a vote for this measure is a vote to make the United States become a weak and stumbling giant, and the main concern that other nations will have for us is that we do not hurt them in our fall.

Mr. President, I associate myself with the remarks of the distinguished Senator from Oklahoma. He is absolutely right.

I should like to read for the benefit of the Senate an item that appeared on the UPI wire the day before yesterday:

> The price rollback feature of the emergency energy bills which President Nixon has threatened to veto would cost the Nation 11.5 billion gallons of domestic oil within a year; a leading independent producer said today.
>
> President George Mitchell of the Texas Independent Producers and Royalty Owners Association told the West Central Texas Oil and Gas Association that oil price controls likely will prevent the drilling of 3,000 new wells in the United States as it is. He estimated that at least 275 million barrels of oil production probably would be discovered in those wells that will not be drilled, and he said the oil price rollback, if it stands, will styme efforts to produce substantial amounts of marginal oil from existing wells.

Mr. President, if we fail to sustain this veto, what we are going to do is probably wipe out approximately 12 percent of our domestic crude production that is marginal production. To try to make scapegoats of the major oil companies or try to roll back prices for some cosmetic effect is not going to solve the shortage. As a matter of fact, it is going to exacerbate the shortage.

With respect to all this talk about oil company profits, the oil companies buy their crude from independent producers. So what we are talking about is the oil companies as customers. This does not affect their profit picture at all. It might be that they will have to pass along higher prices to the consumer. But it will also mean that even higher priced crude will not have to be imported in greater quantities.

I cannot understand why the Members of the Senate would prefer that we buy foreign crude oil, Middle Eastern crude oil, at a greater price than buy domestic crude at a lesser price, albeit a higher price than we are accustomed to pay. It does not make any sense.

There is another aspect of this bill that should cause it to fall, and that is the provision known as **section 108**, which would transfer the conservation functions of the States to Federal officials in the executive branch, because it would permit these officials to second guess so-called MER, or maximum efficient rate of production. That could result in taking conservation management out of the hands of State authorities who are well experienced and familiar with the problem and placing it in the hands of Federal administrators who do not know what they are doing. If the Federal Government forces these wells to produce at above the maximum efficient rate for immediate short-term gain, in terms of additional supplies of crude, we will be selling ourselves down the river in the future, from the standpoint of trying to maintain some reasonable degree of self-sufficiency in crude oil in the United States.

I do not understand the apparent love feast between some Members of this body and the Arabs. Rather than buy domestic oil, they would buy Arabian oil and pay a higher price for it. The same syndrome is apparent in their refusal to support measures to deregulate the price of natural gas. Let the mechanism of the marketplace work its will.

We pay more for our natural gas that we produce in Texas than people pay in the Northeast, because they get it at an artificially low price as a result of regulation. We do not complain about it in our State. We are delighted to have the gas.

What I am saying now is that if Senators want a source of energy in this country that is secure—that is to say, largely a domestic source—they had better vote to sustain the President on this bill, or I promise that they will destroy marginal production in this country and will stifle new drilling in the process.

Mr. BARTLETT. I believe that 4 of the 5 largest producers of oil and gas are in the 14 largest consumer State categories of all the States. Texas is one, Oklahoma is one, California is one, and Louisiana is the fourth.

Mr. TOWER. The Senator is correct. There is a lesson to be learned there.

Mr. RANDOLPH. Mr. President, in vetoing the Energy Emergency Act, President Nixon is wrong in his purposes and in error in his reasoning. As suggested by a March 3, 1974, editorial in the Washington Post, this action provides "somber evidence of the degree to which the President has now removed himself from the concerns of his fellow citizens, and the isolation in which he wraps himself."

Shortages have dealt a deft blow to the American consumer who has been subjected to energy shortages, to threatened strikes, and in many instances, to unemployment and to higher prices. After being called on to institute voluntary energy conservation actions by lowering the thermostats, by driving autos and trucks slower, by carpooling, and by many other self-motivated conservation initiatives—the American people are now being told by the President's veto message that they are going to have to pay more, that they are not going to be eligible for special unemployment compensation, and that they are not going to be assured of the minimum supply that rationing can provide.

Mr. President, let us examine the validity of some of the reasons used by President Nixon to justify his veto of the Energy Emergency Act.

PRICE ROLLBACK

Speaking of price rollbacks **[Sec. 110]** the President said—

The Energy Emergency Act would set domestic crude oil prices at such low levels that the oil industry would be unable to sustain its present production of petroleum products, including gasoline. It would result in reduced energy supplies, longer lines at the gas pump, minimal, if any, reduction in gasoline prices, and worst of all, serious damage to jobs in America. Unemployment would go up, and incomes would go down.

The Chief Executive added—

The rollabck would not only cut domestic oil production, but would also retard imports since in the present environment oil companies are reluctant to import oil and gasoline that would have to be sold at prices far above the domestic prices.

So says the President. I do not agree with his argument. He added further—

As we call on industry to provide these supplies, I feel very strongly that we must also insure that oil companies do not benefit excessively from the energy problem. I continue to believe that the most effective remedy for unreasonably high profits is the windfall profits tax which I have proposed. That tax would eliminate unjust profits for the oil companies, but instead of reducing supplies, it would encourage expanded research, exploration and production of new energy resources.

But let us examine the facts. In mandating a rollback in the price of crude oil and refined petroleum products, the Congress is simply directing the President to exercise authority he already has under the Economic Stabilization Act of 1970 and the Emergency Petroleum Allocation Act of 1973.

The President also is incorrect in his assumption that shortages are going to vanish overnight simply because crude oil prices are allowed to rise. Between January 1973, and January 1974, the average domestic price has doubled from $3.40 to $6.75 a barrel. Yet domestic production has climbed by less than one-third of 1 percent—34,000 barrels out of a total 10,893,000 barrels per day during this period.

The real constraint is not oil prices but shortages of trained manpower, tubular goods. drilling rigs, and many other materials needed by this high-technology industry.

The legislation guarantees a minimum domestic average price of about $5.25 with a ceiling price of about $7.09 a barrel. These prices seem realistic for the next year compared to investment requirements. Senator Jackson in Senate debate on the conference report recalled that in January 1974 the Federal Energy Office noted—

No one knows exactly what the long-term supply price is, as no one can predict in the future that clearly. Our best estimate is that it would be in the neighborhood of $7 per barrel within the next few years.

In December 1973 the Department of the Treasury said—

The long-term supply price of bringing in the alternate sources of energy in this country, as well as drilling in the Outer Continental Shelf and the North Slope—is $7 a barrel, current 1973 dollars.

Currently the average international oil price is $10 per barrel but the majority of this is a tax that goes to the producing countries not to the international oil companies.

Should domestic oil prices climb to this artificial price, there will be unprecedented profits to oil companies borne on the shoulders of the American consumer, without any substantial increase in supplies.

It is more in the public's interest to prevent excessive profits before they occur rather than tax them after the fact—as suggested by the President. Under such an approach, the consumer still must bear the expenditure of high-cost energy supplies, while profits are drained into general tax revenues.

UNEMPLOYMENT COMPENSATION

After admitting that unemployment will occur because of the energy crisis, the President's second major premise is that—

The Energy Emergency Act is also objectionable because it would establish an unworkable and inequitable program of unemployment payments [Sec. 116].

Under it, the Government would be saddled with the impossible task of determining whether the unemployment of each of the Nation's jobless workers is "energy related."

Mr. President, I call to the Senate's attention the expressed concern over the coverage of this provision [Sec. 116] is unwarranted. Under the conference report on S. 2589 the President by regulation is given total discretion to define the nature of the criteria or formulas to be followed by States before they would be entitled to receive grants in aid for energy-related unemployment compensation. Sufficient flexibility would be available within the authority to restrict coverage sufficiently to overcome President Nixon's expressed concerns.

This authority is being provided as an interim measure for 1 year pending enactment of long-term legislation to strengthen our regular unemployment insurance program. As an emergency action it must be emphasized that such coverage could not exceed 1 year. The President's accusation that this program is a "shoveling out the taxpayer's money under a standard so vague and in a fashion so arbitrary," it seems to me unwarranted.

A MATTER OF PERSPECTIVE

I agree with the President's statement that—

The energy shortage has been a pressing problem for the American people for several months now. We have made every effort to soften the impact of this problem. We have come through this winter without serious hardship due to heating oil shortages.

However, Mr. President, there is no question but that this was due principally to the voluntary actions of American citizens and the blessing of a much warmer winter than anticipated. The administration's mandatory petroleum allocation is only a few weeks old.

I am convinced that the United States faces a deepening energy crisis and extraordinary steps are needed to assure millions of citizens that steady energy supplies will be available.

On November 7, 1973, President Nixon made a major address to the American people on the energy emergency facing our country. On the next day a special message was sent to the Congress proposing that

The Administration and the Congress join forces and together, in a bipartisan spirit, work to enact an emergency energy bill.

It was the President's expressed hope that—

By pushing forward together, we can have new emergency legislation on the books before the Congress recesses in December.

Despite renewed assurances from the President, the full cooperation of the administration with the Congress has not been witnessed.

In the President's own words—

Unfortunately, there are some who have chosen to capitalize on the Nation's energy problems in an effort to obtain purely political benefits. Regrettably, the few who are so motivated have managed to produce the delays, confusion, and finally the tangled and ineffective result which is before me today. The amendments, counter-amendments, and parliamentary puzzles which have marked the stumbling route of this bill through the Congress must well make Americans wonder what has been going on in Washington while they confront their own very real problems. We must now join together to show the country what good government means.

Unfortunately this statement portrays the Congress as the obstacle to the enactment of necessary energy emergency legislation. The Con-

gress was prepared to act last December, if it had not been for administration opposition and an implied veto that took us back to House-Senate conference.

Then, last month, the Senate and the House of Representatives overwhelmingly endorsed the conference report on S. 2589.

Mr. President, among the needed authorities in the conference report is a provision creating a temporary Federal Energy Emergency Administration. Until more permanent authority is enacted, this authority is needed for the effective administration of the mandatory allocation program currently operated by the Federal Energy Office. [Sec. 103.]

The Federal Energy Office is functioning under Executive Order 11748 of December 4, 1973. All the Federal Energy Office's employees are on loan from other Federal agencies and there is little if any authority to hire the necessary personnel to effectively administer these programs.

This authority is needed so that direct appropriations can be provided for these vital programs. As expressed last week by John Sawhill, Deputy Administrator of the Federal Energy Office, at hearings before the Senate Interior Committee:

> I wish the Congress would give us a bill (to provide the necessary resources, particularly of personnel) so we had statutory base for our organization, so we could have some of the people onboard in the Chicago office, I don't know what the figures are, but we probably have 90 people detailed in from other agencies. How are we going to make a process work when yesterday somebody was a chicken inspector and today they are supposed to be running an allocation program.

Mr. President, the necessary authority for a temporary Federal Energy Administration is contained in the Energy Emergency Act, until such time as the Federal Energy Emergency Act is enacted.

This is one example of the numerous authorizations and mandatory provisions in this legislation which are needed to cope with the immediate energy crisis.

In his veto message President Nixon speaks to the need for emergency energy legislation. Among the needed authorities identified in his veto message are—

> We need the authority to require energy conservation measures. We need the direct authority to ration gasoline if, and only if, rationing becomes necessary, which it has not. We need the authority to require conversion of power plants, where possible, to permit the use of our abundant coal reserves.

I must stress. Mr. President, that these are the authorities and, vitally needed authorities, contained in the conference report on S. 2589. I will vote to override the President's veto.

Mr. President, we will decide this issue in a few minutes. I am certain that each Member will vote his conviction. I doubt that there is a sufficient number of Senators to provide the necessary two-thirds majority to override the President's veto. It will be demonstrated, however, that a substantial majority of the Members of this body disagree with the action of the Chief Executive.

Mr. GOLDWATER. Mr. President, it was very difficult for all of us in Congress to believe last fall that we actually faced and were in the middle of a fuel crisis in this country. I know from trips home that the people at home find it difficult to believe and that they no longer do.

What the American people are looking to us for is some relief. I suggest that the American people want fuel, the American people want gasoline, the American people want everything needed that comes from petroleum to provide heat, propulsion, and the other things we get from petroleum products. They do not want more regulation.

I asked the distinguished leader of this bill before we departed for the Christmas vacation to name for me where 1 additional gallon of gasoline was coming from the 32 bills we discussed, none of which had been passed. I did not get any answer except the Alaskan pipeline, and I suggested that had nothing to do with the present legislation.

Nor did the Elk Hills opening in northern California have anything to do with it. And I still claim the emergency measures we have taken have not given to the American people one thimbleful of gasoline for their cars. To sit here and debate day after day after day how we are going to regulate the oil companies, how we are going to cut down on their profits, how we are going to regulate and control, even down to the gasoline station operations, to me is senseless. I do not think the American people approve of it.

For instance, we need new domestic sources. For years—I would say 40 years—we have made those who engaged in fuel exploration almost criminals. We have discouraged such a person. We have talked against him. We have passed prohibitive regulations in the field of natural gas, and in my State we depend on natural gas to produce 52 percent of the copper produced in this country.

We want more fuel. That is what Americans want. When they look at what foreigners have to pay for gasoline, they realize how lucky we have been in this country year after year. They do not like to wait for hours in line for gasoline. I think Americans would be glad to pay a little more if they thought it was going to relieve fuel supplies. We need new domestic sources.

Do my colleagues know what we are going to do if this piece of legislation becomes law? We are going to discourage every small driller that can produce 10 or 12 barrels a day, who might produce 20 barrels, from producing anything. And at the present time that is the only place we are going to get additional petroleum.

We need refineries. I am told by people whose expertise I respect that we need 80 refineries now—not 5 or 10 years from now, but now. They tell me we have enough crude oil to make gasoline, but, again, we have discouraged this kind of investment in the past, and now that we need them, I do not know who is buliding the new refineries. We are talking about building one in Arizona, and I hope we will be able to go ahead with it. Instead of talking about regulating and excess profits and that sort of thing, we could have interested people to go ahead and invest and build refineries.

Another thing we need in this country and do not have—in fact, I think we have one, and that is off Long Beach, Calif., and it is not a modern facility—is the ability to offload the large modern tanker. Neither do we make the large modern tanker. They are being made in other places in the world. I was in Iran recently and saw at one loading dock 13 tankers of over 200,000 tons. Not one of those tankers could be unloaded in the United States, because we have not built the facilities. Again, instead of spending our time talking about regulation, and so forth, why have we not done something to make it a little en-

couraging for companies or people to build those badly needed offload facilities? We are not looking even at 200,000 ton tankers. In Iran they are providing for unloading 500,000 ton tankers, and we have no place in the United States now that can begin to take care of an offload like that.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. GOLDWATER. Mr. President, I will vote to sustain the President's veto because the bill is pure, unadulterated, 100 percent hogwash.

Mr. MUSKIE. Mr. President, with respect to the comments just made by the distinguished Senator from Arizona (Mr. Goldwater), let me read from the President's veto message his view about the importance of the legislation which we are considering, and I read the following paragraph:

> We need the authority to require energy conservation measures. We need the direct authority to ration gasoline if, and only if, rationing becomes necessary, which it has not. We need the authority to require conversion of power plants, where possible, to permit the use of our abundant coal reserves.

These three needs which the President describes even now in a message vetoing the bill are essential national policy, he tells us.

Mr. President, he told us the same things last December, and it was in response to his urging and that of his administration that we in the Senate, and the two Houses in conference worked long days and long hours to iron out our differences and produce this kind of authority.

At that time there were just two hangups: One, the nature of the conservation authority we should give to the Energy Administrator, Mr. Simon; and two, the question of what we should do with respect to whatever windfall profits might be generated from the current situation by the oil companies.

The House was adamant on the so-called windfall profits provisions last December. There was no way to persuade the House to recede. And finally I offered an amendment which suspended the House provisions until January 1975, thus giving us a year to work out those problems.

In addition, I did my best to give the President flexibility with respect to the conservation authority that would be given to Mr. Simon.

When that work was all done, my impression was that, although there were some differences remaining, everybody concerned could live with it—the Senate conferees, the House conferees, and the administration advisers.

But, no; when the bill hit the floor, a filibuster was launched against those suspended windfall profits provisions, and the bill was killed in the closing hours of that session.

So when we came back in this session, we went through the same exercise again; succeeded in persuading the House to substitute, for its windfall profits provisions, the rollback provisions incorporated in the pending bill. And again those provisions were tailored to comments which had been made by Mr. Simon in behalf of the administration. He had said over and over again that he felt the price of crude oil should ultimately settle at about $7 per barrel. Using that figure, and indeed 9 cents more—$7.09 a barrel—the Senate and House conferees wrote in this rollback provision. **[Sec. 110.]**

Indeed, this rollback provision is attacked from the other side as permitting too much of an increase in the price of petroleum products. Because it is attacked from both sides, I suggest perhaps the provision we have pending before us is a reasonable one.

How high does the administration now think the price of domestic crude should go? We are not told, but on top of page 2 of the mimeographed copy of the veto message there is language which may give us a clue, and I read:

> The rollback would not only cut domestic oil production, but would also retard imports since in the present environment oil companies are reluctant to import oil and gasoline that would have to be sold at prices far above the domestic prices.

Is the President telling us in this language that he believes the price for domestic crude should rise to the levels set by the Arab oil-producing countries? That is what he seems to be saying. What he seems to be saying, therefore, is that if one consents to his veto message and drops the rollback provisions, we can expect that the price for American domestic crude will rise to meet the levels set in the international market by the Arab oil-producing states.

I cannot think of any other way of interpreting that language in the President's veto message.

It was because of the threat—that an arbitrary price would become the market price for domestic crude—that the House and Senate conferees felt impelled to write these rollback provisions into the bill.

I would like to say, Mr. President, that I will vote to override the President's veto because I feel that to abandon this effort to control prices will place those prices in the hands of an administration which seems to be pointing in the direction of the cartel prices set overseas.

Mr. President, I refer to the language at the top of page 2 of the President's veto message to indicate the reason for my position.

It was at the urging of the President that we give him the authority to require energy conservation measures and to ration gasoline, if necessary, that I was willing to work with my colleagues in this body and in the House in order to loosen up some of the environmental safeguards in our environmental law.

I felt that if Americans were going to be asked to conserve heating oil and gasoline by turning down their thermostats and by driving slower and by driving less and all of the other means by which we have been asked to conserve heating oil and gasoline that it was not unreasonable for those of us interested in environmental values to make some small sacrifice, provided that it did not mean the abandonment of our environmental goals.

If these authorities are so unnecessary at the present time that the President is impelled to veto this bill, then I would say to the President that, for one, I will take another look at any further request on his part to modify the environmental laws before I make a decision.

Mr. President, I have one other concern. I have the concern that the President may have an unstated reason for vetoing the bill, and that would be that he would want a more complete relaxation of the environmental laws than the bill provides.

We already know what the administration wanted to do to environmental laws under the guise of the energy emergency. In early November 1973 representatives of the administration submitted

an informal text of legislation that was printed for the use of the Senate Interior Committee on November 6, 1973.

A blanket gutting of the Clean Air Act was proposed in section 203, which reads in part:

The President may—

(4) acting through the Administrator of the Environmental Protection Agency, exempt, by order and without the necessity for hearing, any fuel-burning stationary source of air pollutant emissions from any emissions limitation in any regulation promulgated under the Clean Air Act or any State air quality statute or local regulation, which limitation may apply to such source in a manner which restricts the source's ability to use any fuel either allocated to it pursuant to this Act, or approved for use by it in conformity with the purposes of this Act; such exemptions shall be granted for a period not to exceed the duration of the energy emergency or as necessary to comply with section 203(3);

The same section called for exceptions from a Clean Water Act, even though the regulations to be waived had not even been proposed:

The President may—

(5) acting through the Administrator of the Environmental Protection Agency, exempt, by order and without the necessity for hearing, any refinery or other installation producing or finishing any fuel and any electrical generating facilities from any discharge limitations or other requirements in Federal Water Pollution Control Act (33 U.S.C. 1251 et seq), or any State water quality statute, and from any discharge or other limitations in any waste water discharge permit issued by any State or Federal agency pursuant to section 402 of the Federal Water Pollution Control Act (33 U.S.C. 1342), or any State water quality statute, whenever he determines that such exemption is necessary to assure adequate production of fuels or energy or to effectuate the purposes of this Act; such exemptions shall be granted for a period not to exceed the duration of the energy emergency or as necessary to comply with section 203(c);

(6) enter into appropriate understandings, arrangements, or agreements with concerned domestic interests, foreign states or foreign nationals, or international organizations, to adjust and allocte imports of fossil fuels, or take such other action, and for such time, as he deems necessary, with respect to trade in fossil fuels, in order to achieve the purposes of this Act.

Mr. President, I include the entire administration proposal printed November 6, 1973, at the end of my remarks.

Mr. President, there must be those in the administration who would use this veto as a way to get wider authority to undermine the environmental law. And, for that reason, I urge those of us who are concerned with me in the environment to vote to override the President's veto.

There being no objection, the proposal was ordered to be printed in the Record, as follows:

DRAFT OF THE EMERGENCY ENERGY ACT ADMINISTRATION PROPOSAL

TITLE I—FINDINGS AND PURPOSE

SEC. 101. FINDINGS AND DECLARATIONS.—The Congress hereby finds and declares that:

(1) Adequate energy supplies are essential to the security of the Nation and the maintenance of its defenses at home and abroad.

(2) The availability of clean, reasonably priced supplies of energy are equally critical to the maintenance of the health, safety, and welfare of the American people in insuring adequate supplies of food, shelter, health, education, employment, and emergency services.

(3) As the population increases and the demands for a better living environment increase, the American people will require increasing quantities of clean energy supplies.

(4) Responding to the demands for increasing quantities of clean energy will require more efficient utilization of available energy supplies and both the development of new domestic resources and, at least in the next decade, increased levels of imports of energy supplies from abroad.

(5) Disruptions in the availability of imported energy supplies, particularly crude oil and petroleum products, pose a serious risk to national security, economic well-being, and the health and welfare of the American people.

(6) It is necessary that the United State maintain the freedom to pursue a foreign policy independent of and unrestricted by the possible need to obtain supplies of natural resources including fossil fuels and other forms of energy from foreign states.

(7) Potential interruptions of important energy supplies, both in the near term and in the future, will require emergency measures to reduce energy consumption, increase domestic production of energy resources, provide for equitable distribution of available supplies to all Americans, and take appropriate international action to promote sharing of foreign supplies of fuels.

(8) The most effective use and development of domestic resources and imports of energy sources from abroad will require coordination of interstate and foreign commerce related to energy as well as a comprehensive national program which will take into account the diversity of needs, climate, and available fuel resources in different parts of the United States.

(9) The development of a comprehensive energy policy to serve all of the people of the United States necessitates the regulation of intrastate delivery and use of energy resources in order to insure the effective regulation of foreign and interstate commerce in energy service delivery.

SEC. 102. PURPOSES. The purposes of this Act are to—

(1) Provide the President with such authority as may be needed to meet any emergency deficiency in energy supplies, including emergencies resulting from foreign restrictions on the exportation of energy resources and the limitations of domestic supply and to insure the best use of existing resources consistent with the national security and the requirements of the health, safety, and welfare of the American people.

(2) Insure that measures taken to meet existing emergencies are consistent, as nearly as possible, with existing national commitments to protect and improve the environment in which we live.

(3) Minimize the adverse effects of such shortages or dislocations on the economy and industrial capacity of the Nation, including employment, to preserve the independent sectors of the domestic energy industries.

TITLE II

SEC. 201. DECLARATION OF EMERGENCY.—

(1) If the President determines that there is an actual or threatened shortage of essential supplies of fuel, including fossil fuels of any kind or description, or of energy, including electrical energy supplies which may impair the national security, economic wellbeing, health, or welfare of the American people, he shall proclaim the existence of an energy emergency, and shall in addition to other authority conferred by law, take such of the following actions as he deems necessary to deal with the actual or threatened shortage.

(2) The declaration of an energy emergency shall, for the purposes of this Act, terminate one year after the date of its proclamation, unless it shall have been terminated earlier by the President. The President may extend the declaration of an energy emergency for additional periods not exceeding one year. Prior to any such extension, the President shall provide notice to the Congress of his intention to proclaim such an extension.

SEC. 202. AUTHORITY.—During any energy emergency proclaimed by the President pursuant to this Act, the President may exercise any authority vested in him on date of enactment of this Act by the Defense Production Act of 1950, as amended, the Economic Stabilization Act of 1970, as amended, and the Export Administration Act of 1969, as amended, and the Export Administration Act of 1970, as amended, to accomplish the purposes of this Act notwithstanding any prior expiration of any of those Acts.

SEC. 203. EMERGENCY FUEL DISTRIBUTION ACTIONS.—In addition to the authority conferred by section 202 of this Act, the President is authorized during any energy emergency to establish priorities of use, allocation systems for wholesale purchasers and rationing systems to end users and, notwithstanding any other provision of State or Federal law. In exercising this authority, the President may—

(1) allocate all supplies of fuels among all producers, refiners, gas plant operators, wholesale marketers, jobbers, suppliers, distributors, terminal operators, of any person, firm, or corporation supplying or purchasing, wholesale or retail,

or using any fuel of any derivation, including coal, natural gas, or petroleum of any condition, including crude or refined, or quality, including heating value and chemical content;

(2) require any person, firm, or corporation having in its possession or having contracted for or having the capability to produce any supplies of fuel to distribute or redirect the distribution of such supplies, by such quantity and quality as he may specify, to whatever wholesale or retail purchasers of fuel he may designate on a fair and equitable basis;

(3) order the owner or operator of any fuel-burning installation having the capability, as determined under regulations prescribed by the President and after consultation with the Federal Power Commission with respect to matters under its jurisdiction, to convert or preclude from converting from the use of one fuel to the use of another or alternative fuel and to effectuate such conversion; any installation so converted or precluded from conversion will be permitted to continue to use such fuel for at least one year;

(4) acting through the Administrator of the Environmental Protection Agency, exempt, by order and without the necessity for hearing, any fuel-burning stationary source of air pollutant emissions from any emissions limitation in any regulation promulgated under the Clean Air Act or any State air quality statute or local regulation, which limitation may apply to such source in a manner which restricts the source's ability to use any fuel either allocated to it pursuant to this Act, or approved for use by it in conformity with the purposes of this Act; such exemptions shall be granted for a period not to exceed the duration of the energy emergency or as necessary to comply with section 203(3);

(5) acting through the Administrator of the Environmental Protection Agency, exempt, by order and without the necessity for hearing, any refinery or other installation producing or finishing any fuel and any electrical generating facilities from any discharge limitations or other requirements in any regulations adopted pursuant to the Federal Water Pollution Control Act (33 U.S.C. 1251 et seq.), or any State water quality statute, and from any discharge or other limitations in any waste water discharge permit issued by any State or Federal agency pursuant to section 402 of the Federal Water Pollution Control Act (33 U.S.C. 1342), or any State water quality statute, whenever he determines that such exemption is necessary to assure adequate production of fuels or energy or to effectuate the purposes of this Act; such exemptions shall be granted for a period not to exceed the duration of the energy emergency or as necessary to comply with section 203(c);

(6) enter into appropriate understandings, arrangements, or agreements with concerned domestic interests, foreign states or foreign nationals, or international organizations, to adjust and allocate imports of fossil fuels, or take such other action, and for such time, as he deems necessary, with respect to trade in fossil fuels, in order to achieve the purposes of this Act.

SEC. 204. EMERGENCY ACTIONS TO REDUCE ENERGY CONSUMPTION.—

(1) During an energy emergency, the President is authorized to impose emergency restrictions on public or private activities which involve or result in the use of fuel or energy resources which may include, but are not limited to: transportation control plans; restrictions against the use of fuel or energy for decorative lighting, outdoor advertising, recreational activities or other nonessential uses of energy; limitations on operating hours of commercial establishments and public services, such as schools; temperature restrictions in office and public buildings, including wholesale and retail business establishments, and other structures; and a requirement that the States adopt restrictions on speed limits.

(2) The President may initiate and carry out voluntary energy conservation programs such as public education programs and voluntary reductions in energy use.

(3) To encourage the use of funds authorized by the Federal-Aid Highway Act of 1973 for mass transit capital improvements, the Federal matching share ceiling shall be increased to an amount not to exceed 80 per centum on nonhighway public mass transit projects involving the construction of fixed rail facilities or the purchase of passenger equipment including rolling stock for any mode of mass transit, or both, when such projects are funded pursuant to section 142 of title 23, United States Code, and to further insure the equitable use of such funds, section 164(a) and section 165(b) of the Federal-Aid Highway Act of 1973 are hereby repealed.

(4) Energy control fees: In order to deter consumption of energy resources or encourage the use of alternate fuels, the President may impose fees on energy

consumption, at either the wholesale or retail level, at rates not to exceed—per centum of a representative market value of the item involved.

SEC. 205. EMERGENCY ACTIONS TO INCREASE ENERGY SUPPLIES.—During an emergency the President is authorized to—

(1)(a) Require production of the developed oil and gas resources from any national petroleum reserves, including the naval petroleum reserves, at the maximum rate which could be sustained without detriment to the ultimate recovery of oil and gas under sound engineering and economic principles. Such production is attributable to, and shall meet the needs of production for "national defense purposes", as used in section 7422, title 10, United States Code, as amended, and related sections. Production shall be required under this section only if the energy emergency requires such production to satisfy national security requirements, as determined by the President.

(b) Require expeditious exploration and further development of these reserves to determine the amount of oil and gas reserves located thereon; and

(2) Regulate the conservation and production of crude oil and natural gas. Those regulations shall take precedence over State regulations or crude oil and natural gas which are inconsistent with the regulations of the President.

SEC. 206. RELATION TO ENVIRONMENTAL REQUIREMENTS.—(1) No action taken under this Act shall, for a period of one year after the initiation of such action, be deemed a major Federal action significantly affecting the quality of the human environment within the meaning of the National Environmental Policy Act of 1969 (83 Stat. 852). However, prior to taking any action if practicable or in any event within sixty days after taking or initiating any action that has potentially significant impact on the environment, an environmental evaluation, with analysis equivalent to that required under section 102(2)(c) of the National Environmental Policy Act to the extent practicable within the time constraints, shall be prepared and circulated to appropriate Federal, State, and local government agencies and to the public: *Provided, however*, That such an environmental evaluation shall not be required where the action in question has been preceded by preparation and issuance of an environmental impact statement under section 102(2)(c) of the National Environmental Policy Act. In any such action is to be continued beyond one year from the date of its initiation, the requirements of the National Environmental Policy Act shall apply in full to any such action to which they would otherwise apply.

TITLE III—RESPONSIBILITIES OF FEDERAL REGULATORY AGENCIES

SEC. 301. It is the sense of Congress that the public interest requires that governmental actions relating to energy control and transportation policies be coordinated with a comprehensive national energy policy that will insure the development and conservation of existing energy resources to meet the energy needs of the Nation in the future. Consistent with their existing statutory responsibilities, executive agencies as defined in section 105 of title 5, United States Code, shall take into account the effect of their proposed actions on the development and conservation of foreign and domestic energy resources of the United States, and shall take such emergency action as may be necessary to develop and conserve energy during an energy emergency declared by the President.

SEC. 302. During an energy emergency the designated regulatory agencies shall have the following emergency authorities:

(1) The Federal Power Commission may, without notice or hearing, suspend for the duration of such emergency, the applicability of sections 4 and 7 of the Natural Gas Act, as amended, to sales to pipelines which sales would, but for such suspension, otherwise be subject to the provisions of such sections. In order to protect the interests of consumers, the Federal Power Commission is authorized, for the duration of the energy emergency, to monitor the wellhead prices of such natural gas sales under contracts subject to these provisions, and, if necessary establish ceilings as to future rates or charges for such sales. In determining whether to establish such ceilings and in setting their level, that Commission shall take the following factors into account:

(A) the current and projected price of other fuels at the point of utilization, adjusted to reflect a comparable heating value;

(B) the premium nature of natural gas and its environmental superiority over many other fuels;

(C) current and projected prices for the importation of liquefied natural gas and the manufacture of synthetic gaseous fuels; and

(D) the adequacy of these prices to provide necessary incentive for exploration and production of domestic reserves of natural gas and the efficient end-use of such supplies.

(2) In any proceeding under the Atomic Energy Act of 1954, as amended, for which a hearing is required to grant or amend any operating license for a nuclear power reactor, the Commission may issue a temporary operating license under the authority of this Act in advance of the conduct of such hearing: *Provided, however,* That in all other respects the requirements of that Act including, but not limited to, matters of public health and safety, shall be met. No such temporary operating license may be issued for a period in excess of eighteen months.

(3) The Interstate Commerce Commission, the Civil Aeronautics Board, and the Federal Maritime Commission shall have, for the duration of any national emergency, in addition to their existing powers the authority to review and adjust a carrier's operating authority in order to conserve fuel. This authority includes but is not limited to adjusting the level of operations, altering points served, shortening distance traveled, and reviewing or adjusting rate schedules accordingly. Actions taken pursuant to this paragraph may be taken, notwithstanding any other provision of law, after summary hearings under procedures prescribed by the regulatory agency but any person adversely affected by an action shall be entitled to a full hearing, as prescribed by law, if petition is filed with the agency within ——— days. Consistent with the purposes of this Act, the Interstate Commerce Commission may enlarge, modify, or remove the various categories of exempt carriage under the Interstate Commerce Act.

(4) All agencies under subsection 302 of this title shall report to the Congress within ninety days of the proclamation of an energy emergency by the President the actions taken by them pursuant to this title. They shall submit additional reports every ninety days thereafter for the duration of the emergency.

TITLE IV—GENERAL PROVISIONS

SEC. 401. The President is authorized to delegate the responsibility vested in him by this Act (other than the authority to proclaim energy emergencies) to any officer or agency of the Federal Government or any State or local government.

SEC 402. PENALTIES.—Any person who—

(a) Willfully violates any order or regulation issued pursuant to this Act shall be guilty of a misdemeanor and upon conviction shall be punishable by a fine not to exceed $———— for each violation.

(b) Violates any order or regulation issued pursuant to this Act shall be subject to civil penalty of not more than $———— for each day he is in violation of this Act.

SEC. 403. INJUNCTIVE RELIEF.—The United States district courts for the districts in which a violation of this Act or regulations issued pursuant thereto occur, or are about to occur, shall have jurisdiction to issue a temporary restraining order, preliminary or permanent injunction to prevent such violation. Such injunction may be issued upon application of the Attorney General in compliance with the Federal Rules of Civil Procedure.

SEC. 404. JURISDICTION OF STATE COURTS.—Violations of State orders or regulations issued pursuant to the requirements of this Act shall be punishable upon conviction in appropriate courts of the several States, the District of Columbia, the Commonwealth of Puerto Rico, or territories. Such courts shall have authority to impose civil penalties or grant injunctive or other relief, consistent with the jurisdiction, with respect to actions which are taken or threatened to be taken in violation of State orders or regulations issued pursuant to the requirements of this Act.

SEC. 405. AUTHORIZATIONS.—There are hereby authorized to be appropriated such funds as are necessary to carry out the provisions of this Act, and during an energy emergency, such funds may be expended without regard to fiscal year limitations.

SEC. 406. RELATION TO OTHER LEGISLATION.—Except as expressly provided in this Act, nothing in this Act shall be deemed to limit or restrict any authority conferred by any other Act.

SEC. 407. ADMINISTRATIVE PROVISIONS.—Sections 205, 206, 207, 211(a), 212(a), 212(e), 212(f), 212(g), and 213 of the Economic Stabilization Act of 1970 (as in effect on the date of enactment of this Act), shall apply to the administration of any regulations promulgated under this Act, and to any action taken by the

President (or his delegate) under this Act, as if such regulation had been promulgated, such order had been issued, or such action had been taken under the Economic Stabilization Act of 1970; except that the expiration of authority to issue and enforce orders and regulations under section 218 of such Act shall not affect any authority to amend and enforce the regulation or to issue and enforce any order under this Act.

SEC. 408. This Act expires on June 31, 19—.

Mr. JACKSON. Mr. President, I yield myself 1 minute in which to take the opportunity to again extend my deep appreciation to the Senator from Maine for the hours, days, weeks, and months he has spent on this bill. He was a mainstay in our efforts throughout the inception of the legislation. I am deeply grateful for his excellent statement. I think that he has stated the case very well.

I also, Mr. President, express my appreciation to the distinguished chairman of the committee, the Senator from West Virginia (Mr. Randolph), for his ongoing contributions since the inception of the pending bill that is now before the Senate.

Mr. BUCKLEY. Mr. President, 3 weeks ago I spoke on this floor against the adoption of the Energy Emergency Act because of its extremely adverse impact on the consumers of the country. I pointed out that our consumers are having their natural gas supply interrupted, and that they are forced to line up in the longest automobile lines in the country because we are particularly subject to the Arab embargo.

I pointed out that the oil rollback on prices would, at best, save New York 2.5 cents per gallon and remove those incentives required in order to enable us to work our way out of the shortages.

I also pointed out that we had the unanimous testimony of five economists, ignored by the conference committee, who stated that it would be irresponsible to roll back prices unless we wanted to place ourselves in perpetual bondage to the Arab states.

I had hoped that some of our arguments would be reported in the press so that the public might be able to understand better some of the issues involved. Unfortunately, in the next day's New York Times, my comments and the comments of several other Senators were dismissed lightly. I know that the New York Times is never wrong. And to my astonishment, I find that New York is an oil-producing State.

Let me tell the Senate what I have found. New York State has 5,300 wells that in the aggregate are producing 2,700 barrels a day, or an average of half a barrel a day for each well. We are producing about 1 million cubic feet of gas a day.

Then, out of curiosity I decided to find out what happened to oil production and exploration in New York State. I checked in Albany. I found that the price of gas in New York State has risen from 40 cents a thousand cubic-feet to 45 cents. I found also that in September of last year new oil was deregulated prior to May 1973, less than one rig was working per month in New York State. In October 1973, the figure rose to 1.8 rigs. In November it was 5.3 rigs. In February of this year, it was 5.3 rigs.

In New York we have seen an expansion amounting to 400 percent. Reservoirs that had been abandoned two and three decades ago are now being brought back into production and are being used simply because the economics of the situation have been changed.

I submit that if this is the experience of New York State, it is bound to be the experience in the rest of the country. If the price incentive is causing people to risk large sums of money to look for deeper hori-

zons. to bring every last drop of oil out of reservoirs that have long since been abandoned, the interests of consumers of the country are being served.

Mr. President, I will vote to sustain the President's veto.

Mr. President, the farmers of America know about economics, and they want assured supplies of oil. That is why the American Farm Bureau Federation urged the President to veto this legislation. I ask unanimous consent, Mr. President, to print in the Record at this point the statement of the American Farm Bureau Federation regarding the Energy Emergency Act.

There being no objection, the statement was ordered to be printed in the Record, as follows:

STATEMENT OF THE AMERICAN FARM BUREAU FEDERATION REGARDING THE ENERGY EMERGENCY ACT, MARCH 6, 1974

Based on policy Farm Bureau consistently has opposed price controls and rollbacks as a matter of principle. Meeting this week in Chicago, the Board of Directors of the American Farm Bureau Federation affirmed this position and urged the President to veto the Energy Emergency Act, particularly because it contains a provision which would roll back crude oil prices and thus aggravate current shortages. The Board called upon the Congress to sustain the Presidential veto.

WILLIAM J. KUHFUSS,
President.

Mr. MCCLURE. Mr. President, I rise in opposition to the effort to override the President's veto, and I urge Members of the Senate to vote to sustain the President's veto.

Mr. President, we have heard a lot on the floor of the Senate about this measure. We have heard it said that this measure will protect the consumers and get the prices down. As a matter of fact, for more than one reason if we adopt this measure, the price of petroleum products to the consumers of the United States will go up and not down, because it will increase our dependency upon imported products which are highly priced, more so than the domestically produced products that now go into the market.

It is also said that this will create, by some magic alchemy, an independence within our own country. I say this measure will create a greater dependence on imported oil, for the immediate future and for the longer range future.

It has been said that this measure is somehow anti-big business, anti-major oil company. Mr. President, that is an anomaly, because those who speak in favor of this measure say they are in favor of reduced profits to big oil companies, but quietly above the best interests of the big oil companies because their major profits are derived from imports and not domestic production. So the big oil companies like this measure; it serves their interests and increases their profits. The little independent oil companies of this country are opposed to this measure.

Mr. GRAVEL. Mr. President, will the Senator let me underscore that? Will not the Senator agree that it will result in driving American capital abroad?

Mr. MCCLURE. The Senator from Alaska is absolutely correct. It has been said that this measure will save the consumer 5 cents a gallon at the gasoline pump. But I will say that if the price goes back to $5.25 a barrel on old oil and $7.09 on new oil, the customer will save only seven-tenths of 1 cent a gallon, and if the price of all of it were

rolled back to $5.25, he would save 1 1/10 cents a gallon at the pump, and not the larger amounts claimed by the proponents of this measure.

If we are concerned about profits in the oil industry, there is a much better way of dealing with the problem than by this clumsy measure, and that is to deal with profits directly. I have submitted a proposal which would accomplish that, a measure which would increase the supply and reduce profits, rather than result in a scarcity.

Mr. GRAVEL. Mr. President, I just want to underscore what my colleague from Idaho has said very briefly: that this measure will cause inflation, not reduce inflation. It will drive capital abroad, which will create a scarcity here. If we buy more abroad, we will give more control to foreigners, who have essentially caused the inflation we have experienced in the past year. I cannot think of anything more nonsensical, or more inimical to our domestic interests.

One cannot, by edict, turn back the clock. I tried to make that point with my colleague from Washington with respect to real estate values and rentals. But whether it is food or whether it is oil, the principle is the same. For some reason, we think we are gong to be able to do it with oil, but I say it would mean disaster to the most fundamental parts of our society.

Mr. HANSEN. Mr. President, I do not think anything new can be added to the debate. All the issues have been explored in great detail. If I can be helpful at all, the only thing I can do is summarize what we have been talking about.

It ought to be evident to all Americans now that despite our best intentions, we cannot repeal the law of supply and demand. That is manifest from what is happening in Europe. There are no gas lines over there. They have no energy crunch, for obvious reasons. If we want more oil, and I am sure most Americans do, because our economy is geared to energy, and energy comes almost 80 percent from oil and gas, we have got to have oil and gas. The question then arises, are we going to get it from other parts of the world, from Arab nations, from the Middle East, or do we want to get more of it here? Events in the Middle East have underscored the fact that if we want to have the latitude that Americans demand, and that indeed in the interests of world peace we must have, then I think it is important that we have a greater degree of self-sufficiency now, in being able to supply oil and gas domestically, than we have had in the past.

The issue is as simple as that. This act will not produce a single additional barrel of domestic oil.

The price rollback can result only in continued reliance on those who control most of the world's oil at their own price.

The only solution to a shortage is more supply.

The petroleum industry has already responded to more realistic crude oil prices and higher profits. The economics department of McGraw-Hill publications reports that the petroleum industry plans to invest $7.68 billion in 1974 which is 42 percent higher than last year and double the increase planned last October.

So a vote to override the President's veto would reverse the trend toward the only real solution of our energy problem—development of domestic self-sufficiency.

We can do that very simply by doing what the Senator from Alaska has suggested, and that is rejecting this illstarred, poorly conceived,

economically foolish measure that would have become law had not the President of the United States vetoed it.

Let us do that. Let us reject it, because not too long ago we passed another emergency bill that has now come back to haunt us. And that was the Emergency Petroleum Allocation Act which now must be amended because it was pushed through as a consumer protection bill when in practice it has caused nothing but trouble and longer lines at the gas pump.

Mr. JACKSON. Mr. President, I think it is important for the Members of the Senate to keep in mind that there is something more to the legislation that is pending before this body than the subject of rollback. All I want to say on the subject of rollback of the price [Sec. 110] is that we are not talking about a free market. We are talking about a cartel market.

Mr. President, we have asked the Arab countries to roll back their prices, we have asked Canada to roll back its prices, and now, if this override fails, we are not going to roll back our prices, but instead we are talking about fixing our prices—and that is what it amounts to—at the Arab price level.

I point out that the bill also provides for the coverage of those who are unemployed by reason of the energy crisis. [Sec. 116.] Let me point out just this one fact: over the ticker, a few minutes ago, the Bureau of Labor Statistics came out with the latest unemployment statistics. They are, as of today, 292,000 people out of work directly as a result of the energy crisis, bringing the total to 2,643,000. This is up 40,000 over last week.

Mr. President, the President dismisses this situation in a rather cynical manner. He dismisses in a cynical manner an opportunity to help the small businessman to obtain long-term loans, and homeowners' long-term loans in order to provide for a more effective means of dealing with energy problems through appropriate insulation programs. [Sec. 130.]

He says nothing about a requirement in the bill here which is crucial: that the oil companies make a full disclosure of their assets and their resources. [Sec. 124.]

We have provisions in here for safeguards on antitrust. We have grants to the States to implement this program. We have provision for the protection of franchise dealers, both branded and nonbranded. We have a provision for control of exports, and we have a provision for conservation and rationing.

This is a comprehensive bill, and I hope the Senate will vote to override the veto measure of the President of the United States.

Mr. TOWER. Mr. President, the issue of major oil company profits is probably about the phoniest issue we could bring up in connection with the rollback on the price of domestic crude. Approximately 75 to 80 percent of the domestic exploration in this country is undertaken by independent operators, not by the major oil companies. The major oil companies are the customers of the independents. When you roll back the price of crude, you do not change the profit picture of the major oil companies; what you do is discourage the independents. You discourage marginal production in this country, which amounts to about 12.5 percent of the production in this country. If we fail to sustain the veto of the President of the United States, we will

wipe out about 12.5 percent of the oil and gas production in this country.

The Senator talks about unemployment. Mr. President, we will have a lot more unemployment if this undesirable piece of legislation is sustained by this vote and subsequently sustained by the House of Representatives. Make no mistake about that.

Furthermore, we are going to deny ourselves the prospect of drilling for an additional 275 million barrels of oil in this country this year, if this law is allowed to stand.

Further, yes, there is something else in the bill and that is **section 108** which prescribes the regulation of maximum efficient production—MERP, as it is called—and that will go into the hands of the Federal Government and out of the hands of competent State authorities and can destroy future sources of oil for this country for years to come.

Mr. BELLMON. Mr. President, the Energy Emergency Act with the crude oil price rollback provision **[Sec. 110]** is a bad piece of legislation and the President did the right thing by vetoing it. I feel strongly the veto should be sustained for these reasons:

It would further weaken the domestic energy industry at a time when drilling activity is beginning to pick up.

It would create a greater dependence on imports from other countries at higher prices.

It would not relieve the shortage of fuel, because it would not produce a single extra barrel of oil.

It would not produce any significant effect on propane prices, because about two-thirds of all propane is produced from natural gas.

It would not reduce the price of gasoline more than about 1 cent per gallon, and these savings would soon be wiped out by high-cost imported fuel.

It would be another step toward Government control of private industry.

It would allow the Federal Government to take over conservation functions now carried out by State regulatory agencies.

It would probably be declared unconstitutional, because it would be the first time in history that Congress set a price on one commodity for one industry.

This rollback bill **[Sec. 110]** would be a setback for every consumer in the United States.

Mr. STEVENSON. Would the distinguished Senator from Washington yield briefly for some questions on the rollback section of the bill, **section 110**?

Last weekend I had the opportunity to meet with several independent producers in Illinois who expressed some concern over this section and some confusion over what would happen if the provision were enacted. They thought that as soon as the bill was enacted the price of all oil—even that of new oil—would immediately be rolled back to $5.25 per barrel. Some of these producers thought they might be able to live with a price of $7.09, but not a price of $5.25 for new oil, but they believed that the price would immediately roll back to $5.25 and that there would probably be a delay of several months before various hurdles could be passed and the $7.09 price instituted.

Senator, as a conferee I understood that what this legislation actually envisions is a 30-day freeze after the bill is enacted, in other

words, a 30-day period within which the President could act to free various classes of oil from the $5.25 per barrel level up to the $7.09 per barrel level. During that 30-day period, however, prices would remain what they were on the day of enactment, or about $5.25 for old oil and over $10 for the so-called new oil. It would only be after the 30-day period, and unless the President had not acted to raise prices beyond the $5.25 level for certain classes of oil, that the price of all oil would be rolled back to $5.25 per barrel.

Am I correct in my understanding of the provisions of **section 110**?

Mr. JACKSON. The Senator from Illinois is essentially correct. The only caveat I would add is that if the President chose to act before the expiration of the 30-day period he could set prices for any class of oil at a price over $5.25 and up to $7.09, but not above that price. But essentially we have a 30-day freeze on present prices, and then a rollback, a rollback which would be to $5.25 for all oil—and $5.25 is not even a rollback for old oil—unless the President acted within that time frame to exempt certain classes of oil from the $5.25 price, in which case he could raise those classes up to a maximum of $7.09. The authority to raise the price up to $7.09 is with the President.

Mr. STEVENSON. Thank you. Senator Jackson, it is also my understanding that the procedural provisions of **section 110** would not cause a serious delay. There would be a 10-day period required for comments on any action the President proposes to take, but even that could be waived with the hearing to follow after a price above $5.25 is instituted. And the bill rules out any temporary restraining orders or preliminary injunctions by the courts. The courts could only act by issuing a final order ruling the President's action unlawful because it is based on a lack of substantial evidence. Is my understanding on these points correct?

Mr. JACKSON. The Senator is correct. The President can act as quickly as he deems fit. The procedural mechanisms which are placed in the act are for the protection of the public—the independent producers as well as the consumer—from arbitrary actions by the administration. The independent producer can challenge the President's prices as being too low and, therefore, inequitable if the price is below $7.09.

Mr. STEVENSON. But the proceedings need not drag on months or even weeks?

Mr. JACKSON. How long any proceedings "drag on" depends on the administration. The only period the bill provides is a 10-day period for comments, and even that period can be waived. And once the price is in effect it stays in effect until a court finally determines that it is inequitable.

Mr. STEVENSON. And am I correct in stating that the $7.09 price could apply to all new oil and to oil from stripper wells?

Mr. JACKSON. The Senator is correct.

Mr. STEVENSON. And since the administration was seeking a higher level than $7.09, is it not probable that the administration would move quickly to permit $7.09 for all new oil and oil from stripper wells?

Mr. JACKSON. That would be my expectation.

Mr. STEVENSON. I thank the Senator for that clarification of this legislation. It should be reassuring to independent producers throughout the country, whom we want to aid, as well as to those in Illinois.

Mr. WILLIAMS. Mr. President, I am very disturbed about President Nixon's decision to veto the Emergency Energy Act passed by Congress.

Mr. BAYH. Mr. President, I shall vote to override the President's unwise and illogical veto of the Energy Emergency Act and urge strongly that my colleagues join me in passing this crucial legislation despite the President's shortsighted action.

This is President Nixon's 42d veto, and it is as unjustified as any of the preceeding 41. Once again, the President has vetoed legislation passed overwhelmingly by both the Senate and House of Representatives. Once again we are faced with the necessity of legislating, not by a majority but by two-thirds of the Senate and House.

The veto of the Energy Emergency Act is ironic, since the President and spokesmen for his administration have repeatedly chided the Congress for not moving fast enough on energy legislation. The fact is this important bill would have been enacted before the Christmas recess were it not for stalling tactics supported by the administration, and in January were it not for an initial recommittal of the conference report accomplished with the full support of the administration.

The President offers three reasons for his veto. None are well-taken and, in fact all fly in the face of the best interests of the American people.

PRICE ROLLBACK

The President opposes **section 110** of the bill which would lower crude oil and refined petroleum product prices. He argues that the rollback in prices would reduce the supply of available gasoline by discouraging oil exploration.

This is wrong. The bill permits the President to raise the price of so-called new oil, that is oil produced in excess of early 1973 production, to as much as $7.09 a barrel. This is 35 percent above the basic price of $5.25 a barrel. What the President fails to acknowledge, as he adopts the same arguments made by the oil industry when it lobbied against passage of the bill, is that as late as last fall the oil industry agreed that a price of about $7 a barrel was enough to justify new drilling and production.

We are faced, Mr. President, with a remarkable situation in which the oil industry chooses to raise the minimum acceptable price for new oil production to new and higher levels after every price increase is granted. Such unjustified price increases smack of profiteering and place a totally unreasonable burden on American consumers already reeling under inflation which came close to 9 percent last year.

To gain a better perspective on the $7.09 a barrel price to be allowed on new oil, this is fully twice the average domestic price of crude oil just 1 year ago, and $1.84 a barrel more than the basic price of domestic oil.

Rather than support the price rollback, which would provide desperately needed relief for American consumers, the President offers what he insists on calling a windfall profits tax. But no matter what the President calls his proposal, it really is an excise tax, the burden of which will be carried by consumers as the major oil companies—whose profits were up 50 percent last year—continue to rake in record profits.

Mr. President, the rollback in crude oil and refined petroleum product prices is one of the very important provisions of Energy Emer-

gency Act. It is something that has the understandable support of the American people. Rather than serving to justify a Presidential veto, it provides good cause for us to override that veto.

UNEMPLOYMENT COMPENSATION

The second reason cited by the President for his veto is **section 116**, the provision for expanded and extended unemployment compensation for workers who lose their jobs due to the energy crisis. Since **section 116** follows very closely an amendment I suggested to the distinguished Senator from Washington (Mr. JACKSON), I obviously have a deep concern about this provision.

The President's abrupt dismissal of this section as "arbitrary" and "vague" shows remarkable insensitivity to the tens of thousands of American workers who have already lost their jobs due to the energy crisis. These workers, and their families, are not buoyed by the overly optimistic fundamentally inaccurate statements by high administration spokesmen that the energy crisis will not play a major role in expanding unemployment.

In my own State of Indiana, the energy crisis has already created grave unemployment, as high as 10 percent in Elkhart. This unemployment is not always directly attributable to a specific governmental response to the energy crisis. Sometimes jobs are lost indirectly due to fuel prices and fuel allocations. Or, as is the case in Elkhart where the recreational vehicle industry has experienced major shutdowns, the unemployment results from consumer reluctance to buy a new recreational vehicle, automobile, or other product, because of legitimate uncertainty about the availability of fuel in coming months.

This is why **section 116** takes into account all unemployment resulting from the energy crisis. The President's objection to this provision ignores reality as clearly as do his other statements that the energy crisis is over and we will not have a recession. The President would like to wish away our energy crisis and coming recession, but all his wishing will not put food on the table of families, in Indiana and across the country, in which the breadwinners have been thrown out of work.

I have no patience for the callous opposition of the President to the improved unemployment compensation provisions of the Energy Emergency Act. This is a most basic need, for which we can wait no longer, and further argues for a vote to override this veto.

ENERGY CONSERVATION LOANS

The third reason given by the President for his veto is the section **[Sec. 130]** which authorizes low interest loans to homeowners and small businessmen to improve insulation. This proposal is designed to meet our energy problem in one of the quickest and most effective ways available.

Even as we explore ways to increase our energy supply, we should by taking the necessary steps to reduce energy demand, and improved insulation will have a major effect in cutting demand.

The President talks about conserving energy, yet he is unwilling to even lend—not give—American homeowners and small businessmen the money needed to conserve significant amounts of energy. All his

lip service will not buy a single storm window, and I disagree fully with his argument against the low-interest loan provision of the act.

Mr. President, having addressed myself to the three specific issues raised by the President in his veto message, I would like to summarize other important and desirable provisions of the Energy Emergency Act. All of these provisions, which follow, have been carefully considered in the Senate and House, and by the conferees in several different sessions, and deserve passage despite the President's veto:

Authority to limit the export of coal, petroleum products and petrochemical feedstocks is given to the Administrator of the new Federal Energy Emergency Administration. **[Sec. 115.]** Also, the Secretary of Commerce would be required to use his authority to limit exports of these vital products if the Administrator deems it necessary to meet the energy emergency. For more than 3 months I have been trying to get the Secretary of Commerce to use his existing authority to limit petrochemical exports. Domestic industry, especially small businesses, has been hurt severely by the shortage of petrochemical feedstocks and the inaction of the Secretary is deplorable. At last, this bill provides a solution to that inaction.

Recognizing that there are limits to which we can balance energy supply and demand by increasing supplies in the short term, the bill gives the administration needed authority to limit energy demand through mandatory conservation methods. Such conservation may be our best hope for avoiding economic disaster due to the energy crisis. **[Sec. 105.]**

In a further effort to avoid energy waste, the bill instructs the regulatory agencies to revise their regulations to permit fuel savings in interstate commerce. **[Sec. 113.]**

Since end-use gasoline rationing may become necessary, the bill creates the necessary authority for rationing. **[Sec. 104.]**

As part of the overall program of energy conservation the bill provides Federal assistance to States and localities in developing carpool program. **[Sec. 117.]**

Since the major, integrated oil companies have used the fuel shortage as a tool against gasoline service station operators who do not follow the company line, the bill contains needed protections for the franchise rights of these small businessmen. **[Sec. 111.]**

The bill has tough, effective antitrust rules to make certain the oil companies do not act improperly in concert in responding to the energy crisis. **[Sec. 114.]**

Mr. President, I know the President's veto of the Energy Emergency Act has brought glee to the boardrooms of the major, international companies. But it has brought sorrow to American consumers. I hope sincerely that the Congress will override this veto, here in the Senate and in the House of Representatives, and in that way show that we are far more concerned with the well-being of the average American family than with the earnings of the multinational oil giants.

Mr. HELMS. Mr. President, President Nixon has, as Senators are aware, vetoed the so-called "Emergency Energy Act." I voted

against this legislation when final passage was considered by the Senate, and I will vote to sustain a veto. This act would create yet another Federal bureaucracy to manufacture "redtape" and harass the American people—those it presumably would exist to aid, all at a cost borne by the taxpayer and consumer.

Everyone is properly concerned about the energy crisis with its shortages of gasoline, fuel oil, and gas. Many portions of the country have felt the heavy burden of long lines at service stations and an inadequate supply of fuel generally. I am convinced that my State has borne the brunt of this situation as heavily as any.

Our people are justly concerned. Many businesses have been adversely affected. Everyone's daily life has been pervaded by the ever present necessity of searching for small quantities of fuel to meet essential and immediate needs.

Nonetheless, the American people remain unconvinced that our fuel situation is so extreme as to merit the extraordinary remedies that have been mentioned from time to time. According to a recent Gallup poll, 53 percent of Americans oppose gasoline rationing: a clear majority. Reasons advanced in opposition to the establishment of such a rationing program are: first the involvement of bureaucratic "redtape," which it is feared would render the program more of a burden than an advantage; two, the inability of the Government to accurately forecast the fuel needs of the various segments of our society so as to structure the program in an equitable manner; and three, the fear that it would encourage "black marketeering."

Furthermore, Mr. William Simon, Administrator of the Federal Energy Office, recently acknowledged that he basically just does not think that rationing would work.

It is evident that the American people do not want gasoline rationing. It is equally evident that the American people believe the Government to be incapable of establishing a fair and workable rationing program. We are compelled to the conclusion that our citizenry would prefer to trust the free enterprise system to provide for their needs. In this conclusion, I entirely agree.

The American people recall all too well the dismal failures of other governmental attempt to improve upon free enterprise. We all remember that we tried price controls on meat, and the result was an almost immediate shortage of meat. Some have advocated a price rollback. Many, however, see this purported panacea for the idle dream that it is. Only through production and competition in the marketplace can we hope to enjoy a more abundant supply of the goods we need and—in the long run—more equitable prices for the goods we buy. Price controls create negative incentives for production. We cannot afford further interference with the business sector in a time of acute shortage.

I cannot support a gasoline rationing program, and I urge the removal of all price controls from the economy so that the market can return to a normal supply-and-demand situation.

I certainly share the general concern regarding the current fuel shortage, but we must not allow this transitory hardship to bring about a further erosion of our free enterprise system and our traditional American economic structure.

Mr. CRANSTON. Mr. President, I rise to express my deep regret that President Nixon has vetoed the Energy Emergency Act (S. 2589) and to urge my colleagues to vote today to override this unfortunate veto.

In his veto message, President Nixon stated that **section 110** of S. 2589, which would roll back the price of domestically produced crude oil would "set domestic crude oil prices at such low levels that the oil industry would be unable to sustain its present production of petroleum products, including gasoline."

Mr. President, this statement is difficult to believe. The rollback provision would simply require that all crude oil produced in the United States—with the exception of stripper wells—would be subject to the current controlled price level of $5.25 a barrel. Currently, 75 percent of all domestic crude oil is subject to this price ceiling. The rollback would affect less than 25 percent of the domestic crude oil—that which is now averaging the world price of $10 a barrel. But to be sure that there is ample incentive to maximize production from current wells and to explore for new oil, the President would have the authority under the rollback provision to raise the price of "new" oil to $7.09 a barrel if he found that such price increases were necessary in order to stimulate new production.

This veto is based to a large extent on the feeble and erroneous argument that we must have uncontrolled, inflation-feeding fuel prices in order to stimulate new production. Even the oil industry admits that $10 a barrel oil is not economically justifiable. In December 1973, the National Petroleum Council said:

"For maximum attainable self-sufficiency by 1980 a price of $4.05 would give a 10 percent rate of return, while a price of $5.74 would give a 20 percent return."

We should not forget, too, that in the past 12 months, crude oil prices have doubled. In January of 1973, the average price per barrel was $3.40. In January of 1974, that average had jumped to $6.75. But even with this supposed incentive, crude oil production during the same period increased by a mere 34,000 barrels—from 10,859,000 barrels a day to 10,893,000 barrels a day.

The facts simply do not support President Nixon's contention that we must allow the price of crude oil to skyrocket in order to encourage the oil companies to produce more oil.

But the President has vetoed far more than a rollback of fuel prices.

By once again acting to protect the interests of the oil companies, President Nixon has sacrificed the interests of the American people.

He has vetoed unemployment assistance benefits of $500 million that would be available as grants-in-aid to the States to provide at least 6 months additional unemployment compensation to individuals left jobless as a result of energy shortages. **[Sec. 116.]**

He has vetoed new legal rights and judicial remedies for service station owners to protect them from arbitrary and unreasonable actions by large oil companies. **[Sec. 111.]**

He has vetoed a provision which would have, for the first time, required the mandatory disclosure by the oil companies of reliable data and information on reserves, production levels, refinery runs, stock

levels, imports, prices, and other information essential to understanding the scope of the energy crisis. **[Sec. 124.]**

He has vetoed stringent antitrust safeguards designed to insure that the agreements among the oil companies to deal with shortages do not result in permanent violations of the antitrust laws. **[Sec. 114.]**

He has vetoed authority for a wide range of actions designed to conserve scarce energy resources, particularly authority to ration gasoline and to require regular operating hours for gas stations. **[Secs. 104 and 105.]**

And he has vetoed authority for the Department of Housing and Urban Development and the Small Business Administration to provide low-interest loan assistance to homeowners and small businesses to finance insulation, storm windows, and improved heating units. **[Sec. 130.]** I am particularly disappointed that this has been vetoed, because in his message, President Nixon claimed:

"The actual energy savings produced by these vast expenditures would not justify such as enormous loan program."

I find this a difficult pill to swallow. In other messages, President Nixon has told the American people that they must conserve energy, that they must turn their thermostats down and turn off lights and make other sacrifices in order to save fuel. His action today amounts to another message that the people must bear the brunt of rising fuel costs, with no hope of assistance in the form of loans from the Federal Government.

And it is incorrect to imply that these conservation measures will have an insignificant impact on our overall energy budget. Currently, the residential sector uses about 20 percent of all the energy consumed, with 70 percent of this amount being consumed by only two household uses—space heating and water heating.

Mr. CRANSTON. The real message of this veto, Mr. President, is that the President of the United States intends to place the primary burden of the energy crisis on the shoulders of the individual consumers. He is saying to the American people that they must swallow rhetoric instead of action and pay higher and higher fuel costs while the oil companies continue to line their pockets with record profits. I urge the Senate to override this veto.

The PRESIDING OFFICER (Mr. William C. Scott). The hour of 5 o'clock having arrived, and all time having expired, the question is, Shall the bill (S. 2589) pass, the objections of the President of the United States to the contrary notwithstanding?

The yeas and nays are mandatory under the Constitution. The clerk will call the roll.

The legislative clerk called the roll.

Mr. ROBERT C. BYRD. I announce that the Senator from Nevada (Mr. Cannon) is necessarily absent.

I further announce that, if present and voting, the Senator from Nevada (Mr. Cannon) would vote "yea."

Mr. GRIFFIN. I announce that the Senator from Connecticut (Mr. Weicker) is absent due to death in the family.

The yeas and nays resulted—yeas 58, nays 40, as follows:

The PRESIDING OFFICER. (Mr. Metzenbaum). Two-thirds of the Senators present and voting not having voted in the affirmative, the bill, on reconsideration, fails of passage.

CHAPTER 7

Second Conference Report and Debates on S. 2589

93D CONGRESS
2d Session
SENATE
REPORT
No. 93-681

ENERGY EMERGENCY ACT

FEBRUARY 6, 1974.—Ordered to be printed
Filed under authority of the order of the Senate of February 6, 1974

Mr. JACKSON, from the committee of conference, submitted the following

CONFERENCE REPORT

[To accompany S. 2589]

The committee of conference on the disagreeing votes of the two Houses on the amendments of the House to the bill (S. 2589) to declare by congressional action a nationwide energy emergency; to authorize the President to immediately undertake specific actions to conserve scarce fuels and increase supply; to invite the development of local, State, National, and international contingency plans; to assure the continuation of vital public services; and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its disagreement to the amendment of the House to the text of the bill and agree to the same with an amendment as follows:

In lieu of the matter proposed to be inserted by the House amendment insert the following:

That this Act, including the following table of contents, may be cited as the "Energy Emergency Act".

TABLE OF CONTENTS

TITLE I—ENERGY EMERGENCY AUTHORITIES

SEC. 101. FINDINGS AND PURPOSES.

(a) (1) The Congress hereby determines that—

(A) shortages of crude oil, residual fuel oil, and refined petroleum products caused by insufficient domestic refining capacity, inadequate domestic production, environmental constraints, and the unavailability of imports sufficient to satisfy domestic demand, now exist;

(B) such shortages have created or will create severe economic dislocations and hardships;

(C) such shortages and dislocations jeopardize the normal flow of interstate and foreign commerce and constitute an energy emergency which can be averted or minimized most efficiently and effectively through prompt action by the executive branch of Government;

(D) disruptions in the availability of imported energy supplies, particularly crude oil and petroleum products, pose a serious risk to national security, economic well-being, and health and welfare of the American people;

(E) because of the diversity of conditions, climate, and available fuel mix in different areas of the Nation, a primary governmental responsibility for developing and enforcing energy emergency measures lies with the States and with the local govern-

ments of major metropolitan areas acting in accord with the provisions of this Act; and

(F) the protection and fostering of competition and the prevention of anticompetitive practices and effects are vital during the energy emergency.

(2) On the basis of the determinations specified in subparagraphs (A) through (F) of paragraph (1) of this subsection, the Congress hereby finds that current and imminent fuel shortages have created a nationwide energy emergency.

(b) The purposes of this Act are to call for proposals for energy emergency rationing and conservation measures and to authorize specific temporary emergency actions to be exercised, subject to congressional review and right of approval or disapproval, to assure that the essential needs of the United States for fuels will be met in a manner which, to the fullest extent practicable: (1) is consistent with existing national commitments to protect and improve the environment; (2) minimizes any adverse impact on employment; (3) provides for equitable treatment of all sectors of the economy; (4) maintains vital services necessary to health, safety, and public welfare; and (5) insures against anticompetitive practices and effects and preserves, enhances, and facilitates competition in the development, production, transportation, distribution, and marketing of energy resources.

SEC. 102. DEFINITIONS.

For purposes of this Act:

(1) The term "State" means a State, the District of Columbia, Puerto Rico, or any territory or possession of the United States.

(2) The term "petroleum product" means crude oil, residual fuel oil, or any refined petroleum product (as defined in the Emergency Petroleum Allocation Act of 1973).

(3) The term "United States" when used in the geographical sense means the States, the District of Columbia, Puerto Rico, and the territories and possessions of the United States.

(4) The term "Administrator" means the Administrator of the Federal Energy Emergency Administration.

SEC. 103. FEDERAL ENERGY EMERGENCY ADMINISTRATION.

(a) There is hereby established until May 15, 1975, unless superseded prior to that date by law, a Federal Energy Emergency Administration which shall be temporary and shall be headed by a Federal Energy Emergency Administrator, who shall be appointed by the President, by and with the advice and consent of the Senate. Vacancies in the office of Administrator shall be filled in the same manner as the original appointment.

(b) The Administrator shall be compensated at the rate provided for level II of the Executive Schedule. Subject to the Civil Service and Classification provisions of title 5, United States Code, the Administrator may employ such personnel as he deems necessary to carry out his functions.

(c) Effective on the date on which the Administrator first takes office, all functions, powers, and duties of the President under the Emergency Petroleum Allocation Act of 1973 (as amended by this Act), and of any officer, department, agency, or State (or officer there-

of) under such Act (other than functions vested by section 6 of such Act in the Federal Trade Commission, the Attorney General, or the Antitrust Division of the Department of Justice), are transferred to the Administrator. All personnel, property, records, obligations, and commitments used primarily with respect to functions transferred under the preceding sentence shall be transferred to the Administrator.

(d)(1) Whenever the Federal Energy Emergency Administration submits any budget estimate or request to the President or the Office of Management and Budget, it shall concurrently transmit a copy of such estimate or request to the Congress.

(2) Whenever the Federal Energy Emergency Administration submits any legislative recommendations or testimony or comments on legislation to the Office of Management and Budget, it shall concurrently transmit a copy thereof to the Congress.

(3) The Federal Energy Emergency Administration shall be considered an independent regulatory agency for purposes of chapter 35 of title 44, United States Code, but not for any other purpose.

SEC. 104. END-USE RATIONING.

Section 4 of the Emergency Petroleum Allocation Act of 1973 is amended by adding at the end thereof the following new subsection:

"(h)(1) The President may promulgate a rule which shall be deemed a part of the regulation under subsection (a) and which shall provide, consistent with the objectives of subsection (b), for the establishment of a program for the rationing and ordering of priorities among classes of end-users of crude oil, residual fuel oil, or any refined petroleum product, and for the assignment to end-users of such products of rights, and evidences of such rights, entitling them to obtain such products in precedence to other classes of end-users not similarly entitled.

"(2) The rule under this subsection shall take effect only if the President finds that, without such rule, all other practicable and authorized methods to limit energy demand will not achieve the objectives of subsection (b) of this section and of the Energy Emergency Act.

"(3) The President shall, by order, in furtherance of the rule authorized pursuant to paragraph (1) of this subsection and consistent with the attainment of the objectives in subsection (b) of this section, cause such adjustments in the allocations made pursuant to the regulation under subsection (a) as may be necessary to carry out the purposes of this subsection.

"(4) The President shall provide for procedures by which any end-user of crude oil, residual fuel oil or refined petroleum products for which priorities and entitlements are established under paragraph (1) of this subsection may petition for review and reclassification or modification of any determination made under such paragraph with respect to his rationing priority or entitlement. Such procedures may include procedures with respect to such local boards as may be authorized to carry out functions under this subsection pursuant to section 122 of the Energy Emergency Act.

"(5) No rule or order under this section may impose any tax or user fee, or provide for a credit or deduction in computing any tax."

SEC. 105. ENERGY CONSERVATION PLANS.

(a)(1)(A) Pursuant to the provisions of this section, the Administrator may promulgate, by regulation, one or more energy conserva-

tion plans in accord with this section which shall be designed (together with actions taken and proposed to be taken under other authority of this or other Acts) to result in a reduction of energy consumption to a level which can be supplied by available energy resources. For purposes of this section, the term "energy conservation plan" means a plan for transportation controls (including but not limited to highway speed limits) or such other reasonable restrictions on the public or private use of energy (including limitations on energy consumption of businesses) which are necessary to reduce energy consumption.

(B) No energy conservation plan may impose rationing or any tax or user fee, or provide for a credit or deduction in computing any tax.

(2) An energy conservation plan shall become effective as provided in subsection (b). Such a plan shall apply in each State, except as otherwise provided in an exemption granted pursuant to such plan in cases where a comparable State or local program is in effect, or where the Administrator finds special circumstances exist.

(3) An energy conservation plan may not deal with more than one logically consistent subject matter.

(4) An amendment to an energy conservation plan, if it has significant substantive effect, shall be transmitted to Congress and shall be effective only in accordance with subsection (b). Any amendment which does not have significant substantive effect and any rescission of a plan may be made effective in accordance with section 553 of title 5, United States Code.

(5) Subject to subsection (b)(3), an energy conservation plan shall remain in effect for a period specified in the plan unless earlier rescinded by the Administrator, but shall terminate in any event no later than six months after any such plan first takes effect.

(b)(1) For purposes of this subsection, the term "energy conservation plan" includes an amendment to an energy conservation plan which has significant substantive effect.

(2) The Administrator shall transmit any energy conservation plan (bearing an identification number) to each House of Congress on the date on which it is promulgated.

(3)(A) If an energy conservation plan is transmitted to Congress before March 15, 1974, and provides for an effective date earlier than March 15, 1974, such plan shall take effect on the date provided in the plan; but if either House of the Congress, before the end of the first period of 15 calendar days of continuous session of Congress after the date on which such plan is transmitted to it, passes a resolution stating in substance that such House does not favor such plan, such plan shall cease to be effective on the date of passage of such resolution.

(B)(i) Except as provided in clause (ii), if an energy conservation plan is transmitted to the Congress and provides for an effective date on or after March 15, 1974, and before September 1, 1974, such plan shall take effect at the end of the first period of 15 calendar days of continuous session of Congress after the date on which such plan is transmitted to it unless, between the date of transmittal and the end of the 15-day period, either House passes a resolution stating in substance that such House does not favor such plan.

(ii) An energy conservation plan described in clause (i) may be implemented prior to the expiration of the 15 calendar-day period after the date on which such plan is transmitted, if each House of

Congress approves a resolution affirmatively stating in substance that such House does not object to the implementation of such plan.

(C) An energy conservation plan proposed to be made effective on or after September 1, 1974, shall take effect only if approved by Act of Congress.

(4) For the purpose of paragraph (3) of this subsection—

(A) continuity of session is broken only by an adjournment of Congress sine die; and

(B) the days on which either House is not in session because of an adjournment of more than three days to a day certain are excluded in the computation of the 15-day period.

(5) Under provisions contained in an energy conservation plan, a provision of the plan may take effect at a time later than the date on which such plan otherwise takes effect.

(c) (1) This subsection is enacted by Congress—

(A) as an exercise of the rulemaking power of the Senate and the House of Representatives, respectively, and as such it is deemed a part of the rules of each House, respectively, but applicable only with respect to the procedure to be followed in that House in the case of resolutions described by paragraph (2) of this subsection; and it supersedes other rules only to the extent that it is inconsistent therewith; and

(B) with full recognition of the constitutional right of either House to change the rules (so far as relating to the procedure of that House) at any time, in the same manner and to the same extent as in the case of any other rule of that House.

(2) For purposes of this subsection, the term 'resolution' means only a resolution of either House of Congress described in subparagraph (A) or (B).

(A) A resolution the matter after the resolving clause of which is as follows: "That the ———— does not object to the implementation of energy conservation plan numbered ———— submitted to the Congress on ————, 19__.", the first blank space therein being filled with the name of the resolving House and the other blank space being appropriately filled; but does not include a resolution which specified more than one energy conservation plan.

(B) A resolution the matter after the resolving clause of which is as follows: "That the ———— does not favor the energy conservation plan numbered ———— transmitted to Congress on ————, 19—.", the first blank space therein being filled with the name of the resolving House and the other blank spaces therein being appropriately filled; but does not include a resolution which specifies more than one energy conservation plan.

(3) A resolution once introduced with respect to an energy conservation plan shall immediately be referred to a committee (and all resolutions with respect to the same plan shall be referred to the same committee) by the President of the Senate or the Speaker of the House of Representatives, as the case may be.

(4) (A) If the committee to which a resolution with respect to an energy conservation plan has been referred has not reported it at the end of 5 calendar days after its referral, it shall be in order to move either to discharge the committee from further consideration of such

resolution or to discharge the committee from further consideration of any other resolution with respect to such energy conservation plan which has been referred to the committee.

(B) A motion to discharge may be made only by an individual favoring the resolution, shall be highly privileged (except that it may not be made after the committee has reported a resolution with respect to the same energy conservation plan), and debate thereon shall be limited to not more than 1 hour, to be divided equally between those favoring and those opposing the resolution. An amendment to the motion shall not be in order, and it shall not be in order to move to reconsider the vote by which the motion was agreed to or disagreed to.

(C) If the motion to discharge is agreed to or disagreed to, the motion may not be renewed, nor may another motion to discharge the committee be made with respect to any other resolution with respect to the same plan.

(5)(A) When the committee has reported, or has been discharged from further consideration of, a resolution, it shall be at any time thereafter in order (even though a previous motion to the same effect has been disagreed to) to move to proceed to the consideration of the resolution. The motion shall be highly privileged and shall not be debatable. An amendment to the motion shall not be in order, and it shall not be in order to move to reconsider the vote by which the motion was agreed to or disagreed to.

(B) Debate on the resolution shall be limited to not more than 10 hours, which shall be divided equally between those favoring and those opposing the resolution. A motion further to limit debate shall not be debatable. An amendment to, or motion to recommit, the resolution shall not be in order, and it shall not be in order to move to reconsider the vote by which the resolution was agreed to or disagreed to; except that it shall be in order to substitute a resolution disapproving a plan for a resolution not to object to such plan, or a resolution not to object to a plan for a resolution disapproving such plan.

(6)(A) Motions to postpone, made with respect to the discharge from committee, or the consideration of a resolution and motions to proceed to the consideration of other business, shall be decided without debate.

(B) Appeals from the decisions of the Chair relating to the application of the rules of the Senate or the House of Representatives, as the case may be, to the procedure relating to a resolution shall be decided without debate.

(7) Notwithstanding any of the provisions of this subsection, if a House has approved a resolution with respect to an energy conservation plan, then it shall not be in order to consider in that House any other resolution with respect to the same plan.

(d)(1) In carrying out the provisions of this Act, the Administrator shall, to the greatest extent practicable, evaluate the potential economic impacts of proposed regulatory and other actions including but not limited to the preparation of an analysis of the effect of such actions on—

(A) the fiscal integrity of State and local government;

(B) vital industrial sectors of the economy;

(C) employment, by industrial and trade sector, as well as on a national, regional, State, and local basis;

(D) *the economic vitality of regional, State, and local areas;*
(E) *the availability and price of consumer goods and services;*
(F) *the gross national product;*
(G) *competition in all sectors of industry; and*
(H) *small business.*

(2) *The Administrator shall develop analyses of the economic impact of any energy conservation plan on States or significant sectors thereof, considering the impact on energy resources as fuel and as feedstock for industry.*

(3) *Such analysis shall, whenever possible, be made explicit and, to the extent practicable, other Federal agencies and agencies of State and local governments which have special knowledge and expertise relevant to the impact of proposed regulatory or other actions shall be consulted in making the analyses, and all Federal agencies shall cooperate with the Administrator in preparing such analyses except that the Administrator's actions pursuant to this subsection shall not create any right of review or cause of action except as otherwise exist under other provisions of law.*

(4) *The Administrator, together with the Secretaries of Labor and Commerce, shall monitor the economic impact of any rules, regulations, and orders taken by the Administrator, and shall provide the Congress with separate reports every thirty days on the impact of the energy shortage and such emergency actions on employment and the economy.*

(e) *Any energy conservation plan which the Administrator submits to the Congress pursuant to subsection (b) of this section shall include findings of fact and a specific statement explaining the rationale for each provision contained in such plan.*

SEC. 106. COAL CONVERSION AND ALLOCATION.

(a) *The Administrator shall, to the extent practicable and consistent with the objectives of this Act, by order, after balancing on a plant-by-plant basis the environmental effects of use of coal against the need to fulfill the purposes of this Act, prohibit, as its primary energy source, the burning of natural gas or petroleum products by any major fuel-burning installation (including any existing electric powerplant) which, on the date of enactment of this Act, has the capability and necessary plant equipment to burn coal. Any installation to which such an order applies shall be permitted to continue to use coal or coal byproducts as provided in section 119(b) of the Clean Air Act. To the extent coal supplies are limited to less than the aggregate amount of coal supplies which may be necessary to satisfy the requirements of those installations which can be expected to use coal (including installations to which orders may apply under this subsection), the Administrator shall prohibit the use of natural gas and petroleum products for those installations where the use of coal will have the least adverse environmental impact. A prohibition on use of natural gas and petroleum products under this subsection shall be contingent upon the availability of coal, coal transportation facilities, and the maintenance of reliability of service in a given service area. The Administrator shall require that fossil-fuel-fired electric powerplants in the early planning process, other than combustion gas turbine and combined cycle units, be designed and constructed so as to be capable*

of using coal as a primary energy source instead of or in addition to other fossil fuels. No fossil-fuel-fired electric powerplant may be required under this section to be so designed and constructed, if (1) to do so would result in an impairment of reliability or adequacy of service, or (2) if an adequate and reliable supply of coal is not available and is not expected to be available. In considering whether to impose a design and construction requirement under this subsection, the Administrator shall consider the existence and effects of any contractual commitment for the construction of such facilities and the capability of the owner or operator to recover any capital investment made as a result of the conversion requirements of this section.

(b) The Administrator may by rule prescribe a system for allocation of coal to users thereof in order to attain the objectives specified in this section.

SEC. 107. MATERIALS ALLOCATION.

(a) The Administrator shall, within 30 days after the date of enactment of this Act, propose (in the nature of a proposed rule affording an opportunity for the presentation of views) and publish (and may from time to time amend) a contingency plan for the allocation of supplies of materials and equipment necessary for exploration, production, refining, and required transportation of energy supplies and for the construction and maintenance of energy facilities. At such time as he finds that it is necessary to put all or part of such plan into effect, he shall transmit such plan or portion thereof to each House of Congress and such plan or portion thereof shall take effect in the same manner as an energy conservation plan prescribed under section 105 and to which section 105(b)(3)(A) applies (except that such plan or portions thereof may be submitted at any time after the date of enactment of this Act and before May 15, 1975).

(b) Section 4(b)(1)(G) of the Emergency Petroleum Allocation Act of 1973 is amended to read as follows:

> *"(G) allocation of residual fuel oil and refined petroleum products in such amounts and in such manner as may be necessary for the maintenance of exploration for, and production or extraction of—*
>
> *"(i) fuels, and*
>
> *"(ii) minerals essential to the requirements of the United States,*
>
> *and for required transportation related thereto,".*

(C) The Administrator shall exercise any authority conferred on him under this Act and under any other Act to take steps designed to alleviate shortages in petrochemical feedstocks, and within 30 days from the date of the enactment of this Act shall report to the Congress with respect to shortages of petrochemical feedstocks, of steps taken to alleviate any such shortages, the unemployment impact resulting from such shortages, and any legislative recommendations which he deems necessary to alleviate such shortages.

SEC. 108. FEDERAL ACTIONS TO INCREASE AVAILABLE DOMESTIC PETROLEUM SUPPLIES.

(a) The Administrator may, by rule or order, until May 15, 1975, require the following measures to supplement domestic energy supplies:

(1) the production of designated existing domestic oilfields, at their maximum efficient rate of production, which is the maximum rate at which production may be sustained without detriment to the ultimate recovery of oil and gas under sound engineering and economic principles. Such fields are to be designated by the Secretary of the Interior, after consultation with the appropriate State regulatory agency. Data to determine the maximum efficient rate of production shall be supplied to the Secretary of the Interior by the State regulatory agency which determines the maximum efficient rate of production and by the operators who have drilled wells in, or are producing oil and gas from such fields;

(2) if necessary to meet essential energy needs, production of certain designated existing domestic oilfields at rates in excess of their currently assigned maximum efficient rates. Fields to be so designated, by the Secretary of the Interior or the Secretary of the Navy as to the Federal lands or as to Federal interests in lands under their respective jurisdiction, shall be those fields where the types and quality of reservoirs are such as to permit production at rates in excess of the currently assigned sustainable maximum efficient rate for periods of ninety days or more without excessive risk of losses in recovery;

(3) the adjustment of processing operations of domestic refineries to produce refined products in proportions commensurate with national needs and consistent with the objectives of section 4(b) of the Emergency Petroleum Allocation Act of 1973.

(b) Nothing in this section shall be construed to authorize the production from any Naval Petroleum Reserve now subject to the provisions of chapter 641 of title 10, United States Code.

SEC. 109. OTHER AMENDMENTS TO THE EMERGENCY PETROLEUM ALLOCATION ACT OF 1973.

(a) Section 4 of the Emergency Petroleum Allocation Act of 1973 (as amended by section 104 and 107 of this Act) is further amended by adding at the end of such section the following new subsection:

"(i) If any provision of the regulation under subsection (a) provides that any allocation of residual fuel oil or refined petroleum products is to be based on use of such a product or amounts of such product supplied during a historical period, the regulation shall contain provisions designed to assure that the historical period can be adjusted (or other adjustments in allocations can be made) in order to reflect regional disparities in use, population growth or unusual factors influencing use (including unusual changes in climatic conditions), of such oil or product in the historical period. This subsection shall take effect 30 days after the date of enactment of the Energy Emergency Act. Adjustments for such purposes shall take effect no later than 6 months after the date of enactment of this subsection. Adjustments to reflect population growth shall be based upon the most current figures available from the United States Bureau of the Census."

(b) Section 4(g)(1) of the Emergency Petroleum Allocation Act of 1973 is amended by striking out "February 28, 1975" in each case the term appears and inserting in each case "May 15, 1975".

SEC. 110. PROHIBITION ON INEQUITABLE PRICES.

(a) Section 4 of the Emergency Petroleum Allocation Act of 1973, as amended by this title, is further amended to prevent inequitable prices with respect to sales of crude oil, residual fuel oil, and refined petroleum products, by adding at the end thereof the following new subsection:

"(j)(1) The President shall exercise his authority under this Act and the Economic Stabilization Act of 1970, as amended, so as to specify (or prescribe a manner for determining) prices for all sales of domestic crude oil, residual fuel oil, and refined petroleum products in accordance with this subsection.

"(2) Except as otherwise provided in paragraphs (3) and (4), the provisions of the regulation under subsection (a) of this section which specified (or prescribed a manner for determining) the price of domestic crude oil, residual fuel oil, and refined petroleum products, and which were in effect on the date of enactment of this subsection shall remain in effect until modified pursuant to paragraph (5) of this subsection.

"(3) Commencing 30 days after the date of enactment of this subsection, and until any other ceiling price becomes effective pursuant to the terms of paragraph (5) hereof, the ceiling price for the first sale or exchange of a particular grade of domestic crude oil in a particular field shall be the sum of—

"(A) the hihgest posted price at 6:00 a.m., local time, May 15, 1973, for that grade of crude oil at that field, or if there are no posted prices in that field, the related price for that grade of crude oil which is most similar in kind and quality at the nearest field for which prices are posted; and

"(B) a maximum of $1.35 per barrel.

"(4) The regulation under subsection (a) of this section shall be amended so as to provide that any reduction in the price of crude oil (or any classification thereof), of residual fuel oil, or of a refined petroleum product (including propane) resulting from the provisions of this subsection is passed through on a dollar-for-dollar basis to any subsequent purchaser, reseller, or final consumer in the United States. Such pass-through of price reductions shall, to the extent practicable and consistent with the objectives of this section, be allocated among products refined from such crude oil on a proportional basis, taking into consideration historical price relations among such products.

"(5)(A) The President may, in accordance with the procedures and standards provided in this paragraph, amend the regulation under subsection (a) of this section to specify a different price for domestic crude oil, residual fuel oil, or refined petroleum products, or a different manner for determining the price, other than that provided in paragraph (2) or (3) of this subsection, if he finds that such different price or such different manner for determining such price is necessary to permit the attainment of the objectives of this Act and the purposes described in Section 101(b) of the Energy Emergency Act.

"(B) Every price proposed to be specified pursuant to this subsection which specifies a different price or manner for determining the price for domestic crude oil provided for in paragraph (3) of this subsection, and every price specified for (or every prescribed manner for determining the ceiling price of) residual fuel oil and refined

petroleum products, shall be transmitted to the Congress and shall be accompanied by a detailed analysis setting forth—

"(i) the additional quantities of crude oil, residual fuel oil, refined petroleum products, or if any, that can reasonably be expected to be produced;

"(ii) the effect, if any, upon the demand for crude oil, residual fuel oil, refined petroleum products, or

"(iii) the impact upon the economy as a whole, including the impact upon consumers and the profitability of and employment in industry and business;

"(iv) any significant problems of enforcement or administration; and

"(v) the impact on the preservation of existing competition within the petroleum industry.

resulting from the proposed change in the price of crude oil or manner for determining the price of residual fuel oil or refined petroleum products. Any change in a price of domestic crude oil (or any classification thereof) which is transmitted to Congress within 30 days after enactment of this subsection, which prescribes a different price or a different manner for determining such price provided in paragraph (3) of this subsection shall not take effect until 15 days after the detailed analysis required by this paragraph has been transmitted to the Congress.

"(C) No price for domestic crude oil, or any classification thereof, specified pursuant to this subsection shall exceed the ceiling price provided in paragraph (3) of this subsection by more than 35 percent.

"(D) Ceiling prices or a manner for determining prices established by or pursuant to this subsection are maximum permissible prices, and any seller may sell domestic crude oil, or residual fuel oil, or any refined petroleum product produced therefrom at any lesser price. In the case of any exchange of domestic crude oil, residual fuel oil, or refined petroleum products, the ceiling price shall apply to the total value of the goods and services asked, given or received in exchange for such crude oil, residual fuel oil, or refined petroleum product.

"(6)(A) Any interested person who has reason to believe that any price or manner for determining prices in the regulation under subsection (a) of this section does not prevent inequitable prices may petition the President for a determination under subparagraph (B) of this paragraph.

"(B) Upon petition of any interested person, the President shall by rule determine whether the price of crude oil, residual fuel oil, or any refined petroleum products does not prevent inequitable prices. The President may either affirm such price, or method for determining such price, or establish a different price, or method of determining such price, upon a finding (accompanied by a detailed analysis of such finding as is required under paragraph (5)(B) that such prices as affirmed or reestablished prevents inequitable prices.

"(7)(A) The President may provide, in his discretion under regulations prescribed by him, for such consolidation of petitions as may be necessary or appropriate to carry out the purposes of this subsection.

"(B) The President may make such rules, regulations, and orders as he deems necessary or appropriate to carry out his functions under this subsection.

"(8) *No petition under paragraph (6) of this subsection to determine prices may be filed later than one year after the expiration of this Act or any extension thereof.*

"(9) *The President may at any time act to establish ceiling prices lower than those provided in paragraphs (2) and (5) if he determines that lower ceiling prices will permit the attainment of the objectives of this Act and the purposes described in section 101(b) of the Energy Emergency Act.*

"(10) *The provisions of this subsection shall apply to all crude oil notwithstanding the provisions of subsection (e)(2) of this section and section 406 of Public Law 93-153 (87 Stat. 590).*

"(11)(A) *A proceeding to amend the regulation under subsection (a) of this section with respect to prices as authorized and limited under the terms of paragraph (5) of this subsection and a rulemaking proceeding under paragraph (6) of this subsection shall be governed by section 553 of title 5, United States Code, except that the President shall afford interested persons an opportunity of at least 10 days to present oral and written views, data, and arguments. The 10-day period for presentation of views, data and arguments respecting such action may be postponed until after such action takes effect where the President specifically finds that strict compliance would be likely to cause serious impairment to the operation of the program and such finding and the reasons therefore are set out in detail in the Federal Register at the time of publication.*

"(B) *Judicial review of an amendment to the regulation under subsection (a) of this section with respect to prices under the terms of paragraph (5) of this subsection and a rule promulgated under paragraph (6) of this subsection shall be reviewable pursuant to the provisions of section 211 of the Economic Stabilization Act of 1970, as amended, except that any such amendment and rule may not be enjoined or set aside, in whole or in part, unless the court makes a final determination that such amendment or rule is in excess of the President's authority, is arbitrary or capricious, is otherwise unlawful under the criteria set forth in section 706(2) of title 5, United States Code, or is based on findings required by this subsection which are not supported by substantial evidence.*

"(12) *For purposes of this subsection—*

"(A) *the term 'inequitable price' means a price in excess of a price which is reasonable, taking into consideration the price necessary to obtain sufficient supplies of crude oil, residual fuel oil, and refined petroleum products, to permit the attainment of the objectives of this Act and the purposes described in section 101(b) of the Energy Emergency Act;*

"(B) *the term 'domestic crude oil means crude oil produced in the United States or from the outer Continental Shelf as defined in section 2 of the Outer Continental Shelf Lands Act (43 U.S.C. 1331); and*

"(C) *the term 'interested person' includes the United States, any State, the District of Columbia, Puerto Rico, and the territories and possessions of the United States.*"

SEC. 111. PROTECTION OF FRANCHISED DEALERS.

(a) As used in this section:

(1) The term "distributor" means a person engaged in the sale, consignment, or distribution of petroleum products to wholesale or retail outlets whether or not it owns, leases, or in any way controls such outlets.

(2) The term "franchise" means any agreement or contract between a refiner or a distributor and a retailer or between a refiner and a distibutor, under which such retailer or distributor is granted authority to use a trademark, trade name, service mark, or other identifying symbol or name owned by such refiner or distributor, or any agreement or contract between such parties under which such retailer or distributor is granted authority to occupy premises owned, leased, or in any way controlled by a party to such agreement or contract, for the purpose of engaging in the distribution or sale of petroleum products for purposes other than resale.

(3) The term "refiner" means a person engaged in the refining or importing of petroleum products.

(4) The term "retailer" means a person engaged in the sale of any refined petroleum product for purposes other than resale within any State, either under a franchise or independent of any franchise, or who was so engaged at any time after the start of the base period.

(b)(1) A refiner or distributor shall not cancel, fail to renew, or otherwise terminate a franchise unless he furnishes prior notification pursuant to this paragraph to each distributor or retailer affected thereby. Such notification shall be in writing and sent to such distributor or retailer by certified mail not less than ninety days prior to the date on which such franchise will be canceled, not renewed, or otherwise terminated. Such notification shall contain a statement of intention to cancel, not renew, or to terminate together with the reasons therefor, the date on which such action shall take effect, and a statement of the remedy or remedies available to such distributor or retailer under this section together with a summary of the applicable provisions of this section.

(2) A refiner or distributor shall not cancel, fail to renew, or otherwise terminate a franchise unless the retailer or distributor whose franchise is terminated failed to comply substantially with any essential and reasonable requirement of such franchise or failed to act in good faith in carrying out the terms of such franchise, or unless such refiner or distributor withdraws entirely from the sale of refined petroleum products in commerce for sale other than resale in the United States.

(c)(1) If a refiner or distributor engages in conduct prohibited under subsection (b) of this section, a retailer or a distributor may maintain a suit against such refiner or distributor. A retailer may maintain such suit against a distributor or a refiner whose actions affect commerce and whose products with respect to conduct prohibited under paragraph (1) or (2) of subsection (b) of this section, he sells or has sold, directly or indirectly, under a franchise. A distributor may maintain such suit against a refiner whose actions affect commerce and whose products he purchases or has purchased or whose products he distributes or has distributed to retailers.

(2) *The court shall grant such equitable relief as is necessary to remedy the effects of conduct prohibited under subsection (b) of this section which it finds to exist including declaratory judgment and mandatory or prohibitive injunctive relief. The court may grant interim equitable relief, and actual and punitive damages (except for actions for a failure to renew) where indicated, in suits under this section, and may, unless such suit is frivolous, direct that costs, including reasonable attorney and expert witness fees, be paid by the defendant. In the case of actions for a failure to renew damages shall be limited to actual damages including the value of the dealer's equity.*

(3) *A suit under this section may be brought in the district court of the United States for any judicial district in which the distributor or the refiner against whom such suit is maintained resides, is found, or is doing business, without regard to the amount in controversy.*

(d) *The provisions of this section expire at midnight, May 15, 1975, but such expiration shall not affect any pending action or pending proceeding, civil or criminal, not finally determined on such date, nor any action or proceeding based upon any act committed prior to midnight, May 15, 1975, except that no suit under this section, which is based upon an act committed prior to midnight, May 15, 1975, shall be maintained unless commenced within three years after such act.*

SEC. 112. PROHIBITIONS ON UNREASONABLE ACTIONS.

(a) *Action taken under authority of this Act, the Emergency Petroleum Allocation Act of 1973, or other Federal law resulting in the allocation of petroleum products and electrical energy among classes of users or resulting in restrictions on use of petroleum products and electrical energy, shall be equitable, shall not be arbitrary or capricious, and shall not unreasonably discriminate among classes of users: cious, and shall not unreasonably discriminate among classes of users, except that with respect to allocations of petroleum products no foreign corporation or entity shall receive more favorable treatment in the allocation of petroleum products than that which is accorded by its home country to United States citizens engaged in the same line of commerce, unless the President determines such a policy would be inconsistent with the purposes of this Act and publishes his finding in the Federal Register. Allocations shall contain provisions designed to foster reciprocal and non-discriminatory treatment by foreign countries of United States citizens engaged in commerce.*

(b) *To the maximum extent practicable, any restriction on the use of energy shall be designed to be carried out in such manner so as to be fair and to create a reasonable distribution of the burden of such restriction on all sectors of the economy, without imposing an unreasonably disproportionate share of such burden on any specific industry, business or commercial enterprise, or on any individual segment thereof and shall give due consideration to the needs of commercial, retail, and service establishments whose normal function is to supply goods and services of an essential convenience nature during times of day other than conventional daytime working hours.*

SEC. 113. REGULATED CARRIERS.

(a) *The Interstate Commerce Commission (with respect to common or contract carriers subject to economic regulation under the Inter-*

state Commerce Act), the Civil Aeronautics Board, and the Federal Maritime Commission shall, for the duration of the period beginning on the date of enactment of this Act and ending on May 15, 1975, have authority to take any action for the purpose of conserving energy consumption in a manner found by such Commission or Board to be consistent with the objectives and purposes of the Acts administered by such Commission or Board on its own motion or on the petition of the Administrator which existing law permits such Commission or Board to take upon the motion or petition of any regulated common or contract carrier or other person.

(b) The Interstate Commerce Commission shall, by expedited proceedings, adopt appropriate rules under the Interstate Commerce Act which eliminate restrictions on the operating authority of any motor common carrier of property which require excessive travel between points with respect to which such motor common carrier has regularly performed service under authority issued by the Commission. Such rules shall assure continuation of essential service to communities served by any such motor common carrier.

(c) Within 45 days after the date of enactment of this Act, the Civil Aeronautics Board, the Federal Maritime Commission, and the Interstate Commerce Commission shall report separately to the appropriate committees of the Congress on the need for additional regulatory authority in order to conserve fuel during the period beginning on the date of enactment of this Act and ending on May 15, 1975 while continuing to provide for the public convenience and necessity. Each such report shall identify with specificity—

(1) the type of regulatory authority needed;

(2) the reasons why such authority is needed;

(3) the probable impact on fuel conservation of such authority;

(4) the probable effect on the public convenience and necessity of such authority; and

(5) the competitive impact, if any, of such authority.

Each such report shall further make recommendations with respect to changes in any existing fuel allocation programs which are deemed necessary to provide for the public convenience and necessity during such period.

SEC. 114. ANTITRUST PROVISIONS.

(a) Except as specifically provided in subsection (i), no provision of this Act shall be deemed to convey to any person subject to this Act any immunity from civil and criminal liability or to create defenses to actions, under the antitrust laws.

(b) As used in this section, the term "antitrust laws" means—

(1) the Act entitled "An Act to protect trade and commerce against unlawful restraints and monopolies", approved July 2, 1890 (15 U.S.C. 1 et seq.), as amended;

(2) the Act entitled "An Act to supplement existing laws against unlawful restraints and monopolies, and for other purposes", approved October 15, 1914 (15 U.S.C. 12 et seq.), as amended;

(3) the Federal Trade Commission Act (15 U.S.C. 41 et seq.), as amended;

(4) sections 73 and 74 of the Act entitled "An Act to reduce taxation, to provide revenue for the Government, and for other pur-

poses", approved August 27, 1894 (15 U.S.C. 8 and 9), as amended; and

(5) the Act of June 19, 1936, chapter 592 (15 U.S.C. 13, 13a, 13b, and 21a).

(c) (1) To achieve the purposes of this Act, the Administrator may provide for the establishment of such advisory committees as he determines are necessary. Any such advisory committees shall be subject to the provisions of the Federal Advisory Committee Act of 1972 (5 U.S.C. App. I), whether or not such Act or any of its provisions expires or terminates during the term of this Act or of such committees, and in all cases shall be chaired by a regular full-time Federal employee and shall include representatives of the public. The meetings of such committees shall be open to the public.

(2) A representative of the Federal Government shall be in attendance at all meetings of any advisory committee established pursuant to this section. The Attorney General and the Federal Trade Commission shall have adequate advance notice of any meeting and may have an official representative attend and participate in any such meeting.

(3) A full and complete verbatim transcript shall be kept of all advisory committee meetings, and shall be taken and deposited, together with any agreement resulting therefrom, with the Attorney General and the Federal Trade Commission. Such transcript and agreement shall be made available for public inspection and copying, subject to the provisions of sections 552 (b) (1) and (b) (3) of title 5, United States Code.

(d) The Administrator, subject to the approval of the Attorney General and the Federal Trade Commission, shall promulgate, by rule, standards and procedures by which persons engaged in the business of producing, refining, marketing, or distributing crude oil, residual fuel oil or any refined petroleum product may develop and implement voluntary agreements and plans of action to carry out such agreements which the Administrator determines are necessary to accomplish the objectives stated in section 4(b) of the Emergency Petroleum Allocation Act of 1973.

(e) The standards and procedures under subsection (d) shall be promulgated pursuant to section 553 of title 5, United States Code. They shall provide, among other things, that—

(1) Such agreements and plans of action shall be developed by meetings of committees, councils, or other groups which include representatives of the public, of interested segments of the petroleum industry and of industrial, municipal and private consumers, and shall in all cases be chaired by a regular full-time Federal employee;

(2) Meetings held to develop a voluntary agreement or a plan of action under this subsection shall permit attendance by interested persons and shall be preceded by timely and adequate notice with identification of the agenda of such meeting to the Attorney General, the Federal Trade Commission and to the public in the affected community;

(3) Interested persons shall be afforded an opportunity to present, in writing and orally, data, views and arguments at such meetings;

(4) A full and complete verbatim transcript shall be kept of any meeting, conference or communication held to develop, implement or carry out a voluntary agreement or a plan of action under this subsection and shall be taken and deposited, together with any agreement resulting therefrom, with the Attorney General and the Federal Trade Commission. Such transcript and agreement shall be available for public inspection and copying, subject to provisions of section 552 (b) (1) and (b) (3) of title 5, United States Code.

(f) The Federal Trade Commission may exempt types or classes of meetings, conferences or communications from the requirements of subsections (c) (3) and (e) (4) provided such meetings, conferences, or communications are ministerial in nature and are for the sole purpose of implementing or carrying out a voluntary agreement or plan of action authorized pursuant to this section. Such ministerial meeting, conference or communication may take place in accordance with such requirements as the Federal Trade Commission may prescribe by rule. Such persons participating in such meeting, conference or communication shall cause a record to be made specifying the date such meeting, conference, or communication took place and the persons involved, and summarizing the subject matter discussed. Such record shall be filed with the Federal Trade Commission and the Attorney General, where it shall be made available for public inspection and copying.

(g) (1) The Attorney General and the Federal Trade Commission shall participate from the beginning in the development, implementation, and carrying out of voluntary agreements and plans of action authorized under this section. Each may propose any alternative which would avoid or overcome, to the greatest extent practicable, possible anticompetitive effects while achieving substantially the purposes of this Act. Each shall have the right to review, amend, modify, disapprove, or prospectively revoke, on its own motion or upon the request of any interested person, any plan of action or voluntary agreement at any time, and, if revoked, thereby withdraw prospectively the immunity which may be conferred by subsection (i) of this section.

(2) Any voluntary agreement or plan of action entered into pursuant to this section shall be submitted in writing to the Attorney General and the Federal Trade Commission 20 days before being implemented, where it shall be made available for public inspection and copying.

(h) (1) The Attorney General and the Federal Trade Commission shall monitor the development, implementation and carrying out of plans of action and voluntary agreements authorized under this section to assure the protection and fostering of competition and the prevention of anticompetitive practices and effects.

(2) The Attorney General and the Federal Trade Commission shall promulgate joint regulations concerning the maintenance of necessary and appropriate documents, minutes, transcripts and other records related to the development, implementation or carrying out of plans of action or voluntary agreements authorized pursuant to this Act.

(3) Persons developing, implementing, or carrying out plans of action or voluntary agreements authorized pursuant to this Act shall maintain those records required by such joint regulations. The Attorney General and the Federal Trade Commission shall have access

to and the right to copy such records at reasonable times and upon reasonable notice.

(4) The Federal Trade Commission and the Attorney General may each prescribe such rules and regulations as may be necessary or appropriate to carry out their responsibilities under this Act. They may both utilize for such purposes and for purposes of enforcement, any and all powers conferred upon the Federal Trade Commission or the Department of Justice, or both, by any other provision of law, including the antitrust laws; and wherever such provision of law refers to "the purposes of this Act" or like terms, the reference shall be understood to be this Act.

(i) There shall be available as a defense to any civil or criminal action brought under the antitrust laws in respect of actions taken in good faith to develop and implement a voluntary agreement or plan of action to carry out a voluntary agreement by persons engaged in the business of producing, refining, marketing or distributing crude oil, residual fuel oil, for any refined petroleum product that—

(1) such action was—

(A) authorized and approved pursuant to this section, and

(B) undertaken and carried out solely to achieve the purposes of this section and in compliance with the terms and conditions of this section, and the rules promulgated hereunder; and

(2) such persons fully complied with the requirements of this section and the rules and regulations promulgated hereunder.

(j) No provision of this Act shall be construed as granting immunity for, nor as limiting or in any way affecting any remedy or penalty which may result from any legal action or proceeding arising from, any acts or practices which occurred: (1) prior to the enactment of this Act, (2) outside the scope and purpose or not in compliance with the terms and conditions of this Act and this section, or (3) subsequent to its expiration or repeal.

(k) Effective on the date of enactment of this Act, this section shall apply in lieu of section 6(c) of the Emergency Petroleum Allocation Act of 1973. All actions taken and any authority or immunity granted under such section 6(c) shall be hereafter taken or granted, as the case may be, pursuant to this section.

(l) The provisions of section 708 of the Defense Production Act of 1950, as amended, shall not apply to any action authorized to be taken under this Act or the Emergency Petroleum Allocation Act of 1973.

(m) The Attorney General and the Federal Trade Commission shall each submit to the Congress and to the President, at least once every six months, a report on the impact on competition and on small business of actions authorized by this section.

(n) The authority granted by this section (including any immunity under subsection (i)) shall terminate on May 15, 1975.

(o) The exercise of the authority provided in section 113 shall not have as a principal purpose or effect the substantial lessening of competition among carriers affected. Actions taken pursuant to that subsection shall be taken only after providing from the beginning an adequate opportunity for participation by the Federal Trade Commission and the Assistant Attorney General in charge of the Antitrust Division, who shall propose any alternative which would avoid or overcome, to the greatest extent practicable, any anticompetitive effects while achieving the purposes of this Act.

SEC. 115. EXPORTS.

To the extent necessary to carry out the purpose of this Act, the Administrator may under authority of this Act, by rule, restrict exports of coal, petroleum products, and petrochemical feedstocks, under such terms as he deems appropriate: Provided, That the Administrator shall restrict exports of coal, petroleum products, or petrochemical feedstocks if either the Secretary of Commerce or the Secretary of Labor certifies that such exports would contribute to unemployment in the United States. The Secretary of Commerce, pursuant to the Export Administration Act of 1969 (but without regard to the phrase "and to reduce the serious inflationary impact of abnormal foreign demand" in section 3(2)(A) of such Act), may restrict the exports of coal, petroleum products, and petrochemical feedstocks, and of materials and equipment essential to the production, transport, or processing of fuels to the extent necessary to carry out the purpose of this Act and sections 4(b) and 4(d) of the Emergency Petroleum Allocation Act of 1973: Provided, That in the event that the Administrator certifies to the Secretary of Commerce that export restrictions of products enumerated in this section are necessary to carry out the purpose of this Act, the Secretary of Commerce shall impose such export restrictions. Rules under this section by the Administrator and actions by the Secretary of Commerce under the Export Administration Act of 1969 shall take into account the historical trading relations of the United States with Canada and Mexico and shall not be inconsistent with subsections (b) and (d) of section 4 of the Emergency Petroleum Allocation Act of 1973.

SEC. 116. EMPLOYMENT IMPACT AND UNEMPLOYMENT ASSISTANCE.

(a) The President shall take into consideration and shall minimize, to the fullest extent practicable, any adverse impact of actions taken pursuant to this Act upon employment. All agencies of government shall cooperate fully under their existing statutory authority to minimize any such adverse impact.

(b) The President shall make grants in accordance with regulations prescribed by him to States to provide assistance to any individual unemployed, if such unemployment heretofore or hereafter is the result of the energy crisis and was in no way due to the fault of such individual, while the individual is unemployed. Unemployment resulting from the energy crisis means unemployment which the State determines to be attributable to fuel allocations, fuel pricing, consumer buying decisions clearly influenced by the energy crisis, and governmental action associated with the energy crisis. Such assistance as a State under such a grant shall provide for not less than 6 months of eligibility and shall be available to individuals not otherwise eligible for unemployment compensation and individuals who have otherwise exhausted their eligibility for such unemployment compensation, and shall continue as long as such unemployment continues or until the individual is reemployed in a suitable position, but not longer than one year after such individual becomes eligible for such assistance. Such assistance shall not exceed the maximum weekly amount under the unemployment compensation program of the State in which the employment loss occurred.

(c) On or before the sixtieth day following the date of enactment of this Act, the President shall report to the Congress concerning the present and prospective impact of energy shortages upon employment. Such report shall contain an assessment of the adequacy of existing programs in meeting the needs of adversely affected workers and shall include legislative recommendataions which the President deems appropriate to meet such needs, including revisions in the unemployment insurance laws.

SEC. 117. USE OF CARPOOLS.

(a) The Secretary of Transportation shall encourage the creation and expansion of the use of carpools as a viable component of our nationwide transportation system. It is the intent of this section to maximize the level of carpool participation in the United States.

(b) The Secretary of Transportation is directed to establish within the Department of Transportation an "Office of Carpool Promotion" whose purpose and responsibilities shall include—

(1) responding to any and all requests for information and technical assistance on carpooling and carpooling systems from units of State and local governments and private groups and employees;

(2) promoting greater participation in carpooling through public information and the preparation of such materials for use by State and local governments;

(3) encouraging and promoting private organizations to organize and operate carpool systems for employees;

(4) promoting the cooperation and sharing of responsibilities between separate, yet proximately close, units of government in coordinating the operations of carpool systems; and

(5) promoting other such measures that the Secretary determines appropriate to achieve the goal of this subsection.

(c) The Secretary of Transportation shall encourage and promote the use of incentives such as special parking privileges, special roadway lanes, toll adjustments, and other incentives as may be found beneficial and administratively feasible to the furtherance of carpool ridership, and consistent with the obligations of the State and local agencies which provide transportation services.

(d) The Secretary of Transportation shall allocate the funds appropriated pursuant to the authorization of subsection (f) according to the following distribution between the Federal and State or local units of government:

(1) The initial planning process—up to 100 percent Federal.

(2) The systems design process—up 100 percent Federal.

(3) The initial startup and operation of a given system—60 percent Federal and 40 percent State or local with the Federal portion not to exceed 1 year.

(e) Within 12 months of the date of enactment of this Act, the Secretary of Transportation shall make a report to Congress of all his activities and expenditures pursuant to this section. Such report shall include any recommendations as to future legislation concerning carpooling.

(f) The sum of $5,000,000 is authorized to be appropriated for the conduct of programs designed to achieve the goals of this section, such authorization to remain available for 2 years.

(g) For purposes of this section, the terms "local governments" and "local units of government" include any metropolitan transportation organization designated as being responsible for carrying out section 134 of title 23, United States Code.

(h) As an example to the rest of our Nation's automobile users, the President of the United States shall take such action as is necessary to require all agencies of Government, where practical, to use economy model motor vehicles.

(i)(1) The President shall take action to require that no Federal official or employee in the executive branch below the level of Cabinet officer be furnished a limousine for individual use. The provisions of this subsection shall not apply to limousines furnished for use by officers or employees of the Federal Bureau of Investigation, or to those persons whose assignments necessitate transportation by limousines because of diplomatic assignment by the Secretary of State.

(2) For purposes of this subsection, the term "limousine" means a type 6 vehicle as defined in the Interim Federal Specifications issued by the General Services Administration, December 1, 1973.

(3)(A) The President shall take action to insure the enforcement of 31 U.S.C. 638a.

(B) No funds shall be expended under authority of this or any other Act for the purpose of furnishing a chauffeur for individual use to any Federal official or employee.

SEC. 118. ADMINISTRATIVE PROCEDURE AND JUDICIAL REVIEW.

(a)(1) Subject to paragraphs (2), (3), and (4) of this subsection, the provisions of subchapter II of chapter 5 of title 5, United States Code, shall apply to any rule, regulation, or order (including a rule, regulation, or order issued by a State or officer thereof) under this title, under section 4(h) of the Emergency Petroleum Allocation Act of 1973; except that this subsection shall not apply to any rule, regulation, or order issued under the Emergency Petroleum Allocation Act of 1973 (as amended by this title) other than section 4(h) thereof, nor to any rule under section 113 of this title.

(2) Notice of any proposed rule or order described in paragraph (1) shall be given by publication of such proposed rule or order in the Federal Register. In each case, a minimum of ten days following such publication shall be provided for opportunity to comment; except that the requirements of this paragraph as to time of notice and opportunity to comment may be waived where strict compliance is found to cause serious impairment to the operation of the program to which such rule or order relates and such findings are set out in detail in such rule or order. In addition, public notice of all rules or orders promulgated by officers of a State or political subdivision thereof or to State or local boards pursuant to this Act shall to the maximum extent practicable be achieved by publication of such rules or orders in a sufficient number of newspapers of statewide circulation calculated to receive widest possible notice.

(3) In addition to the requirements of paragraph (2), if any rule or order described in paragraph (1) is likely to have a substantial impact on the Nation's economy or large numbers of individuals or businesses, an opportunity for oral presentation of views, data, and

arguments shall be afforded. To the maximum extent practicable, such opportunity shall be afforded prior to the implementation of such rule or order, but in all cases such opportunity shall be afforded no later than 45 days after the implementation of any such rule or order. A transcript shall be kept of any oral presentation.

(4) Any officer or agency authorized to issue rules or orders described in paragraph (1) shall provide for the making of such adjustments, consistent with the other purposes of this Act or the Emergency Petroleum Allocation Act of 1973 (as the case may be), as may be necessary to prevent special hardships, inequity, or an unfair distribution of burdens and shall in rules prescribed by it establish procedures which are available to any person for the purpose of seeking an interpretation, modification, or rescission of, or an exception to or exemption from, such rules and orders. If such person is aggrieved or adversely affected by the denial of a request for such action under the preceding sentence, he may request a review of such denial by the officer or agency and may obtain judicial review in accordance with subsection (b) or other applicable law when such denial becomes final. The officer or agency shall, in rules prescribed by it, establish appropriate procedures, including a hearing where deemed advisable, for considering such requests for action under this paragraph.

(b) (1) Judicial review of administrative rulemaking of general and national applicability done under this title may be obtained only by filing a petition for review in the United States Court of Appeals for the District of Columbia within thirty days from the date of promulgation of any such rule or regulation, and judicial review of administrative rulemaking of general, but less than national, applicability done under this title may be obtained only by filing a petition for review in the United States Court of Appeals for the appropriate circuit within thirty days from the date of promulgation of any such rule or regulation, the appropriate circuit being defined as the circuit which contains the area or the greater part of the area within which the rule or regulation is to have effect.

(2) Notwithstanding the amount in controversy, the district courts of the United States shall have exclusive original jurisdiction of all other cases or controversies arising under this title, or under regulations or orders issued thereunder, except any actions taken by the Civil Aeronautics Board, the Interstate Commerce Commission, Federal Power Commission, or the Federal Maritime Commission, or any actions taken to implement or enforce any rule or order by any officer of a State or political subdivision thereof or State or local board which has been delegated authority under section 122 of this Act except that nothing in this section affects the power of any court of competent jurisdiction to consider, hear, and determine in any proceeding before it any issue raised by way of defense (other than a defense based on the constitutionality of this title or the validity of action taken by any agency under this title). If in any such proceeding an issue by way of defense is raised based on the constitutionality of this Act or the validity of agency action under this title, the case shall be subject to removal by either party to a district court of the United States in accordance with the applicable provisions of chapter 89 of title 28, United States Code. Cases or controversies arising under any rule or order of any officer of a State or political subdivision thereof or a State or local board may be heard in either (1) any appropriate State court,

and (2) without regard to the amount in controversy, the district courts of the United States.

(3) This subsection shall not apply to any rule, regulation, or order issued under the Emegency Petroleum Allocation Act of 1973 nor to any rule under section 113 of this title.

(c) The Administrator may by rule prescribe procedures for State or local boards which carry out functions under this Act or the Emergency Petroleum Allocation Act of 1973. Such procedures shall apply to such boards in lieu of subsection (a), and shall require that prior to taking any action, such boards shall take steps reasonably calculated to provide notice to persons who may be affected by the action, and shall afford an opportunity for presentation of views (including oral presentation of views where practicable) at least 10 days before taking the action. Such boards shall be of balanced composition reflecting the makeup of the community as a whole.

(d) In addition to the requirements of section 552 of title 5, United States Code, any agency authorized by this title of the Emergency Petroleum Allocation Act of 1973 to issue rules or orders shall make available to the public all internal rules and guidelines which may form the basis, in whole or in part, for any rule or order with such modifications as are necessary to insure confidentiality protected under such section 552. Such agency shall, upon written request of a petitioner filed after any grant or denial of a request for exception or exemption from rules or orders furnish the petitioner with a written opinion setting forth applicable facts and the legal basis in support of such grant or denial. Such opinions shall be made available to the petitioner and the public within thirty days of such request and with such modifications as are necessary to insure confidentiality of information protected under such section 552.

SEC. 119. PROHIBITED ACTS.

It shall be unlawful for any person to violate any provision of title I of this Act (other than provisions of this Act which make amendments to the Emergency Petroleum Allocation Act of 1973 and section 113) or to violate any rule, regulation (including an energy conservation plan) or order issued pursuant to any such provision.

SEC. 120. ENFORCEMENT.

(a) Whoever violates any provision of section 119 shall be subject to a civil penalty of not more than $2,500 for each violation.

(b) Whoever willfully violates any provision of section 119 shall be fined not more than $5,000 for each violation.

(c) It shall be unlawful for any person to offer for sale or distribute in commerce any product or commodity in violation of an applicable order or regulation issued pursuant to this Act. Any person who knowingly and willfully violates this subsection after having been subjected to a civil penalty for a prior violation of the same provision of any order or regulation issued pursuant to this Act shall be fined not more than $50,000 or imprisoned not more than six months, or both.

(d) Whenever it appears to any person authorized by the Administrator to exercise authority under this Act that any individual or organization has engaged, is engaged, or is about to engage in acts or practices constituting a violation of section 119, such person may request the Attorney General to bring an action in the appropriate dis-

trict court of the United States to enjoin such acts or practices, and upon a proper showing a temporary restraining order or a preliminary or permanent injunction shall be granted without bond. Any such court may also issue mandatory injunctions commanding any person to comply with any provision, the violation of which is prohibited by section 119.

(e) Any person suffering legal wrong because of any act or practice arising out of any violation of section 119 may bring an action in a district court of the United States, without regard to the amount in controversy, for appropriate relief, including an action for a declaratory judgment or writ of injunction. Nothing in this subsection shall authorize any person to recover damages.

SEC. 121. USE OF FEDERAL FACILITIES.

Whenever practicable, and for the purpose of facilitating the transportation and storage of fuel, agencies or departments of the United States are authorized, during the period beginning on the date of enactment of this Act and ending May 15, 1975, to enter into arrangements for the acquisition or use by domestic public entities and private industries of equipment or facilities which are surplus to the needs of such agency or department and appropriate to the transportation and storage of fuel, except that such arrangements may be made (1) only after the Administrator finds that such equipment or facilities are not available from private sources and (2) only on the basis of compensation for the acquisition or use of such equipment or facilities at fair market value prices or rentals.

SEC. 122. DELEGATION OF AUTHORITY AND EFFECT ON STATE LAW.

(a) The Administrator may delegate any of his functions under the Emergency Petroleum Allocation Act of 1973 or this Act to any officer or employee of the Federal Energy Emergency Administration as he deems appropriate. The Administrator may delegate any of his functions relative to implementation and enforcement of the Emergency Petroleum Allocation Act of 1973 or this Act to officers of a State or political subdivision thereof or to State or local boards of balanced composition reflecting the make-up of the community as a whole. Such officers or boards shall be designated and established in accordance with regulations which the Administration shall promulgate under this Act. Section 5(b) of the Emergency Petroleum Allocation Act of 1973 is repealed effective on the effective date of the transfer of functions under such Act to the Administrator pursuant to section 103 of this Act.

(b) No State law or State program in effect on the date of enactment of this Act, or which may become effective thereafter, shall be superseded by any provision of this Act or any regulation, order, or energy conservation plan issued pursuant to this Act except insofar as such State law or State program is inconsistent with the provisions of this Act, or such a regulation, order, or plan.

SEC. 123. GRANTS TO STATES.

Any funds authorized to be appropriated under section 127(b) shall be available for the purpose of making grants to States to which the Administrator has delegated authority under section 122 of this Act, or for the administration of appropriate State or local energy con-

servation programs which are the basis of an exemption made pursuant to section 105(a)(2) of this Act from a Federal energy conservation plan which has taken effect under section 105 of this Act. The Administrator shall make such grants upon such terms and conditions as he may prescribe by rule.

SEC. 124. REPORTS ON NATIONAL ENERGY RESOURCES.

(a) For the purpose of providing to the Administrator, Congress, the States, and the public, to the maximum extent possible, reliable data on reserves, production, distribution, and use of petroleum products, natural gas, and coal, the Administrator shall promptly publish for public comment a regulation requiring that persons doing business in the United States, who, on the date of enactment of this Act, are engaged in exploring, developing, processing, refining, or transporting by pipeline, any petroleum product, natural gas, or coal, shall provide detailed reports to the Administrator every sixty calendar days. Such reports shall show for the preceding sixty calendar days such person's (1) reserves of crude oil, natural gas, and coal; (2) production and destination of any petroleum product, natural gas, and coal; (3) refinery runs byproduct; and (4) other data required by the Administrator for such purpose. Such regulation shall also require that such persons provide to the Administrator such reports for the period from January 1, 1970, to the date of such person's first sixty day report. Such regulation shall be promulgated 30 days after such publication. The Administrator shall publish quarterly in the Federal Register a meaningful summary analysis of the data provided by such reports.

(b) The reporting requirements of this section shall not apply to the retail operations of persons required to file such reports. Where a person shows that all or part of the data required by this section is being reported by such person to another Federal agency, the Administrator may exempt such person from reporting all or part of such data directly to him, and upon such exemption, such agency shall, notwithstanding any other provision of law, provide such data to the Administrator. The district courts of the United States are authorized, upon application of the Administrator, to require enforcement of such reporting requirements.

(c) Upon a showing satisfactory to the Administrator by any person that any report or part thereof obtained under this section from such person or from a Federal agency would, if made public, divulge methods or processes entitled to protection as trade secrets or other proprietary information of such person, such report, or portion thereof, shall be confidential in accordance with the provisions of section 1905 of title 18 of the United States Code, except that such report or part thereof shall not be deemed confidential for purposes of disclosure to (1) any delegate of the Federal Energy Emergency Administration for the purpose of carrying out this Act, (2) the Attorney General, the Secretary of the Interior, the Federal Trade Commission, the Federal Power Commission, or the General Accounting Office when necessary to carry out those agencies' duties and responsibilities under this and other statutes, and (3) the Congress or any Committee of Congress upon request of the Chairman. The provisions of this section shall expire on May 15, 1975.

SEC. 125. INTRASTATE GAS.

Nothing in this Act shall expand the authority of the Federal Power Commission with respect to sales of non-jurisdictional natural gas.

SEC. 126. EXPIRATION.

The authority under this title to prescribe any rule or order or take other action under this title, or to enforce any such rule or order, shall expire at midnight, May 15, 1975, but such expiration shall not affect any action or pending proceedings, civil or criminal, not finally determined on such date, nor any action or proceeding based upon any act committed prior to midnight, May 15, 1975.

SEC. 127. AUTHORIZATIONS OF APPROPRIATIONS.

(a) There are authorized to be appropriated to the Federal Energy Emergency Agency to carry out its functions under this Act and under other laws, and to make grants to States under section 123, $75,000,000 for the fiscal year ending June 30, 1974, and $75,000,000 for the fiscal year ending June 30, 1975.

(b) For the purpose of making payments under grants to States under section 123, there are authorized to be appropriated $50,000,000 for the fiscal year ending June 30, 1974, and $75,000,000 for the fiscal year ending June 30, 1975.

(c) For the purpose of making payments under grants to States under section 116, there is authorized to be appropriated $500,000,000 for the fiscal year ending June 30, 1974.

SEC. 128. SEVERABILITY.

If any provision of this Act, or the application of any such provision to any person or circumstance, shall be held invalid, the remainder of this Act, or the application of such provision to persons or circumstances other than those as to which it is held invalid, shall not be affected thereby.

SEC. 129. IMPORTATION OF LIQUEFIED NATURAL GAS.

Notwithstanding the provisions of section 3 of the Natural Gas Act (or any other provisions of law) the President may by order, on a finding that such action would be consistent to the public interest, authorize on a shipment-by-shipment basis the importation of liquefied natural gas from a foreign country: Provided, however, That the authority to act under this section shall not permit the importation of liquefied natural gas which had not been authorized prior to the date of expiration of this Act and which is in transit on such date.

SEC. 130. LOANS TO HOMEOWNERS AND SMALL BUSINESSES.

(a) The Department of Housing and Urban Development and the Small Business Administration are authorized to make low interest loans to homeowners and small businesses for the purpose of installing new and improved insulation, storm windows, and more efficient heating units, and adopt such rules and regulations as are necessary to achieve the objectives of this section.

(b) It is the sense of the Congress that small business enterprises should cooperate to the maximum extent possible in achieving the purposes of the Act and that they should have their varied needs consid-

should cooperate to the maximum extent possible in achieving the purgrams provided for by this Act.

(c) In order to carry out the policy stated in subsection (b)—

(1) the Small Business Administration (A) shall to the maximum extent possible provide small business enterprises with full information concerning the provisions of the programs provided for in this Act which particularly affect such enterprises, and the activities of the various departments and agencies under such provisions, and (B) shall, as a part of its annual report, provide to the Congress a summary of the actions taken under programs provided for in this Act which have particularly affected such enterprises;

(2) to the extent feasible, Federal and other governmental bodies shall seek the views of small business in connection with adopting rules and regulations under the programs provided for in this Act and in administering such programs; and

(3) in administering the programs provided for in this Act, special provision shall be made for the expeditious handling of all requests, applications, or appeals from small business enterprises.

(d) Any controls instituted shall be insofar as practicable, equitably applied to all businesses, whether large or small; and due consideration shall be given to the unique problems of retailing establishments and small business so as not to discriminate or cause unnecessary hardship in the administration or implementation of the provisions of this Act.

TITLE II—COORDINATION WITH ENVIRONMENTAL PROTECTION REQUIREMENTS

SEC. 201. SUSPENSION AUTHORITY.

Title I of the Clean Air Act (42 U.S.C. 1857 et seq.) is amended by adding at the end thereof the following new section:

"ENERGY EMERGENCY AUTHORITY

"SEC. 119. (a)(1)(A) The Administrator may, for any period beginning on or after the date of enactment of this section and ending on or before November 1, 1974, temporarily suspend any stationary source fuel or emission limitation as it applies to any person, if the Administrator finds that such person will be unable to comply with such limitation during such period solely because of unavailability of types or amounts of fuels. Any suspension under this paragraph and any interim requirement on which such suspension is conditioned under paragraph (3) shall be exempted from any procedural requirements set forth in this Act or in any other provision of local, State, or Federal law; except as provided in subparagraph (B).

"(B) The Administrator shall give notice to the public of a suspension and afford the public an opportunity for written and oral presentation of views prior to granting such suspension unless otherwise provided by the Administrator for good cause found and published in the Federal Register. In any case, before granting such a suspension he shall give actual notice to the Governor of the State, and to the chief executive officer of the local government entity in which the affected source or sources are located. The granting or denial of such

suspension and the imposition of an interim requirement shall be subject to judicial review only on the grounds specified in paragraphs (2)(B) and (2)(C) of section 706 of title 5, United States Code, and shall not be subject to any proceeding under section 304(a)(2) or 307 (b) and (c) of this Act.

"(2) In issuing any suspension under paragraph (1) the Administrator is authorized to act on his own motion without application by any source or State.

"(3) Any suspension under paragraph (1) shall be conditioned upon compliance with such interim requirements as the Administrator determines are reasonable and practicable. Such interim requirements shall include, but need not be limited to, (A) a requirement that the source receiving the suspension comply with such reporting requirements as the Administrator determines may be necessary, (B) such measures as the Administrator determines are necessary to avoid an imminent and substantial endangerment to health of persons, and (C) requirements that the suspension shall be inapplicable during any period during which fuels which would enable compliance with the suspended stationary source fuel or emission limitations are in fact reasonably available to that person (as determined by the Administrator). For purposes of clause (C) of this paragraph, availability of natural gas or petroleum products which enable compliance shall not make a suspension inapplicable to a source described in subsection (b)(1) of this section.

"(4) For purposes of this section:

"(A) The term 'stationary source fuel or emission limitation' means any emission limitation, schedule, or timetable for compliance, or other requirement, which is prescribed under this Act (other than section 303, 111(b), or 112) or contained in an applicable implementation plan, and which is designed to limit stationary source emissions resulting from combustion of fuels, including a prohibition on, or specification of, the use of any fuel of any type or grade or pollution characteristic thereof.

"(B) The term 'stationary source' has the same meaning as such term has under section 111(a)(3).

"(b)(1) Except as provided in paragraph (2) of this subsection, any fuel-burning stationary source—

"(A) which is prohibited from using petroleum products or natural gas as fuel by reason of an order issued under section 106(a) of the Energy Emergency Act, or

"(B) which (i) the Administrator of the Environmental Protection Agency determines began conversion to the use of coal as fuel during the 90-day period ending on December 15, 1973, and (ii) the Administrator of the Federal Energy Emergency Administration determines should use coal after November 1, 1974, after balancing on a plant-by-plant basis the environmental effects of such conversion against the need to fulfill the purposes of the Energy Emergency Act,

and which converts to the use of coal as fuel, shall not, until January 1, 1979, be prohibited, by reason of the application of any air pollution requirement, from burning coal which is available to such source. For purposes of this paragraph, the term "began conversion" means action by the owner or operator of a source during the 90-day period ending

December 15, 1973 (such as entering into a contract binding on the operator of the source for obtaining coal, or equipment or facilities to burn coal; expending substantial sums to permit such source to burn coal; or applying for an air pollution variance to enable the source to burn coal) which the Administrator finds evidences a decision (made prior to December 15, 1973) to convert to burning coal as a result of the unavailability of an adequate supply of fuels required for compliance with the applicable implementation plan, and a good faith effort to expeditiously carry out such decision.

"(2)(A) Paragraph (1) of this subsection shall apply to a source only if the Administrator finds that emissions from the source will not materially contribute to a significant risk to public health and if the source has submitted to the Administrator a plan for compliance for such source which the Administrator has approved, after notice to interested persons and opportunity for presentation of views (including oral presentation of views). A plan submitted under the preceding sentence shall be approved only if it provides (i) for compliance by the means specified in subparagraph (B), and in accordance with a schedule which meets the requirements of such subparagraph; and (ii) that such source will comply with requirements which the Administrator shall prescribe to assure that emmissions from such source will not materially contribute to a significant risk to public health. The Administrator shall approve or disapprove any such plan within 60 days after such plan is submitted.

"(B) The Administrator shall prescribe regulations requiring that any source to which this subsection applies submit and obtain approval of its means for and schedule of compliance. Such regulations shall include requirements that such schedules shall include dates by which such source must—

"(i) enter into contracts (or other enforceable obligations) which have received prior approval of the Administrator as being adequate to effectuate the purposes of this section and which provide for obtaining a long-term supply of coal which enables such source to achieve the emission reduction required by subparagraph (C), or

"(ii) if coal which enables such source to achieve such emission reduction is not available to such source, (I) enter into contracts (or other enforceable obligations) which have received prior approval of the Administrator as being adequate to effectuate the purposes of this section and which provide for obtaining a long-term supply of other coal or coal by-products, and (II) take steps to obtain continuous emission reduction systems necessary to permit such source to burn such coal or coal by-products and to achieve the degree of emission reduction required by subparagraph (C) (which steps and systems must have received prior approval of the Administrator as being adequate to effectuate the purposes of this section).

"(C) Regulations under subparagraph (B) shall require that the source achieve the most stringent degree of emission reduction that such source would have been required to achieve under the applicable implementation plan which was in effect on the date of enactment of this section (or if no applicable implementation plan was in effect on such date, under the first applicable implementation plan which

takes effect after such date). Such degree of emission reduction shall be achieved as soon as practicable, but not later than January 1, 1979; except that, in the case a source for which a continuous emission reduction system is required for sulphur-related emissions, reduction of such emissions shall be achieved on a date designated by the Administrator (but not later than January 1, 1979). Such regulations shall also include such interim requirements as the Administrator determines are reasonable and practicable including requirements described in clauses (A) and (B) of subsection (a) (3).

"(D) The Administrator (after notice to interested persons and opportunity for presentation of views, including oral presentations of views, to the extent practicable) (i) may, prior to November 1, 1974, and shall thereafter prohibit the use of coal by a source to which paragraph (1) applies if he determines that the use of coal by such source is likely to materially contribute to a significant risk to public health; and (ii) may require such source to use coal of any particular type, grade, or pollution characteristic if such coal is available to such source. Nothing in this subsection (b) shall prohibit a State or local agency from taking action which the Administrator is authorized to take under this subparagraph.

"(3) For purposes of this subsection, the term 'air pollution requirement' means any emission limitation, schedule, or timetable for compliance, or other requirement, which is prescribed under any Federal, State, or local law or regulation, including this Act (except for any requirement prescribed under this subsection or section 303), and which is designed to limit stationary source emissions resulting from combustion of fuels (including a restriction on the use or content of fuels). A conversion to coal to which this subsection applies shall not be deemed to be a modification for purposes of section 111(a) (2) and (4) of this Act.

"(4) A source to which this subsection applies may, upon the expiration of the exemption under paragraph (1), obtain a one year postponement of the application of any requirement of an applicable implementation plan under the conditions and in the manner provided in section 110(f).

"(c) The Administrator may by rule establish priorities under which manufacturers of continuous emission reduction systems shall provide such systems to users thereof, if he finds that priorities must be imposed in order to assure that such systems are first provided to users in air quality control regions with the most severe air pollution. No rule under this subsection may impair the obligation of any contract entered into before enactment of this section. No State or political subdivision may require any person to use a continuous emission reduction system for which priorities have been established under this subsection except in accordance with such priorities.

"(d) The Administrator shall study, and report to Congress not later than May 31, 1974, with respect to—

"(1) the present and projected impact on the program under this Act of fuel shortages and of allocation and end-use allocation programs;

"(2) availability of continuous emission reduction technology (including projections respecting the time, cost, and number of units available) and the effects that continuous emission reduction

systems would have on the total environment and on supplies of fuel and electricity;

"*(3) the number of sources and locations which must use such technology based on projected fuel availability data;*

"*(4) priority schedule for implementation of continuous emission reduction technology, based on public health or air quality;*

"*(5) evaluation of availability of technology to burn municipal solid waste in these sources; including time schedules, priorities analysis of unregulated pollutants which will be emitted and balancing of health benefits and detriments from burning solid waste and of economic costs;*

"*(6) projections of air quality impact of fuel shortages and allocations;*

"*(7) evaluation of alternative control strategies for the attainment and maintenance of national ambient air quality standards for sulfur oxides within the time frames prescribed in the Act, including associated considerations of cost, time frames, feasibility, and effectiveness of such alternative control strategies as compared to stationary source fuel and emission regulations;*

"*(8) proposed allocations of continuous emission reduction technology for nonsolid waste producing systems to sources which are least able to handle solid waste byproduct, technologically, economically, and without hazard to public health, safety, and welfare; and*

"*(9) plans for monitoring or requiring sources to which this section applies to monitor the impact of actions under this section on concentration of sulfur dioxide in the ambient air.*

"*(e) No State or political subdivision may require any person to whom a suspension has been granted under subsection (a) to use any fuel the unavailability of which is the basis of such person's suspension (except that this preemption shall not apply to requirements identical to Federal interim requirements under subsection (a)(1)).*

"*(f)(1) It shall be unlawful for any person to whom a suspension has been granted under subsection (a)(1) to violate any requirement on which the suspension is conditioned pursuant to subsection (a)(3).*

"*(2) It shall be unlawful for any person to violate any rule under subsection (c).*

"*(3) It shall be unlawful for the owner or operator of any source to fail to comply with any requirement under subsection (b) or any regulation, plan, or schedule thereunder.*

"*(4) It shall be unlawful for any person to fail to comply with an interim requirement under subsection (i)(3).*

"*(g) Beginning January 1, 1975, the Administrator shall publish at no less than 180-day intervals, in the Federal Register the following:*

"*(1) A concise summary of progress reports which are required to be filed by any person or source owner or operator to which subsection (b) applies. Such progress reports shall report on the status of compliance with all requirements which have been imposed by the Administrator under such subsections.*

"*(2) Up-to-date findings on the impact of this section upon—*

"*(A) applicable implementation plans, and*

"*(B) ambient air quality.*

"(*h*) *Nothing in this section shall affect the power of the Administrator to deal with air pollution presenting an imminent and substantial endangerment to the health of persons under section 303 of this Act.*

"(*i*) (*1*) *In order to reduce the likelihood of early phaseout of existing electric generating facilities during the energy emergency, any electric generating power plant* (*A*) *which, because of the age and condition of the plant, is to be taken out of service permanently no later than January 1, 1980, according to the power supply plan (in existence on the date of enactment of the Energy Emergency Act) of the operator of such plant,* (*B*) *for which a certification to that effect has been filed by the operator of the plant with the Environmental Protection Agency and the Federal Power Commission, and* (*C*) *for which the Commission has determined that the certification has been made in good faith and that the plan to cease operations no later than January 1, 1980, will be carried out as planned in light of existing and prospective power supply requirements, shall be eligible for a single one-year postponement as provided in paragraph* (*2*).

"(*2*) *Prior to the date on which any plant eligible under paragraph* (*1*) *is required to comply with any requirement of an applicable implementation plan, such source may apply (with the concurrence of the Governor of the State in which the plant is located) to the Administrator to postpone the applicability of such requirement to such source for not more than one year. If the Administrator determines, after balancing the risk to public health and welfare which may be associated with a postponement, that compliance with any such requirement is not reasonable in light of the projected useful life of the plant, the availability of rate base increases to pay for such costs, and other appropriate factors, then the Administrator shall grant a postponement of any such requirement.*

"(*3*) *The Administrator shall, as a condition of any postponement under paragraph* (*2*), *prescribe such interim requirements as are practicable and reasonable in light of the criteria in paragraph* (*2*).

"(*j*) (*1*) *The Administrator may, after public notice and opportunity for presentation of views in accordance with section 553 of title 5, United States Code, and after consultation with the Federal Energy Emergency Administration, designate persons to whom fuel exchange orders should be issued. The purpose of such designation shall be to avoid or minimize the adverse impact on public health and welfare of any suspension under subsection* (*a*) *of this section or conversion to coal to which subsection* (*b*) *applies or of any allocation under the Energy Emergency Act or the Emergency Petroleum Allocation Act of 1973.*

"(*2*) *The Administrator of the Federal Energy Emergency Administration shall issue exchange orders to such persons as are designated by the Administrator under paragraph* (*1*) *requiring the exchange of any fuel subject to allocation under the preceding Acts effective no later than 45 days after the date of the designation under paragraph* (*1*), *unless the Administrator of the Federal Energy Emergency Administration determines, after consultation with the Administrator, that the costs or consumption of fuel, resulting from such exchange order, will be excessive.*

"(3) *Violation of any exchange order issued under paragraph (2) shall be a prohibited act and shall be subject to enforcement action and sanctions in the same manner and to the same extent as a violation of any requirement of the regulation under section 4 of the Emergency Petroleum Allocation Act of 1973.*"

SEC. 202. IMPLEMENTATION PLAN REVISIONS.

(a) Section 110(a) of the Clean Air Act is amended in paragraph (3) by inserting "(A)" after "(3)" and by adding at the end thereof the following new subparagraph:

"*(B)(1) For any air quality control region in which there has been a conversion to coal under section 119(b), the Administrator shall review the applicable implementation plan and no later than one year after the date of such conversion determine whether such plan must be revised in order to achieve the national primary standard which the plan implements. If the Administrator determines that any such plan is inadequate, he shall require that a plan revision be submitted by the State within three months after the date of notice to the State of such determination. Any plan revision which is submitted by the State after notice and public hearing shall be approved or disapproved by the Administrator, after public notice and opportunity for public hearing, but no later than three months after the date required for submission of the revised plan. If a plan provision (or portion thereof) is disapproved (or if a State fails to submit a plan revision), the Administrator shall, after public notice and opportunity for a public hearing, promulgate a revised plan (or portion thereof) not later than three months after the date required for approval or disapproval.*

"*(2) Any requirement for a plan revision under paragraph (1) and any plan requirement promulgated by the Administrator under such paragraph shall include reasonable and practicable measures to minimize the effect on the public health of any conversion to which section 119(b) applies.*"

(b) Subsection (c) of section 110 of the Clean Air Act (42 U.S.C. 1857 C–5) is amended by inserting "(1)" after "(c)"; by redesignating paragraphs (1), (2), and (3) as subparagraphs (A), (B), and (C), respectively; and by adding the following new paragraph:

"*(2)(A) The Administrator shall conduct a study and shall submit a report to the Committee on Interstate and Foreign Commerce of the United States House of Representatives and the Committee on Public Works of the United States Senate not later than May 1, 1974, on the necessity of parking surcharge, management of parking supply, and preferential bus/carpool lane regulations as part of the applicable implementation plans required under this section to achieve and maintain national primary ambient air quality standards. The study shall include an assessment of the economic impact of such regulations, consideration of alternative means of reducing total vehicle miles traveled, and an assessment of the impact of such regulations on other Federal and State programs dealing with energy or transportation. In the course of such study, the Administrator shall consult with other Federal officials including, but not limited to, the Secretary of Transportation, the Administrator of the Federal Energy Emergency Administration, and the Chairman of the Council on Environmental Quality.*

"(B) No parking surcharge regulation may be required by the Administrator under paragraph (1) of this subsection as a part of an applicable implementation plan. All parking surcharge regulations previously required by the Administrator shall be void upon the date of enactment of this subparagraph. This subparagraph shall not prevent the Administrator from approving parking surcharges if they are adopted and submitted by a State as part of an applicable implementation plan. The Administrator may not condition approval of any applicable implementation plan submitted by a State on such plan's including a parking surcharge regulation.

"(C) The Administrator is authorized to suspend until January 1, 1975, the effective date or applicability of any regulations for the management of parking supply or any requirement that such regulations be a part of an applicable implementation plan approved or promulgated under this section. The exercise of the authority under this subparagraph shall not prevent the Administrator from approving such regulations if they are adopted and submitted by a State as part of an applicable implementation plan. If the Administrator exercises the authority under this subparagraph, regulations requiring a review or analysis of the impact of proposed parking facilities before construction which take effect on or after January 1, 1975, shall not apply to parking facilities on which construction has been initiated before January 1, 1975.

"(D) For purposes of this paragraph, the term 'parking surcharge regulation' means a regulation imposing or requiring the imposition of any tax, surcharge, fee, or other charge on parking spaces, or any other area used for the temporary storage of motor vehicles. The term 'management of parking supply' shall include any requirement providing that any new facility containing a given number of parking spaces shall receive a permit or other prior approval, issuance of which is to be conditioned on air quality considerations. The term 'preferential bus/carpool lane' shall include any requirement for the setting aside of one or more lanes of a street or highway on a permanent or temporary basis for the exclusive use of buses and/or carpools."

SEC. 203. MOTOR VEHICLE EMISSIONS.

(a) Section 202(b)(1)(A) of the Clean Air Act is amended by striking out "1975" and inserting in lieu thereof "1977"; and by inserting after "(A)" the following: "The regulations under subsection (a) applicable to emissions of carbon monoxide and hydrocarbons from light-duty vehicles and engines manufactured during model years 1975 and 1976 shall contain standards which are identical to the interim standards which were prescribed (as of December 1, 1973) under paragraph (5)(A) of this subsection for light-duty vehicles and engines manufactured during model year 1975."

(b) Section 202(b)(1)(B) of such Act is amended by striking out "1976" and inserting in lieu thereof "1978"; and by inserting after "(B)" the following: "The regulations under subsection (a) applicable to emissions of oxides of nitrogen from light-duty vehicles and engines manufactured during model years 1975 and 1976 shall contain standards which are identical to the standards which were prescribed (as of December 1, 1973) under subsection (a) for light-duty vehicles and engines manufactured during model year 1975. The regulations under subsection (a) applicable to emissions of oxides of nitro-

gen from light duty vehicles and engines manufactured during model year 1977 shall contain standards which provide that emissions of such vehicles and engines may not exceed 2.0 grams per vehicle mile."

(c) Section 202(b)(5)(A) of such Act is amended to read as follows:

"(5)(A) At any time after January 1, 1975, any manufacturer may file with the Administrator an application requesting the suspension for one year only of the effective date of any emission standard required by paragraph (1)(A) with respect to such manufacturer for light-duty vehicles and engines manufactured in model year 1977. The Administrator shall make his determination with respect to any such application within 60 days. If he determines, in accordance with the provisions of this subsection, that such suspension should be granted, he shall simultaneously with such determination prescribe by regulation interim emission standards which shall apply (in lieu of the standards required to be prescribed by paragraph (1)(A) of this subsection) to emissions of carbon monoxide or hydrocarbons (or both) from such vehicles and engines manufactured during model year 1977."

(d) Section 202(b)(5)(B) of the Clean Air Act is repealed and the following subparagraphs redesignated accordingly.

SEC. 204. CONFORMING AMENDMENTS.

(a)(1) Section 113(a)(3) of the Clean Air Act is amended by striking out "or" before "112(c)", by inserting a comma in lieu thereof, and by inserting after "hazardous emissions)" the following: ", or 119(f) (relating to priorities and certain other requirements)".

(2) Section 113(b)(3) of such Act is amended by striking out "or 112(c)" and inserting in lieu thereof ", 112(c), or 119(f)".

(3) Section 113(c)(1)(C) of such Act is amended by striking out "or section 112(c)" and inserting in lieu thereof ", section 112(c), or section 119(f)".

(4) Section 114(a) of such Act is amended by inserting "119 or" before "303".

(b) Section 116 of the Clean Air Act is amended by inserting "119 (b), (c) and (e)," before "209".

SEC. 205. PROTECTION OF PUBLIC HEALTH AND ENVIRONMENT.

(a) Any allocation program provided for in title I of this Act or in the Emergency Petroleum Allocation Act of 1973, shall, to the maximum extent practicable, include measures to assure that available low sulfur fuel will be distributed on a priority basis to those areas of the country designated by the Administrator of the Environmental Protection Agency as requiring low sulfur fuel to avoid or minimize adverse impact on public health.

(b) In order to determine the health effects of emissions of sulfur oxides to the air resulting from any conversions to burning coal to which section 119 of the Clean Air Act applies, the Department of Health, Education, and Welfare shall, through the National Institute of Environmental Health Sciences and in cooperation with the Environmental Protection Agency, conduct a study of chronic effects among exposed populations. The sum of $3,500,000 is authorized to be appropriated for such a study. In order to assure that long-term

studies can be conducted without interruption, such sums as are appropriated shall be available until expended.

(c) No action taken under this Act shall, for a period of 1 year after initiation of such action, be deemed a major Federal action significantly affecting the quality of the human environment within the meaning of the National Environmental Policy Act of 1969 (83 Stat. 856). However, before any action under this Act that has a significant impact on the environment is taken, if practicable, or in any event within 60 days after such action is taken, an environmental evaluation with analysis equivalent to that required under section 102(2)(C) of the National Environmental Policy Act, to the greatest extent practicable within this time constraint, shall be prepared and circulated to appropriate Federal, State, and local government agencies and to the public for a 30-day comment period after which a public hearing shall be held upon request to review outstanding environmental issues. Such an evaluation shall not be required where the action in question has been preceded by compliance with the National Environmental Policy Act by the appropriate Federal agency. Any action take under this Act which will be in effect for more than a one year period (other than action taken pursuant to subsection (d) of this section) or any action to extend an action taken under this Act to a total period of more than 1 year shall be subject to the full provisions of the National Environmental Policy Act notwithstanding any other provision of this Act.

(d) Notwithstanding subsection (c) of this section, in order to expedite the prompt construction of facilities for the importation of hydroelectric energy thereby helping to reduce the shortage of petroleum products in the United States, the Federal Power Commission is hereby authorized and directed to issue a Presidential permit pursuant to Executive Order 10485 of September 3, 1953, for the construction, operation, maintenance, and connection of facilities for the transmission of electric energy at the borders of the United States without preparing an environmental impact statement pursuant to section 102 of the National Environmental Policy Act of 1969 (83 Stat. 856) for facilities for the transmission of electric energy between Canada and the United States in the vicinity of Fort Covington, New York.

SEC. 206. ENERGY CONSERVATION STUDY.

(a) The Administrator of the Federal Energy Emergency Administration shall conduct a study on potential methods of energy conservation and, not later than 6 months after the date of enactment of this Act, shall submit to Congress a report on the results of such study. The study shall include, but not be limited to, the following:

(1) the energy conservation potential of restricting exports of fuels or energy-intensive products or goods, including an analysis of balance of payments and foreign relations implications of any such restrictions;

(2) federally sponsored incentives for the use of public transit, including the need for authority to require additional production of buses or other means of public transit and Federal subsidies for the duration of the energy emergency for reduced fares and additional expenses incurred because of increased service;

(3) alternative requirements, incentives, or disincentives for increasing industrial recycling and resource recovery in order to

reduce energy demand, including the economic costs and fuel consumption trade-off which may be associated with such recycling and resource recovery in lieu of transportation and use of virgin materials;

(4) the costs and benefits of electrifying rail lines in the United States with a high density of traffic; including (A) the capital costs of such electrification, the oil fuel economies derived from such electrification, the ability of existing power facilities to supply the additional power load, and the amount of coal or other fossil fuels required to generate the power required for railroad electrification, and (B) the advantages to the environment of electrification of railroads in terms of reduced fuel consumption and air pollution and disadvantages to the environment from increased use of fossil fuel such as coal; and

(5) means for incentives or disincentives to increase efficiency of industrial use of energy.

(b) Within 90 days of the date of enactment of this Act, the Secretary of Transportation, after consultation with the Federal Energy Emergency Administrator, shall submit to the Congress for appropriate action an "Emergency Mass Transportation Assistance Plan" for the purpose of conserving energy by expanding and improving public mass transportation systems and encouraging increased ridership as alternatives to automobile travel.

(c) Such plan shall include, but shall not be limited to—

(1) recommendations for emergency temporary grants to assist States and local public bodies and agencies thereof in the payment of operating expenses incurred in connection with the provision of expanded mass transportation service in urban areas;

(2) recommendations for additional emergency assistance for the purchase of buses and rolling stock for fixed rail, including the feasibility of accelerating the timetable for such assistance under section 142(a)(2) of title 23, United States Code (the "Federal Aid Highway Act of 1973"), for the purpose of providing additional capacity for and encouraging increased use of public mass transportation systems;

(3) recommendations for a program of demonstration projects to determine the feasibility of fare-free and low-fare urban mass transportation systems, including reduced rates for elderly and handicapped persons during nonpeak hours of transportation;

(4) recommendations for additional emergency assistance for the construction of fringe and transportation corridor parking facilities to serve bus and other mass transportation passengers;

(5) recommendations on the feasibility of providing tax incentives for persons who use public mass transportation systems.

(d) In consultation with the Federal Energy Emergency Administrator, the Secretary of Transportation shall make an investigation and study for the purpose of conserving energy and assuring that the essential fuel needs of the United States will be met by developing a high-speed ground transportation system between the cities of Tijuana in the State of Baja California, Mexico, and Vancouver in the Province of British Columbia, Canada, by way of the cities of Seattle in the State of Washington, Portland in the State of Oregon, and Sacramento, San Francisco, Fresno, Los Angeles and San Diego in the State

of California. In carrying out such investigation and study the Secretary shall consider, but shall not be limited to—

(1) the efficiency of energy utilization and impact on energy resources of such a system, including the future impact of existing transportation systems on energy resources if such a system is not established;

(2) coordination with other studies undertaken on the State and local levels; and

(3) such other matters as he deems appropriate.

The Secretary of Transportation shall report the results of the study and investigation pursuant to this Act, together with his recommendations, to the Congress and the President no later than December 31, 1974.

SEC. 207. REPORTS.

The Administrator of the Environmental Protection Agency shall report to Congress not later than January 31, 1975, on the implementation of sections 201 through 205 of this title.

SEC. 208. FUEL ECONOMY STUDY.

Title II of the Clean Air Act is amended by redesignating section 213 as section 214 and by adding the following new section:

"FUEL ECONOMY IMPROVEMENT FROM NEW MOTOR VEHICLES

SEC. 213. (a) (1) The Administrator and the Secretary of Transportation shall conduct a joint study, and shall report to the Committee on Interstate and Foreign Commerce of the United States House of Repsentatives and the Committees on Public Works and Commerce of the United States Senate within 120 days following the date of enactment of this section, concerning the practicability of establishing a fuel economy improvement standard of 20 percent for new motor vehicles manufactured during and after model year 1980. Such study and report shall include, but not be limited to, the technological problems of meeting any such standard, including the leadtime involved; the test procedures required to determine compliance; the economic costs associated with such standards, including any beneficial economic impact; the various means of enforcing such standard; the effect on consumption of natural resources, including energy consumed; and the impact of applicable safety and emission standards. In the course of performing such study, the Administrator and the Secretary of Transportation shall utilize the research previously performed in the Department of Transportation, and the Administrator and the Secretary shall consult with the Administrator of the Federal Energy Emergency Administration, the Chairman of the Council on Environmental Quality, and the Secretary of the Treasury. The Office of Management and Budget may review such report before its submission to Congress but the Office may not revise the report or delay its submission beyond the date prescribed for its submission, and may submit to Congress its comments respecting such report. In connection with such study, the Administrator may utilize the authority provided in section 307(a) of this Act to obtain necessary information.

"(2) For the purpose of this section, the term 'fuel economy improvement standard' means a requirement of a percentage increase in the number of miles of transportation provided by a manufacturer's

entire annual production of new motor vehicles per unit of fuel consumed, as determined for each manufacturer in accordance with test procedures established by the Administrator pursuant to this Act. Such term shall not include any requirement for any design standard or any other requirement specifying or otherwise limiting the manufacturer's discretion in deciding how to comply with the fuel economy improvement standard by any lawful means."

TITLE III—STUDIES AND REPORTS

SEC. 301. AGENCY STUDIES.

The following studies shall be conducted, with reports on their results submitted to the Congress:

(1) Within 30 days after the date of enactment of this Act:

(A) The Administrator shall conduct a review of all rulings and regulations issued pursuant to the Economic Stabilization Act to determine if such rulings and regulations are contributing to the shortage of fuels and of materials associated with the production of energy supplies.

(B) All Federal departments and agencies, including the Federal regulatory agencies, are directed to undertake a survey of all activities over which they have special expertise or jurisdiction and identify and recommend to the Congress and to the President specific proposals to significantly increase energy supply or to reduce energy demand through conservation programs.

(C) The Secretary of the Treasury and the Director of the Cost of Living Council shall recommend to the Congress specific incentives to increase energy supply, reduce demand, to encourage private industry and individual persons to subscribe to the goals of this Act. This study shall also include an analysis of the price-elasticity of demand for gasoline.

(D) The Administrator shall report to the Congress concerning the present and prospective impact of energy shortages upon employment. Such report shall contain an assessment of the adequacy of existing programs in meeting the needs of adversely affected workers, together with legislative recommendations appropriate to meet such needs, including revisions in the unemployment insurance laws.

(E) The Secretary of the Interior and the Secretary of Commerce are directed to prepare a comprehensive report of (1) United States exports of petroleum products and other energy sources, and (2) foreign investment in production of petroleum products and other energy sources to determine the consistency or lack thereof of the Nation's trade policy and foreign investment policy with domestic energy conservation efforts. Such report shall include recommendations for legislation.

(2) Within 6 months after the date of enactment of this Act:

(A) The Administrator shall develop and submit to the Congress no later than May 15, 1974, a plan for providing incentives for the increased use of public transportation and Federal subsidies for maintained or reduced fares and additional expenses incurred because of increased service for the duration of the Act.

(B) The Administrator shall recommend to the Congress actions to be taken regarding the problem of the siting of energy producing facilities.

(C) The Administrator shall conduct a study of the further development of the hydroelectric power resources of the Nation, including an assessment of present and proposed projects already authorized by Congress and the potential of other hydroelectric power resources, including tidal power and geothermal steam.

(D) The Administrator shall prepare and submit to Congress a plan for encouraging the conversion of coal to crude oil and other liquid and gaseous hydrocarbons.

(E) The Secretary of the Interior shall study methods for accelerating leases of energy resources on public lands including oil and gas leasing onshore and offshore, and geothermal energy leasing.

SEC. 302. REPORTS OF THE PRESIDENT TO CONGRESS.

The President shall report to the Congress every sixty days, beginning April 1, 1974, on the implementation and administration of this Act and the Emergency Petroleum Allocation Act of 1973, together with an assessment of the results attained thereby. Each report shall include specific information, nationally and by region and State, concerning staffing and other administrative arrangements taken to carry out programs under these Acts and may include such recommendations as he deems necessary for amending or extending the authorities granted in this Act or in the Emergency Petroleum Allocation Act of 1973.

And the House agree to the same.

That the Senate recede from its disagreement to the amendment of the House to the title of the Senate bill and agree to the same with an amendment as follows:

In lieu of the matter proposed to be inserted by the amendment of the House to the title of the Senate bill, insert the following: "An Act to assure, through energy conservation, end-use rationing of fuels, and other means, that the essential energy needs of the United States are met, and for other purposes."

And the House agree to the same.

Managers on the Part of the House.

63-518 O - 76 - 46 (Vol. I)

JOINT EXPLANATORY STATEMENT OF THE COMMITTEE OF CONFERENCE

The managers on the part of the House and the Senate at the conference on the disagreeing votes of the two Houses on the amendments of the House to the bill (S. 2589) to declare by congressional action a nationwide energy emergency; to authorize the President to immediately undertake specific actions to conserve scarce fuels and increase supply; to invite the development of local, State, National, and International contingency plans; to assure the continuation of vital public services; and for other purposes, submit the following joint statement to the House and the Senate in explanation of the effect of the action agreed upon by the managers and recommended in the accompanying conference report:

The House amendments struck out all of the Senate bill after the enacting clause and inserted a substitute text and provided a new title for the Senate bill.

The committee of conference has agreed to a substitute for both the Senate bill and the House amendment to the text of the bill. Except for clarifying, clerical, and conforming changes, the differences are noted below:

Several general comments should be made concerning the overall pattern of the legislation agreed to by the Conference Committee. The Substitute text agreed to does not contain a number of provisions which were contained in either the House or Senate bill. The Committee wishes to emphasize that it has eliminated these provisions without prejudice. In a number of cases these matters were not agreed to in deference to the jurisdictional prerogatives of other committees of the Congress who were not represented at the Conference. In other cases the Conferees eliminated provisions which in their judgment addressed problems which did not relate to the short term emergency situation. Because of the exigencies of the situation, the Conferees have attempted to confine the scope of this legislation to those matters which were essential and leave to a time which affords more studied consideration those proposals which attempt to deal with the more long term and basic energy supply and demand problems which confront this nation.

Emergency Conservation Regulations

Faced with the emergency situation, on November 8, 1973, the President addressed the nation on the dimensions of the energy crisis. In that address, the President announced that he would request the Congress to vest in him emergency authority to impose restrictions on both the public and private consumption of energy. The legislation which the Conferees have agreed to proposes to give to the Executive a full

spectrum of extraordinary powers to cope with the situation. The Conferees fully expect that the Administration, having been granted these authorities under the Act, will use them forthwith, and take strong action to reduce demand for energy during this period of national energy shortages and to expand supply of petroleum products through the conversion of stationary electric power plants now burning oil or natural gas.

The Conferees have not, however, agreed to vest without limitation the all pervasive and ill defined authority to restrict public and private consumption of energy which had been requested by the President. Instead, the Conferees have devised a mechanism for allowing further legislative consideration and control over the exercise of these powers.

Under its terms, the Administrator of the Federal Emergency Energy Administration created by this legislation would be permitted to issue regulations restricting energy use subject to a reservation of Congressional veto power. This control is to be exercised in a manner which closely parallels statutory mechanisms which have been used in various reorganization acts of the Congress over the past thirty years. The Conferees have carefully tailored this mechanism to take into consideration the emergency circumstances which confront the nation. Thus, the Administrator would be permitted to immediately implement conservation regulations prior to March 15, 1974, in order to reduce demand in the harsh winter months of January and February without delay. Such regulations must be submitted to the Congress simultaneously with their promulgation. Thereafter, the Congress would have an opportunity to veto the regulation by simple resolution in either house. If vetoed, the regulation would not continue in effect. The Committee wishes to emphasize that any such regulation would, until vetoed, be given full force and effect. Compliance may be obtained through court injunctive process or through the imposition of civil and criminal penalties for any violation.

Conservation regulations proposed to take effect after March 15, 1974, would be delayed in their implementation until Congress is afforded an opportunity of 15 consecutive days in continuous legislative session to consider disapproval resolutions. If the Congress does not act within that 15-day period, the regulation may be implemented. Lastly, the Conferees have determined that any conservation measure which is proposed to take effect after August 31, 1974, must be submitted to the Congress in the nature of a legislative proposal for appropriate Congressional consideration. Actions of this nature are sufficiently long term in their objective so as to permit the normal legislative process to be observed.

The law passed since the first declared national emergency in 1933 commonly transferred almost unlimited power to the Executive to permit government to act effectively in times of great crisis. A recently issued report of the Special Committee on the Termination of the National Emergency, United States Senate, catalogued over 470 significant statutes which the Congress has passed since 1933 delegating to the President powers that has been "the prerogatives and responsibility of the Congress since the beginning of the Republic".

Over the course of that 40-year period, the Congress has repeatedly been presented with the problem of finding a means by which a legislative body in a democratic republic may extend extraordinary powers

for use by the Executive during times of emergency without imperiling our Constitutional balance of liberty and authority. The Conferees believe that the disapproval mechanism contained in this legislation provides the best opportunity for resolution of this problem.

The veto authority coupled with a termination date which limits the duration of the period within which these powers may be exercised provides assurance that normal legislative processes will be resumed at a time certain and that the Constitutional checks and balance system will be preserved. It is firmly believed that this form of legislative consideration and control gives full effect to the separation of powers principle so fundamental to our system of government while at the same time allowing a vesting of power in the Executive branch to permit actions to be taken expeditiously in order to respond to immediate and changing circumstances during a crisis situation.

FEDERAL EMERGENCY ENERGY ADMINISTRATION

To exercise the authority granted under this legislation, the Committee has created a temporary Federal Emergency Energy Administration to be directed by an administrator appointed by the President with the advice and consent of the Senate. In addition to its duties under this Act, the Administration is to exercise the authority provided for in the Emergency Petroleum Allocation Act of 1973 previously reported by this Committee and already enacted into law. In so doing the Committee proposes to parallel and give statutory force to the Federal Energy Office created by executive order of the President on Tuesday, December 4, 1973. It is the understanding of the conferees that the office of Administrator came into existence on the effective date of this Act and that vacancies exist in such offices from the time of their creation until they are filled. Accordingly, Article 2, Section 2, Clause 3 of the Constitution is applicable.

The creation of this new administration to deal with the emergency fuels shortages is proposed on the premise that we must focus authority in a single agency head with decisionmaking responsibility for these programs. This agency is to operate within the Executive Department subject to the supervision of the President. Several trappings of independence, however, are given to the Administrator to assure that he may act consonant with the preeminence of his mission free from certain administrative controls which have been ingrafted on agency actions in the name of administrative efficiency. Thus, the Federal Emergency Energy Administration is relieved of the necessity of obtaining prior OMB clearance for information gathering activities. Also to assure that the administration will have high visibility in government, budget requests and legislative recommendations are to be transmitted to the Congress simultaneously with their submission to the Office of Management and Budget. In so doing the Committee seeks to assure that the Congress will know without question or qualification what the Administrator determines to be his fiscal needs in carrying out his legislative assignment and what additional authority may be required to get the job done effectively and expeditiously.

In addition to the powers under the Emergency Petroleum Allocation Act of 1973 and as may be authorized under this Act, the Presi-

dent has proposed to transfer other functions of the Executive Department to a Federal Energy Administration so as to consolidate energy related activities. The Committee has not attempted and does not propose to transfer these functions in this Act. It is understood that some of these proposed transfers, such as the transfer from the Department of Interior of its Office of Oil and Gas and the Outer Continental Shelf authority, require legislative approval. An appropriate bill has been submitted to the Congress and has considered by the Government Operations Committees of the House and Senate. On December 19 the Senate passed the Administration's proposed bill to establish an FEA.

The conferees wish to emphasize that the creation of a temporary Federal Emergency Energy Administration under this Act does not remove the necessity of the Congress acting upon the legislation reported by the House and Senate Government Operations Committees. The need for statutory creation of an administrative office within the Executive Branch which consolidates energy policy related functions of government remains real and immediate. This Act provides the basic authority to initiate the establishment of such an administrative office.

Safeguards Against Unreasonable Discriminations and Unequitable Treatment

The authorities contained in this legislation and in the Emergency Petroleum Allocation Act of 1973, which it amends, call for a major intrusion into the competitive marketplace by the federal government. In allocating fuels so as to maintain essential services during times of shortage and to assure equitable distribution of supplies throughout the nation, decisions will be made which will impact on all regions of the country and all sectors of the economy. Already significant actions have been taken in some cases on questionable legal authority, which have produced dislocations and distortions in the competitive market which have impacted disproportionately on individual groups of competitors offering similar services. In part, this has been the unavoidable result of attempting to cope with a crisis situation without having first developed a decision-making structure which affords government an opportunity to appreciate the full ramifications of its direct and indirect actions. For example, there must be a realization by those in authority that the public good is not served by denying allocations of fuel for certain uses which have the appearance of being nonessential (such as recreational activities or various aspects of general aviation) if to do so would result in significant unemployment and economic recession for some regions of the country. There are, of course, many areas in this nation where recreation and tourism provide the base of the local economy. Careful attention must be given to the needs of these as well as other areas. Moreover, government must equip itself so as to be able to look beyond the immediately affected industry to discover the unforeseen ripple effects of its action on other supportive and relative industry groupings.

Access to adequate supplies of fuels is basic to the survival of virtually every commercial enterprise and, accordingly, government must act with great care to assure that its actions are equitable and do not unreasonably discriminate among users. The Committee has added a separate section to this legislation creating a statutory standard of

reasonableness to be observed in the allocation of refined petroleum products and electrical energy among users or in taking actions which result in restrictions on use of such products and electrical energy. The Committee intends the term equitable to be applied in its broadest and most general sense. As such, the term denotes the spirit of fairness, justness, and right dealing. No user or class of users should be called upon during this shortage period to carry an unreasonably disproportionate share of the burden. This is fundamental to the traditional notion of fairness, and equal protection. The Committee expects the President and the Administrator of the Federal Emergency Energy Administration created under this Act to assidiously observe these requirements in the conduct of their functions.

The Committee also adopted a section which requires the preparation of an economic impact analysis of any actions it proposes to take to bring supply and demand into balance. Wherever practicable, this analysis is to be completed prior to implementation of the proposed action. If conditions do not permit full advance preparation of the economic impact analysis in acting to deal with emergency conditions, the analysis is to be prepared contemporaneously with implementation of any proposed action between date of enactment and March 15, 1974.

The committee is concerned about the very real threat of the cutoff of Canadian fuel to the United States, particularly fuel essential for business and heating purposes. A specific example of such an action is the possibility that the Canadian government may stop supplying fuel to the great Northern Paper and Georgia-Pacific plants in the State of Maine. The following amendment was offered in the conference but was subsequently withdrawn in recognition of the desirability of allowing diplomatic endeavors to be pursued:

"Whenever, as a result of action by the Canadian Resources Board, fuel exports to any manufacturing plant in the United States are interrupted, the Administrator shall make an allocation of fuel to such manufacturing plant in accordance with the provisions of the Emergency Petroleum Allocation Act. Where possible, such allocation shall be from fuel which would otherwise be exported from the United States to Canada."

The committee understands that diplomatic efforts are underway to reverse the actions contemplated by the Canadian government and expresses a strong interest in having all diplomatic avenues pursued vigorously to successfully resolve this and other similar situations.

End Use Rationing Authority

The conferees have agreed on provisions which authorize the President to develop and implement an end use rationing plan for crude oil, residual fuel oil and refined petroleum products. This authority is to be exercised under the Emergency Petroleum Allocation Act of 1973 and must be consistent with the attainment of the congressionally stated objectives of that Act. Procedural protections are provided to permit users an opportunity to present views respecting the development of the plan. It is the firm intention of the conferees that end use rationing be implemented as a last resort measure. Accordingly it has been provided in the conference substitute that end use rationing may

be implemented only upon a finding that all other practicable and authorized actions are insufficient to assure the preservation of public health, safety, and the public welfare and those other defined objectives set forth in section 4(b) of the Emergency Petroleum Allocation Act. Should the President be able to make such a finding, he is authorized to implement end use rationing without further action of the Congress.

The conferees wish to state their intent that in the development of an end use rationing plan, the President shall give special consideration to the transportation needs of our handicapped Americans. Clearly, if the employment, medical, and therapeutic services of our physically handicapped citizens are interrupted as a result of lack of transportation, a hardship for such individuals will be incalculable in its effects. Moreover, the conferees believe that actions taken under the Emergency Petroleum Allocation Act of 1973 shall, where consistent with the objectives of section 4(b) of that Act, give consideration to providing allocations of petroleum products for the timely completion of Federal construction projects and give consideration to the public welfare needs of meeting the educational or housing requirements of our citizens.

The Conferees also recognize that end use rationing plans should give consideration to the personal transportation needs of American military personnel re-assigned to other duty stations and of those persons who are required to relocate for employment purposes.

Prohibition on Inequitable Pricing

During the protracted congressional consideration of S. 2589, the energy emergency and the problems facing the Nation have become acute. One of the most serious and recent aspects of the emergency has been the meteoric increase in crude oil and petroleum product prices. In the last three months of 1973, the cost of residual fuel oil to utilities rose by 150 percent. In December 1973, fuel price increases accounted for 40 percent of the increase in the wholesale price index. Wholesale gasoline prices increased about four cents a gallon in the last three months of 1973. These increases, under present price controls, can be traced directly to two factors: (1) the great increase in the world crude price since October, and (2) the release of certain categories of domestic crude from price controls.

A year ago, crude oil sold for $3.40 a barrel. Today, imported crude and domestic crude not subject to price ceilings sell for $10.35 a barrel and higher. While it is beyond the Committee's jurisdiction to regulate the world price of crude or the price of crude established by international controls, control of domestic prices was considered in order.

It is indisputable that such prices have led to increased drilling activity in the United States, which is clearly desirable if we are to approach domestic self-sufficiency in energy. However, the Committee understands that, according to oil industry and other recent economic supply studies, the long-run market clearing price needed to assure adequate exploration and development and supply is considerably under the $7.09 a barrel national average price for newly produced crude established under section 110 of this act. The Committee there-

fore finds little reason for asking consumers to pay increasingly higher prices, when such prices cannot be justified on the grounds of increasing cost.

For example, total sales volume for the seven major oil companies in the U.S. increased about six percent between the first three quarters of 1973. Total revenues increased by 22 percent, and total net earnings by 46 percent. For this reason, the Committee adopted a section which sets an average ceiling price for crude oil of $5.25, with provisions for higher prices for certain classes of crude, up to an absolute ceiling of 35 percent above the $5.25 average price, or an average of $7.09. Dollar-for-dollar passthroughs of all rollbacks are required to be passed through to the ultimate consumers of residual fuel oil or refined petroleum products, including propane.

The Committee intends, in adopting this section, to strike a just balance between the need for equity and the need for adequate incentives to assure a sufficient long-run supply of domestic fuels.

SHORT TITLE

TABLE OF CONTENTS

Senate bill

The Senate bill provided that it could be cited as the "National Energy Emergency Act of 1973". It had no table of contents.

House amendment

The House amendment provided that it could be cited as the "Energy Emergency Act".

The House amendment also included a table of contents of the legislation.

Conference substitute

The conference substitute has the same short title as the House amendment and includes a table of contents.

TABLE I—ENERGY EMERGENCY AUTHORITIES

FINDINGS AND PURPOSES—ENERGY EMERGENCY

FINDINGS

Senate bill

Under section 101 of the Senate bill the Congress would make a determination that a shortage of crude oil, residual fuel oil, and refined petroleum products does now exist. In addition, it would make determinations with respect to the effect of those shortages; what steps should be taken with respect thereto; that primary responsibility for developing and enforcing fuel shortage contingency plans lies with the States and certain local governments, and that, during the energy emergency the protection and fostering of competition and the prevention of anticompetitive practices and effects are vital.

House amendment

No provision.

Conference substitute

Section 101(a)(1) of the conference substitute is in most respects the same as the Senate bill.

DECLARATION OF EMERGENCY

Senate bill

Under Section 201 the Congress would declare that current and imminent fuel shortages have created a nationwide energy emergency.

House amendment

No provision.

Conference substitute

Section 101(a)(2) of the conference substitute states that on the basis of the determinations specified in paragraph (1) thereof the Congress hereby finds that current and imminent fuel shortages have created a nationwide energy emergency.

PURPOSES

Senate bill

Section 102 of the Senate bill lists the purposes of the legislation. Among the purposes listed are (1) to declare an energy emergency, (2) to direct the President to take action with regard thereto, (3) to provide a national program to conserve scarce energy resources, (4) to minimize the adverse effects of energy shortages on the economy and industrial capacity of the Nation, and (5) to direct the President and State and local governments to develop contingency plans for making specified reductions in energy consumption.

House amendment

Section 101 of the House amendment sets forth the purpose of the legislation which is to (1) call for proposals for measures which could be taken in order to conserve energy, and (2) authorize specific temporary emergency measures to be taken to assure that the Nation's essential needs for fuel will be met in a manner which to the maximum practicable extent meets certain specified objectives.

Conference substitute

Section 101(b) of the conference substitute provides that the purposes of the legislation are to call for proposals for energy emergency rationing and conservation measures and to authorize specific temporary emergency actions to be exercised, subject to congressional review and right of approval or disapproval, to assure that the essential needs of the United States for fuels will be met in a manner which to the fullest extent practicable meets specified objectives.

DEFINITIONS

Senate bill

No provision.

House amendment

Section 102 defined the terms "State", "petroleum product", "United States" and "Administration" for purposes of the legislation.

"Administrator" is defined to mean the Administrator of the Federal Energy Administration which is established by section 104 of the House amendment. The term is used with that meaning throughout the House amendment segments of this joint statement unless another intent is specifically indicated.

Conference substitute

Section 102 of the conference substitute is the same as the House amendment, except that "Administrator" is defined to mean the Administrator of the Federal Energy Emergency Administration which is established by section 103 of the conference substitute. That term will be used with that meaning throughout the conference substitute portions of this joint statement unless another intent is specifically indicated.

53

FEDERAL ENERGY EMERGENCY ADMINISTRATION

Senate bill

No provision.

House amendment

Section 104 would establish a Federal Energy Administration. The Administration would be headed by a Federal Energy Administrator appointed by and with the consent of the Senate who would serve until May 15, 1975. The Administrator would be responsible for the development and implementation of Mandatory Allocation Programs provided for in the Emergency Petroleum Allocation Act of 1973.

Copies of budget estimates and requests, legislative recommendations, testimony, or comments on legislation which are submitted to the President or to the Office of Management and Budget would be concurrently transmitted to the Congress. The Administration would be considered an independent regulatory agency for purposes of the collection of information and as such is exempt from Office of Management and Budget veto of its actions for the collection of necessary information.

Conference substitute

Section 103 of the conference substitute establishes until May 15, 1975, unless superseded prior to that date by law a Federal Emergency Energy Administration (FEEA) which shall be temporary and headed by an Administrator who shall be appointed by the President by and with the advice and consent of the Senate.

It is the understanding of the conferees that the office of Administrator comes into existence on the date of enactment of the legislation and that a vacancy exists in such office from the time of its creation until it is filled. Accordingly, Article II, Section 2, Clause 3 of the Constitution is applicable.

Effective on the date on which the Administrator first takes office (or, if later, on January 1, 1974) certain functions, powers, and duties under specified sections of the Emergency Petroleum Allocation Act of 1973 (other than functions vested by section 6 of such Act in the Federal Trade Commission, the Attorney General, or the Antitrust Division of the Department of Justice) are transferred to the Administrator. Personnel, property, records, obligations, and commitments used primarily with respect to functions transferred to the Administrator are also transferred to him.

Whenever the FEEA submits any (1) budget estimate or request, or (2) legislative recommendations or testimony or comments on legislation, to the Office of Management and Budget it must concurrently transmit a copy thereof to the Congress.

The FEEA shall be an independent regulatory agency for purposes of Chapter 35 of Title 44, United States Code, but not for any other purpose.

ENERGY CONSERVATION, DISTRIBUTION, AND ALLOCATION PROVISIONS—RATIONING AUTHORITY

Senate bill

ENERGY RATIONING AND CONSERVATION PROGRAM

Under subsections (a) and (b) of section 203, the President would be required to promulgate a nationwide emergency energy rationing

and conservation program within 15 days after enactment of the legislation. Such program would include (1) a priority system and plan, including a program to be implemented without delay for rationing scarce fuels among distributors and consumers, and (2) measures capable of reducing energy consumption in the affected area by no less than 10% within 10 days, and by no less than 25% within 4 weeks after implementation.

Fuel Distribution Plan

Section 203(c) would require the President within 15 days after enactment of the legislation to determine the fuel needs of the major geographic regions of the United States and to promulgate a plan assuring equitable distribution of available fuel supplies among such regions based on their respective relative needs, including such needs of the States within such regions.

The plan would include allocation of available transport facilities necessary to assure equitable distribution of fuel supplies under the plan.

The fuel distribution plan or plans would be implemented within 30 days after promulgation.

House amendment

Energy Conservation Plans

Section 105 would require the Administrator, within 30 days after enactment of the legislation and from time to time thereafter, to propose one or more energy conservation plans, as defined, to reduce energy consumption to a level which could be supplied from available energy resources. The plans would be submitted to Congress for appropriate action.

Section 105(b) would require such plans to provide for the maintenance of vital services. Section 105(c) would require that proposed restrictions on the use of energy in such plans to be submitted by the Administrator would be designed, to the maximum extent practicable, to be carried out in a manner which is fair and reasonably distributes the burden on all sectors of the economy. Such restriction should also give due consideration to the needs of commercial, retail, and service establishments with unconventional working hours. Section 105(e) would state that no provision of the Act or the EPAA should be construed as authorizing the imposition of any tax.

Amendment to Emergency Petroleum Allocation Act of 1973 (EPAA)

Section 103(a) would amend section 4 of the EPAA, relating to mandatory allocation of crude oil, residual fuel oil, and refined petroleum products.

Proposed subsection 4(h) would authorize the President to establish rules for the ordering of priorities among users of petroleum products and to assign to such users rights to obtain petroleum products in preference to those assigned a lower priority. Prior to this ordering of priorities and assignment of rights, the President must find that such action is necessary in order to carry out the objectives

or subsection 4(b) of the EPAA. (Subsection 4(b) is the section which defines the provisions which must be fulfilled by the regulation providing for the mandatory allocation of petroleum products.)

In the ordering of priorities among users, the maintenance of vital services would be emphasized.

Allocations of products made pursuant to the proposed subsection would be adjusted by the President as necessary to assure that those entitled to receive allotments would actually obtain such allocated products.

The President would be required to establish procedures whereby users may petition for review, reclassification, and modification of priorities and entitlements assigned in accordance with the subsection. These procedures may include procedures with respect to local boards which could be established under section 109(c) of the legislation.

The President would be authorized to require refineries in the United States to adjust their operations with regard to the proportions of products produced in the refining process. These adjustments would be required as necessary to assure that the proportions produced are consistent with the objectives set forth in section 4(b) of the EPAA.

The definition of "allocation" as used in this subsection would be clarified by stating that it "shall not be construed to exclude the end-use allocation of gasoline to individual consumers". Thus, the President would be authorized to ration gasoline.

Section 103(e) would amend section 4 of the EPAA by adding subsections (l) through (n) thereto providing a procedure for Congressional review and disapproval of any rule issued under section 4(h) (which is discussed above) with respect to end-use allocation which is referred to as an "energy action".

Under the procedure, the President would be required to transmit any energy action to both Houses of the Congress on the same day.

An energy action would take effect at the end of the first period of 15 calendar days of continuous session of the Congress after the date on which the energy action is transmitted, unless either House passed a resolution stating that it did not favor the energy action. A detailed disapproval procedure is set out which would be enacted as an exercise of the rulemaking power of each House of Congress. Any energy action which became effective would be printed in the Federal Register.

Proposed section 4(j) of the EPAA would provide that, notwithstanding any other provision of the EPAA, or of any State or local law regarding fuel allocation, provision will be made for adequate supplies of fuels for:

(a) moves of armed services personnel on orders;

(b) household moves related to employment;

(c) household moves rising from displacement due to unemployment; and

(d) moves due to health, educational opportunities, or other good and sufficient reasons.

Conference substitute

End-Use Allocation

Section 104 of the conference substitute amends section 4 of the Emergency Petroleum Allocation Act of 1973 (EPAA) by adding a new subsection (h). This new subsection, agreed to by the conferees on December 20, 1973, authorizes the development and implementation of end use rationing plans for crude oil, residual fuel oil, and refined petroleum products.

Under the new subsection the President may promulgate a rule which shall provide, consistent with the objectives of section 4(b) of that Act, an ordering of priorities among users of crude oil, residual fuel oil, or any refined petroleum product, and for the assignment to such users of rights entitling them to obtain any such oil or product in precedence to other users not similarly entitled. The proposed gasoline rationing plan published for comment by the Federal Energy Office on January 16, 1974 was not reviewed by the conferees. The conference report reflects neither concurrence nor non-concurrence with the Federal Energy Office plan or with any of the provisions thereof.

Such rule shall take effect only if the President finds that, without such rule, all other practicable and authorized methods to limit energy demand will not achieve the objectives of Emergency Petroleum Allocation Act of 1973, and of this Act.

The President shall, by order, in furtherance of such rule cause such adjustments in the allocations made pursuant to the regulation under section 4(b) of the EPAA as may be necessary to provide for the allocation of crude oil, residual fuel oil, or any refined petroleum product as necessary to attain the objectives established for the Allocation Program in the Emergency Petroleum Allocation Act.

The President must provide for procedures by which any user of such oil or product for which priorities and entitlements are established under this new subsection may petition for review and reclassification or modification of any determination made thereunder with respect to his priority or entitlement. Provision is made for the establishment of local boards to administer allocation or rationing programs. In providing for the implementation of rationing the conferees specifically state that no taxing authority, of any type, is granted.

Energy Conservation Regulations

Under section 105 of the conference substitute, the Administrator may propose one or more energy conservation regulations which shall be designed (together with certain other actions) to result in a reduction of energy consumption to a level which can be supplied by available energy resources. The term "energy conservation regulations" is defined to mean limits or such other restrictions on the public or private use of energy (including limitations on operating hours of businesses) which are necessary to reduce energy consumption.

An energy conservation regulation—

(1) may not impose any tax or user fee, or provide for a credit or deduction in computing any tax,

(2) may not provide for taking any action of a kind which may not be taken under this legislation, the Emergency Petroleum Allocation Act of 1973, or the Clean Air Act,

(3) shall apply according to its terms in each State except as otherwise provided in the regulation, and

(4) may not deal with more than one logically consistent subject matter.

An energy conservation regulation may be amended or repealed only in accordance with section 105(b), except that technical or clerical amendments may be made in accordance with section 553 of title 5, United States Code.

Subject to provisions relating to Congressional approval or disapproval, a provision of an energy conservation regulation shall remain in effect for a period specified in the plan but may not remain in effect after May 15, 1975.

The term "energy action" is defined to mean an energy conservation regulation or an amendment (other than a technical or clerical amendment) or repeal of such energy conservation regulation.

The Administrator must transmit any energy action (bearing an identification number) to each House of Congress on the date on which it is promulgated.

If an energy action is transmitted to Congress before March 1, 1974, and provides for an effective date earlier than March 1, 1974, then such action shall take effect on the date provided in the action; but if either House, before the end of the first period of 15 calendar days of continuous session of Congress after the date on which the plan is transmitted to it, passes a resolution stating in substance that that House does not favor the energy action, such action shall cease to be effective on the date of passage of such resolution.

If an energy action is transmitted to Congress and provides for an effective date on or after March 15, 1974 and before September 1, 1974, such action shall take effect in most cases at the end of the first period of 15 calendar days of continuous session of Congress after the date on which the plan is transmitted to it unless, between the date of transmittal and the end of the 15-day period, either House passes a resolution stating in substance that that House does not favor the energy action.

A plan proposed to be made effective on or after September 1, 1974, shall take effect only if approved by Congress by law.

In carrying out the provisions of this legislation, the Administrator must, to the greatest extent practicable, evaluate the potential economic impacts of proposed regulatory and other actions. This would include but not be limited to the preparation of an analysis of the effect of such actions on certain entities and other things which are enumerated.

The Administrator must also develop analyses of the economic impact of various conservation measures on States or significant sectors thereof, considering the impact on both energy for fuel and energy as feed stock for industry. Such analysis shall, wherever possible, be made explicit and to the extent practicable other Federal agencies and agencies of State and local governments which have special knowledge and expertise relevant to the impact of proposed regulatory or other actions shall be consulted in making the analysis, and all Federal agencies shall cooperate with the Administrator in preparing such analyses.

The Administrator, together with the Secretaries of Labor and Commerce, must monitor the economic impact of any energy actions taken by the Administrator, and must provide the Congress with separate reports every thirty days on the impact of the energy shortage and such emergency actions on employment and the economy.

The conferees, taking cognizance of the fact that there are shortages in petrochemical feedstocks, which if not alleviated may cause disruptions of varying degree among many sectors of our economy, have directed the Administrator to exercise such authority as is granted to him under this Act and under any other Act to alleviate such shortages. The conferees are aware that action has been taken under the Economic Stabilization Act to allow an increase in the price of petrochemical feedstocks in an effort to increase their supply. However, it is the intent of the conferees, in directing the Administrator to exercise the authorities conferred on him, to require that he take such other and additional steps as are necessary to increase the supply and availability of petrochemical feedstocks. Within 30 days from the date of enactment of this Act the Administrator is also directed to report to the Congress with respect to the shortages of petrochemical feedstocks and with respect to such additional steps as have been taken to alleviate such shortages.

Under section 105(b)(3)(A), the conference committee substituted new dates to grant the Administrator immediate authority and time so that it can establish and implement a system subject to congressional veto for the purpose of alleviating the panic-buying now taking place at the retail level. In this regard, special note was made of the success achieved under State programs adopted by the States of Hawaii, Oregon and Massachusetts to manage sales of gasoline at the pump.

The conferees urge the Administrator, in fashioning any energy conservation plan to deal with this problem, to consider preserving State programs for control of gasoline sales which are shown to be workable and which are not inconsistent with this Act.

COAL CONVERSION AND ALLOCATION

Senate bill

Section 204(a) would authorize the President to require that any major fossil fuel burning installation (including existing electric generating plants) which has the ready capability and necessary plant equipment to burn coal or other fuels, convert to burning coal or other fuels as its primary energy source. Any installation so converted could be permitted to use such fuel for more than one year, subject to the provisions of the Clean Air Act. To the extent practicable, plant conversions would first be required where the use of coal would have the least adverse environmental impact. Such conversions would be contingent on the availability of coal and reliability of service.

The President would require that fossil fuel fired electrical powerplants now being planned be designed and constructed so as to have capability of rapid conversion to burn coal.

The President could require that certain fossil fuel fired baseload powerplants (other than combustion turbine and combined cycle units) now being planned be designed and constructed so to be capable of rapid conversion to burn coal.

House amendment

The provisions of section 106 of the House amendment are in most respects the same as in the Senate bill with the following exceptions:

(1) Under the House amendment the powers and duties are vested in the Administrator of the Federal Energy Administration rather than the President.

(2) Any installation limited to burning coal as its primary energy source under the legislation or which converted to the use of coal after beginning such conversion within 90 days before the effective date of the legislation could continue to use coal until January 1, 1980, if the Administrator of the EPA approves a plan submitted by the operator of such installation after notice to interested persons and opportunity for presentation of views. The plan would have to meet requirements spelled out in section 106 (b) (1).

(3) The Administrator of EPA or a State or local agency could, after notice to interested persons and an opportunity for presentation of views, (A) prohibit any such installation from using coal if it determines that such use is likely to materially contribute to a significant risk to public health, or (B) require any such installation to use a particular type and grade of coal if such coal is available.

(4) The Administrator would be authorized to prescribe a system for allocation of coal.

Conference substitute

Section 106 of the conference substitute provides that the Administrator shall, to the extent practicable and consistent with the objectives of this Act, by order, after balancing on a plant-by-plant basis the environmental effects of use of coal against the need to fulfill the purposes of this legislation, prohibit, as its primary energy source, the burning of natural gas or petroleum products by any major fuel-burning installation (including any existing electric powerplant) which, on the date of enactment of this legislation, has the capability and necessary plant equipment to burn coal. Any installation to which such an order applies is permitted to continue to use coal and coal by-products as provided in section 119(b) of the Clean Air Act. To the extent coal supplies are limited to less than the aggregate amount of coal supplies which may be necessary to satisfy the requirements of those installations which can be expected to use coal (including installations to which orders may apply under this subsection), the Administrator shall prohibit the use of natural gas and petroleum products for those installations where the use of coal will have the least adverse environmental impact. A prohibition on use of natural gas and petroleum products hereunder is contingent upon the availability of coal, coal transportation facilities, and the maintenance of reliability of service in a given service area. Assessment of the availability of coal would take into consideration the physical and economic feasibility of its production, transportation to the powerplant, and any of state laws or policies limiting its extraction or use.

The administrator must require that fossil-fuel-fired electric powerplants in the early planning process, other than combustion gas turbine and combined cycle units, be designed and constructed so as to be capable of using coal as a primary energy source instead of or in addi-

tion to other fossil fuels. No fossil-fuel-fired electric powerplant is required to be so designed and constructed, if (1) to do so would result in an impairment of reliability or adequacy of service, or (2) if an adequate and reliable supply of coal is not available and is not expected to be available. In considering whether to impose a design or construction requirement, the Administrator shall consider the existence and effects of any contractual commitment for the construction of such facilities and the capability of the owner or operator to recover any capital investment made as a result of the conversion requirements of this section.

The Administrator is authorized by rule to prescribe a system for allocation of coal to users thereof in order to attain the objectives specified in this section.

MATERIALS ALLOCATION

Senate bill

The first paragraph of section 313 would authorize the President to allocate supplies of materials, equipment, and fuel associated with exploration, production, refining, and required transportation of energy supplies to maintain and increase the production of coal, crude oil, natural gas, and other fuels.

Under section 606 the President would be authorized to allocate residual fuel oil and refined petroleum products for the maintenance of exploration for, and production or extraction and processing of, minerals, and for transportation related thereto.

House amendment

Section 103(b) would amend section 4(b) of the EPAA to provide for such allocation for maintenance of exploration for, and production or extraction of fuels and minerals essential to the requirements of the United States, and for required transportation related thereto.

Section 210 would allow the formulation of rules to provide the necessary fuels for all operations of any project or enterprise authorized by the Federal Government.

Conference substitute

Under section 107(a) of the conference substitute, the Administrator must within 30 days after enactment of the legislation propose and publish a contingency plan for allocation of supplies of materials and equipment necessary for exploration, production, refining, and required transportation of energy supplies and for the construction and maintenance of energy facilities. When he finds it necessary to put all or part of the plan into effect, he must transmit the plan or portion thereof to Congress and such plan or portion thereof shall take effect in the same manner as an energy conservation plan prescribed under section 105.

Section 107(b) of the conference substitute is the same as section 103(b) of the House amendment which is described above.

FEDERAL ACTIONS TO INCREASE AVAILABLE DOMESTIC PETROLEUM SUPPLIES

Senate bill

Section 207 would authorize the President—

(a) to require that existing domestic oil fields produce at their maximum efficient rate (MER). MER is a level of production

fixed by State agency regulation at which it is estimated that production can be sustained without detriment to the ultimate recovery;

(b) to require certain designated oilfields, on lands in which there is a Federal interest, to produce in excess of their maximum efficient rate. Such fields would be those in which production in excess of their currently assigned maximum efficient rate would not result in excessive risk of losses of recovery;

(c) to require adjustment of product mix in domestic refinery operations, in accordance with national needs and priorities; and

(d) to order acceleration of oil and gas leasing programs, both onshore and offshore, and for geothermal leasing. Such an accelerated program would be subject to the provisions of all existing laws, including the National Environmental Policy Act.

House amendment

Section 103(a) would add a new section 4(h)(4) to the EPAA which would vest the President with the same authority with respect to refineries as provided in section 207(c) of the Senate bill.

Section 103(a) would also add new section 4(i) to the EPAA. This new section would authorize the President to require the production of crude oil at the MER. He would consult with the Department of the Interior and with State governments in order to determine which producers shall be so required. The MER would be as determined by the State in which the field is located. However, after consultation with such State or with the Department of the Interior, the President may set a higher rate if he determines that in doing so the ultimate recovery of crude oil and natural gas is not unreasonably impaired.

Existing and future development plans for the production of crude oil on Federal lands would include or be amended to include provisions for the secondary recovery and, insofar as possible, the tertiary recovery of crude oil before the well was abandoned.

Conference substitute

Section 108(a) of the conference substitute is substantially the same as the provisions of the Senate bill described above, except that section 108 vests the authority in the Administrator of FEEA rather than the President, and the provisions for accelerated leasing programs are not included.

Section 108(b) of the conference substitute provides that nothing in this section shall be construed to authorize the production of any Naval Petroleum Reserve now subject to chapter 641 of title 10 of the U.S.C.

OTHER AMENDMENT TO THE EMERGENCY PETROLEUM ALLOCATION ACT OF 1973

Senate bill

No provision.

House amendment

Section 103(a) of the House amendment would have added a new subsection (l) to section 4 of the Emergency Petroleum Allocation Act. Such new subsection would require that, if any allocation of residual fuel oil or refined petroleum products under section 4(a) of the EPAA is based on the amount used or supplied during a historical

period, adjustments could be made reflecting regional disparities in use, or unusual factors influencing use, in the historical period. This subsection would take effect 30 days after enactment of the legislation.

Section 103(c) would amend section 4(c)(3) of the EPAA to direct the President, when requiring adjustments in allocations, to take into account lessened use of crude oil, residual fuel oil, and refined petroleum products prior to enactment as a result of an unusual regional climatic variations.

Section 103(d) would amend section 4(g)(1) of the EPAA to change the termination date in each case to May 15, 1975.

Conference substitute

Section 109 of the conference substitute is the same as the House amendment, except that—

(1) the new subsection which would be added to section 4 of the EPAA would be designated as subsection (i),

(2) population growth and unusual changes in climatic conditions are added as factors on which adjustments under the subsection can be based, and such adjustments to reflect population growth will be based on the most current figures available from the Bureau of the Census, and

(3) a specific provision has been added so that adjustments under the subsection shall take effect no later than 6 months after the date of enactment of the legislation.

(4) the amendment to section 4(c)(3) is omitted.

PROHIBITION ON INEQUITABLE PRICING

Senate bill

No provision.

House amendment

Section 117 amended the Emergency Petroleum Allocation Act to require the President to set prices for crude oil, residual fuel oil and refined petroleum products at such a level as to prevent windfall profits to sellers. If, upon petition by an interested party, the Renegotiation Board (established by section 107(a) of the Renegotiation Act of 1951) determines that a price permits windfall profits, the Board may specify a price which does not result in such profits, and may order the refund to purchases of an amount equal to the windfall profits gained.

For the purposes of this section, windfall profits were defined as either profits in excess of a reasonable profit with respect to the particular seller, considering volume of production, net worth, risk, efficiency, etc.; or, the average profit for the firm or the industry in the period 1967 through 1971.

Conference substitute

The conference substitute rewrites the provisions of the House amendment. The House amendment included provisions designed to prohibit windfall profits-price gouging. The thrust of these provisions was to provide pricing protection for industrial and individual consumers of petroleum products. Under its terms, the President was *directed* to exercise his pricing authority under the Economic Stabilization Act of 1970 and the Emergency Petroleum Allocation Act of 1973 to specify prices for crude oil, residual fuel oil, and refined pe-

troleum products to prevent windfall profits and price gouging by sellers. This was to be accomplished by specifically directing the President to establish prices which avoid windfall profits; by providing a procedure before the Renegotiation Board by which interested persons could obtain review of established prices and, in certain events, a rollback of such prices; and by including procedures permitting consumers to force individual companies to return windfall profits resulting from excessive prices. These provisions were incorporated in the House amendment out of a sense of dissatisfaction with the lack of limitations in existing law on the exercise of the President's pricing authority. This situation had permitted the President to adopt pricing policies which were producing unreasonably high profits for persons engaged in the petroleum industry in what a majority of House members believed to be a misdirected effort to allow the prices for short supplies to rise to levels which would discourage demand. The Senate bill contained no specific control on the exercise of the President's pricing authority similar to that of the House amendment.

The Conference substitute has shifted the emphasis away from a concentration on the profits produced by such prices to instead concentrate on the reasonableness of the levels of such prices. Here the conferees have refined the direction to the President to specifically require that the President specify equitable prices for domestic crude oil, all residual oil, and all refined petroleum products. This section further provides that, within 30 days after enactment of this Act, the ceiling price for all crude oil be the price for that grade of oil in that field at 6:00 a.m., May 15, 1973, plus $1.35. On a national average basis, this new price would be approximately $5.25. If this new price results in a rollback, as it would for oil not now subject to price controls, any such savings must be passed on to the ultimate consumers of residual oil or refined petroleum products, on a dollar-for-dollar passthrough, in an equitable and proportional manner among the consumers of different products.

Such proportional distribution of the passthrough shall be established on the basis of historical sales, using as the base period 1972, the same as that set out under the Emergency Petroleum Allocation Act.

For certain classes of crude, the President may establish a ceiling price up to 35 percent above the general ceiling price, upon transmittal to Congress of an explanation thereof and justification therefor.

Categories which the conferees envision could be granted a ceiling price above the average ceiling price of 5.25, would be crude oil produced from stripper wells, oil produced by secondary or tertiary recovery, and other sources of crude which require higher prices to permit recovery of costs and to provide additional incentives to maintain production and stimulate new development.

With certain exceptions, the conference substitute provides that in making any future change in the regulation which establishes a price or method for determining the price of crude oil, residual fuel oil, and refined petroleum products, the President shall afford interested persons an opportunity of not less than 10 days to present oral and written views on the proposed change. In certain crucial circumstances, the President is entitled to waive the 10 day comment period and make price changes immediately effective. It is the express and deliberate intent of the conferees, however, that such waivers occur in only emergency circumstances and that even in such an event the President

would be directed to afford an opportunity of comment following implementation of the amendment to the regulation.

Morever, in addition to the procedural protections provided in this section the conference substitute has incorporated separate procedures governing the judicial review of amendments to the pricing regulation.

Section 110 also provides for procedure whereby persons may petition the President to obtain administrative review of prices established by regulation.

PROTECTION OF FRANCHISED DEALERS

Senate bill

Section 607 would provide for protection of franchised dealers. The term "franchise" would mean any agreement or contract between a refiner or a distributor and a retailer or between a refiner and a distributor, as these terms were defined by the section. A refiner or distributor was prohibited from terminating a franchise unless he furnished prior notification to each affected distributor or retailer in writing by certified mail not less than 90 days prior to the date on which such franchise would be canceled. Such notification must contain a statement of intention to terminate with the reasons therefor, the date on which such action would take effect, and a statement of the remedy or remedies available to such distributor or retailer. This franchise could not be terminated by the refiner or distributor unless the affected retailer or distributor failed to comply substantially with any essential and reasonable requirement of such franchise or failed to act in good faith in carrying out its terms, or unless such refiner or distributor withdrew entirely from the sale of petroleum products in commerce for sale other than resale in the United States.

A retailer with a franchise agreement could bring suit against a distributor or refiner whose actions affected commerce and who has engaged in conduct prohibited by this section. Similarly, a distributor could bring suit against a refiner. Such suits could be brought in a United States district court if commenced within three years after the cancellation, failure to renew, or termination of a franchise. The district court was empowered to grant the necessary equitable relief including declaratory judgment and injunctive relief. The court could grant an award for actual and punitive damages as well as reasonable attorney and expert witness fees.

House amendment

Section 113 amended the Emergency Petroleum Allocation Act of 1973 to provide for fair marketing of petroleum products. Certain terms were defined, including "commerce" to mean commerce between a state and a point outside such state; "marketing agreement" to mean a specified portion of an agreement or contract between a refiner and a branded independent marketer.

The notice and termination requirements would be the same as those in the Senate bill except that termination could not be made for withdrawal from the market unless the refiner did not for three years after termination engage in the sale of petroleum products in the same relevant market area within which the terminated marketer operated. Another difference required a terminated marketer to bring suit in district court against a refiner within four years after the date of termination of such marketing agreement.

Conference substitute

Section 111 of the conference substitute is the same as the Senate bill, except that—

(1) the terms "distributor", "refiner" and "retailer" are defined in terms of a *person* engaged in certain acts, rather than in terms of an *oil company* engaged in certain acts as in the Senate bill, and

(2) in the case of an action for failure to renew a franchise, damages would be limited to actual damages including the value of the dealer's equity. The provisions of this section shall expire with the expiration of the Act, except for pending actions or proceedings, or claims based on actions prior to that expiration date.

PROHIBITIONS ON UNREASONABLE ACTIONS

Senate bill

No provision.

House amendment

Section 115 provides that actions taken under the legislation, the Emergency Petroleum Allocation Act of 1973, or other Federal law resulting in allocation or restriction on the use of refined petroleum products and electrical energy must be equitable and not arbitrary or capricious or unreasonably discriminate among users.

In the case of allocations of petroleum products applicable to foreign commerce no foreign entity would receive more favorable treatment than that which is accorded by its home country to U.S. citizens in the same line of commerce. Allocations would include provisions designed to foster reciprocal and nondiscriminatory treatment by foreign countries of U.S. citizens engaged in foreign commerce.

Section 105(c) would provide that, to the maximum extent practicable, restrictions on the use of energy shall be designed to be carcied out in such manner so as to be fair and to create a reasonable distribution of the burden on all sectors of the economy, without imposing an unreasonably disproportionate share on any specific industry, business, or commercial enterprise, and shall give due consideration to the needs of commercial, retail, and service establishments with unconventional working hours.

Conference substitute

Section 112 of the conference substitute is the same as the House amendment except that section 112(a) refers to allocation of petroleum products and electrical energy among classes of users. Section 112(b) incorporates the provisions of section 105(c) of the House amendment.

It is the intent of the conferees that foreign corporations be accorded treatment under allocation programs comparable to that accorded United States corporations which operate in their respective countries of origin or incorporation. The President is granted discretion to waive this provision if he determines its strict application would be contrary to the purposes of the Act, and publishes his finding to that effect in the Federal Register. Examples might be allocation of fuels for activities such as petroleum exploration and development, or construction of pipelines or refineries in the United States, by a foreign corporation to serve United States needs, or the use of

allocation authority as an economic bargaining tool with foreign nations.

REGULATED CARRIERS

Senate bill

Under section 204(b)(1), the Interstate Commerce Commission, the Civil Aeronautics Board, and the Federal Maritime Commission with respect to certain carriers which they regulate could make reasonable and necessary adjustments in the operating authority of such carriers in order to conserve fuel.

Section 204(b)(2) would require each of these agencies to report to the appropriate Committees of Congress within 15 days after enactment of the legislation on the need for additional regulatory authority to conserve fuel.

House amendment

Sections 107(a) and 107(d) of the House amendment are substantially the same as the provisions of the Senate bill described above, except that the reports of the ICC, CAB, and FMC would not have to be submitted until 60 days after the date of enactment of the legislation.

In addition, section 107(b) would require the ICC to eliminate restrictions on the operating authority of any motor common carrier of property which require excessive travel between points. This would be done without disrupting essential service to communities served by any such carrier.

Section 107(c) would require the ICC to adopt rules which contribute to conserving energy by eliminating discrimination against the shipment of recyclable materials in rate structures and Commission practices.

Conference substitute

Section 113 of the conference substitute is the same as the House amendment with two exceptions. The reports of the ICC, CAB, and FMC must be submitted within 45 days after enactment and section 107(c) of the House amendment is deleted.

ANTITRUST LAWS

Senate bill

Under section 314, the President would develop plans of action and could authorize voluntary agreements which are necessary to achieve the purposes of the legislation. In addition, the President could provide for the establishment of interagency committees and advisory committees.

Advisory committees would be subject to the Federal Advisory Committee Act of 1972 and would be chaired by a regular full-time Federal employee.

An appropriate representative of the Federal Government would attend each meeting of any advisory committee or interagency committee established under the legislation. The Attorney General and the Federal Trade Commission would be given advance notice of any meeting and could have an official representative attend and participate in any such meeting.

A verbatim transcript would be kept of all advisory committee meetings, and subject to existing law concerning the national security and proprietary information, would be deposited together with any agreement resulting therefrom with the Attorney General and the Federal Trade Commission. The transcript would be available for public inspection.

The Attorney General and the Federal Trade Commission would participate in the preparation of any plans of action or voluntary agreement and could propose any alternative which would avoid, to the greatest extent practicable, any anticompetitive effects while achieving the purposes of the legislation. They would also review, amend, modify, disapprove or prospectively revoke any plan of action or voluntary agreement which they determined was contrary to the purposes of section 314 or not necessary to achieve the purposes of the legislation.

If necessary to achieve the purposes of the legislation, owners, directors, officers, agents, employees, or representatives of two or more persons engaged in the business of producing, transporting, refining, marketing, or distributing crude oil or any petroleum product would meet, confer, or communicate in accordance with the provisions of section 314 and solely to achieve the objectives of the legislation. In those instances, such persons would have a defense against any civil or criminal action brought under the antitrust laws.

The Attorney General would be granted authority to exempt certain meetings, conferences, or communications from being chaired by a regular full-time Federal employee or from the requirement that a verbatim transcript be kept, deposited with the Attorney General and Federal Trade Commission and made available for public inspection.

The President could delegate the functions of developing plans of action, authorizing voluntary agreements, and providing for the establishment of interagency committees and advisory committees.

Section 708 of the Defense Production Act of 1950 would not apply to any action taken under this legislation or the Emergency Petroleum Allocation Act of 1973. The provisions of section 314 would apply to the latter Act, notwithstanding any inconsistent provisions of section 6(c) thereof.

There would be a defense available to any civil or criminal action brought under the antitrust laws arising from any course of action, meeting, conference, communication or agreement which was held or made in compliance with the provision of this section.

The Attorney General and the Federal Trade Commission would be responsible for monitoring any plan of action, voluntary agreement, regulation, or order approved under section 314 to prevent anticompetitive practices and promote competition.

The Attorney General and the Federal Trade Commission would promulgate joint regulations concerning maintenance of documents, minutes, transcripts, and other records relating to the implementation of any plan of action, voluntary agreement, regulation, or order approved under the legislation. Persons involved in any such implementation would be required to maintain the record required by any such joint regulation and make them available for inspection by the Attorney General and the Federal Trade Commission at reasonable times on reasonable notice.

Actions taken by the Interstate Commerce Commission, the Civil Aeronautics Board, and the Federal Maritime Commission under section 204(b)(1) would not have as their principal purpose or effect the substantial lessening of competition among the carriers affected. Actions taken under that section would be taken only after providing an opportunity for participation to the Federal Trade Commission and the Assistant Attorney General in charge of the Antitrust Division.

House amendment

The provisions of section 120 are similar to the provisions in the Senate bill described immediately above. However, the following differences should be noted:

The House version vests various powers and duties in the Administrator of the Federal Energy Administration. In the Senate version powers and duties were vested in the President.

The House version requires that advisory committees include representatives of the public and be open to the public.

The Administrator, subject to the approval of the Attorney General and the Federal Trade Commission would by rule promulgate standards and procedures by which persons engaged in the business of producing, refining, marketing, or distributing crude oil, residual fuel oil, or any refined petroleum product could develop and implement voluntary agreements and plans of action to carry out such agreements which the Administrator determines are necessary to accomplish the objectives of section 4(b) of the EPAA. Such standards and procedures would be promulgated under the section 553 of title 5, United States Code. Several standards and procedures are set forth and required by the legislation.

The Federal Trade Commission instead of the Attorney General could exempt types or classes of meetings, conferences, or communications from the requirement that a verbatim transcript be kept and deposited with the Attorney General and Federal Trade Commission and made available for public inspection and copying.

Any voluntary agreement or plan of action entered into under the section would have to be submitted in writing to the Attorney General and the Federal Trade Commission 20 days before being implemented and would be available for public inspection and copying.

The Attorney General and the Federal Trade Commission could each prescribe rules and regulations necessary or appropriate to carry out their responsibilities under the legislation.

The Attorney General and the Federal Trade Commission would each submit to the Congress and the President at least once every 6 months a report on the impact on completion and on small business of actions authorized by section 120.

The authority granted under section 120 and any immunity from the antitrust laws thereunder would terminate on December 31, 1974.

69

RETAIL AND SERVICE ESTABLISHMENTS—VOLUNTARY ENERGY CONSERVATION AGREEMENTS

Section 114 of the House amendment would provide that within fifteen days of enactment of the legislation, the Administrator, in consultation with the Attorney General and the Federal Trade Commission, would promulgate standards and procedures for retail or service establishments to enter into voluntary agreements to limit operating hours, adjust retail-store delivery schedules and take such other action as the Administrator, after consultation with the Attorney General and the Federal Trade Commission, determines to be necessary and appropriate to accomplish the objectives of this Act.

Such standards and procedures would be promulgated pursuant to section 553 of title 5 of the United States Code. Among these standards and procedures would be provision for the filing of a copy of any agreement with the Attorney General and the Federal Trade Commission, which would be available for public inspection. Meetings held to develop and implement a voluntary agreement could be attended by interested persons, who would be afforded opportunity to make oral and written presentations, and such meetings shall be preceded by timely notice to the Attorney General, the Federal Trade Commission and be available for public in the affected community. A summary of such meeting, along with any written presentation of interested persons, would be submitted to the Attorney General and the Federal Trade Commission and be available for public inspection. Actions in good faith which are taken by firms in conformity with this section to develop and implement a voluntary energy conservation agreement shall not be construed to be within the prohibitions of the antitrust laws of the United States, the Federal Trade Commission Act or similar State statutes.

Any voluntary agreement entered into under this section would be submitted to the Attorney General 10 days before being implemented. The Attorney General at any time on his own motion or upon request of any interested person could disapprove any voluntary agreement under section 114 and thereby withdraw prospectively any immunity from the antitrust laws.

No voluntary agreement under this section would pertain to activities relating to marketing and distribution of crude oil, residual fuel oil or refined petroleum products, which are matters dealt with under section 120. Also, this section is limited to those voluntary agreements in which all members have 75 per cent of their annual sales not for resale and recognized as retail in the particular industry, as determined by the Attorney General.

The Attorney General and the Federal Trade Commission would be required to submit to Congress and the President at least once every six months a report on the impact on competition and on small business of agreements authorized by this section.

Conference substitute

Section 114 of the conference substitute is the same as section 120 of the House amendment, except that the authority granted and any immunity from the antitrust laws thereunder would terminate on May 15, 1975.

70

EXPORTS

Senate bill

Subsection (e) of section 207 authorized the President to limit the export of gasoline, number 2 fuel oil, residual fuel oil, or any other petroleum product, pursuant to the Export Administration Act of 1969, to achieve the purposes of the Act.

House amendment

To the extent necessary to carry out the purposes of the Act, section 123 authorized the Administrator by rule to restrict exports of coal, petroleum products, and petrochemical feedstocks, under such terms as he deems appropriate. He must restrict exports of such commodities if the Secretary of Commerce or the Secretary of Labor certified that such exports would contribute to unemployment in the United States. The Administrator could use, but was not limited to, existing statutes such as the Export Administration Act of 1969. Rules should take into account the historical trading relations with Canada and Mexico and should not be inconsistent with section 4(b) and (d) of the Environmental Protection Agency Act.

Conference substitute

Section 115 of the conference substitute follows the provisions of the House amendment. The authority of the Administrator to set appropriate terms for the restriction of exports of coal, petroleum products, and petrochemical feedstocks and the requirement that he do so upon certification by the Secretary of Commerce or the Secretary of Labor is the same as in section 123 of the House amendment.

In addition, the Secretary of Commerce, pursuant to the Export Administration Act of 1969 may restrict the exports of coal, petroleum products, and petrochemical feedstocks, and of materials and equipment essential to the production, transport, or processing of fuels to the extent necessary to carry out the purpose of this legislation and sections 4(b) and 4(d) of the Emergency Petroleum Allocation Act of 1973. If the Administrator certifies to the Secretary of Commerce that export restrictions of such commodities are necessary to carry out the purposes of this legislation, the Secretary of Commerce shall impose such export restrictions. The requirements for rules in the House amendment are also applied to actions taken by the Secretary of Commerce under the Export Administration Act of 1969.

The Committee has confined the export control authority to petrochemical feedstocks, coal, and petroleum products which are subject to allocation under the Emergency Petroleum Allocation Act of 1973. In using the term "petrochemical feedstocks" the Committee intends to identify the basic hydrocarbon derivatives of crude oil such as propane, butane, naphtha, olefins such as ethylene and propylene, aromatics such as benzene, toluene and the xylenes, extender oil used in the manufacture of rubber, and aromatic oils used in the manufacture of carbon black.

The Committee has vested separate authority in both the Administrator and the Secretary of Commerce in connection with the administration of the Export Administration Act. This will insure that the essential needs of American consumers will be met and that private enterprises will not be permitted to export energy in a manner not in accord with the national interest.

71

EMPLOYMENT IMPACT AND WORKER ASSISTANCE

Senate bill

Section 208 would direct the President to take into consideration and minimize, to the fullest extent practicable, any adverse impact of actions taken under this Act upon employment. All government agencies would be directed to cooperate fully to minimize any such adverse impact.

Section 501 would direct the President to make grants to states to provide unemployment assistance to individuals as he deemed appropriate during the individual's unemployment. The individual must be not otherwise eligible for unemployment compensation or have exhausted his eligibility for it. There is a two-year limitation on the eligibility for such assistance and a limitation on the amount.

This section would also authorize the President to prescribe terms and conditions for the distribution of food stamps through the Secretary of Agriculture pursuant to the provisions of the Food Stamp Act of 1964, as amended, for so long as he determined necessary. The Secretary of Labor would be directed to provide reemployment assistance services under other laws to any unemployed individual, including assistance to relocate in another area where employment was available.

The President would be directed, acting through the Small Business Administration, to make loans to aid in financing domestic projects required by the Administration for administration or enforcement of the Act for approved private and public applicants. The President would determine the terms and conditions of such financial assistance subject to stated exceptions.

The authorization of such appropriations as might be necessary to carry out the provisions of this section would be included. The Secretary of Labor must report to Congress on the implementation of this section no later than six months after enactment and annually thereafter. The report must include an estimate of the funds necessary in each of the succeeding three years.

House amendment

Section 122 included provisions very similar to those in the Senate bill except that the distribution of food stamps and reemployment assistance and Small Business loans would not be provided for. Also, the President was required to report to Congress within 60 days of enactment on the present and prospective impact of energy shortages upon employment, the adequacy of existing programs to deal with such impact, and recommendations for legislation needed to adequately meet the needs of adversely affected workers.

Conference substitute

Section 116 of the Conference report provides for grants to be made to the States to enable them to extend the coverage of their unemployment compensation to persons adversely affected by the implementation of this Act as well as those directly and adversely affected by energy allocations, energy shortages, energy conservation measures and changes in consumption patterns as a result of the energy emergency. Such coverage would be available beyond the duration provided ordinarily under State law, and would extend to persons not otherwise

covered by unemployment insurance programs, up to a period not to exceed one year. In adopting this provision, the Conferees recognized that energy-related unemployment will be severe in the coming months—perhaps reaching recessionary levels—and will touch virtually all sectors of the economy.

The Committee believes that, at a time when the American people are being asked to bear the burden of the shortage, the government should also act to provide programs to assist persons and families who face hardships as a result of unemployment caused by the energy shortage.

The authorization for this section is limited to $500,000,000 each year.

The conferees wish to make some specific notations of their understanding of how this section is to operate. It is to be emphasized that this action requires the President to make grants to the states to provide unemployment compensation for persons who have exhausted their state rights to unemployment compensation and for others engaged in classes of employment not otherwise entitled to unemployment compensation under state programs. In giving rule making authority to the President to govern the issuance of such grants, the conferees intend that the President exercise that authority to define the nature of the criteria or formula pursuant to which states receive grants-in-aid under this section. Within the dimensions of the assistance program as established by the President's regulations, the state is to administer the program. Grants to the states may include reimbursement for the costs of administration of this program. It is also to be emphasized that the states are to determine whether the unemployment is attributable to the energy crisis and may also determine whether an unemployed person continues to be eligible for compensation under this section.

USE OF CARPOOLS AND GOVERNMENT MOTOR VEHICLES

Senate bill

Section 605 directs the Secretary of Transportation to encourage the creation and expansion of the use of carpools and to establish within DOT an Office of Carpool Promotion and authorizes an appropriation of $25,000,000 for the conduct of programs to promote carpools. Appropriated funds would be allocated to State and local governments in fixed proportions to carry out the promotion of carpooling. The Secretary would make a report to the Congress within one year after enactment of the legislation on his activities and expenditures under section 605.

Section 603 would generally preclude the use of funds for passenger motor vehicles or to pay the salaries of drivers of such vehicles unless they are operated out of carpools.

This would not apply to vehicles for the use of the President and one each for the Chief Justice, members of the President's Cabinet, and the elected leaders of Congress, or to vehicles operated to provide regularly scheduled service on a fixed route.

House amendment

Section 116(a)–(f) of the House amendment is generally the same as the provisions of section 605 of the Senate bill with respect to car-

pools, except that only $1 million is authorized to carry out the provisions of the section. Section 116(g) would define local governments and local units of government.

The President under section 116(h) would be required to take action to require all agencies of the Government, where practicable, to use economy model motor vehicles.

Section 116(h) would also specify the number of "fuel inefficient" motor vehicles which could be purchased for the Federal Government in fiscal years 1975 and 1976.

Section 116(i) would direct the President to take action to prevent with specified exceptions any officer or employee in the Executive Branch below the rank of Cabinet officer from being furnished a limousine for his individual use.

Conference substitute

Section 117 (a) through (h) of the conference substitute is the same as section 116 (a) through (h) of the House amendment with two exceptions. The sum of $5 million, not $1 million, is authorized to be appropriated for the conduct of programs to promote carpools, such authorization to remain available for two years. Also, the provisions in section 116(h) of the House amendment on government motor vehicles specifying the number of "fuel inefficient" motor vehicles which could be purchased has been deleted. With regard to the use of limousines by Federal officials, the conferees adopted language from both the Senate and House provisions. The report provides among other things that no funds be expended for chauffeurs for individual use by government officials.

ADMINISTRATIVE PROCEDURE AND JUDICIAL REVIEW

Senate bill

Section 311(a) would waive the more time-consuming procedures of the Administrative Procedure Act, notably the requirements of adjudicatory hearings according to section 554 of title 5, United States Code, which could otherwise apply to functions exercised under the Act. However, the requirements of sections 552, 553 (as modified by section 311(b) of the Act), 555 (c) and (e), and 702 would apply to such functions.

Section 311(b) would require that all rules, regulations, or orders promulgated pursuant to the Act be subject to the provisions of section 553 of title 5, United States Code, with the following exceptions: (1) Notice and opportunity to comment (a minimum of five days) by publication in the Federal Register on all proposed general rules, regulations or orders (this requirement could be waived upon a finding that strict compliance would cause grievous injury); (2) public notice of State rules, regulations, or orders promulgated pursuant to section 203 of the Act by widespread publication in newspapers of statewide circulation, and (3) public hearings on those rules, regulations, or orders issued by authorized agencies and determined to have substantial impact, to be held prior to implementation to the maximum extent practicable and no later than sixty days following implementation.

Section 311(c)(1) would require, in addition to the requirements of section 552 of title 5, United States Code, any agency authorized to issue rules or orders to make available to the public all internal rules and guidelines upon which they are based, modified as necessary to insure confidentiality protected under such section 552. Such agency must publish written opinions on any grant or denial of a petition requesting exemption or exception within thirty days with appropriate modifications to insure confidentiality.

Authorized agencies would also be required to make adjustments to prevent hardships and establish procedures available to any person making appropriate requests.

Section 311(d) would require the President's proposals submitted pursuant to section 301 of the Act to include findings of fact and explanation of the rationale for each provision, proposed procedures for the removal of restrictions imposed, and a schedule for implementing the provisions of section 552 of title 5, United States Code.

Section 312 contained judicial review provisions. National programs required by the Act and regulations establishing such national programs could be challenged only in the United States Court of Appeals for the District of Columbia within 30 days of the promulgation of the regulations. Programs and regulations of general, not national, applicability (to a State, or several States, or portions thereof) could be challenged only in the United States Court of Appeals for the appropriate circuit within 30 days of promulgation. Otherwise, the United States district courts would have original jurisdiction of all other litigation arising under the Act.

However, this section would not apply to actions taken under the act by the Civil Aeronautics Board, the Interstate Commerce Commission, the Federal Power Commission, or the Federal Maritime Commission. The judicial review provisions in their respective organic acts would apply for the sake of uniformity.

House amendment

Section 109(a) would provide for the streamlining of administrative procedures for actions taken pursuant to this Act and the Emergency Petroleum Allocation Act, including the formulation of energy conservation plans.

Actions taken under title I of the bill and under the allocation exchange authority in section 205 would be subject to special administrative procedure and judicial review provisions. Section 109 would provide expedited administrative procedures for Federal actions. These same procedures would also apply to State actions unless the Federal Energy Administrator specified different but comparable procedures for the State. Included among the procedures are publication and notice and an opportunity for comment on agency rules and orders. All rules and orders issued by Federal and State agencies both under title I and under the new subsections (h) and (i) of section 4 of the Emergency Petroleum Allocation Act would be required to include provisions for making adjustments in hardship cases.

Section 109(b) would provide judicial review of rules issued under these provisions in the Temporary Emergency Court of Appeals which was created under the Economic Stabilization Act. Orders issued in individual cases would be reviewed first in the United States district court and then in the Temporary Emergency Court of Appeals.
